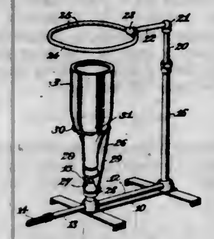
1. In a vehicle of the type described provided with front and rear seats each comprising a main seat piece, and auxiliary pieces hinged to each of said main seat-pieces, said auxiliary pieces being adapted to be folded under said main seat-piece and to be extended and arranged in the same plane as the latter to form a bed, said rear seat extending to and adapted to rest on the frame of the front seat, the back of the front seat being adapted to be dropped back and placed on the floor of the car and in that position providing a support for the middle portion of said bed.

1,577,233. AUTOMOBILE SPRING. LOUIS HOTTO, East Carondelet, Ill. Filed Apr. 1, 1925. Serial No. 19,957. 1 Claim. (Cl. 267—60.)

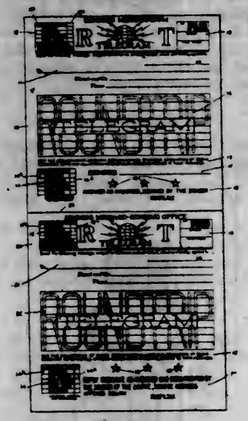
The combination with a pair of clips and perch, one clip and the perch being adapted to be secured to an axle, the other clip being adapted to be secured to the chassis of an automobile above the first named clip, of eye members made fast by the clips, a pair of arms, a pivot common to both arms and connecting the same to the eye member on the chassis, said arms slidable through the eye member and perch on the axle, coiled springs surrounding the arms between the axle and chassis, and a coiled spring on one of the arms and active counter to the other spring thereon.

1,577,234. SCAFFOLD BRACKET. JOHN HUBENY, Elizabeth, N. J., assignor to Hubeny Bros., a Copartnership composed of Joseph Hubeny, Jeremiah Hubeny, Anthony Hubeny, and John Hubeny, all of Elizabeth, N. J. Filed Oct. 24, 1925. Serial No. 64,663. 1 Claim. (Cl. 304—33.)



A scaffold bracket including a pair of horizontal tubular arms, castings formed with sockets into which the ends of the arms are screwed, supporting members adapted to be attached to a wall means for pivotally connecting the castings at one end of the arms to the supporting members, means for pivotally connecting the castings at the free ends of the arms together, and means engageable with said connecting castings for supporting the arms in horizontal position.

1,577,235. DEVICE FOR USE IN REMOVING MEASURED QUANTITIES OF THE CONTENTS OF BOTTLES AND LIKE CONTAINERS. WILLIAM HUCKS, Camden Town, London, England, assignor of one-half to Sodastream Limited, London, England. Filed Aug. 19, 1924. Serial No. 733,019. 5 Claims. (Cl. 215—57.)



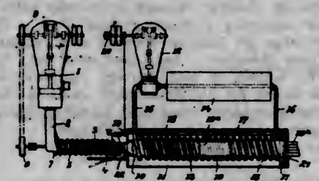
5. An attachment for bottles for removing measured quantities of the contents therefrom comprising a cylindrical casing having an opening in its curved surface, a truncated conical hollow member with its axis at right angles to that of the casing connected to another opening in the casing's side, adapted to fit snugly over the bottle head by means of a rubber lining, and a drum with an opening in its curved surface fitted in the casing and rotatable therein, in combination with a counterweighted lever for turning said drum so that its opening comes successively opposite the two openings in the casing according as the bottle is turned one way or the other upon its axis.

1,577,236. BOTTLE-WASHING DEVICE. GEORGE HUSS, New York, N. Y. Filed May 6, 1924. Serial No. 711,375. 2 Claims. (Cl. 141—7.)

1. In a bottle washing device, a horizontal cleaning fluid conduit pipe having communication with a source of supply, a pair of spaced upstanding communicating pipes connected to said conduit one of said pipes being provided with an internal sprayer head and the other of which is provided with an annular external sprayer head adjustable axially with respect to the internal sprayer head and means on the pipe which supports the internal sprayer head for supporting a bottle in inverted position over the internal sprayer head and in juxtaposition with the external sprayer head, said supporting means being adjustable lengthwise of its supporting pipe whereby to compensate for variations in the size of the bottles to be washed by the device.

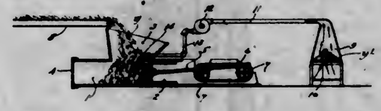
1,577,237. RETURN FORMS OF MESSAGES. HARRY B. INK, East Orange, N. J., assignor of one-fourth to Henry J. Lucke, New York, N. Y. Filed May 11, 1925. Serial No. 29,292. 8 Claims. (Cl. 283—61.)

1. A telegraphic blank providing a space for the reply message, having appropriately designated spaces for the entry of data to indicate the nature and number of words of reply message and a symbol indicating that the reply message has been prepaid.



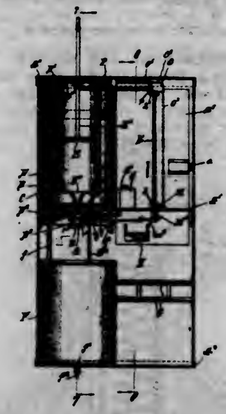
1,577,238. HAT. WILLIAM KATZ, St. Louis, Mo. Filed June 2, 1925. Serial No. 34,395. 1 Claim. (Cl. 2—176.)

In a hat, a crown formed of an upper section, a lower section and an intermediate section consisting of a braid interposed between and secured to said sections and formed of two spaced horizontal bars of vegetable material and a pair of spaced strands of vegetable material, each of said strands at spaced points of its length bent around said bars, the bent portions of each strand at one bar arranged out of alignment with the bent portions of the strand at the other bar whereby the portions of each strand between the bars will extend alternately in opposite directions at an inclination, the inclined portions of one strand crossing the inclined portions of the other strand centrally thereof to provide in connection with the bars spaced uniform openings throughout the braid and each extending from one bar to the other, said intermediate section formed of material of greater strength than the material of the other of the sections for maintaining these latter in spaced relation and for strengthening the crown.



1,577,239. APPARATUS FOR THE CONTINUOUS PRODUCTION OF HARD SOAP IN STRINGS OR PIECES. HERMANN LANDGRAF, Wasungen, Germany. Filed Aug. 8, 1925. Serial No. 47,880. 7 Claims. (Cl. 25—8.)

1. An apparatus for the continuous production of soap comprising, a compression pipe, means for cooling said pipe, and means for impelling the fluent soap mass through said pipe, in combination with a cooling chamber receiving fluent soap therefrom, said chamber being of much greater cross-sectional area than said pipe, whereby the soap mass travels lengthwise of said chamber at a relatively greater slower rate than it does in said pipe, a refrigerant chamber surrounding said cooling chamber, means for circulating the refrigerant in

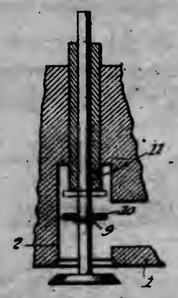


said refrigerant chamber, circulating means for extracting the heat absorbed from the soap mass from the refrigerant, and means for cutting the soap into bars as it emerges from said cooling chamber in a supercooled hard boiled state.

1,577,240. PROCESS OF AND APPARATUS FOR THE TREATMENT OF TOW. JAMES E. LAPPEN, Crookston, Minn. Filed Jan. 29, 1925. Serial No. 5,617. 5 Claims. (Cl. 167—6.)

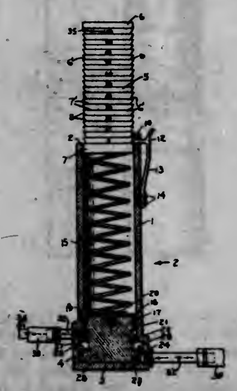
1. The process of treating fibrous material for the destruction of bug and insect life, which consists in permeating the tow with an insecticidal gas while in loose condition, and in compressing such fibrous material into compact form while still permeated with such gas.

1,577,241. ICE-CREAM AND CONE VENDING MACHINE. DAVIS JACOB AJOUELO and IRA LEONARD CRAWFORD, Atlanta, Ga. Filed Feb. 11, 1922, Serial No. 535,830. Renewed Aug. 11, 1925. 9 Claims. (Cl. 107—1.)



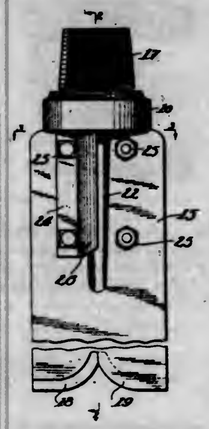
1. Apparatus for vending plastic material comprising a container for the material provided with a delivery chamber located beneath the same and connected thereto, means for simultaneously delivering the material to said delivery chamber and for releasing an individual receptacle for said material, and a hand controlled gate normally closing the bottom of said delivery chamber.

8. Apparatus for vending plastic material comprising a holder adapted to contain a series of superposed re-



ceptacles, a cylindrical container for the material provided with a delivery chamber located beneath the same and connected thereto, a piston mounted in said container, a sliding knife mounted above said delivery chamber, a cleaning chamber through which said knife passes, means for supplying a cleaning fluid to said chamber, and controlling the passage between said container and said delivery chamber, a hand controlled gate normally closing the bottom of said delivery chamber, and coin controlled means for simultaneously releasing the lower one of said receptacles from said holder, pressing down on said piston, and withdrawing said knife.

1,577,242. SELF-CLEANING VALVE STEM. CHRISTOPHER C. ANDERSEN, Salt Lake City, Utah. Filed June 27, 1922. Serial No. 571,126. 1 Claim. (Cl. 123—188.)



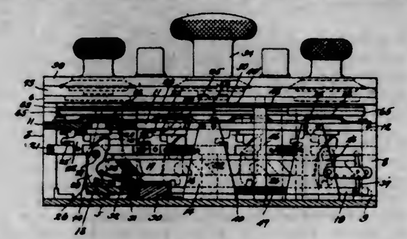
The combination with an engine structure including an exhaust port having a valve seat in its lower end, of a valve movable upwardly against the seat to close the port, an upwardly extending stem projecting from the valve and through the port, a cleaning disk loosely mounted on the stem above the valve and within the port, said disk adapted to slide and rotate freely upon the stem, and means on and movable with the stem between the valve and disk for limiting the movement of the disk in one direction relative to the stem.

1,577,243. AUTOMATIC AIR GAUGE. CHARLES E. BRIDGES, Long Beach, Calif. Filed Mar. 10, 1925. Serial No. 14,460. 2 Claims. (Cl. 137—153.)

1. An automatic air gauge for inflating pneumatic tires, comprising an elongated cylinder having an internal bore, a recess of larger diameter than the bore formed in one end thereof, an air inlet in the base of the recess, an air outlet in the lower end of the cylinder above the recess, a piston having a pair of heads, one of said heads being larger than the other, with the larger head within the recess and the smaller head within the bore of the cylinder, a plunger having a plurality of annular grooves slidably mounted in the bore of the cylinder, an expansion spring between said plunger and piston and a dog formed of spring material having one end secured to the cylinder and the other end adapted to engage the annular groove in said plunger.

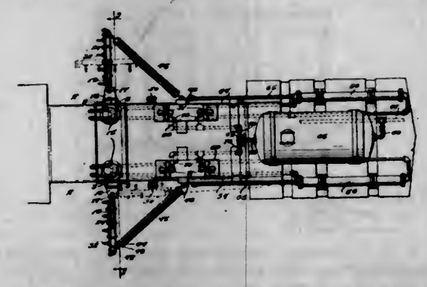
1,577,244. ROTARY DRILL BIT. JACOB S. BROWN, Los Angeles, Calif., assignor of one-half to Walter F. Eichenhofer, Los Angeles, Calif. Filed June 7, 1923. Serial No. 643,929. 8 Claims. (Cl. 255—61.)

1. A drill bit having liquid conveying ducts therein increasing in cross sectional area from their upper ends to their lower ends, grooves communicating at their upper ends with the lower ends of the ducts, and shields attached along corresponding sides of the grooves and open at the opposite sides and arranged in overlying relation to the grooves.



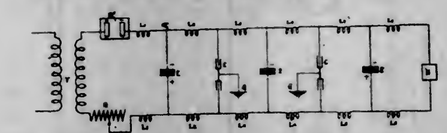
1,577,245. TUNING DEVICE FOR VIOLINS. FRANK A. BUA, Lodi, N. J. Filed Mar. 19, 1924. Serial No. 700,339. 1 Claim. (Cl. 84—304.)

A tuning device of the character described comprising an apertured concavo convex body formed with a relatively short rear wall and a relatively long forward wall, curvilinear lips formed on the upper ends of the walls, split headed bolts arranged in parallelism and passing through the apertures of the body, and nuts of the sleeve type mounted on the screws and having their lower ends normally arranged at a point between the lips of the body.



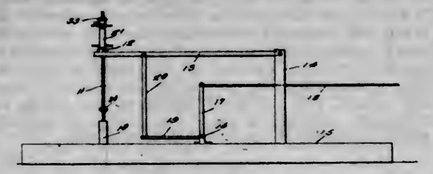
1,577,246. PERMUTATION LOCK. HENRY A. BURKHART, Fitzgerald, Ga. Filed Feb. 14, 1924. Serial No. 692,806. 8 Claims. (Cl. 70—53.)

1. In a lock construction, a frame, a tumbler carriage mounted for sliding movement within the frame, transversely movable dogs mounted within the frame and adapted to move in the paths of travel of the tumblers, a link for operating each dog, disks having heart-shaped



grooves, said links having pins adapted to move in the grooves for transmitting movement of the disks to the links, means for operating the disks, and a sliding bolt operated by the movement of the tumbler carriage.

1,577,247. WEED PULLER AND BALLAST RENOVATOR. ANDREW M. CLOUGH, Batavia, N. Y., and JOHN W. CARNOHAN, Cleveland, Ohio. Filed June 7, 1923. Serial No. 644,029. 8 Claims. (Cl. 262—8.)



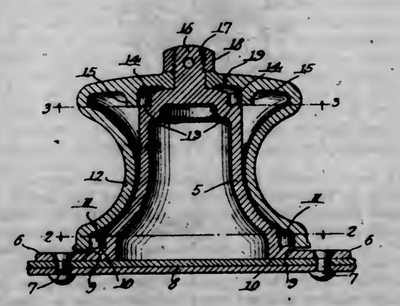
1. Apparatus for the purpose set forth comprising a rake, a support for the rake mounted upon the side of a car, the rake being pivotally mounted on said support at a point removed from the side of the car whereby it may be reversed, and means for securing the rake in angular relation to the side of the car while in either position relative to the support.

1,577,248. METHOD OF AND APPARATUS FOR DERIVING A CONSTANT CURRENT. SAMUEL COHEN, Brooklyn, N. Y. Filed Apr. 18, 1924. Serial No. 707,372. 3 Claims. (Cl. 171—97.)

1. A circuit including a plurality of mains, a load connected to one end of said mains, a source of current connected to the other end of said mains and adapted to deliver a complex current having a load component and a non-load component of higher frequency than said load component, impedance means connected in series with said mains, relatively large capacity means connected in shunt with said mains and between sets of said impedance means, relatively small capacity means connected in shunt with said mains between other sets of said impedance means, and connections leading from a mid-point in each of said relatively small capacity means to ground.

1,577,249. SPACING JACK. FRANK B. COMSTOCK, Knapp Creek, N. Y. Filed Dec. 3, 1923. Serial No. 678,293. 1 Claim. (Cl. 255—18.)

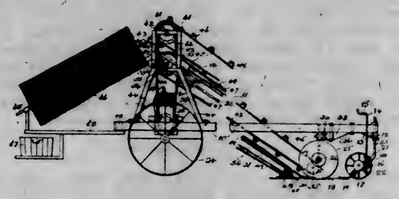
An adjusting jack for use with a rod member, said jack comprising a casing, a sleeve fitted in the upper end of the casing and interiorly threaded, a hollow adjusting screw threaded in said sleeve and of a length substantially equal to that of the casing, and projecting above the sleeve, handle bars projecting laterally from said screw above the casing, handle bars projecting laterally from the casing adjacent the lower end thereof, a cap swivelly mounted on the upper end of said screw and having a central opening to receive said rod member when passed through the screw, and a clamp adapted to engage said rod member and repose upon the cap.



1,577,250. GAME. LEWIS W. CORP, Santa Barbara, Calif. Filed Nov. 24, 1925. Serial No. 71,124. 2 Claims. (Cl. 273—100.)

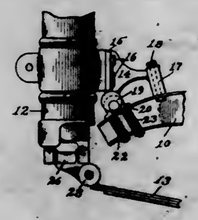
1. In a game, a catapult device comprising an inclined board, a pair of pegs at the upper end, an elastic stretched over said pegs, a block forming a finger grip, the said board having a plurality of apertures and means on the block to engage different apertures.

2. In a game a projectile comprising a U-shaped strip of material, sheet metal hooks secured to the ends thereof by folding the metal and pressing it into the ends of the strips, said hooks having a return bend forming the hooks to engage a catapult device.



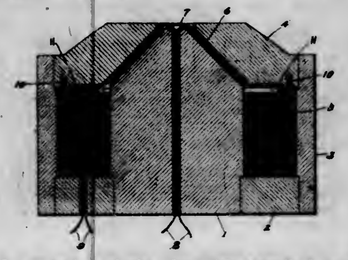
1,577,251. CHOCK. ALBERT A. COYLE and WILLIAM S. MITCHELL, St. Louis, Mo. Filed Apr. 23, 1925. Serial No. 25,452. 1 Claim. (Cl. 254—190.)

In a device of the character described, a body portion having a flange formed at its base, said flange having a cut away portion defining a shoulder, and a substantially flat supporting surface directly above the shoulder, a drum mounted on the body portion and



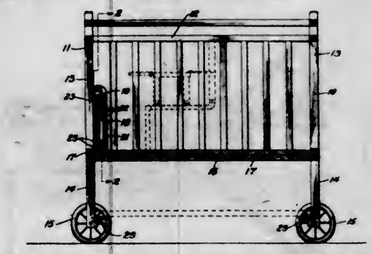
having a depending lower portion adapted to operate adjacent to the shoulder, roller bearings mounted on the supporting surface and engaging the body portion and depending lower portion of the drum, a depending flange formed on the inner surface of the upper portion of the drum, roller bearings mounted on the body portion adjacent to the upper end thereof, said flange adapted to engage the roller bearings at the upper end of the body portion, said body portion having a reduced upper end portion, and said drum having an opening to accommodate the reduced upper end portion of the body portion to secure the drum to the body portion.

1,577,252. HARVESTER FOR ONION SETS OR THE LIKE. JOHN G. ENNIGENBURG, Lansing, Ill. Filed Jan. 30, 1925. Serial No. 5,694. 7 Claims. (Cl. 55—9.)



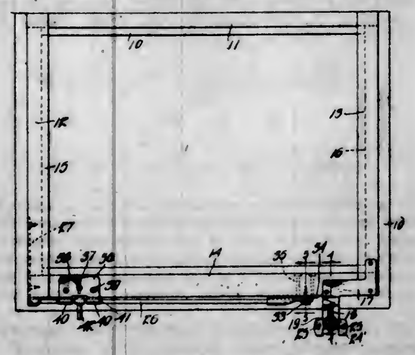
1. A harvester of the class described, the combination of a frame, a ground plate secured to the frame, means for upturning ground and included sprouts upon the ground plate, a movable conveyor for carrying the sprouts rearwardly from the ground plate, means overlying the conveyor and co-operating therewith for disintegrating and separating the soil from the sprouts, and a rotating sifter drum at the discharge end of the conveyor into which the sprouts are discharged, substantially as described.

1,577,253. MOUNTING FOR VEHICLE AIR SPRINGS AND THE LIKE. RAYMOND L. GRUSS, San Francisco, Calif., assignor to Gruss Air Spring Co., San Francisco, Calif. Filed Nov. 6, 1923. Serial No. 673,085. 7 Claims. (Cl. 267—65.)



1. In a vehicle suspension wherein a telescopic air spring is interposed between the usual leaf spring and frame at the ends of the latter, a mounting for the telescopic spring, comprising a bracket having a connection with the end of the vehicle frame bar permitting angular movement of the bracket in a vertical plane longitudinally of the vehicle, a vertically disposed face plate on the bracket to which the telescopic spring is connected, an extension on the back of the face plate terminating in a boss to rest upon the top of the frame bar, said boss being of a length to bring the face plate of the bracket into a perpendicular position, fastening means between the boss and the frame bar, and a connection between the leaf spring and the air spring.

1,577,254. SOUND REPRODUCER. HARVEY C. HAYES, Washington, D. C. Filed Jan. 9, 1924. Serial No. 685,290. 4 Claims. (Cl. 179—115.)

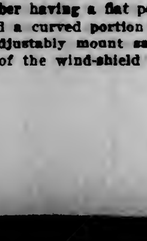


4. In a device of the character described means for creating a conical magnetic gap, a conductive cone diaphragm vibratorily suspended in said gap, and means for inducing uniformly distributed eddy currents in said diaphragm.

1,577,255. COMBINATION CRIB. MARY C. HILL, Hoboken, N. J. Filed Apr. 6, 1925. Serial No. 21,146. 5 Claims. (Cl. 5—93.)

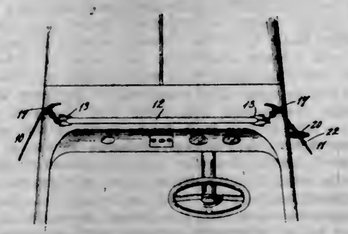
5. In combination with a crib comprising a body and supporting legs therefor, a removable floor, means for supporting said floor within said body, a foldable chair mounted on said floor, and members carried by said legs for supporting said floor upon its removal from said body when said chair is in a folded condition.

1,577,256. CONNECTER FOR TWO-PART AUTOMOBILE DOORS. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed Feb. 3, 1925. Serial No. 6,634. 12 Claims. (Cl. 296—45.)



3. A connecter for two-part vehicle doors having a lower permanent section and an upper demountable section comprising a resilient rod non-circular in cross section, and means adjacent to opposite sides of the demountable upper section along the lower end of the same for connecting the ends of the rod to said upper section in relatively twisted relation to each other, substantially as set forth.

7. A connecter for two-part vehicle doors having a lower permanent section and an upper demountable section comprising an anchor plate having a pair of spaced sockets, a screw journaled in said sockets, and a laterally adjustable bearing pin having threads engaging those of the screw, substantially as set forth.

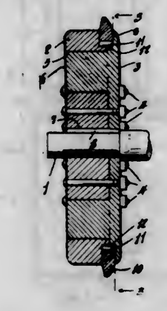


12. A connecter for two-part vehicle doors having a lower permanent section and an upper demountable section comprising a normally twisted resilient rod non-circular in cross section, and means at spaced points along the lower end of the upper door section for connecting the ends of the rod to said upper section in strained relation, said means being slidably connected to said rod, substantially as set forth.

1,577,257. AWNING FOR VEHICLES. ARTHUR HUTCHISON, Neosho, Mo. Filed Oct. 12, 1923. Serial No. 668,179. 1 Claim. (Cl. 296—95.)

In a device of the class described, a spring roller, an awning to be wound on the roller, a U-shaped frame engaging the lower edge of the awning, means for pivoting the frame to swing angularly with reference to a door frame, said means including portions offset from the ends of the frame, and brackets through which the offset ends pass in the same direction but in reverse relation with reference to the inner and outer sides of the brackets, one of the brackets carrying a segmental notched element engaging the adjacent portion of the frame, a spring holding the frame against the notched element, and a pressure device for releasing the frame from the notched element, against the expansive action of the spring, said spring normally holding both side members of the frame in engagement with the brackets.

1,577,258. AUTOMOBILE WIND DEFLECTOR. BERN JASSEN, New York, N. Y. Filed Mar. 27, 1922. Serial No. 547,025. 3 Claims. (Cl. 296—84.)

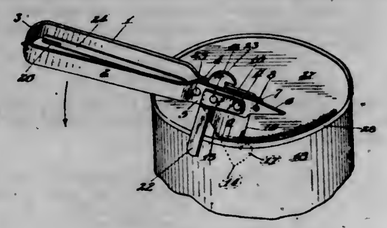


1. An automobile side wind deflector comprising a transparent member having a flat portion terminating at its rear edge and a curved portion at its forward edge, and means to adjustably mount said transparent member at one side of the wind-shield with the curved portion in advance of the wind-shield, the transparent member being adjustable to one position to dispose the curved portion to overlap in front of the wind-shield with the flat portion extending angularly outward and to be disposed in another position with the curved portion spaced laterally from the wind-shield to catch air and with the flat portion extending angularly inwardly to direct the air into the vehicle.

1,577,259. COTTER KEY. JESSE C. JOHNSON, Delray, Fla. Filed Sept. 14, 1925. Serial No. 56,342. 1 Claim. (Cl. 74—8.)

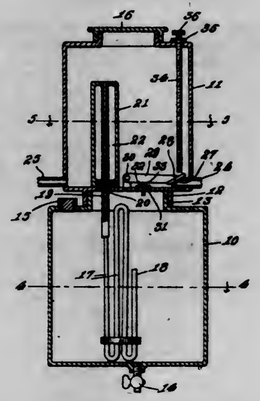
A cotter pin formed from a single length of material and bent upon itself to provide a short limb and a relatively long limb, said long limb being straight for a portion of its length equal to the length of the short limb, and then bent in the direction of the short limb to position the remaining portion of the long limb in advance of and in substantially the same plane with the short limb.

1,577,260. CAR WHEEL. JAMES M. JONES, Hamilton, Ohio. Filed June 27, 1925. Serial No. 39,981. 3 Claims. (Cl. 295—9.)



2. A composite car wheel formed of mating sections, one of said sections having projections extending laterally from one of its faces, the other section having openings therein to snugly receive said projections, the abutting faces of said sections having recesses therein forming a circumferential groove in the tread of the wheel, and an annulus mounted in said groove and rotatable relatively to the wheel tread, said annulus projecting beyond the periphery of the wheel and forming a flange therefor.

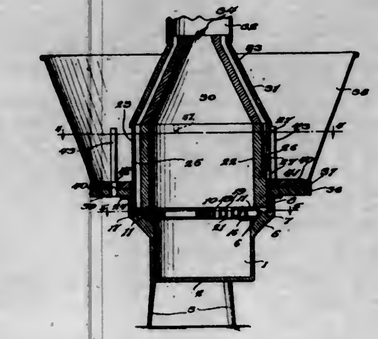
1,577,261. CAN OPENER. FREDRICK E. JOHNSON, Los Angeles, Calif. Filed June 27, 1924. Serial No. 722,688. 3 Claims. (Cl. 30—3.)



1. A can opener comprising a handle, a cutter extending downwardly from the forward end of the handle and having a main cutting edge extending from the handle downwardly and diagonally toward the forward end of the can opener toward the handle and a secondary cutting edge extending from the lower end of the main cutting edge and forming a point, a fulcrum member extending upwardly from the secondary cutting edge and offset to engage the inner side of a can rim, and a guide

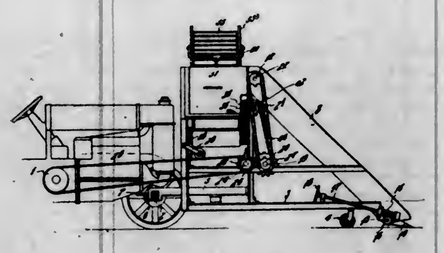
bar extending from the handle outside of the cutter and in front of the main cutting edge to engage the outer side of a can rim, so that when the point has been in-

serted through a can top inside of the can rim the fulcrum will engage the can rim and the cutter will work on a down stroke of the handle to cut the can top.



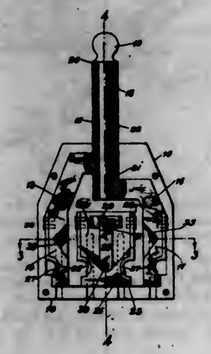
1,577,262. LOCOMOTIVE-FLANGE OILER. LESLIE R. KIEHL, Raton, N. Mex. Filed Aug. 2, 1924. Serial No. 729,776. 4 Claims. (Cl. 184—3.)

1. A device of the character described comprising a pair of casings arranged one above the other, the lower casing serving as an oil reservoir, a condensation coil arranged vertically within the lower casing and having one end terminating therein and its other end leading into the upper casing to convey steam from the upper casing to the lower casing to displace oil therefrom, a pipe leading from the upper casing and terminating in branches leading to the locomotive wheels to be oiled, a control valve between the casings for the passage of the displaced oils, a steam pipe leading into the upper casing, and means operated by flow of steam through said pipe to regulate said valve.



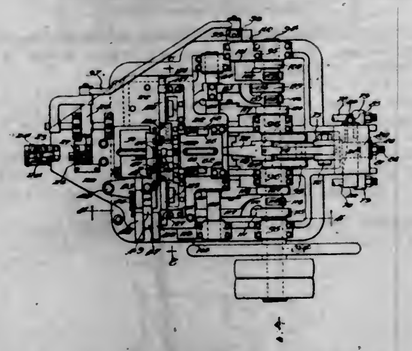
1,577,263. SAND DRIER. EDWARD C. KIRK, St. Albans, W. Va. Filed July 28, 1925. Serial No. 46,642. 6 Claims. (Cl. 34—34.)

6. A sand drier comprising a base constituting an ash pit having communication with the atmosphere, a fire-box resting upon the said base, a hollow grate at the lower end of the fire-box, a hopper supported on the fire-box and surrounding the same, the wall of the fire-box having air passages therethrough, some of said air passages communicating with the hollow grate and others of said passages communicating with the interior of the



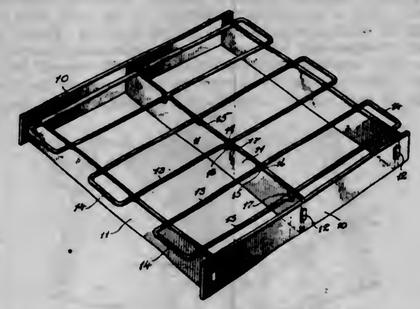
hopper, and means for regulating the flow of air through the fire-box, the flow through the said air passages in the wall of the fire-box being unobstructed at all times.

1,577,264. SNOW-REMOVAL APPARATUS. JOSEPH KLAMT, Howell, Nebr. Filed Apr. 14, 1924. Serial No. 706,493. 3 Claims. (Cl. 37—45.)



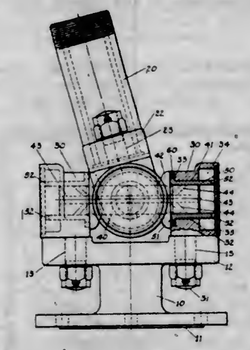
1. An apparatus for removing snow adapted to be used in front of and connected with and moved by a tractor, the said apparatus comprising a main frame the forward portion of which is wheel supported, an inclined elevator frame carried by the main frame, an endless conveyor arranged in said elevator frame, a shoe carried by the elevator frame at the lower end thereof, a transverse trough carried by the main frame and arranged to receive snow from the forwsrd stretch of said conveyor and having removable end gates, a transverse endless conveyor arranged in said trough, a lateral discharge trough removably supported at its inner end on the main frame and detachable and shiftable bodily from one side of said main frame to the other, an endless conveyor in said lateral discharge trough, a transverse shaft journaled in the main frame and adapted to be rotated from a motor driven wheel of a tractor, driving connections between said shaft and the elevating and transverse conveyors, the driving connection complementary to the transverse conveyor being reversible, and a driving connection including a sprocket belt intermediate of the transverse conveyor and the conveyor in the lateral discharge trough, the sprocket belt of the latter driving connection being shiftable from one side of the apparatus to the other.

1,577,265. PLUG. JERRY S. KOBCAK, New York, N. Y. Filed Nov. 3, 1924. Serial No. 747,601. 3 Claims. (Cl. 200—51.)



1. A plug for use in connection with radio receiving apparatus comprising an insulated casing, a pair of conductor members arranged in spaced relation with said housing, a socket formed in each of said members, a block of conducting material disposed between said members and spaced therefrom, a pair of sockets in said block, and means for selectively bridging the space between said block and said members, said means including a swingingly mounted T-shape arm.

1,577,266. NAIL-FORMING MACHINE. CARL A. PORATH and GEORGE N. WILLIAMS, Kokomo, Ind., assignors of one-half to Kokomo Steel and Wire Company, Kokomo, Ind., a Corporation of Indiana. Filed July 11, 1922. Serial No. 574,146. 6 Claims. (Cl. 10—49.)

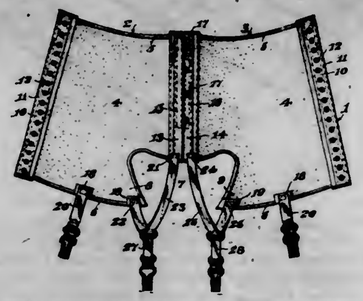


2. In a nail forming machine, the combination of means for feeding forward a length of nail stock, grippers for engaging said nail stock, a rotatively mounted reciprocating header provided with a dished surface and with a flattening surface, means for initially rotating the header to bring the dished surface to the wire line to form a preliminary head and for thereafter rotating the header to present a flattening surface to the wire line to spread the preliminary formed head laterally, and means for reciprocating the header, substantially as described.

1,577,267. GRATING. JOHN D. SPAULDING and OLIVER D. COLLIS, Clinton, Iowa, assignors to The Collis Company, Clinton, Iowa, a Corporation of Iowa. Filed Jan. 30, 1925. Serial No. 5,700. 8 Claims. (Cl. 211—14.)

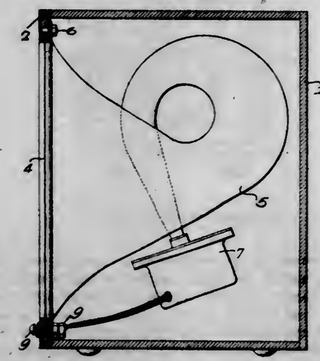
1. In a grating, the combination of a plurality of cross bars, each provided in its supporting edge with a plurality of recesses, and a plurality of cross rods bridging the space between the bars, said cross rods being arranged in units of two rods bent to closed formation and having their ends overlapped within one of the recesses, substantially as described.

1,577,268. UNIVERSAL JOINT. GORDON LUCIUS TABOR, North Plainfield, N. J. Filed Dec. 10, 1924. Serial No. 755,021. 10 Claims. (Cl. 64—102.)



1. A universal joint comprising a driving and driven member journaled at right angles to each other to a trunnion block, circular lubricant reservoirs located beyond the end of the journal pins, annular reservoirs surrounding each circular reservoir and connected thereto, said trunnion block provided with communicating passage connecting the reservoirs with each other.

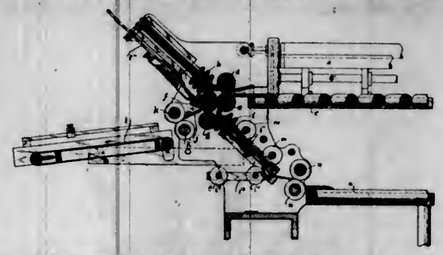
1,577,269. BODY GARMENT OF THE CORSET OR GIRDLE TYPE. RALPH S. THOMPSON, New York, N. Y. Filed Aug. 2, 1924. Serial No. 729,764. 3 Claims. (Cl. 2—38.)



3. A body garment comprising an elastic body portion of band-like form to completely surround the body of the wearer and having the lower part of its front centrally thereof, formed with a cutout portion opening centrally of the bottom edge of said front, the top edge of said cutout portion extending a substantial distance from and on each side of the vertical median of said front and positioned a substantial distance above the bottom edge

of said body portion, the side edges of said cutout portions extending towards each other at an inclination and each terminating at one side of said vertical median to provide in connection with said bottom edge a pair of oppositely disposed tapering portions extending towards each other, a reinforcement secured to the outer face of each of said tapered portions at the free end thereof, a pair of oppositely disposed, curved, depending strap-like coupling members having their upper ends spaced from each other and fixedly secured to said front at the top edge of said cutout portions, said members having their

lower ends fixedly secured to said reinforcements, and lengthwise adjustable means slidably mounted on and automatically shiftable lengthwise of each of said coupling members for synchronously exerting in connection with said tapered portions direct downward pulls and diagonal pulls in opposite directions on the garment with respect to the body of the wearer when the garment is worn, the upper end of each of said coupling members positioned at one side of and spaced from said vertical median.

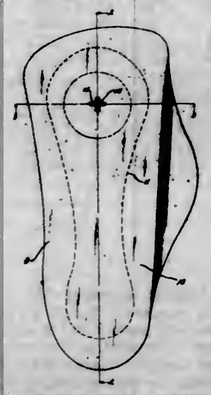


1,577,270. TELEPHONE RECEIVER. JOHN S. TIMMONS, Philadelphia, Pa. Filed Feb. 25, 1922. Serial No. 539,069. 2 Claims. (Cl. 181—27.)

1. A sound amplifying device comprising a horn of graduated diameter coiled intermediate its ends in the direction of its length, the small end of the horn intersecting and extending through the larger portion of the horn and lying in the plane defined by the convolution of the coil.

1,577,271. PAPER-FOLDING MACHINE. WALTER G. TRAUTMAN, Cleveland Heights, Ohio, assignor to The Cleveland Folding Machine Co., Cleveland, Ohio, a Corporation of Ohio. Filed May 15, 1924. Serial No. 713,495. 8 Claims. (Cl. 270—68.)

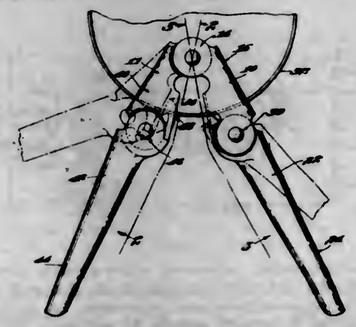
1. In mechanism of the class described, the combination with folding and buckling rolls of a folding plate open from end to end and operatively associated therewith, a stop device adapted to be actuated into positions



for deflecting the signatures through the folding rolls, and signature-receiving means disposed adjacent to both ends of said folding plate, substantially as set forth.

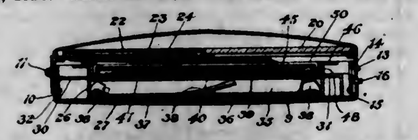
1,577,272. WRIST PENCIL AND HOLDER THEREFOR. LINTON E. TREADAWAY, Daytona Beach, Fla., assignor of one-half to John J. Reedy, Daytona, Fla. Filed Sept. 2, 1925. Serial No. 54,085. 6 Claims. (Cl. 242—98.)

1. An article holder including a tubular article receiver, a flexible article holding connection extending through the receiver, a spring drum within the holder around which one end of the flexible connection is wound, a lever for engagement with said drum to prevent rotation of the latter under tension of its spring, said lever being mounted in the holder and shiftable into and out of operative position in engagement with the drum, said lever having means engageable by an article upon insertion of the latter within the receiver to shift the lever into operative position and said lever also having means engageable by the flexible connection when the article is out of the receiver for shifting the lever into inoperative position.



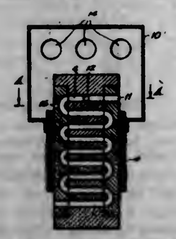
1,577,273. ARCH SUPPORT. CARL H. TRIESCHMANN, Milwaukee, Wis. Filed July 21, 1924. Serial No. 727,221. 1 Claim. (Cl. 36—71.)

An adjustable arch support, comprising a leather insole member formed with a bottom layer and a top layer secured together by a line of stitching spaced from the edges of said portions to provide a pocket between the layers and to permit the insole edges to be trimmed, and



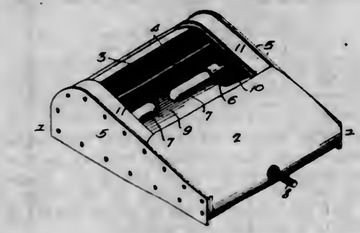
a yielding, non-removable pad member within said pocket, one of said insole layers having a cross-shaped opening therein engaging said pad member and permitting the insertion of a tool for the purpose of adjusting said pad member within the pocket.

1,577,274. CAN OPENER. JAY C. TRUESDELL, Jamaica, N. Y., assignor to George O. Gridley, Springfield, Mass. Filed Mar. 16, 1923. Serial No. 625,496. 2 Claims. (Cl. 30—3.)



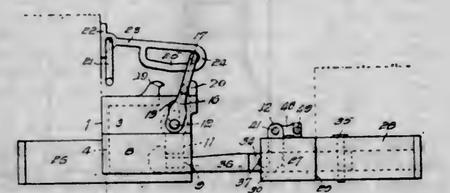
1. An apparatus of the class described comprising two jointed levers pivoted together adjacent their inner ends, cooperating gripping members carried by one of the levers and adapted to engage a container at the junction of the top and side wall, and a cutting blade carried by the cooperating lever and adapted to pierce the side wall of the container below the top upon movement of the two parts of the lever into alinement and to sever the side wall upon relative bodily movement of the levers about the pivotal connection.

1,577,275. LOOSE-POWDER CONTAINER. WILLIAM J. TUCKER, Norton, Mass., assignor to Saart Brothers Company, a Corporation of Rhode Island. Filed Nov. 9, 1925. Serial No. 67,827. 6 Claims. (Cl. 132—83.)



5. In an article of the character described, a box provided with a pocket, a cover on the box, a resilient member in the pocket, a disk loose in the pocket provided with perforations and resting upon the resilient member, elevations upon the disk, a closed frame seated in the pocket adjacent the disk below the cover, and a pad in the frame resting on the disk and closing the openings.

1,577,276. ELECTRICAL HEATER. WALTER WHITTEN, Schenectady, N. Y. Filed Nov. 15, 1923. Serial No. 674,944. 2 Claims. (Cl. 219—47.)

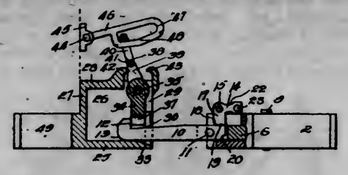


1. An electrical heater which comprises a central, substantially solid core having vertically extending passages therethrough, a cylindrical shell surrounding said core, said shell having vertical passages extending therethrough, upper and lower perforated plates connecting the core with the shell, and an alternating current winding surrounding said core.

1,577,277. THERAPEUTIC DEVICE. GERTHA E. WOLFE, Philadelphia, Pa. Filed Apr. 17, 1925. Serial No. 23,807. 1 Claim. (Cl. 174—177.)

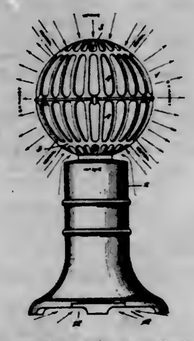
The combination in a device for baking or heating the under portion of the knee of a patient, of a frame higher at one end than at the opposite end and having an inclined cushion section extending from one side to the other; a recess at the higher end of the frame adjoining the cushion section; cushion sections at each side of the recess; a curved reflector in the recess; electric lamp sockets secured to the side walls of the recess; and a cross-bar extending over the recess from one side to the other side, the ends of the frame being curved.

1,577,278. COUPLER. JOSEPH WESOLIK, Belleville, Ill., assignor of one-fourth to Ewall Leutscher, Belleville, Ill., and one-fourth to Ludwig Kribben, Clinton, Mass. Filed Aug. 27, 1923. Serial No. 659,471. 2 Claims. (Cl. 213—176.)



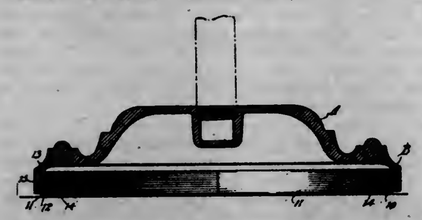
1. In a mine car coupler structure, a draw bar, a hollow coupler head integral with the forward end of said draw bar, pull shoulders formed at the front open end of the coupled head, a swingable and vertically movable coupling member positioned within and at the forward end of the coupler head and engageable with said shoulders when in its normal position, a yoke member pivotally connected to said coupling member, a pair of spaced lugs directed upwardly and inwardly from the top of the coupler head to prevent accidental vertical displacement of the coupling member by engaging the yoke member and an arcuately movable looped member engaging said yoked member for lifting the coupling member from coupled engagement with the coupling member of a companion coupler.

1,577,279. COUPLER. JOSEPH WESOLIK, Belleville, Ill., assignor of one-fourth to Ewall Luetscher, Belleville, Ill., and one-fourth to Ludwig Kribben, Clinton, Mass. Original application filed Aug. 27, 1923, Serial No. 659,471. Divided and this application filed Jan. 26, 1925. Serial No. 4,752. 3 Claims. (Cl. 213—176.)



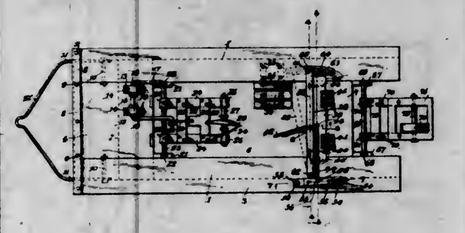
1. In a coupler construction, a coupler head, a draw bar integral therewith having a bifurcated forward end, said head and draw bar having a longitudinal passage therein, a slidable member having a slotted opening therein mounted in said passage, a pin carried by the

draw bar and passing through the slotted opening of the slidable member, a connecting bar pivotally connected to the bifurcated end of the slidable member, a jaw at the forward end of the connecting member, an angular trigger member pivotally supported by the coupler head with one arm thereof directed downwardly to en-



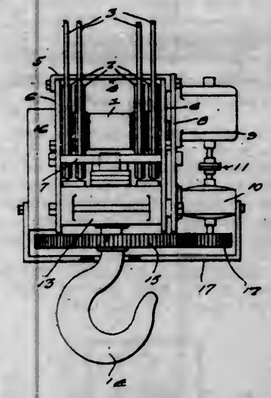
gage the upper face of the rear end of said connecting bar to hold the bar in a horizontal coupling position and a handle connected to the other arm of the trigger for actuating the first mentioned arm of the trigger from contact with the connecting bar to permit the bar to fall by gravity to a perpendicular position.

1,577,280. VENTILATING FAN. SOCRATES A. XIPPAS, Pittsburgh, Pa. Filed Nov. 9, 1925. Serial No. 67,797. 13 Claims. (Cl. 230—1,)



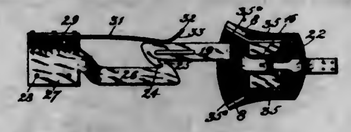
1. In a device of the class described, a rotary blast device, an enclosing casing therefor, said casing having a medial zone and two polar zones of openings therein, and means on said blast device whereby the air is drawn into said casing through the openings in the polar zones said means serving to discharge the air through the openings in the medial zone.

1,577,281. SURFACE PROTECTOR. SIMON MATZNER, New York, N. Y. Filed May 18, 1925. Serial No. 31,134. 2 Claims. (Cl. 45—137.)



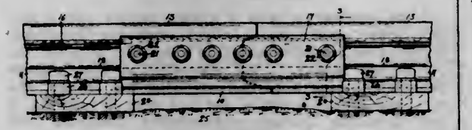
1. The combination with a supporting base having a depending marginal rim, of a surface protecting device for preventing the scratching or marring of the surface upon which the base rests, comprising a resilient strip of material, a tubular yieldable covering thereover, radially adjustable elements extending through the strip and covering and pointed terminals at the outer end of said elements adapted to bite into the inner periphery of the rim for maintaining the strip in place with the thickness of the covering projecting beyond the lower edge of the rim.

1,577,282. AGRICULTURAL IMPLEMENT. WILLIAM H. MCCARTNEY, Salem, Oreg. Filed June 6, 1924. Serial No. 718,298. 1 Claim. (Cl. 111—69.)



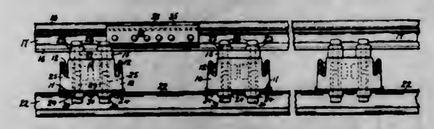
In an agricultural implement, a row covering device of the character set forth, comprising an elongated beam mounted transversely of said implement, an oscillatory shaft carried in vertical position by said beam and having its lower end bent to extend forwardly and further having its upper end bent to provide a laterally extending arm having its terminal portions turned upwardly, a covering blade secured to said bent lower end, a retaining element about said upturned terminal portion allowing limited movement of the same to revolve said shaft, and means overlying said element for engaging the portion extending therethrough to hold the same in any one of a plurality of positions.

1,577,283. SWIVEL HOOK. AMBRICUS MITCHELL, Beaver Falls, Pa. Filed Apr. 27, 1925. Serial No. 26,157. 1 Claim. (Cl. 294—82.)



In a structure of the class described, a supporting frame, a motor carried by said frame, a speed governor carried by said frame, said speed governor being coupled with the shaft of said motor, said speed governor including a shaft, a pinion carried by said shaft, a cross head carried by said frame, a hook swivelly mounted upon said cross head, a gear carried by the shank of said hook, said pinion meshing with said gear, and a counter-balancing weight carried by said frame and located on a side opposite to that upon which the motor is disposed.

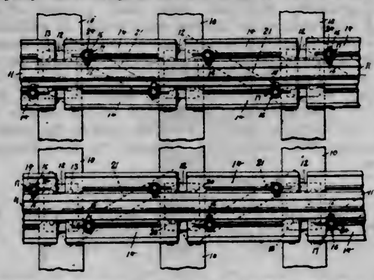
1,577,284. CAR COUPLER. CHARLIE B. MOORE, Altoona, Pa. Filed Feb. 26, 1925. Serial No. 11,777. 4 Claims. (Cl. 213—105.)



1. In a device of the character described, the combination with one of the coupling members, of a wear-plate adapted to be secured to the floor of a car; a U-shaped coupler support horizontally rotatable on said plate; a horizontal journal for connecting said support with one of the coupler members; and opposing springs for pressing the U-shaped member to yieldingly hold the same in a fixed position.

1,577,285. RAILWAY-RAIL CONSTRUCTION. GEORGE W. MULLER, Washington, D. C. Filed July 9, 1925. Serial No. 42,540. 9 Claims. (Cl. 238—144.)

1. A railway rail, including a tie flange and an upstanding web, the said web comprising a thicker head portion and a thicker lower portion adjoining the said rail flange and an intermediate thinner portion extending between the said thicker portions whereby shoulders are formed on both sides of the rail web at the junction of the said thinner intermediate portion and the said thicker lower portion of the web, a supplementary rail constructed for arrangement on either side of the web and having a groove adapted to engage the said head of the web, said rail having also a bead fashioned and disposed to engage either of the said shoulders on whichever side of the web the said rail may be placed, and securing means for fastening the said rail and web together.

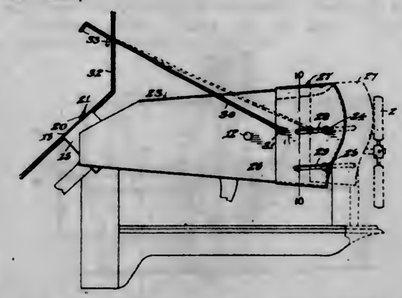


1,577,286. RAILWAY-BED STRUCTURE. GEORGE W. MULLER, Washington, D. C. Filed July 9, 1925. Serial No. 42,541. 8 Claims. (Cl. 238—26.)

7. A railway tie of plastic material, sleeve devices embedded in the tie with securing means, load bearing rails above the tie, supporting rails beneath the tie, and clamping means coacting with the sleeve securing means and operating to bind the load bearing rails and the supporting rails relative to the tie.

1,577,287. RAIL AND TIE HOLDING MEANS. GEORGE W. MULLER, Washington, D. C. Filed Oct. 27, 1925. Serial No. 65,147. 14 Claims. (Cl. 238—214.)

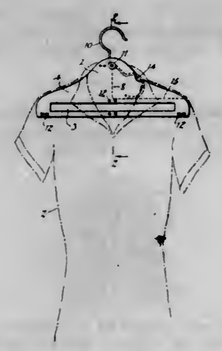
1. Rail clamping plates located on opposite sides of the rail and extending from one tie to another and provided with means whereby the ties are individually engaged and the clamping plates held thereon against displacement, a brace member bearing beneath the ties engaged by the said clamping plates and arranged obliquely with respect to the rail, and means located



at the sides of the ties and engaging the said brace member and clamping plates whereby the rail, the clamping plates and the said brace member are secured to the tie.

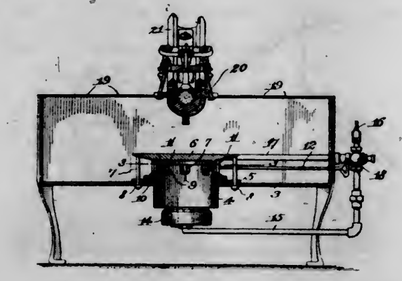
1,577,288. COMPOUND RAIL. GEORGE W. MULLER, Washington, D. C. Filed Nov. 21, 1925. Serial No. 70,521. 7 Claims. (Cl. 238—144.)

1. A railway rail, formed of a plurality of separable body members, one of the said members having a flange or base adapted to rest upon a railroad tie, the said member having a web portion provided with an inclined side, a load-carrying member having a head or ball forming the tread of the rail, the said load-carrying member having a wedge-shaped web arranged in contact with the said inclined side of the member first mentioned, clamping plate members arranged end to end and co-extensive with the length of the rails and constructed and arranged to bear against the other side of the web of the load-carrying member, and means for securing all the said members together.



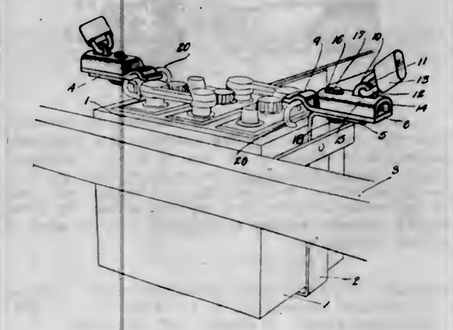
1,577,289. HEATER ATTACHMENT FOR MOTOR VEHICLES. HARLAN B. MUNGER, Balko, Okla. Filed Apr. 27, 1925. Serial No. 26,198. 4 Claims. (Cl. 257—241.)

1. A heating attachment for motor vehicles comprising a combined air collecting, confining and directing element adapted to be arranged in overlapping position with respect to the exhaust manifold of the vehicle and including an outer portion, an inner portion and an



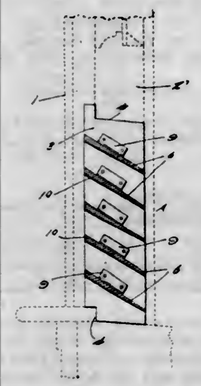
upper portion spacing the inner and outer portions from each other, said outer portion of a length greater than the length of the engine block and projecting forwardly and rearwardly therefrom, said inner portion of less length than said outer portion and further of materially less height than the latter, an air controlling element slidably mounted on, overlapping and conforming in contour to the shape of the forward end portion of said directing element and capable of being extended to a point in close proximity to the fan of the vehicle and the said elements having coacting means for slidably connecting the controlling element to the directing element.

1,577,290. CLOTHES HANGER. LOUIS I. NASH, New York, N. Y. Filed Jan. 30, 1925, Serial No. 5,864. Renewed Jan. 7, 1926. 4 Claims. (Cl. 223—62.)



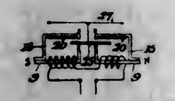
1. A garment hanger, comprising a body formed with the upper part shaped to conform to the shoulders of a dress, said body being formed at the lower part with a slot adapted to receive clothes to be supported, said body being formed with a pair of side plates and a central filling plate having a notch, and a foldable hook pivotally mounted on said body adapted to be folded into the notch in said filler plate.

1,577,291. DRY-HEAT CURING CABINET. EMIL NESTLER, New York, N. Y., assignor to Nestler Rubber Fusing Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 4, 1924. Serial No. 753,978. 2 Claims. (Cl. 18—18.)



1. A dry heat curing cabinet, comprising a casing having an opening in its bottom, a heat receiving tube fitting in the opening and projecting above and below the bottom of the casing, and means in the casing controlling the escape of heat from the tube into the casing.

1,577,292. STORAGE-BATTERY THEFTPROOF LOCKING DEVICE. CLAUDE P. OBREITER, Oklahoma City, Okla. Filed Jan. 15, 1925. Serial No. 2,576. 3 Claims. (Cl. 70—122.)

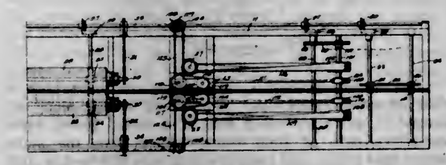


1. In combination with a storage battery and a battery holder, comprising a battery supporting strap having an angular projection at its upper end adjacent the top of the battery, a bar supported on said angular projection having a portion overlying the battery, the bar being provided with a slot and with a hasp lug, a bolt extending through said angular projection and through the bar slot, a nut on said bolt binding the bar to the projection, a housing enclosing the nut and having a slot for the hasp lug, and means co-operative with the lug to retain the housing on the bar.

1,577,293. VENTILATOR. JOHN O'BRIEN, New Waterford, Cape Breton, Nova Scotia, Canada. Filed Feb. 18, 1924. Serial No. 693,695. 1 Claim. (Cl. 98—31.)

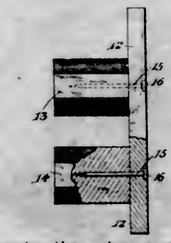
A ventilating device comprising a pair of upright pieces having their ends formed to fit the bottom of a sash and a sill of a window, the inner faces of the uprights having inclined grooves therein, shutters having their ends engaging the grooves, each shutter being composed of two wedge-shaped parts with their inner ends overlapping each other and bent strips on one part of each shutter forming guideways for the other part and clip for fastening the outer ends of the shutters to the uprights.

1,577,294. TELEPHONE RECEIVER. ALBERT PIHL, Murray, Utah, assignor to George F. Borkman, Salt Lake City, Utah. Filed Aug. 2, 1922, Serial No. 579,300. Renewed Feb. 9, 1926. 8 Claims. (Cl. 179—119.)



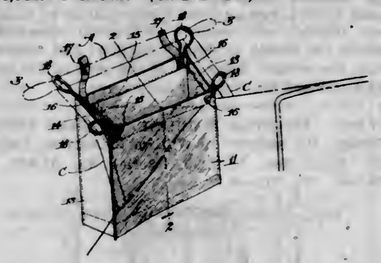
1. A telephone receiver comprising a ring member, a U-shaped permanent magnet carried by said member, two coils having cores attached to the ends of the permanent magnet, pole pieces also attached at one end to the permanent magnet and overlying and partially surrounding the coils, an armature lying between the ends of the coils and also between the inner ends of the pole pieces and the inner ends of the cores, a pivoted support for one end of the armature, a diaphragm carried by the ring member, and means connecting the diaphragm to the other end of the armature.

1,577,295. TELEPHONE RECEIVER. ALBERT PIHL, Murray, Utah, assignor to George F. Borkman, Salt Lake City, Utah. Filed Dec. 27, 1922, Serial No. 609,191. Renewed Feb. 9, 1926. 8 Claims. (Cl. 179—119.)



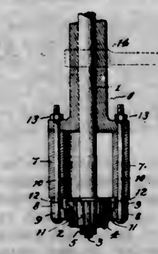
1. A telephone receiver comprising a ring member, a U-shaped permanent magnet carried by said member, pole pieces attached to the ends of the magnet and extending toward each other in substantially parallel planes, a coil retained in position between the free ends of the pole pieces and having its axis at substantially right angles to said planes, an armature pivotally carried by one of said pole pieces, a diaphragm carried by the ring member, and means connecting the armature to the diaphragm.

1,577,296. TEASEL-CLEANING MACHINE. MAX POETZSCH, Ridgewood, N. J. Filed June 22, 1923. Serial No. 647,106. 2 Claims. (Cl. 15—21.)



1. A teasel cleaning machine, comprising a guideway for guiding a teasel carrying frame, means for forcing said frame along said guideway, a series of belt brushes arranged adjacent said guideway, means for moving the belt brushes to set on the teasels carried by said frame, said means causing the operating faces of the belt brushes to travel in a direction opposite to the travel of the teasels, and a set of rotating brushes acting on the teasels carried by said frame for cleaning the same as they move along said guideway.

1,577,297. WALL CONSTRUCTION. CLARENCE RENFRO, Lexington, Ky. Filed June 17, 1925. Serial No. 37,728. 6 Claims. (Cl. 72—101.)

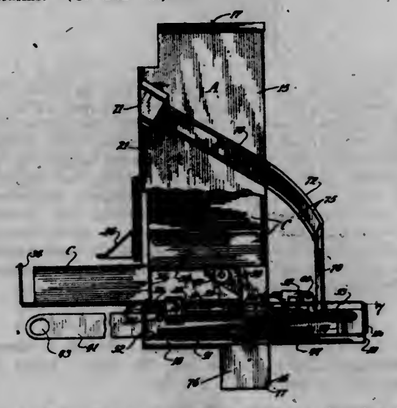


2. In wall construction a base anchoring element positioned in the manner as set forth and comprising a rectangular plate having fixedly secured to one face thereof a pair of right angularly disposed polygonal shaped spaced plugs.

1,577,298. ARTICLE CARRIER. MARY AUGUSTA ROELLER, Astoria, N. Y. Filed Dec. 4, 1924. Serial No. 753,944. 3 Claims. (Cl. 224—29.)

1. As a new article of manufacture, an article carrier consisting of a flexible boxlike structure having an open upper end defining a mouth for the introduction to or removal of the articles therefrom, and elements at the upper end thereof for detachably supporting and suspending said carrier from the handle bar structure of a body carriage, said elements engaging respectively the horizontal cross member and sloping side members of the handle bar structure whereby to gravitationally maintain the mouth of the carrier in an open position when applied to facilitate the introduction to and removal of the articles therefrom.

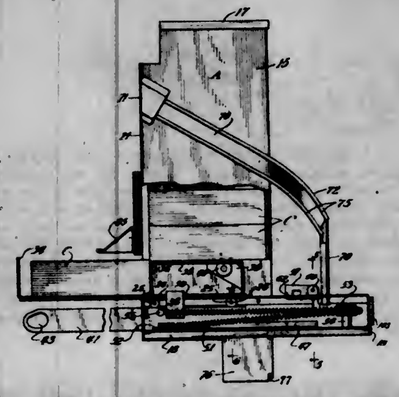
1,577,299. PINION-GEAR HOLDER. GEORGE C. ROHDE, Davenport, Iowa. Filed Jan. 19, 1921. Serial No. 438,376. 3 Claims. (Cl. 29—84.)



1. A device for holding a shaft, having a gear thereon against rotation in a support, said device being adapted to be connected to the support and having means intermeshable with the teeth of the gear for holding said gear and shaft against rotation relative to the support.

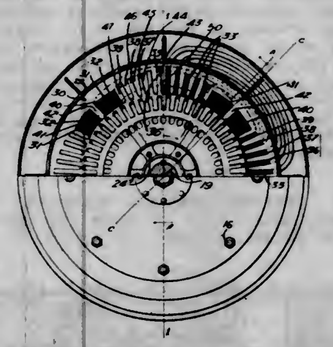
1,577,300. ELECTRIC TIME SWITCH. EDWARD SCHANKE, Santa Rosa, Calif. Filed May 4, 1925. Serial No. 27,830. 9 Claims. (Cl. 200—36.)

1. In a time switch, the combination with the dial and hour hand of a clock mechanism, of an annular contact mounted upon the dial and connected to one side of an electric circuit; a spring contact mounted upon the hour hand and adapted to maintain connection with the annular contact; a second annular contact insulated from the first and adapted to maintain connection with the other side of the electric circuit; and a contact finger mounted upon the second annular contact and adapted to be engaged by the spring contact to close the circuit through said contacts and moved therewith to maintain the circuit in closed condition; and means for moving the contact finger out of the path of the spring contact to break the circuit.



1,577,301. VENDING MACHINE. EDWARD SCHULTZ, Chicago, Ill., assignor to William N. Jenkins, Chicago, Ill. Filed Nov. 7, 1925. Serial No. 67,477. 22 Claims. (Cl. 211—8.)

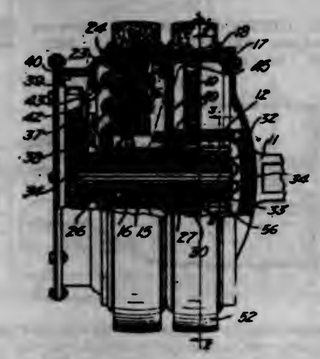
1. A dispensing apparatus, comprising a housing having a removable door, a flange secured within said housing and extending from side to side thereof parallel to said door, a removable dispensing unit, insertable through the doorway, and having a notched support engaging with said flange to position said unit parallel with said door, and detachable means for securing said unit to said housing.



14. In a dispensing apparatus having a base and a movable article delivery means, a reciprocable operating device mounted on said base and projecting from said apparatus, a coiled spring connected at one end with the enclosed portion of said device and at its other end with the forward portion of said base, and a pulley mounted on the rear portion of said base and disposed intermediately of the spring ends around which the spring is required to travel, whereby its effective length is increased and uniform tension may be exerted on said operating device during operation.

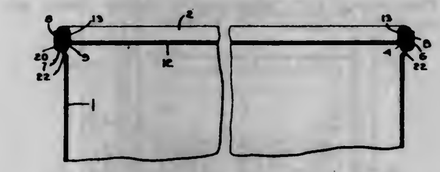
1,577,302. VENDING MACHINE. EDWARD SCHULTZ, Chicago, Ill., assignor to William N. Jenkins, Chicago, Ill. Filed Jan. 2, 1926. Serial No. 78,736. 7 Claims. (Cl. 194—58.)

1. A dispensing apparatus having a reciprocable ejector, a shelf on which the ejector is slidably mounted, means on the shelf cooperating with means on the ejector for locking the ejector in retracted position, operating means for said ejector slidably mounted below the shelf, coin-receiving means carried by said operating means, and means for positioning a coin in said coin-receiving means for releasing the ejector locking means when the operating means is manipulated.



1,577,303. DYNAMO-ELECTRIC MACHINE. JACOB SCHURCH, Los Angeles, Calif., assignor of one-half to William H. Heise, Los Angeles, Calif., and one-half to Benjamin C. Tunison, Pittsburgh, Pa. Filed Oct. 16, 1922. Serial No. 594,794. 5 Claims. (Cl. 171—252.)

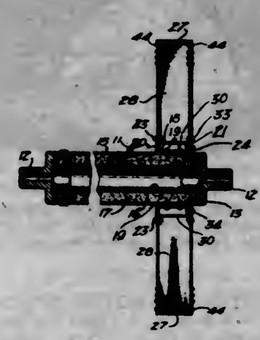
1. In a direct-current dynamo-electric machine, a field structure comprising: a punching having slots arranged in pairs on either side of a radial plane, each successive pair of slots being deeper than the slots nearer said plane; and compensating coils arranged in and filling said slots.



1,577,304. MOTOR WHEEL FOR VEHICLES. JACOB SCHURCH, Los Angeles, Calif., assignor of one-half to William H. Heise, Los Angeles, Calif., and one-half to Benjamin C. Tunison, Pittsburgh, Pa. Filed Oct. 16, 1922. Serial No. 594,795. 8 Claims. (Cl. 172—287.)

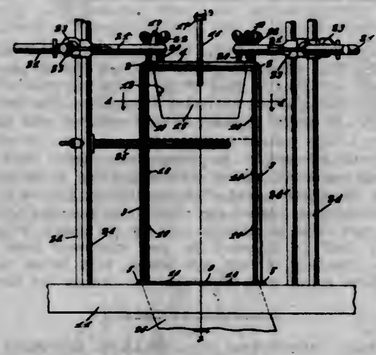
1. In a motor wheel, the combination of: a hollow bearing element; a primary member rotatable about said bearing element and comprising a plurality of shells each serving as a felloe; a secondary member rotatable about said bearing element and comprising a quill extending therein; magnetic repulsion means associated with said members for rotating said members in opposite

directions when said means are energized; and gear means between said members for transmitting the torque of one of said members to the other of said members.



1,577,305. CONTAINER. HARRY SEBELL, Boston, Mass. Filed Dec. 18, 1923. Serial No. 681,340. 2 Claims. (Cl. 220—61.)

1. A container having an open top and a peripheral flange on its exterior at the top which is parallel to the walls of the container but spaced therefrom, a top for closing the container, said top having a depressed central portion and an upstanding wall which fits within the opening of the container, said top having a depending flange extending from said upstanding wall and fitting closely against the peripheral flange, and a removable sealing strip U-shaped in cross section extending around the container with one wing thereof between the peripheral flange and the body of the container and the other wing surrounding the flange of the top, the flanges and sealing strip being firmly pressed against the exterior wall of the container and the upstanding wall of the top being firmly pressed against the interior face of said container.

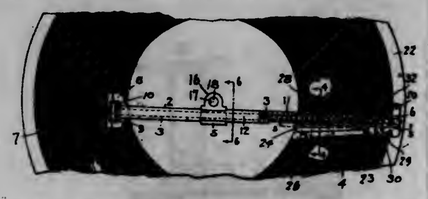


1,577,306. CALF-WHEEL CONSTRUCTION. THOMAS W. SELBEE, Huntington Park, Calif., assignor, by mesne assignments, to Emsco Derrick & Equipment Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 24, 1923. Serial No. 676,865. 2 Claims. (Cl. 64—17.)

1. In a wheel of the character described, the combination of; a hub member; an annular structure on said hub member providing at one end of said annular structure a cylindrical shelf and a radially extending stop, and at the other end a second outwardly disposed cylindrical shelf, a wheel structure defining an opening of a size to fit over said second cylindrical shelf, one side of said wheel structure resting against the outer part of said first cylindrical shelf and radially extending stop; and

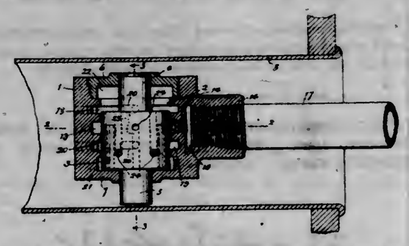
an inwardly radially directed flange on the opposite side of said wheel structure arranged to rest against and be bolted to the side of said second cylindrical shelf.

1,577,307. VENTILATING HOOD. HERMAN W. SHEBL, Decorah, Iowa. Filed May 19, 1925. Serial No. 31,355. 2 Claims. (Cl. 98—55.)



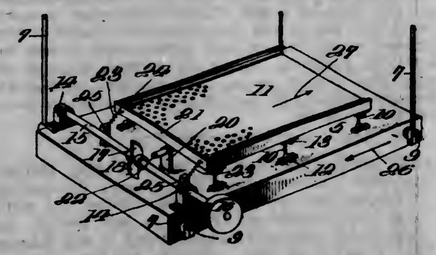
1. A fume hood of the character set forth, comprising a body having top and side walls and open front and rear, a central partition in said body, dividing the same into two portions, a pair of partitions spaced from and one on each side of said central partition to provide fume chambers at the rear of each section, each of said last mentioned partitions having an aperture through the upper part thereof, means for adjustably closing said apertures, and a fume lead-off from the lower portion of the fume chambers.

1,577,308. REPEATING DEVICE FOR PHONOGRAPHS. ANTON SOLMAN and STANLEY SCHROEPFER, Pittsburgh, Pa., assignors of two hundred and sixty-three three-hundred-and-fiftieths to said Solman and eighty-seven three-hundred-and-fiftieths to said Schroepfer. Filed Oct. 23, 1923. Serial No. 670,323. 6 Claims. (Cl. 274—15.)



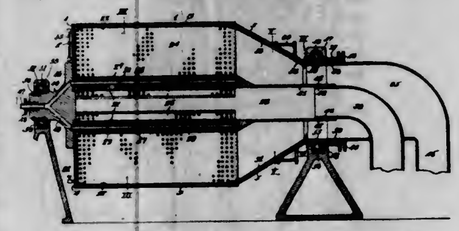
1. A repeating device for phonographs comprising a screw shaft, means for rotating said shaft, means for guiding a phonograph needle adjacent to said screw shaft

while said needle is in reproducing contact with a record, means for then causing said needle to engage said screw shaft, thereby causing said screw shaft to return said



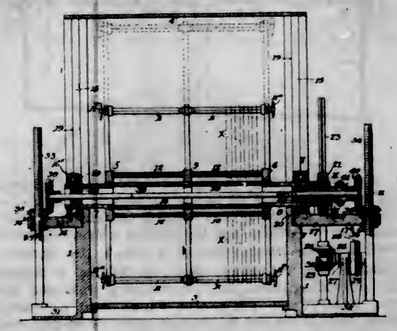
needle to its starting position, a pivot member for mounting the device upon the central pin of a phonograph turntable, and means for adjusting the said pivot member lengthwise with respect to said screw shaft.

1,577,309. BOILER-TUBE-SCALING DEVICE. STEPHEN SORENSEN, New York, N. Y. Filed Nov. 19, 1924. Serial No. 750,893. 1 Claim. (Cl. 15—104.7.)



A body having a cylinder therein, said cylinder having a central fluid admission groove and fluid exhaust grooves, passages on opposite sides of the admission groove, said cylinder having steam chambers at opposite ends thereof, a reciprocal piston disposed in said cylinder, said piston having axially spaced radially disposed rows of admission ports adapted to be respectively aligned with the admission groove in either extreme position of the piston within the cylinder, and with the exhaust grooves at intermediate positions of the piston and passages leading from said ports to opposite ends of the piston, whereby motive fluid is delivered to and exhausted from the steam chambers through the piston, said piston in its movement acting as a slide valve to control the flow of fluid.

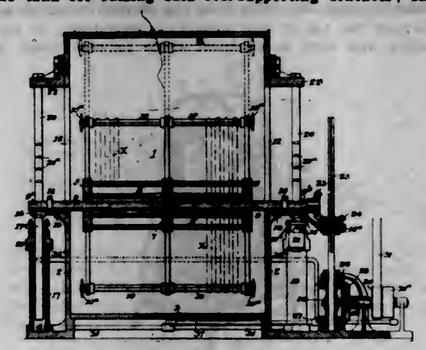
1,577,310. MOUNTING FOR SHAKER SCREENS OR THE LIKE. HENRY MOORE SUTTON, WALTER LIVINGSTON STEELE, and EDWIN GOODWIN STEELE, Dallas, Tex. Filed Dec. 8, 1923. Serial No. 678,345. 8 Claims. (Cl. 209—365.)



1. A mechanism of the character described comprising a base mounted to reciprocate, and a screen much lighter than the base mounted thereon to reciprocate in the same direction as the base, reciprocating mechanism mounted on said base and connected to the screen for reciprocating it in the same direction as the base, whereby the reciprocating movement of the screen is absorbed in the base.

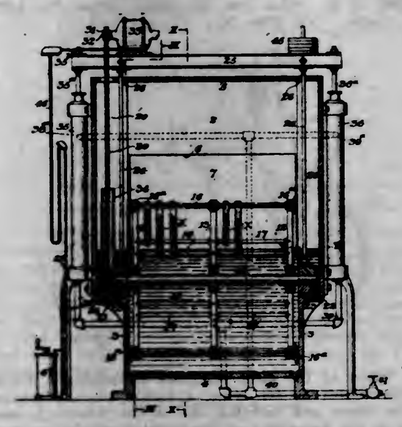
1,577,311. DYEING APPARATUS. HOWARD M. DUDLEY, Philadelphia, Pa. Filed May 18, 1922. Serial No. 560,539. 20 Claims. (Cl. 8—19.)

1. In apparatus for dyeing or otherwise treating fibrous material, the combination of a cylindrical shell forming a liquid-containing drum, a series of foraminous partitions or walls radially disposed and dividing the interior of said drum into a series of longitudinal chambers, means for rotating the drum, and means for introducing dye liquor into one end of the chambers formed by said foraminous partition elements for free circulation through the chambers of said drum.



1,577,312. APPARATUS FOR DYEING, SCOURING, OR OTHERWISE TREATING YARN OR OTHER FIBERS IN THE HANK OR SKEIN. HOWARD M. DUDLEY, Philadelphia, Pa. Filed Aug. 7, 1922. Serial No. 580,301. 22 Claims. (Cl. 8—19.)

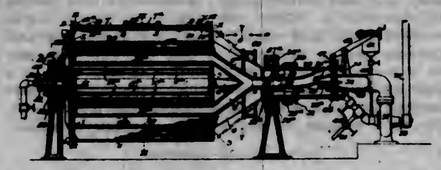
2. In a fiber-treating apparatus, the combination of a tank having slotted side walls, a reel rotatably mounted in said tank, supporting members for said reel slidably mounted in said slotted side walls, gearing for rotating the reel in opposite directions; said gearing for rotating the reel being in operative relation at all times so that said reel may be rotated when disposed in any position vertically of the tank, independent gearing for raising and lowering the reel, and means for driving said gearing from a single source of power.



1,577,313. APPARATUS FOR DYEING, SCOURING, OR OTHERWISE TREATING YARN OR OTHER FIBERS IN THE HANK OR SKEIN. HOWARD M. DUDLEY, Philadelphia, Pa. Filed Aug. 7, 1922. Serial No. 580,302. 15 Claims. (Cl. 8—18.)

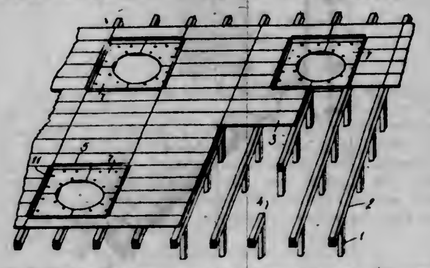
1. In apparatus for dyeing or treating yarn or other fibers, the combination of a tank, brackets arranged for vertical movement at the sides of said tank, a reel journaled in said brackets, means for driving said reel and separate fluid-pressure actuated means at each side of the tank for raising said reel-supporting brackets; said

means for driving the reel being in operative relation at all times so that said reel may be rotated when disposed in any position vertically of the tank.



1,577,314. APPARATUS FOR DYEING, SCOURING, OR OTHERWISE TREATING YARN OR OTHER FIBERS IN THE HANK OR SKEIN. HOWARD M. DUDLEY, Philadelphia, Pa. Filed Aug. 7, 1922. Serial No. 580,303. 14 Claims. (Cl. 8—18.)

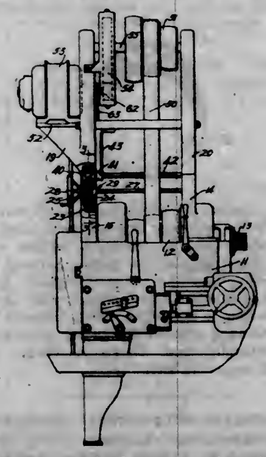
3. The combination, in apparatus for treating or dyeing yarn and other fibers in the hank or skein, of a closed tank, a reel rotatably mounted in said tank, a shaft carrying said reel and disposed wholly within the tank, enclosed bearings in which the ends of said shaft are rotatably mounted arranged for vertical movement with respect to the sides of said tank, and vertically movable hoisting means disposed above the tank and connected to said bearings for effecting vertical movement of the reel within the tank.



1,577,315. APPARATUS FOR DYEING OR OTHERWISE TREATING FIBROUS MATERIAL. HOWARD M. DUDLEY, Philadelphia, Pa. Filed Oct. 17, 1922. Serial No. 595,174. 20 Claims. (Cl. 8—19.)

1. In apparatus for dyeing or otherwise treating fibrous material, the combination of a rotatable shell forming a liquid containing drum, a series of foraminous compartments projecting into said drum and extending longitudinally thereof out of contact with each other; the inner space of the drum chamber being otherwise clear and

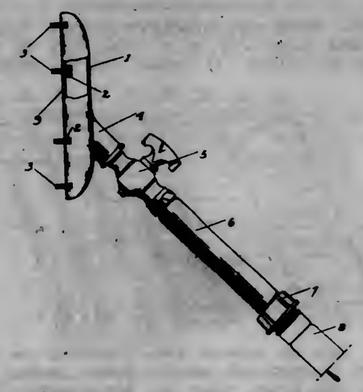
permitting free movement of the goods under treatment, and means for circulating treating liquid continuously through said compartments and drum chamber.



1,577,316. FORM FOR CONCRETE FLOORS. THORALF JAHNSEN, Jersey City, N. J. Filed Sept. 29, 1922. Serial No. 591,214. 11 Claims. (Cl. 25—131.5.)

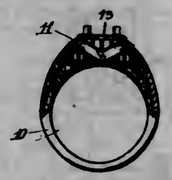
4. A form for concrete floors comprising the combination of reenforced metallic panels, shoring supporting said panels, forms for floor-supporting slabs or abacuses depending from and supported directly by the floor panels.

8. A floor mold comprising a principal plate made of metal, ribs of cushioning material and angle bars fitted to said ribs and secured to one side of the principal plate and to said ribs for holding the latter in place.



1,577,317. BELT TIGHTENER WITH RAPID BELT TENSION RELEASE. WILHELM JARDH, Los Angeles, Calif., assignor to Axelson Machine Company, a Corporation of California. Filed May 2, 1923. Serial No. 636,085. 3 Claims. (Cl. 64—5.)

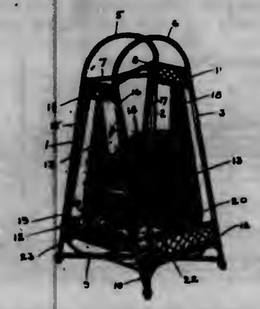
1. In a machine tool, the combination of a stationary head; a driven shaft turning in bearings fixed in said head; a driven pulley on said driven shaft; a jack shaft



above and parallel to said driven shaft; a driving pulley on said jack shaft; a belt passing over said driving pulley and said driven pulley; a superstructure having fixed bearings in which said jack shaft turns; means for driving the jack shaft; means for supporting said superstructure on said head so that said superstructure can be moved vertically with relation to said head in a single operation; blocks upon which said superstructure is supported; and means for adjusting said blocks vertically with relation to said head in a single operation.

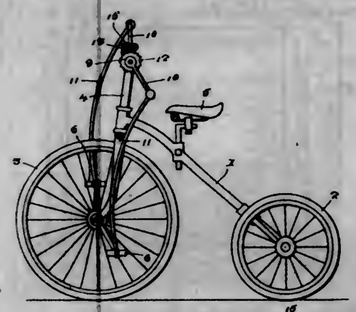
1,577,318. AUTOMOBILE WASHER AND DRIER. ELEFA B. JOHNSON, Sacramento, Calif. Filed Jan. 28, 1925. Serial No. 5,331. 2 Claims. (Cl. 15—127.)

1. A washing and drying device comprising a hollow body member having spaced parallel transverse grooves in one face thereof, and resilient strips mounted in the grooves and projecting outwardly from the body, said body being perforated between the grooves.



1,577,319. METHOD OF MANUFACTURING ARTICLES OF JEWELRY. ISAAC E. KALISHER, New York, N. Y., assignor to Kalisher Mfg. Co., New York, N. Y., a Firm composed of Samuel Wein, Louis Leopold, and Isaac E. Kalisher. Filed Sept. 9, 1924. Serial No. 736,709. 1 Claim. (Cl. 29—160.6.)

The herein described method of manufacturing rings, which consists in removing from a completed ring consisting of a shank and a setting, a portion of the material in the lateral wall of the setting between the finger encircling opening and the outer periphery of the ring to form a space substantially parallel with the plane of the ring extending a relatively short distance about the ring, and securing a desired design or ornamentation in said space, whereby said design is visible when the ring is viewed from the side.

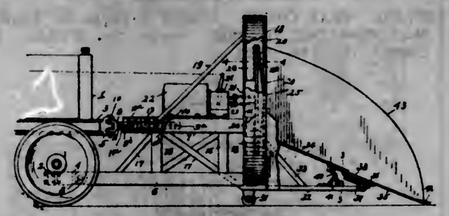


1,577,320. SPRING-SUPPORTED ROCKING-CHAIR. STEPHEN KORZENIEWSKI, Rochester, N. Y. Filed Nov. 10, 1924. Serial No. 748,799. 1 Claim. (Cl. 155—50.)

In a spring supported rocking chair, the combination of a frame comprising four uprights, arches connecting the two front uprights and the rear uprights, diagonal cross members connecting the rear with the front uprights near the top and bottom thereof, two pair of suspension springs supported from the diagonal cross members near the top of said uprights independently of one another and with considerable space between them, a

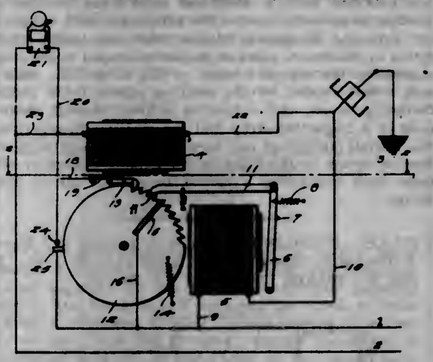
yoke connecting the lower ends of the front pair of said suspension springs and a yoke connecting the rear pair of said suspension springs said yokes forming two narrow spring supported cradles, a pair of rails supported in said cradles, a platform or footrest provided at the front of said rails and a chair supported centrally of said supporting rails.

1,577,321. TRICYCLE. FREDERICK W. KURTH, New York, N. Y. Filed Jan. 28, 1925. Serial No. 5,308. 1 Claim. (Cl. 208—30.)



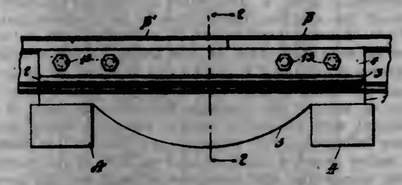
A device of the class described comprising a frame, wheels carried by the same, a forked steering member in the frame and carrying one of the wheels, a cross piece at the upper end of the steering member, a shaft extending through the cross piece with a hand crank mounted upon each end thereof, pedals, connected with the wheel carried by the steering member, a curved rod connecting each pedal with each hand crank, a ratchet wheel rotatable with one of the hand cranks, a hand operated dog pivotally supported on the cross piece and engaging with said ratchet wheel.

1,577,322. SNOWPLOW. WILLARD B. LAING, Bedford, Ohio. Filed Oct. 22, 1924. Serial No. 745,073. 9 Claims. (Cl. 37—43.)



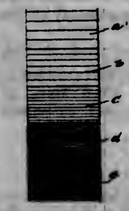
4. In a device of the character described, the combination with a motor vehicle, of a rigid frame yieldingly attached to the front end of the vehicle and extending forwardly therefrom, a scraper yieldingly attached to the forward end of the frame, and a rotary thrower adapted to receive snow from the scraper.

8. A snow plow comprising a frame having snow conveying means thereon, a forwardly and downwardly inclined scraper carried by the frame for delivering snow to said conveying means, means connecting the scraper to the frame permitting bodily movement of the scraper in a rearward direction and vertical swinging movement



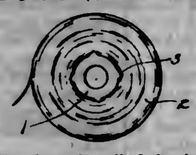
thereof, means including a spring for normally holding the scraper in working position, and means acting to swing the forward end of the scraper upwardly when the scraper is moved rearwardly in opposition to said spring.

1,577,323. PARTY-LINE TELEPHONE SYSTEM. CHESTER W. LEA, Fairbury, Nebr. Filed Oct. 28, 1924. Serial No. 746,394. 3 Claims. (Cl. 179—85.)



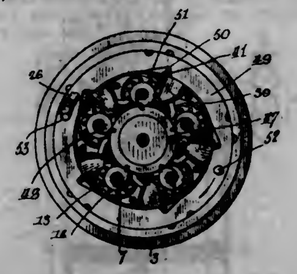
1. A party line telephone including a call bell for each subscriber, a selective mechanism adapted to be operated by central for closing the circuit of the call bell whereby the latter may be operated by central without operating the call bell of any other subscriber, and a resetting mechanism adapted to be operated by central for restoring the parts to normal position after the call bell has been operated having a detent serving as a conductor in said selective mechanism.

1,577,324. RAIL JOINT AND CHAIR. CHARLES W. LEE, Lock Haven, Pa. Filed Dec. 8, 1925. Serial No. 74,059. 2 Claims. (Cl. 238—210.)



2. A rail joint and chair comprising in combination with the meeting ends of railroad rails having interlocking lugs and recesses, the recesses being wider than the lugs to permit endwise movement of the rails, and the rails provided with elongated openings, a chair to receive said rails including a base, upstanding flanges thereon shaped to fit the base and enclose the webs of the rails, said flanges provided with oppositely disposed openings alined with the openings in the rails, securing means engaged through said openings, and a depending extension on said base adapted to seat between adjacent railroad ties to prevent longitudinal creeping of the rails.

1,577,325. METHOD OF COMPENSATING DIFFERENCES OF DENSITIES IN CINEMATOGRAPHIC PRINTS. ERICH LEHMANN, Berlin-Charlottenburg, Germany. Filed June 27, 1924. Serial No. 722,864. 1 Claim. (Cl. 95—5.)

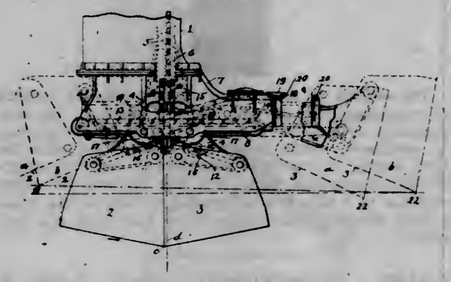


The method of determining the intensity of staining of cinematographic picture ribbons required for the compensation of different printing densities in the printing by machinery; which consists in making test-prints behind a scale of graduated progressively and increasingly stained, transparent layers and then staining the entire negative to a degree corresponding to that of the layer, behind which the most satisfactory test print was produced.

1,577,326. ADDING-MACHINE SPOOL. ELMER G. LEON, Hubbleton, Wis. Filed Apr. 14, 1925. Serial No. 23,098. 1 Claim. (Cl. 116—114.)

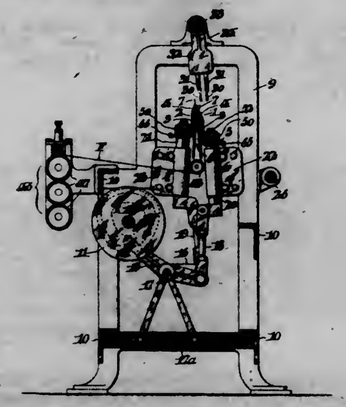
A spool of the class described having longitudinally extending triangular shaped ribs on the outer surface thereof and disposed in diametrically opposed relation whereby to form a substantially rectangular member having sharpened corners for forming indicative parts in paper or other material wound upon the spool.

1,577,327. PERMUTATION LOCK. JOSEPH LETOURNEAU, St. Catharines, Ontario, Canada. Filed Feb. 26, 1925. Serial No. 11,855. 12 Claims. (Cl. 70—53.)



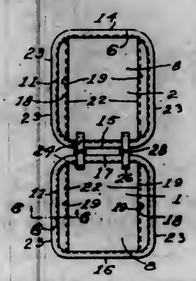
1. A permutation lock comprising a casing, bolts slidable therethrough, disks obstructing some of said bolts, said disks being formed with notches adapted to admit said obstructed bolts, and a control ring adapted to actuate said bolts.

1,577,328. ORE CONCENTRATION. CARL PIERCE LEWIS, San Francisco, Calif., assignor to Minerals Separation North American Corporation, New York, N. Y., a Corporation of Maryland. Filed July 26, 1920. Serial No. 399,068. 19 Claims. (Cl. 209—167.)



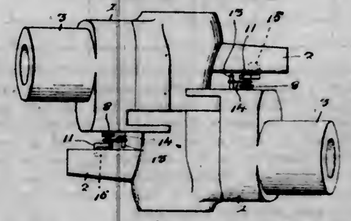
1. The process of concentrating ores which consists in mixing with an ore pulp a flotation agent including a heavy hydrocarbon carried in a hydrocarbon of the benzene series and dependent upon the presence of a substantial amount of both kinds of hydrocarbon for froth-producing properties, and also bringing gaseous bubbles into contact with the solid particles in the ore pulp so as to produce a mineral-bearing froth carrying a large proportion of a mineral of the ore, and separating the froth.

1,577,329. BUCKET UNLOADER. WILLIAM A. LEWIS, Ashtabula, Ohio. Filed Mar. 23, 1925. Serial No. 17,494. 4 Claims. (Cl. 37—188.)



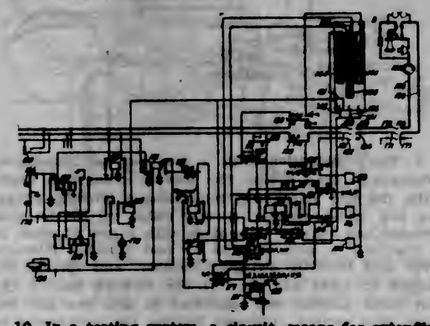
1. An unloader comprising a rigid vertical supporting leg, a grab bucket at the lower end of the leg which consists of laterally movable sections adapted to be spread apart and moved to closed position to gather a load from the floor of the hold of a vessel, said sections being so mounted that the scraping edges thereof when the buckets are spread apart are positioned at different levels whereby the scraping edges of both sections may be maintained during the closing movement in engagement with a floor inclined with respect to the horizontal, and means for operating the bucket.

1,577,330. PATTERN-CONTROL MEANS FOR WARP KNITTING MACHINES. GEORGE W. LINDLEY, Philadelphia, Pa. Filed June 8, 1923. Serial No. 644,117. 7 Claims. (Cl. 66—87.)



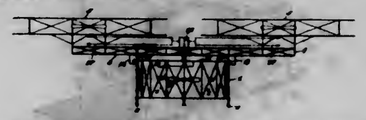
1. In a warp knitting machine, the combination of a plurality of needle banks, means for actuating said needle banks to form fabric stitches, and means for longitudinally shifting each needle bank relative to its support to effect selective transposition of the stitches of the knitting wales respectively produced by them.

1,577,331. SEAT COVER. JOSEPH S. LOPEZ, St. Louis, Mo. Filed Dec. 10, 1923. Serial No. 679,592. 1 Claim. (Cl. 155—182.)



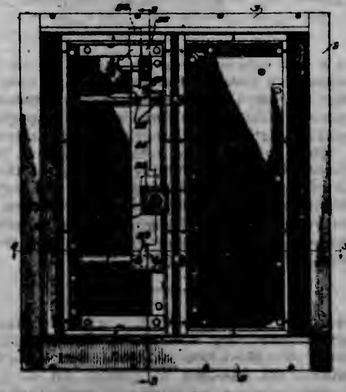
A seat cover comprising two separate sections each consisting of a strip of matting, each of said strips being provided with a U-shaped reinforcing binding extending completely around its periphery, said strips being arranged in spaced relation with the warps of the strips in alinement, pairs of flexible U-shaped hinge straps straddling the adjacent edges of the strips, the ends of said straps resting on the matting adjacent the binding fastening means, each extending entirely through the two ends of a respective strap and the matting therebetween, the flexible straps of one section being alined with the flexible straps of the other section, and rectangular wire loops each connecting a respective pair of alined hinge straps.

1,577,332. COUPLING. SAMUEL J. LOVERN and HENRY J. WELLMAN, Nolan, W. Va. Filed Jan. 29, 1924. Serial No. 689,318. 1 Claim. (Cl. 284—9.)



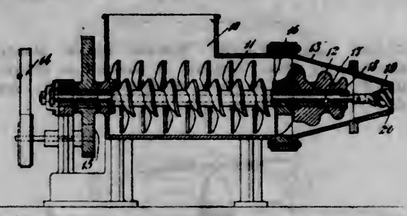
An air pipe coupling for the purpose set forth, comprising two coupling heads designed for coengagement to establish an air passage therethrough, each of said heads having an outwardly projecting angularly disposed horn designed to be arranged over the top of the co-operating head, a disc valve in the air passage of each of the coupling heads, each of said valves having a bleed opening therethrough, a stem for each valve, a lever on each stem, each of said levers having a reduced extension providing a finger on one end and an upturned flange providing a head on its opposite end, a stop element on each of the coupling heads in the path of engagement with the fingers of the respective levers, spring means influencing the levers to one position for holding the valves closed, a catch element on each of the coupling heads engageable with the headed ends of the levers, when the latter are swung to open the valves, and the headed end of each lever being in the path of contacting engagement with the horn of the cooperating coupling heads and designed by virtue of such contact to be swung to open the valves, and the horns being of such length as to permit of the slow closing of the valves when the coupling heads are disassociated.

1,577,333. TESTING SYSTEM. ERIC R. LUNDBERG, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 6, 1923. Serial No. 610,978. 11 Claims. (Cl. 179—175.)



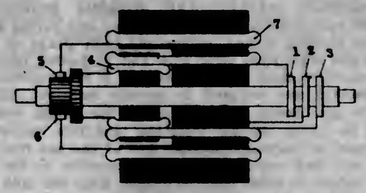
10. In a testing system, a circuit, means for extending said circuit over one end thereof, means for extending said circuit over the other end thereof, a sender, means for invariably connecting the sender to the end of the circuit first extended, and means for thereafter connecting the sender to the other end of the circuit.

1,577,334. HELICOPTER. CARLOS MACEKURTH, Lima, Peru. Filed May 1, 1925. Serial No. 27,196. 7 Claims. (Cl. 244—15.)



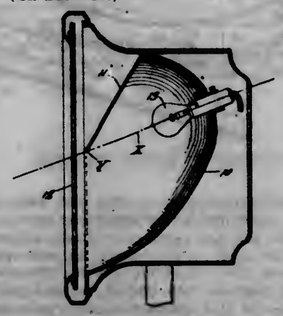
1. A helicopter comprising a base, a rotary beam thereover, a circular track on the base, symmetrically arranged brackets on the beam, anti-friction members carried by the brackets and engaging the track to raise the base, a centering element secured to the base centrally of the track and passing through the beam, a self-propelled airplane at each end of the beam, horizontal rudders on said airplanes and means to control the angularity of said rudders passing through said centering element.

1,577,335. SAFE LOCK. JOSEPH J. MARIOTTI, Chicago, Ill., assignor to Daprato Statuary Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 12, 1925. Serial No. 14,864. 2 Claims. (Cl. 109—3.)



1. A double door locking mechanism for safes comprising, a key operable pinion, a member, including a rack for engaging said pinion, carrying a plurality of horizontally slidable locking bolts, a second rack carried by one of said bolts, a vertically slidable locking bolt having a rack associated therewith, and a pinion for operatively connecting the two last said racks.

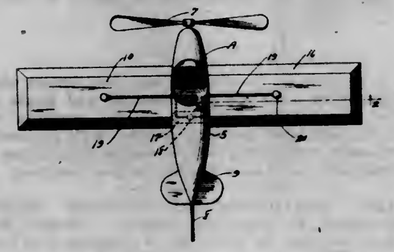
1,577,336. METHOD AND APPARATUS FOR MAKING EXTRUDED CLAY ARTICLES. FIRTH MARSDEN, Ragland, Ala., assignor to Alphons Custodis Chimney Construction Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 21, 1925. Serial No. 76,629. 4 Claims. (Cl. 25—14.)



2. A machine for forming extruded clay articles which consists of an outer die and inner die and means for forcing clay between said dies and for revolving said inner die, said inner die being provided with a plurality of helicoidal spirals and with a central axial recess in the discharge end thereof for the purpose described.

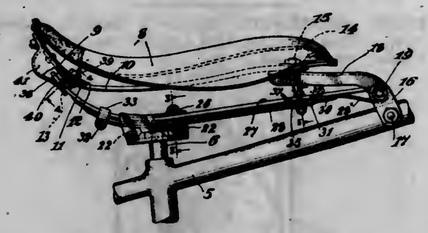
1,577,337. DYNAMO-ELECTRIC MACHINE. BRADLEY MCCORMICK, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Apr. 13, 1925. Serial No. 22,515. 4 Claims. (Cl. 172—280.)

1. In an alternating current motor, the combination of an induced member, an inducing member provided with an inducing winding and with a commuted winding, said commuted winding longitudinally embracing a smaller portion of the laminations of the inducing member than embraced by the inducing winding, the length of air gap between the induced member and the portion of the inducing member embraced by the commuted winding being different from that between the induced member and the remainder of the inducing member.



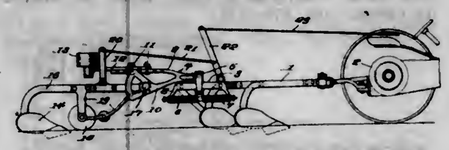
1,577,338. HEADLIGHT. BAYARD T. MERRILL, Valsets, Oreg. Filed Apr. 12, 1924. Serial No. 706,173. 1 Claim. (Cl. 240—41.)

An automobile headlight comprising a casing, a reflector arranged therein and including a curved body por-



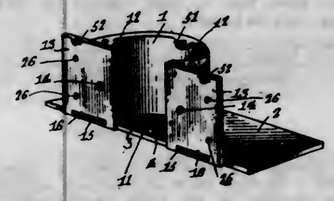
tion having an opening at a point above its transverse center to receive and support an electric light bulb at a downward inclination with respect to said casing, the forward edge of the reflector terminating to provide a semi-circular flange projecting outwardly therefrom and arranged to engage the adjacent wall of the casing, the upper portion of the reflector contacting the adjacent wall of the casing, and a shield of opaque material projecting outwardly and downwardly from the remaining upper half of the reflector, and terminating at a point in a plane beneath said bulb as and for the purpose specified.

1,577,339. AEROPLANE. EDWARD FRANK MERRITT, East Boston, Mass., assignor of one-half to Frank L. Merritt, East Boston, Mass. Filed Dec. 5, 1923. Serial No. 678,765. 1 Claim. (Cl. 244—5.)



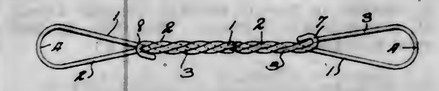
A normally heavier-than-air aeroplane including a fuselage equipped with propelling means and having steering and landing devices, hollow gas tight wings of non-deformable rigid form rigid with and projecting laterally from opposite sides of the fuselage, a tank carried by the fuselage and adapted to contain sufficient lighter-than-air gas under pressure to fill the wings, conduit means to convey the gas from the tank into the wings, and means to normally prevent flow of the gas from the tank, said last named means being operable at the will of the driver to allow the gas to flow from the tank into the wings for rendering the latter lighter-than-air, whereby the aeroplane may be temporarily converted into a substantially lighter-than-air craft for permitting a safe landing in an emergency.

1,577,340. SEAT SUPPORT. HENRY MESINGER, New York, N. Y. Filed Apr. 17, 1925. Serial No. 23,758. 12 Claims. (Cl. 208—100.)



1. In combination with a seat and supporting post therefor, a cushioning spring interposed between the seat and said post and having parts relatively adjustable with respect to the post, means connecting said spring parts with the post, and means for securing the spring parts in adjusted position with respect to said post to vary the resistance of said spring to vertical movement of the seat with respect to the post.

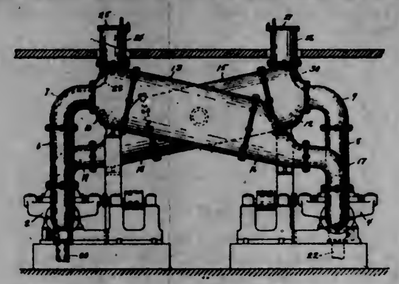
1,577,341. PLOW ATTACHMENT. EMIL METTLER, Clayton, S. Dak. Filed Dec. 17, 1924. Serial No. 756,583. 3 Claims. (Cl. 97—137.)



1. The combination with a plow, of an attachment arranged to trail behind the plow in connection therewith, the said attachment comprising a laterally swinging bell crank member, a soft roller carried by said member and adapted to contact with a row of vines in a vineyard, a plow carried by and movable laterally with said laterally swinging member, and springs arranged in front and rear of the forward end of the bell crank member and connected to said end and the plow, said springs yieldingly holding the attachment in contact with the row of vines.

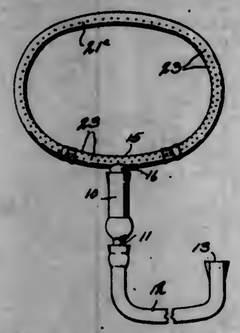
1,577,342. UNIVERSAL BABBITTING EQUIPMENT. MAX MICHALK, Montreal, Quebec, Canada. Filed Aug. 8, 1925. Serial No. 49,081. 6 Claims. (Cl. 22—123.)

1. Babbitting equipment comprising a curved mandrel, and liner plates adjustably connected to said mandrel.



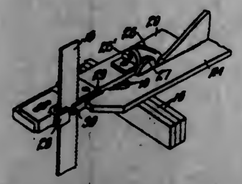
1,577,343. TIE. ELIAS N. MILLER, Denver, Colo. Filed May 2, 1925. Serial No. 27,510. 2 Claims. (Cl. 25—131.)

1. As a new article of manufacture, a tie for plastic forms formed of a single strand of wire and of a length to bridge the space between and extend outwardly beyond opposed walls of such form, said tie comprising an intermediate length, the extremities of said intermediate length being continued by returned lengths, each of the returned lengths terminating inwardly of the opposite end of the intermediate length, each end portion of the intermediate length and the connected portion of the adjacent returned length being separated to provide a loop, the portions of the three lengths between the loops being wrapped one around the other two.



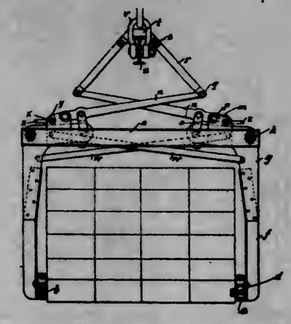
1,577,344. PULP HYDRATOR. ANDREW MUIRHEAD, Haverhill, Mass., and EVERETT K. MANSFIELD, White Plains, N. Y. Filed Dec. 30, 1925. Serial No. 78,498. 8 Claims. (Cl. 92—20.)

1. A pulp hydrator comprising a pump having inlet and discharge pipes connected thereto and an elongated tubular casing of substantially greater transverse area than the area of said pipes and connected at its ends to said pipes, respectively, to form a closed fluid circuit



through which the fluid may be circulated by said pump, said discharge pipe from the pump being arranged to project a jet into said casing longitudinally thereof.

1,577,345. BATH SPRAY. JOHN F. NAGORSKI and OTTO C. CECIL, Bedford, Ohio. Filed Feb. 21, 1925. Serial No. 10,889. 2 Claims. (Cl. 4—157.)

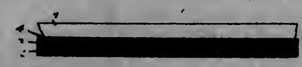


1. A bath spray of the character described comprising a handle adapted at one end for connection to a flexible hose, the opposite end of the handle being provided with a T, the T at the extremities of its branches being formed to provide nipples, the nipples being longitudinally slotted, and a flexible section adapted at its ends to be engaged with said nipples and formed at its ends with holes registering with the slots in the nipples, the inner face of the T and the inner face of the flexible section being provided with longitudinally extending rows of perforations.

1,577,346. SLUG TRIMMER. ANTON H. NARROW, Memphis, Tenn. Filed June 12, 1923. Serial No. 644,995. 19 Claims. (Cl. 29—68.)

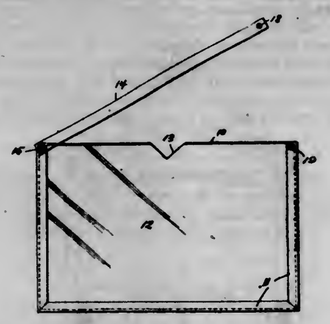
1. In a trimmer for slugs, a guide adapted to engage projections on the slugs, means adjacent one end of said guide for cutting off the ends of the slugs, and means for moving the slugs toward the cutting means, substantially as set forth.

1,577,347. GRASPING DEVICE FOR LOADING OR PILING BRICKS OR THE LIKE. CARL FRANZ NEUMANN, Geesthacht, near Hamburg, Germany. Filed June 27, 1925. Serial No. 40,047. 3 Claims. (Cl. 294—63.)



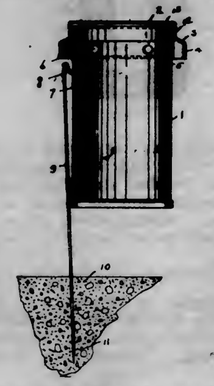
1. A gripping device for loading piles of bricks and having tongue like gripping elements, comprising, oppositely arranged bell crank levers with vertically positioned arms, beams mounted on the lower ends of the vertical arms of the bell crank levers for gripping the bottom layer of a pile of brick from opposite sides, and rods connecting the vertical arm of each bell crank lever with the horizontal arm of the other bell crank lever.

1,577,348. ATTACHMENT PLUG. STANLEY MCCLATCHIE, Cambridge, Mass., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 24, 1920. Serial No. 398,689. 2 Claims. (Cl. 173—359.)



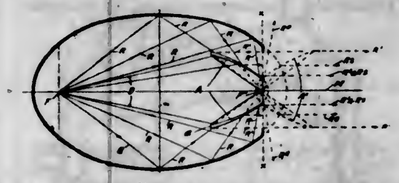
1. An attachment plug comprising a cylindrical insulating base, having a central opening therethrough, a yoke-shaped metal member straddling said opening, a center contact threaded into the central portion of said yoke and forming a binding screw, and a side contact insulated from said center contact by said cylindrical insulating body.

1,577,349. PROCESS OF SECURING RUBBER TO LEATHER AND OTHER LIKE MATERIALS. ALBERT LINN MURRAY, Auburn, Ind. Filed Feb. 2, 1924. Serial No. 690,183. 3 Claims. (Cl. 18—59.)



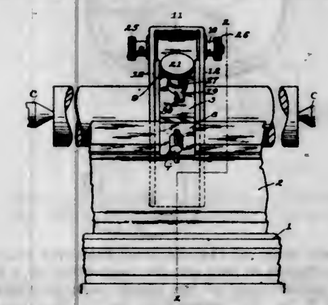
1. The process of securing rubber to leather which consists in applying a sheet of raw milled rubber to a compounded rubber, then subjecting the same to heat for vulcanizing the compounded rubber, and inseparably securing the sheet thereto then applying a second sheet of raw milled rubber to the exposed surface of the first sheet and finally cementing the exposed surface of the second sheet to the leather.

1,577,350. HOLDER. CHARLES E. OTTEMAN, Toledo, Iowa. Filed Dec. 20, 1924. Serial No. 757,200. 1 Claim. (Cl. 40—16.)



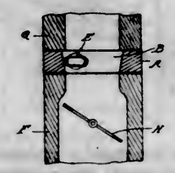
A card holder of the character described comprising a relatively flat elongated body, flange members extending inwardly in spaced relation from the ends and bottom edge thereof, a transparent plate positioned adjacent the outer face of the body and having its corresponding edges received within the spaces thus defined between the body and flange members respectively, a channel-shaped member arranged upon the upper edge of the transparent plate and body, one corner of the channel-shaped member and corresponding upper side edge of the body having a sleeve extending therethrough, and fastening elements extending through the sleeve and the opposite end of the body and channel-shaped member for locking the transparent plate within the body and for securing the body as a whole in a desired position.

1,577,351. CONTAINER. ANTONIO ALVAREZ, Oakland, Calif., assignor to M. J. Brandenstein & Company, San Francisco, Calif., a Copartnership composed of Max J. Brandenstein, Manfred Branstea, and Edward Branstea. Filed Mar. 27, 1924. Serial No. 702,209. 2 Claims. (Cl. 43—131.)



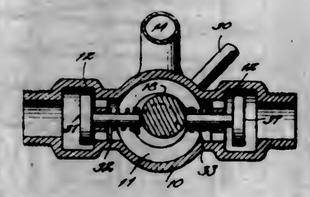
1. A container comprising a receptacle open at one end and having a plurality of holes about the periphery adjacent the open end, in combination with a cover for said open end having an annular cylindrical portion adapted to frictionally engage the receptacle and close the open end and an annular border on the cover extending out from the receptacle and thence substantially parallel with the receptacle and overhanging the said holes and a thin tearing strip interposed between the can and the cylindrical portion of the cover, said strip normally covering the said holes as for the purpose set forth.

1,577,352. HEADLIGHT REFLECTOR. MARTHA W. CAUGHLAN, Oakland, Calif., assignor to American Woodlite Corporation, San Francisco, Calif., a Corporation of California. Filed May 13, 1925. Serial No. 29,938. 7 Claims. (Cl. 240—41.)



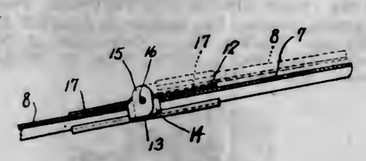
1. In a headlight having a main reflector and a light source, an auxiliary condensing reflector arranged to receive light from the main reflector at one end and to emit light through the other end, said condensing reflector being positioned in front of the source of light and having an outer convex reflecting surface and an inner concave reflecting surface, said convex reflecting surface being parabolic on parallel horizontal planes and said concave reflecting surface being elliptical on parallel horizontal planes.

1,577,353. STEADY REST. SOL EINSTEIN, Cincinnati, and HERMAN E. ISLER, Norwood, Ohio, assignors to The Cincinnati Milling Machine Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 27, 1924. Serial No. 695,516. 7 Claims. (Cl. 51—238.)



1. A grinding machine combining a table, a grinding wheel; a saddle supported by said table; a member pivoted to said saddle; a work-supporting block carried by said member and adapted to engage the work at the side opposite said grinding wheel; and a single means for adjusting said member about its pivot to move it upwardly and outwardly so as to maintain said work-supporting block in contact with the work during a grinding operation.

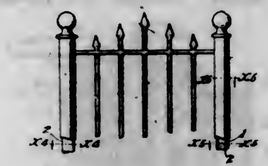
1,577,354. VAPORIZER. ALBERTUS W. MCCALMONT, Pontiac, Mich., assignor to Briscoe Devices Corporation, Pontiac, Mich, a Corporation of Michigan. Filed Apr. 11, 1921. Serial No. 460,541. 2 Claims. (Cl. 257—241.)



1. In a vaporiser for internal combustion engines, the combination with the intake conduit, of a throttle controlling said conduit, adapted when partly open, to direct the flow primarily along one side of the conduit, a tube extending across the passage of said conduit adjacent to said throttle and adjacent to the side of said passage along which the primary flow is directed in the partly opened position of the throttle, said tube being flattened within the conduit transversely to the flow therethrough, said tube forming a conduit for a heating fluid.

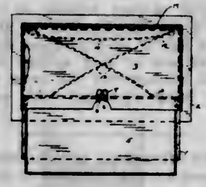
1,577,355. MIXING VALVE. FRANK PALEY, Cleveland, Ohio. Filed Mar. 21, 1925. Serial No. 17,350. 2 Claims. (Cl. 277—7.)

1. A mixing valve comprising a casing, a central normally seated spring actuated valve mounted for rotary and axial movement therein, laterally disposed normally seated spring actuated valves upon opposite sides of the central valve, an eccentric carried by the central valve, stems carried by the lateral valves and engaging the eccentric to operate said valves when the central valve is rotated, a stem extending from the central valve and means engaging the stem to rotate and move said stem axially and control the lateral and central valves.



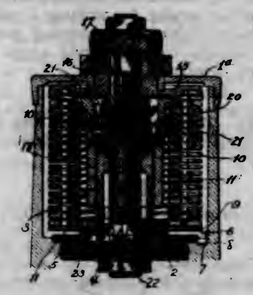
1,577,356. UMBRELLA. THOMAS PALLONE, Minerva, Ohio. Filed Aug. 2, 1924. Serial No. 729,782. 1 Claim. (Cl. 135—29.)

A means for pivotally connecting the cross sectionally U-shaped rib sections of an umbrella frame, comprising split bands arranged over the confronting ends of umbrella sections, each having its lower portion bent under and against the inner sides of the cross sectionally U-shaped rib sections, one of said bands having spaced outstanding ears, and lower spring tongues beneath the ears, and the second band having angularly disposed lugs whose outer ends are rounded upwardly from the band and which lugs are centrally pivoted between the ears so that the inner edges thereof will be contacted by the spring tongues when the rib sections are arranged in parallelism and also whereby the rounded ends of the said lugs will frictionally contact with the said tongues when the outer rib section is swung over the inner rib section.



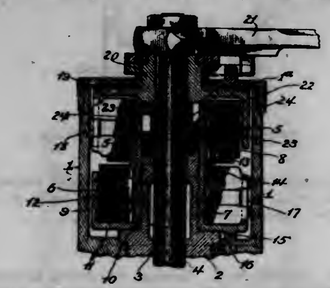
1,577,357. METHOD OF PLATING COMPOSITION BODIES. FELIX PRANO, Inglewood, Calif. Filed Dec. 17, 1923. Serial No. 681,175. 9 Claims. (Cl. 204—8.)

1. The method set forth of producing a metal deposit on a composition body consisting of first mixing a setting material to form a plastic mass, then mixing metal wool with such mass, then modeling the mixture into a body of the desired form, then allowing the body to set,



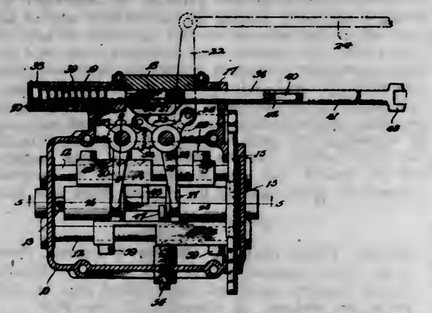
then treating surfaces of the body to expose portions of the metal wool, and then treating the body to build up a metal deposit thereon.

1,577,358. CANDY BOX. EDWARD W. POPPE, Milwaukee, Wis. Filed May 3, 1923. Serial No. 636,374. 2 Claims. (Cl. 206—44.)



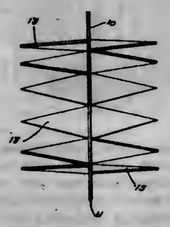
1. In a paper box having a body, the combination with an intermediate horizontal partition in said body and having a cut away portion at the forward end of said body, of a stop secured to said partition in said cut away portion and having a lip depending from said partition, a movable container within the body and below said partition, said body having at its forward end a wall hinged to the bottom of said body, and a spring for projecting said container outwardly over said wall, said lip extending into said container for contact with the rear wall thereof, whereby movement of said container may be limited and said container may be manually manipulated about said lip for removal from said body.

1,577,359. DOOR CLOSER. ROBERT S. POTTER, Greenwich, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Aug. 11, 1923. Serial No. 656,890. 4 Claims. (Cl. 16—76.)



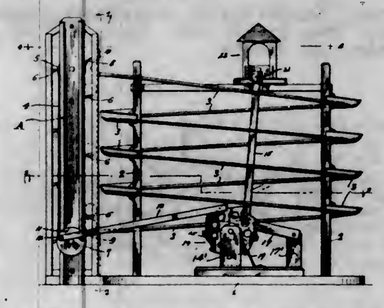
1. In a door closer, the combination with a casing, a plurality of spring winders within said casing, a lever, and connections between the respective spring winders and said lever, of a spring structure within the casing and comprising a plurality of connected coils providing a continuous spring, the respective ends of such continuous spring being connected with the respective winders.

1,577,360. DOOR CLOSER. ROBERT S. POTTER, Greenwich, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Apr. 2, 1924. Serial No. 703,751. 2 Claims. (Cl. 16—80.)



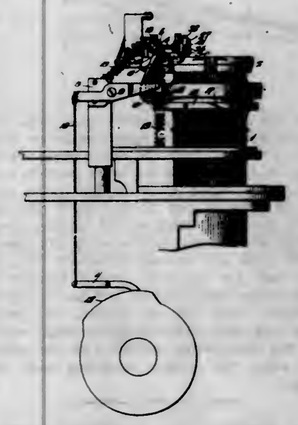
1. In a door closer, the combination with independently movable winders, of a spring structure comprising a plurality of coiled springs located in alignment with each other, and a coupling member for said springs and having the inner end of each of them attached thereto, the outer end of one of said springs being connected with one of said winders and the outer end of another of said springs being connected with another of said winders.

1,577,361. GEAR-SHIFTING MECHANISM. GLENN T. RANDOL, Marmaduke, Ark., assignor of one-half to Sol S. Steinberg, Paragould, Ark. Filed July 5, 1923. Serial No. 649,685. 18 Claims. (Cl. 74—58.)



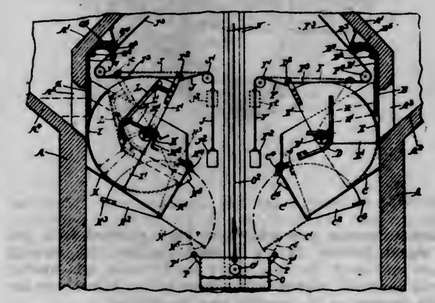
1. A gear shifting mechanism including rotatable selecting means movable axially for shifting a selected gear, means for axially shifting said selecting means, and a longitudinally movable element having a cam for actuating said second mentioned means.

1,577,362. TOY. HEINRICH REITBERG, New York, N. Y. Filed Oct. 7, 1924. Serial No. 742,094. 3 Claims. (Cl. 46—37.)



1. A toy comprising an annular disk having a concentric opening therein, the material removed when forming the opening being shaped into triangular sections providing blades, tapering channels extending radially into the disk and having their mouths communicating with the opening, and means on said blades engaging said channels for securing said blades to the disk.

1,577,363. GRAVITY TOY. RICHARD G. RICHARDSON, Piedmont, W. Va. Filed Jan. 25, 1923. Serial No. 614,988. 3 Claims. (Cl. 46—37.)

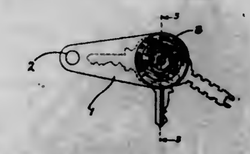


1. A device of the class described comprising a frame, an inclined track supported thereby and having curved ends and straight side portions connected with the ends, an elevator for taking articles from the lower end of the track and depositing them upon the upper end of the track, a gate for holding articles upon the upper part of the track, a lever pivoted to a part of the frame, a rod connected with the lever and with the gate for opening the gate when the lever is actuated, a ratchet wheel rotatably mounted in a part of the frame and having a projection thereon for engaging the lever, a pulley connected with a shaft of the elevator, a rod eccentrically pivoted to the pulley and having a dog on its end for engaging the ratchet wheel and means permitting the elevator to be actuated.

1,577,364. YARN BINDER AND TRIMMER. FRANK W. ROBINSON, Reading, Pa., assignor to Schuylkill Hosiery Mills, Inc., Reading, Pa., a Corporation of Pennsylvania. Filed May 1, 1923. Serial No. 635,840. 6 Claims. (Cl. 66—134.)

1. In a yarn binder and trimmer, a stationary binder and cutter member having a hooked end, relatively movable binder and cutter members mounted to co-operate with said hooked end, said cutter having a hook-like cutting portion, yielding means to effect relative movement of said members in one direction, a third member to effect relative movement of said movable binder and cutter members in a reverse direction, pattern controlled means to move said third member into its active position, and cylinder controlled means to actuate said third member when it is in its active position.

1,577,365. PROCESS OF AND APPARATUS FOR HANDLING AND MIXING COAL. CLYDE P. ROSS, Chicago, Ill. Filed Feb. 5, 1923. Serial No. 616,882. 7 Claims. (Cl. 83—78.)



1. The process of completely mixing coal of different grades while freely falling, which consists in downwardly discharging along separate but adjacent paths unmeasured quantities of different grades of coal, interrupting the downward movement of each of such streams of coal, discharging coal from each of said streams, in measured charges permitting said charges to fall freely through the air, into a common mixing zone in the air, and subsequently conveying the mixed material upwardly from said mixing zone.

1,577,366. CABINET DRESSER. COSTANZO RUOCCO, Philadelphia, Pa. Filed July 31, 1922. Serial No. 578,673. 2 Claims. (Cl. 45—99.)

1. In an article of furniture, a central stationary mirror, a pair of mirrors hingedly connected, one at each side of the stationary mirror for swinging movement on vertical axis, a drawer having guideways in its side walls, a supporting board slidably supported in said guideways, a bearing plate carried by said board for rotary movement about a vertical axis, a U-shaped frame having its intermediate portion hingedly connected to said bearing plate, the sides of said frame having guide slots therein, a mirror positioned between the sides of the frame for vertical movement, guide trunnions carried by the mirror and movable in the slots and means for retaining the mirror in a vertically adjusted position relative to the frame.

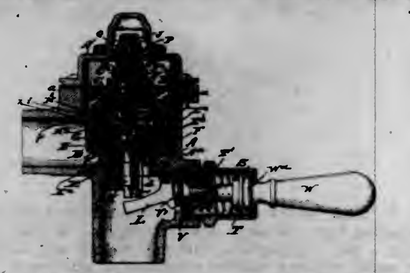
1,577,367. KEY CARRIER. LEROY L. SALFISBERG, Newark, N. J. Filed Jan. 10, 1925. Serial No. 1,575. 4 Claims. (Cl. 59—96.)

1. A key carrier comprising a base having a threaded opening and a recess in one face adjacent to said opening, a bolt engaging and extending through said opening, a mark receiving member positioned in said recess, and means co-operating with said bolt to retain said member in operative position in the recess.

1,577,368. REVERSIBLE AND INTERCHANGEABLE STOCKING TOP. ALBERT E. SANBORN, Laconia, N. H. Filed Oct. 18, 1924. Serial No. 744,873. 1 Claim. (Cl. 2—240.)

A duplex stocking top formed separately from a stocking and adjustable upwardly and downwardly thereon, said stocking top comprising two separately knitted tubular members seamed at their relatively upper edges to each other and lying one within the other and concentrically with relation to each other, each tubular member having a pattern side knit therewith and a raw or unfinished side, the pattern sides of the respective tubular members normally lying one on the outer face and the other on the inner face of the duplex top, and said pattern sides being of contrasting design and appearance, whereby one pattern side is normally displayed and by turning the duplex top inside out the positions of the pattern sides will be reversed for display of the other pattern side.

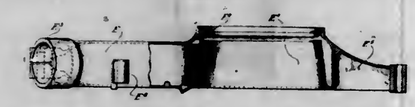
1,577,369. NICOTINE DUST FOR KILLING INSECTS. GEORGE E. SANDERS and RAYMOND H. PESTELL, Louisville, Ky., assignors to Dosch Chemical Co., a Corporation of Delaware. Filed Sept. 1, 1922. Serial No. 585,801. 12 Claims. (Cl. 167—6.)



1. A composition containing nicotine and ammonia.

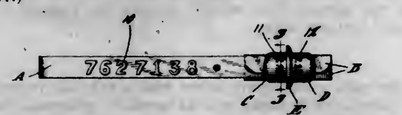
11. A composition containing nicotine, ammonia, magnesium oxide, quick lime, nicotine sulphate and ammonium sulphate.

1,577,370. FLUSHING VALVE. FREDERICK A. SCHOSSOW, Detroit, Mich. Filed May 25, 1925. Serial No. 32,635. 22 Claims. (Cl. 139—93.)



3. In a device of the character described; a valve body having ports for the admission and discharge of water; a normally closed main valve for controlling the flow of the water; means for actuating the main valve; means including a releasing valve for maintaining the main valve in open position during the period of time in which the rate of flow through the valve is sufficient to maintain a predetermined pressure and volume within the valve; and means adapted to automatically close the main valve when the rate of flow through the valve body is insufficient to maintain said valve in open position.

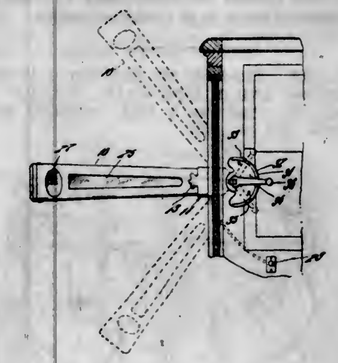
14. In a device of the character described; a valve body having inlet and outlet ports; a main valve; a releasing valve; means for maintaining the releasing



valve in an open position controlled by a predetermined minimum water pressure; means for automatically closing the releasing valve when the water pressure is less than the predetermined amount.

1,577,371. EXHAUST NOZZLE AND ASSEMBLY. JOHN A. SECOR, La Porte, Ind., assignor to Advance-Rumely Company, a Corporation of Indiana. Filed Apr. 12, 1922. Serial No. 552,019. 2 Claims. (Cl. 137—160.)

1. As a new article of manufacture an engine muffler, said muffler being generally annular in shape and provided with an annular exhaust opening, an exhaust impulse balancing means comprising a plurality of oppositely directed separate exhaust connections communicating with said muffler whereby exhaust discharges are directed in opposite directions to balance each other.



1,577,372. CAR SEAL. JOHN SELINE and ALBERT DUNCAN FERGUSON, Calgary, Alberta, Canada. Filed June 9, 1924. Serial No. 718,993. 1 Claim. (Cl. 292—307.)

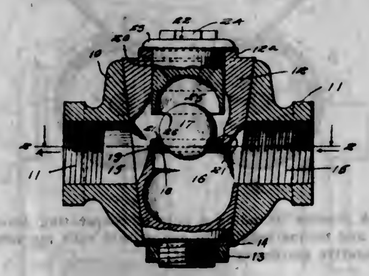
An improvement in car seals of the type including a seal strip and joined sealed sections thereon, consisting in the application to the strip of a serial number and the application to each of the seal sections of a number having a certain relation to said first named number whereby disagreement between the numbers on the sections or disagreement of the numbers on both sections with respect to the serial number will be evidence of tampering.

1,577,373. DIRECTION SIGNAL. OTIS E. SHARP, Middleville, Mich. Filed May 25, 1925. Serial No. 32,815. 2 Claims. (Cl. 116—54.)

1. A signal device of the character described comprising a bearing member carrying clamping means adapted for engagement upon the side of a motor vehicle windshield, said bearing member being formed at one end with an attaching plate portion, a segmental plate secured to said attaching plate portion and having an upturned flange formed with a plurality of notches, a shaft rotatably and slidably mounted through said bearing member and through said segmental plate, an operating handle on said shaft adapted to be engaged within a selected one of said notches, a washer member secured upon said shaft in spaced relation to the adjacent end of the

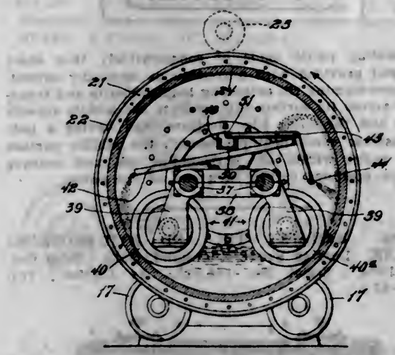
bearing member, said washer having a serrated face, and a signal member having a head engaged and secured upon said shaft, the face of the head toward said washer being serrated whereby adjustment of the signal member with respect to the handle may be effected.

1,577,374. GUM OR CANDY CONTAINER. THOMAS W. SHELLEY, Los Angeles, Calif., assignor to John L. Timmins, Los Angeles, Calif., by court order assigned to Margaret Timmins, widow of said John L. Timmins, deceased. Filed Nov. 5, 1921. Serial No. 513,000. 14 Claims. (Cl. 215—1.)



1. A container adapted for use in combination with a vending machine and comprising a lower globe shaped compartment open at both ends and adapted to contain articles to be vended; and an upper square or rectangular shaped compartment the center of which is directly over the center of the lower globe shaped compartment.

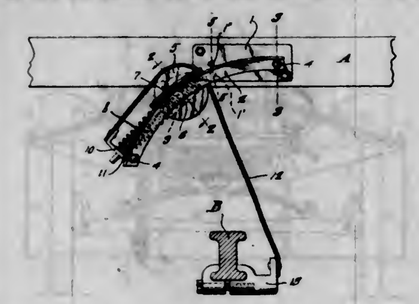
1,577,375. REVERSIBLE CHECK VALVE AND STOP. HAROLD A. SHOWMAN, Geuda Springs, Kans. Filed Mar. 21, 1925. Serial No. 17,302. 1 Claim. (Cl. 277—25.)



A device of the class described comprising a valve casing, a plug rotatable in said casing to coact with the passage thereof, said plug having a substantially central opening, a valve seat member insertable into said opening and having threaded engagement with the plug at the base of the opening, a ball valve insertable through said opening and engaging said valve seat member, a wrench-engaging head on said plug, a cap extending into said opening and having a ground joint connection with the opening, the inner end of said cap being cut away to

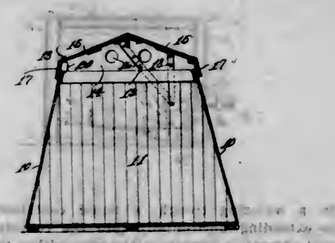
restrain movement of the ball valve, said cap being downwardly extended to lengthen the zone of the ground joint connection and to enable the cutaway portion

aforesaid to be provided, said cap having an outwardly extending flange resting on said head, and said cap having a wrench engaging head projecting above the flange and inwardly of its margin.



1,577,376. MILL. FRANK SILVA, Copperhill, Tenn. Filed Nov. 21, 1925. Serial No. 70,594. 12 Claims. (Cl. 83—9.)

1. In a mill, a casing having external trackways, rollers engaging said casing and supporting the casing for rotation, means for rotating the casing, the casing having at its opposite ends feed and discharge openings, spaced supports projecting through the feed and discharge openings, means for yieldably forcing the supports downwardly, crushing rollers carried by the supports within the casing and means for maintaining a constant fluid level within the casing.

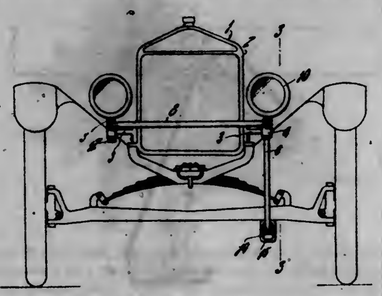


1,577,377. SHOCK ABSORBER. ALFRED J. SINCLAIR, Dayton, Ohio. Filed Aug. 21, 1925. Serial No. 51,663. 3 Claims. (Cl. 267—10.)

1. A device of the class described, comprising a curved track, a drum, brake parts carried by the same and engaging the track, spring means for normally holding the drum at the upper end of the track and a flexible

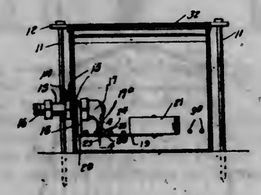
member passing over the drum and having its ends connected with the parts, the relative movements of which are to be resisted.

1,577,378. HINGE AND SUPPORT FOR CLOSURES. GEORGE W. SMIDLEY, New Holland, Ohio. Filed Aug. 26, 1924. Serial No. 734,284. 1 Claim. (Cl. 220—32.)



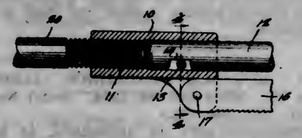
The combination with an enclosure and a cover therefor, of a hinge means comprising vertically disposed bars secured to the ends of the cover, inwardly thereof, and adjacent one long side thereof and having their other ends pivotally connected to the ends of the enclosure, externally thereof and inwardly of a long side thereof, and obliquely extending bars pivotally connected to the said ends of the enclosure coincidently with the adjacent ends of the first bars and having their other ends secured to the inner faces of the said ends of the cover adjacent the intermediate portions thereof, whereby to permit said cover to be swung into a position with its enclosure closing portion against the said longer side of the enclosure.

1,577,379. MOVABLE HEADLIGHT. JAMES SMITH, Donora, Pa. Filed Oct. 29, 1924. Serial No. 746,586. 1 Claim. (Cl. 240—62.)



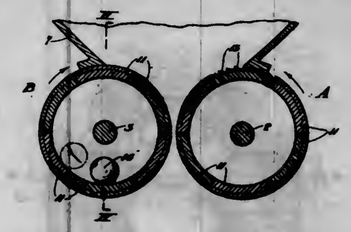
In combination with an automobile, of means for causing the headlamps thereof to turn with and in the same direction as the steering wheels, comprising curved brackets secured to the sides of the radiator and terminating in outwardly directed hubs, a lamp supporting post journaled in each hub, each of said posts having an outstanding arm, a rod to which the arms are pivotally secured, one of said posts being of a greater length than the other, a rod pivotally secured to the lower end of the longer post to permit of the vertical but to prevent the side movement thereof, a barrel having

spaced depending fingers which are clamped on the steering knuckle connecting rod of the machine, a rod movable through the barrel and adjustably sustained thereon, and a loose connection between the pivoted rod and the



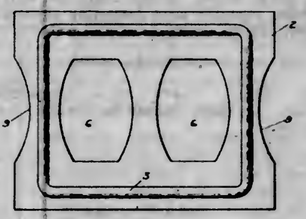
last mentioned rod whereby the pivoted rod will be swung upon the lateral movement of the knuckle connecting rod to impart a simultaneous swinging to the lamp supporting posts.

1,577,380. WATERING TROUGH. RUDOLPH F. SONSTEGARD, Sisseton, S. Dak. Filed Jan. 10, 1924. Serial No. 685,439. 1 Claim. (Cl. 137—104.)



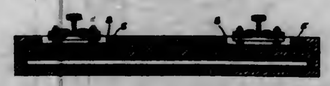
In a watering trough, a liquid container, a supply pipe extending horizontally into the container through a wall thereof, a bonnet on the pipe within the container and having a downwardly extending discharge nozzle, a valve to control the supply of liquid through said nozzle and consisting of a plurality of superposed elements whereby their number may be diminished or increased, a float controlled lever carrying said valve, and a hanger for said lever suspended from said pipe between the wall of the container and the aforesaid bonnet.

1,577,381. HACK-SAW FRAME. CLIFFORD SPRAGUE, St. Louis, Mo. Filed June 17, 1925. Serial No. 37,807. 4 Claims. (Cl. 145—31.)



4. A saw comprising a tubular member, means to attach the inner end of a saw blade to said member, a rod having its inner end slidable within the tubular member, means at the outer end of the rod to engage the outer end of a saw blade and a saw handle adjustable within the tubular member and engaging the inner end of the rod to adjust the blade engaging means relative to the rod and an extension handle section removably secured to the frame.

1,577,382. CRUSHER. FRANCIS J. STRAUB, New Kensington, Pa., assignor to Crosier-Straub, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 10, 1921. Serial No. 436,159. 2 Claims. (Cl. 83—12.)

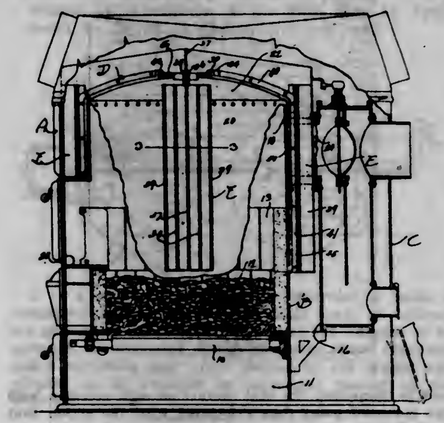


2. A crusher including a pair of cooperating crushing rolls, and rolling weights in one of said rolls for varying the rotative movement thereof.

1,577,383. PALLET FOR BLOCK-MAKING MACHINES. FRANCIS J. STRAUB, New Kensington, Pa. Filed May 27, 1924. Serial No. 716,172. 1 Claim. (Cl. 25—41.)

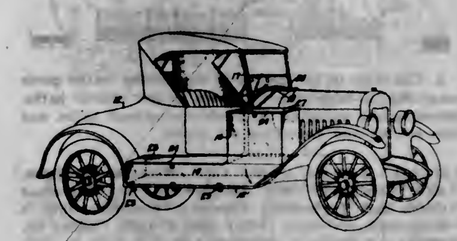
A molding pallet made of comparatively thin sheet metal and provided with a continuous upwardly extending groove-forming rib extending longitudinally and transversely across its surface intermediate the middle smooth surface and the outer edge portions, and having a pair of transverse core openings through the middle portion of the pallet within the surrounding rib, and concave clearance openings cut in each end of the pallet.

1,577,384. RAILWAY TIE AND RAIL-SECURING MEANS. LUTHER STOYE, Cleveland, Ohio. Filed Oct. 23, 1924. Serial No. 745,317. 14 Claims. (Cl. 238—87.)



1. A concrete tie having a cavity extending longitudinally thereof, and having a reinforcing metallic member disposed exteriorly of and enclosing the said cavity, and also having a rail securing insert embedded in the tie with its top surface substantially flush with the top surface of the tie, and securing means formed on the insert and embedded in the tie to securely hold the insert within the tie.

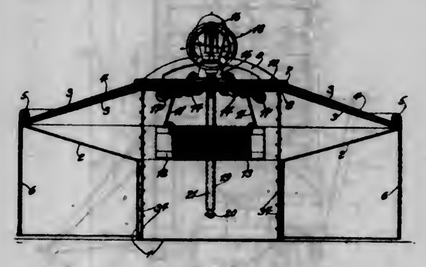
1,577,385. AUXILIARY RADIATING ATTACHMENT FOR HOT-AIR FURNACES. EARL R. TAYLOR, Adel, Iowa. Filed Feb. 11, 1925. Serial No. 8,468. 6 Claims. (Cl. 126—118.)



1. In an attachment of the class described the combination with a hot air furnace including an inner fire receiving heater shell and an outer casing with an air

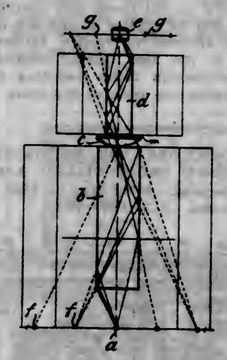
space between the shell and casing, said shell including a top wall and side walls, a ring shaped member removably supported by the top wall, and radially extending fin

members detachably supported by said ring shaped member so as to extend in abutment along said top wall and along the side wall of said shell within the air space between said shell and casing.



1,577,386. LUGGAGE CARRIER. PORTER M. TRAVIS, Sherman, Tex. Filed June 16, 1925. Serial No. 37,448. 8 Claims. (Cl. 224—29.)

1. A luggage carrier for automobiles comprising a receptacle for each running board thereof and having a forward portion extending upward beside the cowl, means for fastening said upright portions together across said cowl comprising a connecting rod for engagement with each of said upright portions, and means for fastening each of said receptacles to its supporting running board, substantially as set forth.

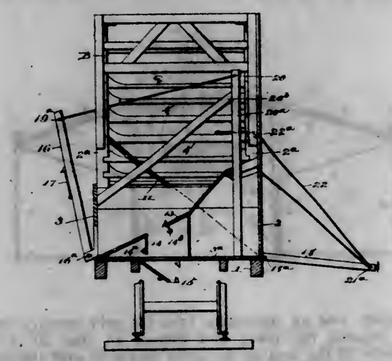


1,577,387. HOVER. ERNEST TROVA, St. Louis, Mo. Filed Feb. 15, 1923. Serial No. 619,175. 3 Claims. (Cl. 119—82.)

3. A device of the character described, comprising a heat radiating chamber composed of an upright wall portion and a wall portion flaring upwardly and outwardly from said upright portion, said chamber having an opening in the top thereof, an insulating support mounted in said opening, a heating element suspended from said support and being on a plane substantially at the juncture of the walls of said heating chamber, and a heat responsive element for controlling the circuit of said heating element, said heat responsive element having a member extending downwardly in the heat radiating

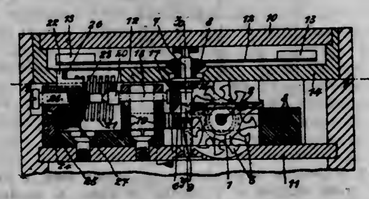
chamber, and an insulating tube for said member leaving exposed the lower end thereof so that it is responsive to the heat in the lower strata of said chamber.

1,577,388. PROJECTION APPARATUS. FRANK TWYMAN, London, England, assignor to Adam Hilger, Limited, London, England. Filed May 19, 1923. Serial No. 640,199. 7 Claims. (Cl. 88—24.)



1. In projection apparatus, a projecting lens, a prism whose cross section is a regular polygon, a condenser and a light source, all of said parts being arranged along an optical axis and optical elements which produce virtual images of the light source at the foci of the condensing lens, conjugate with the virtual images of the center of the projecting lens formed by the prism.

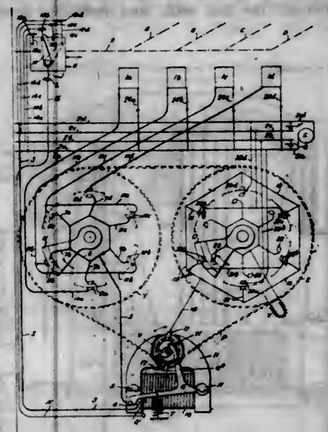
1,577,389. PURIFICATION OF SUGAR SOLUTIONS. KAREL URBAN, Pecky, Czechoslovakia, assignor to Seligman Elbogen, Prague-N, Czechoslovakia, a Firm. Filed June 2, 1924. Serial No. 717,433. 2 Claims. (Cl. 127—46.)



1. Process of purifying a sugar solution by means of a compound which has the property of exchanging alkaline earths for the alkalies of the sugar solution, characterized by the fact that the sugar solution is filtered through said compound until a maximum enriching of the sugar solution with alkaline earths is obtained and is then further filtered through a compound having said exchange property to remove alkaline earths and other ashy substances and organic non-sugar substances to a large extent from the solution.

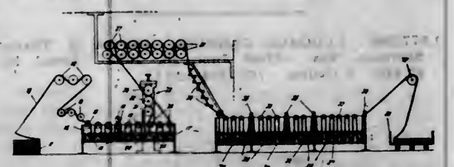
1,577,390. BALLAST-CLEANING DEVICE. GEORGE VANG, Cumberland, Md. Filed June 16, 1923. Serial No. 645,889. 1 Claim. (Cl. 209—256.)

In a device of the character described, a frame adapted for travel on a track, a screen mounted in said frame at an incline longitudinal of said frame, a hopper adapted to protect said screen and to regulate the initial velocity of the material thereon, a slide mounted in said frame beneath said screen and adapted to convey the dirt flowing therefrom to one side of the frame, dirt chutes hingedly connected to the frame and adapted to receive and convey the dirt to a point at one side of the frame, a ballast slide adapted to receive ballast from said screen, a door in the floor thereof adapted to deposit the ballast therethrough before reaching the exit end of the slide between the rails of the track.



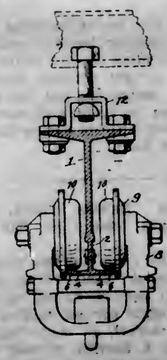
1,557,391. CLOCKWORK FOR MECHANICAL FUSES FOR ARTILLERY PROJECTILES. ANDRÉ VARAUD, Geneva, Switzerland. Filed May 1, 1925. Serial No. 27,121. 7 Claims. (Cl. 102—36.)

1. In a clockwork for mechanical fuses for artillery projectiles, a balance, a cylindrical spiral so placed that the axis thereof is transverse of the fuse and perpendicular to the axis of rotation of the projectile, a supporting member upon which said spiral momentarily rests at the time of the departure of the projectile upon being fired, and a dead-beat escapement whereby oscillations of relatively large amplitude are given to the balance.



1,577,392. AUTOMATIC DIRECTION OF TRAVELING BODIES. ROBERT EDWARD STOPFORD VENABLES, London, England. Filed Dec. 9, 1920. Serial No. 429,571. 3 Claims. (Cl. 104—88.)

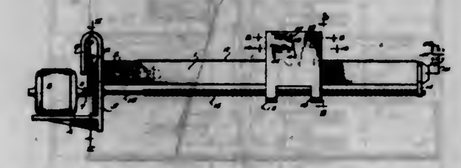
1. In a system of traveling bodies, wherein the transfer action to be performed on a body traveling in a set path is determined by an electric contact associated with said body touching another electric contact associated with the transfer action, a method of using the same contact associated with a body to cause different transfer actions on different occasions, which consists in associating with each such action one of a number of potential points in at least one electric supply circuit,



and in connecting the said contact on each occasion with the potential point thus associated with the action that is then desired to be caused.

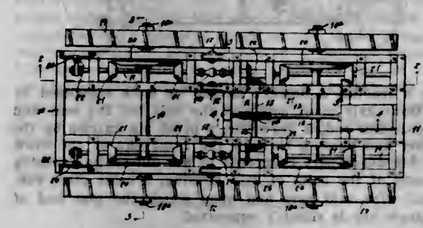
1,577,393. APPARATUS FOR AND METHOD OF TREATING TEXTILES. FREDERICK BENEDICT VOEGELI, Easton, Pa. Filed Feb. 9, 1925. Serial No. 7,932. 8 Claims. (Cl. 8—20.)

5. The steps in the method of mercerizing textile goods consisting in subjecting the goods to hot caustic baths, squeezing and mangling the goods during such baths, and then cooling and stretching the goods.



1,577,394. I-BEAM MONORAIL. WILLIAM G. WEBB, East Cleveland, Ohio, assignor to The Cleveland Crane and Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed July 6, 1925. Serial No. 41,594. 5 Claims. (Cl. 104—109.)

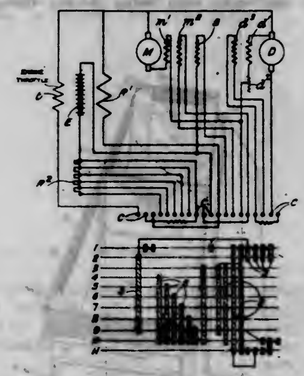
2. An I-beam monorail comprising a rolled T-bar of structural steel and a rolled T-rail having flanges of



less width than the T-bar and having its web in the plane of the web of the first mentioned bar and secured thereto.

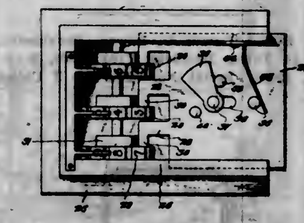
1,577,395. AUTOMATIC SCALE. HARVEY SIMONS WELCH, Jr., Charleston, S. C. Filed Sept. 28, 1925. Serial No. 59,188. 6 Claims. (Cl. 265—56.)

1. In a device of the character described, a beam, a weight automatically movable on said beam, an indicating gear train carried by said weight and adapted to be actuated by movement of the weight in either direction, and a totalising gear train carried by the weight and adapted to be actuated by movement thereof in one direction.



1,577,396. TRACTOR. CHARLES J. WHITE, Kurthwood, La. Filed Mar. 29, 1924. Serial No. 702,888. 1 Claim. (Cl. 180—17.)

A tractor having a frame, front and rear wheels, an axle on said frame for the front wheels, an axle on said frame for the rear wheels, a driving gear on each axle at each side of the frame, longitudinally disposed shafts one at each side of the frame, means operable to drive said shafts, means operable to slide said shafts longitudinally, and drive members on said shafts to coact with the first mentioned drive members through movement of the longitudinal shafts in both directions to control the direction of movement of the tractor, said longitudinally extending shaft having universal joints therein intermediate their ends, and said frame being in sections pivoted together on an axis substantially passing through the universal joint.

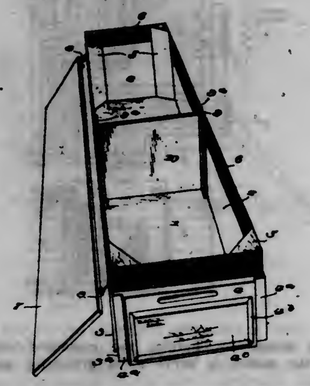


1,577,397. CONTROL OF VEHICLES PROVIDED WITH ELECTRICAL TRANSMISSION. HAROLD KENNETH WHITEHORN, Maidstone, England, assignor to Tilling-Stevens Motors Limited, Victoria Works, Maidstone, Kent, England. Filed Mar. 24, 1924. Serial No. 701,578. 11 Claims. (Cl. 172—179.)

5. In a vehicle transmission and braking system of the kind set forth, the combination of a motor adapted normally to drive the vehicle and at certain times to be driven thereby a number of turns of field winding adapted to excite the motor when driving, a further number of turns of field winding adapted to be connected in series with said first mentioned turns, and separate

exciting means to energize the combined windings to excite the motor to serve as a generator when being driven.

1,577,398. KEYLESS LOCK. MEADE WILDRICK and ALEXANDER GILCHRIST HATCH, Honolulu, Territory of Hawaii, assignors to W-H Keyless Lock Company, Limited. Filed Sept. 24, 1924. Serial No. 739,665. 3 Claims. (Cl. 70—53.)



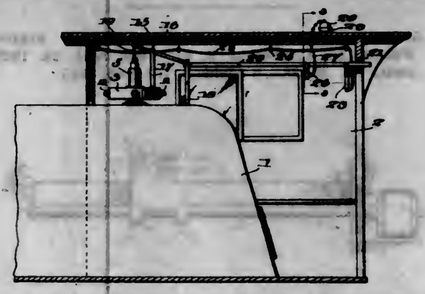
1. A lock comprising a locking member movable from an effective to an ineffective position, and vice versa, a plurality of permutation tumblers including parts lying in the paths of movement of parts of said locking member and preventing effective movement thereof except when set in a pre-determined relation, a manipulator movably mounted in said lock, and having a driving connection with said locking member whereby the latter may be moved from one of its two position to the other when such movement is not obstructed by said tumblers, and a pair of stop elements, one on said manipulator and the other on said locking member, variably positioned by the movements of said parts, whereby said manipulator is limited in its permissible movement by said stops when said locking member is in one of its two positions but is not affected by said stops when said member is in the other of its two positions.

1,577,399. SHIPPING CRATE. RAYMOND LEE WILLIAMS, San Francisco, Calif. Filed Apr. 8, 1925. Serial No. 21,582. 7 Claims. (Cl. 217—45.)

5. A ventilated receptacle for shipping baby chicks comprising a bottom and upright side walls, upright supports projecting above the upper edge of said side walls and spaced inwardly from the outer surface of said side wall, wire netting extending between adjacent supports,

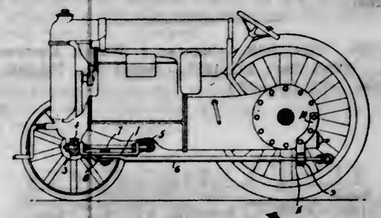
a lid resting on and supported by the upper ends of said supports, and fastening means for said lid at opposite edges thereof secured to said supports and to said lid and spaced inwardly from the outer faces of the side walls, the side walls each being thicker through the

major portion than at their end portions whereby the major portion projects beyond the end portion and ventilation is provided along the end edge portions when receptacles of similar type are stacked one upon the other and alongside of each other.



1,577,400. BOX. LEWIS D. YOUNG, Providence, R. I., assignor to Young Brothers, Providence, R. I. Filed July 24, 1924. Serial No. 727,916. 3 Caims. (Cl. 217—5.)

1. In a box, a body including an open base having sides and ends the corners of which are extended downwardly to form supporting feet of approximately L-shape, a tray having a bottom, sides and ends arranged in the base and with its bottom substantially flush with the lower edges of the sides and ends of the base so as to form a bottom for the latter, the upper parts of the tray sides and ends extending above the base sides and ends to form cover engaging flanges, a cover, a flexible hinge strip secured at one side to the outer face of the rear side of the cover and at its opposite side between the rear sides of the tray and base, and finishing strips secured to the body and cover and extending on opposite sides of the hinge strip to conceal the latter.

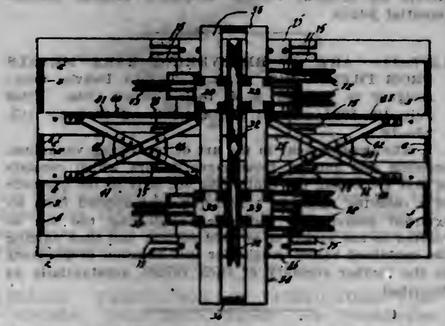


1,577,401. SAFETY DEVICE FOR LOCOMOTIVES. HENRY R. WILLIAMSON, Atlanta, Ga. Filed Mar. 29, 1924. Serial No. 702,908. 4 Claims. (Cl. 137—140.)

2. The combination with the steam distributing box or turret of a locomotive, of a valve for controlling the supply of steam to said box, means constantly tending to close said valve, restraining means for normally holding said valve open, a rock shaft extending longitudinally

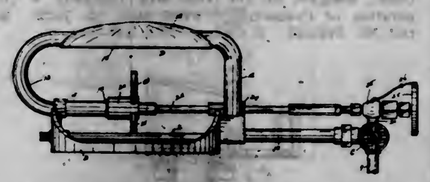
of the locomotive cab for releasing said restraining means, and independent manual and automatic means for operating said rock shaft.

1,577,402. TRACTOR HITCH. JAMES M. WRAY and VINTON P. WRAY, Yakima, Wash. Filed Mar. 20, 1925. Serial No. 17,036. 1 Claim. (Cl. 280—33.12.)



In a tractor, a bracket having its ends supported by the front axle pivot bolt and the bolt for the rear end of the radius rod, a draw bar, a pivot pin carried by the bracket and passing through the front end of the draw bar, dependent bars connected to the differential housing by some of the bolts of said housing, a cross piece connected with said bars and upon which the rear end of the draw bar is slidably supported.

1,577,403. WIRE-LINE GUARD FOR TRAVELING BLOCKS. EDWARD TIMBS, Los Angeles, and LEWIS E. ZEASS, Moneta, Calif., assignors to Union Tool Company, Torrance, Calif., a Corporation of California. Filed Jan. 14, 1924. Serial No. 686,093. 6 Claims. (Cl. 254—197.)

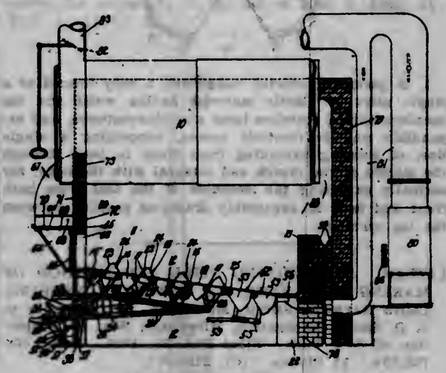


1. A traveling block comprising a frame, a plurality of sheaves rotatably carried by the frame, and guards for the sheaves hooked at one end to the frame and clamped together at the other end.

1,577,404. CROWN-BLOCK CONSTRUCTION. LEWIS E. ZEASS, Moneta, and EDWARD TIMBS, Los Angeles, Calif., assignors to Union Tool Company, Torrance, Calif., a Corporation of California. Filed May 17, 1924. Serial No. 713,991. 10 Claims. (Cl. 254—190.)

8. In a crown-block construction, the combination of a base having four horizontal I-beams, spacing blocks disposed between the webs of said beams, tie-bolts connecting the pairs of the said beams, and tie-bolts passing completely through all of the said beams and securing the same together, a plurality of brackets seated on and secured to the upper flanges of the said beams and consisting of I-beams with their webs cut so that the upper flanges of the brackets are longer than their lower flanges and form a pedestal seat, casing sheaves disposed on each side of the brackets and having parallel shafts extending at right angles to the first named beams, boxes carrying said shafts supported on the first named beams, a pedestal seated on the upper flanges of the brackets, said pedestal having a pair of separated I-beams with distance blocks therebetween, tie bolts connecting the last named I-beams through the last named distance blocks, removable bolts for securing the flanges of the pedestal I-beams to the flanges of the brackets, and diagonal braces secured to the webs of the pedestal I-beams and secured at their lower ends to the flanges of the base beams.

1,577,405. OIL BURNER. MITCHELL CARTER, Salt Lake City, Utah, assignor to Thermic Generating Company, a Corporation of Utah. Filed Sept. 10, 1924. Serial No. 736,939. 3 Claims. (Cl. 158—53.)

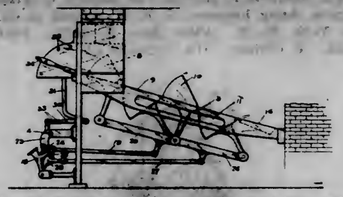


3. An oil burner comprising a hollow circular generator having spaced apart concavo-convex top and bottom with the concave side of both turned in the same direction and toward the flame jets; means to supply oil to said generator; a curved gas pipe to allow gas to flow from said generator; a frusto-conical valve nozzle secured on the end of said gas pipe and having an exit port in its side wall; a rotatable casing conforming to the exterior surface of said valve nozzle; one or more flame jets therein of different lengths and sizes, each adapted to be brought into alignment with the port in said valve nozzle and to direct a flow of gas toward the under face of said generator; and means to regulate the flow of oil into said generator.

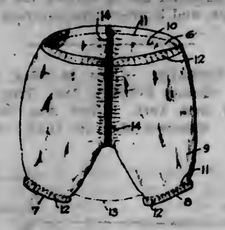
1,577,406. TOILET PACKET. WILLIAM FRIEDMAN, New York, N. Y., assignor to John W. Arnold, Dan H. Arnold, Adelaide F. Arnold, and Mildred C. Arnold, Copartners doing business as F. R. Arnold & Company, New York, N. Y. Filed Nov. 5, 1925. Serial No. 66,983. 6 Claims. (Cl. 132—78.5.)

1. A unitary article of manufacture comprising a subdivided strip of units bearing toilet-preparation and adapted for individual use by tearing the individual units from the strips, and a protective covering for said strip.

1,577,407. FURNACE. VASIL MACKAY, Boston, Mass., assignor to Neemes Foundry, Inc., Troy, N. Y., a Corporation of New York. Filed Aug. 30, 1915, Serial No. 47,047. Renewed May 26, 1923. 6 Claims. (Cl. 110—39.)



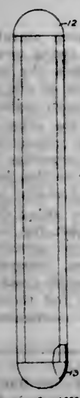
4. A furnace embodying plural series of fuel feeding grate bars mounted to swing upwardly on axes in proximity to their rear edges, the bars of one series being alternated with the bars of the other series, means for operating the bars of each series upwardly to feed the fuel onto the bars of the other series and toward the rear of the furnace in combination with means at the back of the furnace for arresting the rearward movement of the fuel, a grate bar section located forwardly of said fuel arresting means pivotally mounted on an axis in proximity to one edge to swing downwardly for dumping the fuel, ashes and clinker fed thereon by the first mentioned grate bars, manual operating means for said last mentioned grate section, releasable locking means for holding said section against downward movement, due to the weight of material fed thereon, and manually and mechanically operated mechanisms for actuating the grate bars.



1,577,408. STOKER. VASIL MACKAY, Washington, D. C. Filed Nov. 12, 1921, Serial No. 514,752. Renewed Sept. 17, 1925. 14 Claims. (Cl. 110—30.)

1. A stoker including rocking feeding bars, means for

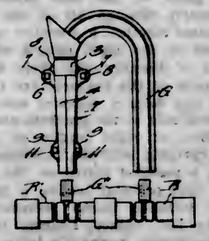
operating the bars mechanically, and means for operating the bars manually, the operability of the manual operating means being dependent upon the angular position of the mechanical operating means.



1,577,409. GARMENT PROTECTOR. LE ROY H. RAND, Brooklyn, N. Y., assignor to Brooklyn Shield & Rubber Company, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 12, 1923. Serial No. 612,216. 5 Claims. (Cl. 128—288.)

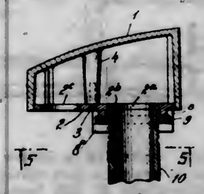
1. A garment-protector comprising a body formed of a single piece of elastic material having waist and leg openings with a seamless loose seat therebetween, and expandible and contractible means, comprising a single line, of shirring extending from front to back through the middle of the crotch and integral with the body, for normally gathering the looseness of the seat from both front and back in expansibly drawn-up position between the leg openings.

1,577,410. OIL-REFINING STILL AND METHOD OF MAKING THE SAME BY ELECTRIC WELDING. LLOYD RAYMOND SMITH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Dec. 31, 1924. Serial No. 758,994. 11 Claims. (Cl. 219—8.)



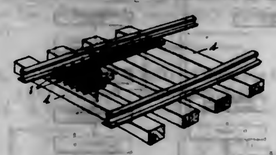
7. In the manufacture of stills of extreme dimensions for use in oil distillation, the method which comprises the steps of converting thick plates having a length many times their width into longitudinal trough-like sections with edges reduced in thickness to form a welding groove, assembling such sections in circular order with their edges in register, and fusing the said edges by playing an electric arc in the welding groove to constitute an integral tubular structure without circumferential joints.

1,577,411. ART OF RECOVERING RARE METALS FROM THEIR ORES. KARL B. THEWS, Denver, Colo., assignor to William A. J. Bell, Denver, Colo. Filed July 12, 1924. Serial No. 484,198. 6 Claims. (Cl. 23—16.)



1. The improvement in the art of recovering vanadium, uranium and radium from carnotite ore which consists in first subjecting the containing ore body in the presence of a reducing agent to a reducing heat applied from an external source and thereafter subjecting the ore so roasted to the action of an acid solvent and thus putting the contained values sought for into solution preparatory to the further recovery of such values, substantially as described.

1,577,412. REPEATER TERMINAL FOR ROLLING MILLS. GEORGE W. WEIMER, Girard, Ohio. Filed Jan. 30, 1923. Serial No. 615,893. 6 Claims. (Cl. 80—52.)

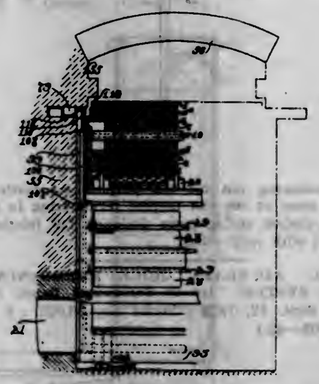


1. A terminal for the work returning guide of a strip rolling mill, comprising an elongated laterally expansible work receiving and straightening guide, closed at its sides and open at its ends, the interior of said guide decreasing in cross sectional area from its inlet to its outlet end and being helically formed to straighten the strip if twisted in the work returning guide.

1,577,413. FIXTURE. JOSEPH A. VOLK, JR., Norwalk, Conn., assignor to The Veco Mfg. Company, a Corporation of Connecticut. Filed Mar. 22, 1922. Serial No. 545,823. 4 Claims. (Cl. 247—6.)

2. In a fixture usable with conduits, the combination of a member of said fixture provided with a hole adapted to receive the screw-threaded end of a conduit, and lugs on said fixture member at opposite sides of the hole therethrough, said lugs being provided at their free end with inwardly directed ledges, said lugs being adapted to receive between them a nut on the threaded end of a conduit that is too large to enter said hole, and said ledges being adapted to receive the end thrust of said nut when its conduit is screwed endwise against the fixture member.

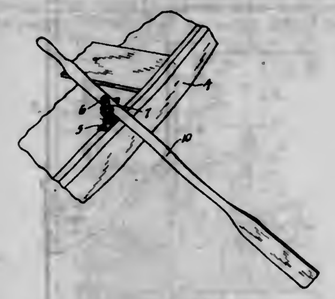
1,577,414. CATTLE GUARD. HARLEY R. SMILEY, Kalamazoo, Mich., assignor to Cook Standard Tool Company, Kalamazoo, Mich. Filed Aug. 3, 1925. Serial No. 47,824. 3 Claims. (Cl. 256—18.)



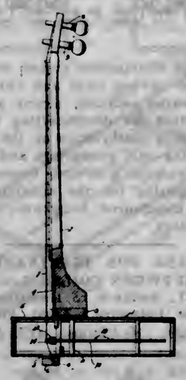
3. A cattle guard unit consisting of a pair of angle iron body members disposed in an opposed inwardly and downwardly facing spaced relation, and a plurality of cross bars having upstanding teeth mounted upon said body members.

1,577,415. PRODUCTION OF ACRIDINIUM COMPOUNDS. LOUIS BENDA, Mainkur, near Frankfort-on-the-Main, and OTTO SIEVERS, Fechenheim-on-the-Main, Germany. Original application filed Dec. 22, 1923, schaft mit beschränkter Haftung, a Corporation of Germany. Original application filed Dec. 22, 1923, Serial No. 682,305. Divided and this application filed Apr. 18, 1925. Serial No. 24,272. 4 Claims. (Cl. 260—36.)

3. As new substances hydroxy-10-alkylacridinium-compounds.



1,577,416. COMPRESSED-AIR FURNACE. ALFRED WILLIAM BENNIS, Bolton, England. Filed May 12, 1919. Serial No. 296,682. 14 Claims. (Cl. 110—40.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

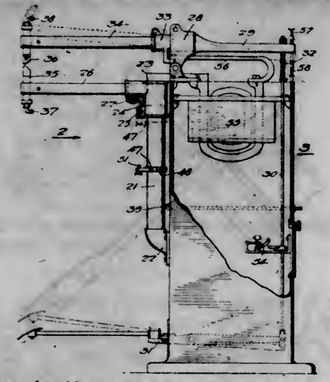


1. A furnace, comprising in combination a mechanical stoking device, including a movable grate, means to force air into the furnace at joints between movable parts and fixed parts to seal the furnace at such places.

1,577,417. OARLOCK. OLAF BERG, St. Paul, Minn. Filed Sept. 27, 1924. Serial No. 740,251. 6 Claims. (Cl. 9—24.)

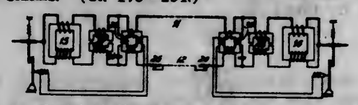
1. In an oarlock, the combination with an oar having a bearing extending transversely of its axis at its fulcrum point, of a substantially vertical pintle secured to the gunwale of a boat, a hub member journaled for horizontal pivotal motion on said pintle, and a substantially horizontal pin rigidly secured to said hub member adapted to pass through the bearing in said oar and be secured thereto to permit vertical pivotal motion of said oar thereon.

1,577,418. MUSICAL INSTRUMENT. SHERMAN CLUBB, Olathe, Colo. Filed Jan. 29, 1924. Serial No. 689,324. 3 Claims. (Cl. 84—268.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



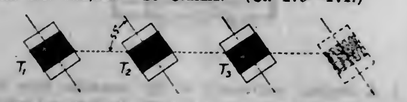
1. A musical instrument of the mandolin type comprising a body having holes in both its top and bottom, string supporting means on the bottom adjacent the hole therein, a neck connected with the front face of the body and extending at an angle from the body, pegs carried by the neck and strings passing over the neck and through the holes in the body and having their ends connected with the string support and the pegs.

1,577,419. ELECTRIC SPOT-WELDING MACHINE. FRANK M. CUSHING and WILLIAM L. B. CUSHING, Los Angeles, Calif. Filed Mar. 12, 1923. Serial No. 624,415. 7 Claims. (Cl. 219—4.)



1. An electric spot welding machine comprising a fulcrumed arm and an arm spaced relative thereto and adapted to swing laterally, means clamping said arms but adapted to permit the rotation of said arms upon their own axes, means to limit the movement of the

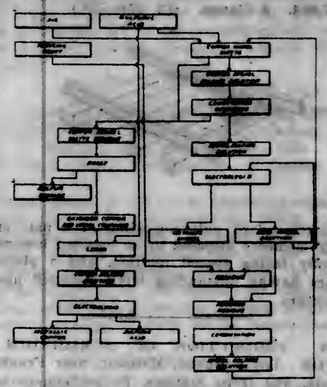
swinging movement to position the extremities in operative relation to each other, electrodes carried at the ex-



tremities of said arms, and manual means for moving said arms into operative relation.

1,577,420. DEVICE FOR AUTOMATICALLY CUTTING OUT DEFECTIVE SECTIONS IN ELECTRIC-DISTRIBUTION NETWORKS. ROBERT DEUBNER, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company, New York, N. Y., a Corporation. Filed Feb. 27, 1925. Serial No. 12,051. 2 Claims. (Cl. 175—294.)

1. An electrical distribution system comprising a split-conductor section having main and auxiliary conductors arranged in parallel relation, means arranged at each end of said section for disconnecting the section upon the occurrence of a disturbance of the normal ratio of currents traversing said conductors and means including inductive and condensive devices connected to the section for compensating for the unbalancing of currents resulting from unbalanced inductance and capacity in the said conductors.

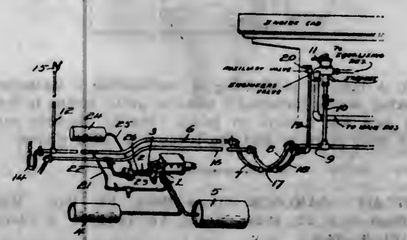


1,577,421. MEANS FOR ELIMINATING MAGNETIC COUPLING BETWEEN COILS. LOUIS A. HAZELTINE, Hoboken, N. J., assignor to Hazeltine Corporation, a Corporation of Delaware. Filed Apr. 7, 1924. Serial No. 704,629. 10 Claims. (Cl. 179—171.)

1. In an electric coil system comprising a plurality of coils whose length is approximately two-thirds the diameter, the method of eliminating undesirable magnetic coupling between the coils thereof, which comprises arranging said coils with their axes parallel and with their centers on the same straight line and disposing each of said axes at an angle of approximately 55 degrees to the line of centers of said coils, whereby substantially no magnetic flux produced by the electric current in any of said coils is linked with any other of said coils.

1,577,422. REFINING COPPER-NICKEL MATTE, ETC. NOAK VICTOR HYBINETTE, Ottawa, Ontario, Canada, assignor, by mesne assignments, to Anglo-Canadian Mining and Refining Company, Limited. Filed Jan. 18, 1921. Serial No. 437,021. 10 Claims. (Cl. 204—57.)

1. The method of utilizing bessemerized copper-nickel matte which comprises cementing copper thereon from a copper-nickel sulfate solution, roasting the remaining matte and cement copper, leaching the roasted material with sulfuric acid to form a copper sulfate solution, re-



ducing the leached residue, dissolving the reduced material to form a copper-nickel solution and cementing copper from such solution upon a further amount of bessemerized matte.

1,577,423. CLEANING ROD. HENDRIK D. MUGAAS, near Norma, N. Dak. Filed Oct. 12, 1925. Serial No. 62,125. 3 Claims. (Cl. 42—91.)

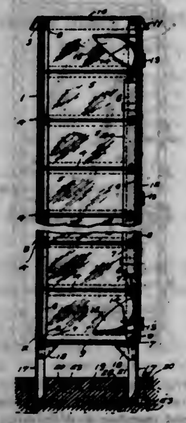
1. A cleaning rod for the purpose set forth having parallel arms at one end thereof terminating in substantially U-shaped spring jaws designed for frictional engagement with each other.

1,577,424. AIR-BRAKE QUICK EMERGENCY CONTROL SYSTEM. HENRY SCHMARGE, Belen, N. Mex. Filed Sept. 12, 1925. Serial No. 56,037. 6 Claims. (Cl. 303—42.)

1. An air brake system comprising in combination a triple valve, a main pipe line for supplying air under pressure to said triple valve, means secured to said triple valve for preventing undesired emergency operation thereof, an auxiliary pipe line for supplying air

under pressure to said means and a double acting valve interposed between said means and said auxiliary pipe line for securing local reduction in pressure in said means and in said auxiliary pipe line by propagation immediately upon positive reduction in pressure in said auxiliary pipe line for permitting emergency operation of said triple valve.

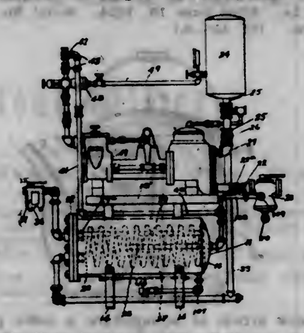
1,577,425. AUTOMOBILE BED. THEODORE G. SCHMEISER, Davis, Calif. Filed Sept. 25, 1924. Serial No. 739,814. 3 Claims. (Cl. 155—7.)



1. A method of converting a two-seated automobile body into a bed, which consists of disconnecting the front seat from its base, turning the seat backwardly through an arc of ninety degrees, and shifting it so that the upholstered back lies on the base of the front seat and serves to form one end of a bed, and disposing cushions between the rear seat and back of the front seat to complete the bed.

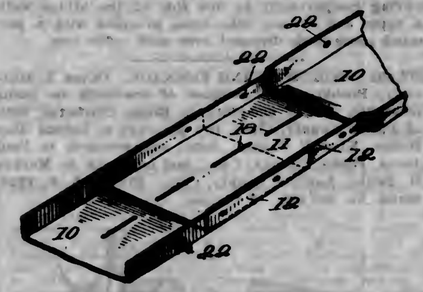
1,577,426. COMPOSITION AND PROCESS OF MAKING THE SAME. ALSONS G. SCHOLICH and GEORGE T. WRIGHT, Alton, Ill., assignors to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Original application filed Feb. 25, 1924, Serial No. 695,098. Divided and this application filed Aug. 31, 1925. Serial No. 53,734. 7 Claims. (Cl. 87—12.)

1. The process consisting in heating China-wood oil at a temperature and for a period sufficient to form a jelly and quenching the same.



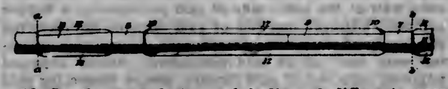
1,577,427. HIGHWAY MARKER. MORRIS H. SMITH, Shreveport, La. Filed June 23, 1925. Serial No. 39,080. 5 Claims. (Cl. 40—132.)

1. A highway marker comprising a metal frame, transparent panels secured to the front and sides of the metal frame, a door secured to the back of the metal frame, lamps carried by the inner side of the door, a top and bottom secured to the ends of the metal frame, and reflectors secured to the inner side of the door.



1,577,428. PUMPING, FILTERING, AND HEATING SYSTEM FOR OIL-BURNING PLANTS. EARLE I. STAPLES, New York, N. Y. Filed May 5, 1923. Serial No. 637,035. 3 Claims. (Cl. 158—36.)

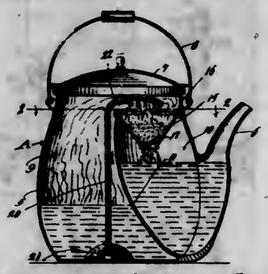
1. An oil heating, pumping and filtering system comprising a pair of oil heaters, frames supporting said heaters in parallel relation to each other, a pan supported by said frames above said heaters, pumps rising from the pan and disposed in vertical alignment with the respective heaters, a horizontally disposed coil arranged in each heater and coiled from its inlet and having a straight portion extending to its outlet, means for caus-



ing filtered oil to be delivered to the pumps and then discharged to said coils and a filter connected with said coils to receive the heated oil therefrom and for causing said oil as it leaves the filter to pass to the burner line of a heating plant, means for delivering steam to the central portion of said heaters to serve as a heating agent for the oil flowing through said coils.

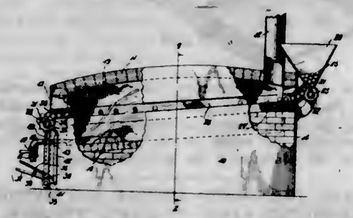
1,577,429. FORM FOR CONCRETE CONSTRUCTION. HEWITT WELLS, Washington, D. C., assignor to Washington Steel Form Company, Washington, D. C., a Corporation of the District of Columbia. Filed Nov. 2, 1925. Serial No. 66,252. 15 Claims. (Cl. 25—131.)

1. A form for concrete construction comprising a metal plate having its sides bent downwardly, said plate having the sides thereof at one end extending inwardly for reducing the width of the plate to permit overlapping of the plate with the next adjacent plate.



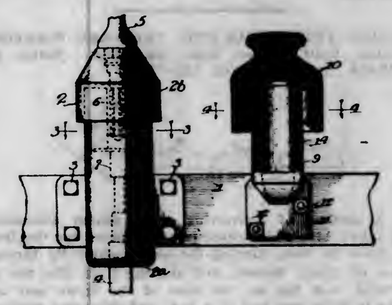
1,577,430. DIE-ROLLED ARTICLE AND METHOD OF MAKING THE SAME. WILLIAM P. WITHEROW, Pittsburgh, Pa., assignor to Witherow Steel Company, a Corporation of Pennsylvania. Filed Jan. 20, 1922. Serial No. 530,640. 11 Claims. (Cl. 80—30.)

10. In the manufacture of bodies of different cross section and at least in part of substantially circular cross section, the steps consisting in forming a leader having a major axis and a minor axis with its major axis larger than the largest portion of the body to be finished therefrom, supplying the leader to a die rolling mill in such manner that the direction of compression of the leader in the mill is along a cross sectional dimension of the leader, and die rolling the leader to form a series of



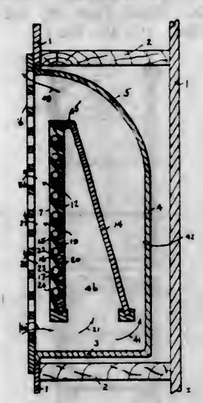
similarly connected blanks, each of the several blanks having a varying cross sectional area along its length but of substantially circular cross section throughout a portion thereof, and then severing the blanks.

1,577,431. COFFEEPOT. ROBERT W. HAGEL, New Orleans, La. Filed June 19, 1924. Serial No. 721,086. 1 Claim. (Cl. 53—3.)



As a new article of manufacture, a coffee percolator comprising a body having an upper open end, a cover detachably connected with the open end of the body, one side of the body being provided with a pointed spout, an arcuate bridge wall extending across the body and connected with the opposite sides thereof and terminating short of the upper edge of the body and extending to the lower wall of the body and enclosing said spout, said bridge wall defining a main water receiving compartment and a made coffee receiving compartment, an inverted substantially frusto-conical shaped ground coffee receiving cup disposed in the upper end of said made coffee compartment, and a percolator tube having an enlarged base detachably fitted within the main water receiving compartment at one side of the bridge wall, the upper end of said tube being provided with a perforated goose neck disposed over said coffee cup.

1,577,432. BOLT-HEATING FURNACE. CLYDE T. MULVANY, Pueblo, Colo., assignor of one-tenth to Rufus Lowrance, and of one-tenth to Elmer Clatfelter, both of Pueblo County, Colo., two per cent to Lorena May Belian, Kimball County, Nebr., one-twentieth to Paul Jones, Pueblo County, Colo., and one-tenth to Markus H. Belian, Larimer County, Colo. Filed Feb. 9, 1924. Serial No. 691,639. 3 Claims. (Cl. 263—6.)



2. In a bolt heating furnace, a fire box, a baffle in said fire box for spreading the flame throughout the same, one side wall of said furnace being formed with an inclined passageway, a water jacket arranged in the furnace wall at the lower side of said passageway, a hopper arranged adjacent one end of said furnace for receiving the supply of stock to be heated, said hopper communicating with one end of said passageway, shafts arranged adjacent each end of said furnace, means connecting said shafts for simultaneous rotation, sprocket wheels arranged on said shafts, the sprocket wheel on the shaft adjacent said hopper controlling the passage of the stock from said hopper into said passageway, the sprocket wheels on the other side of said shafts controlling the discharge of said stock from the discharge end of said passageway and means for rotating said sprocket wheels.

1,577,433. PROTECTIVE DEVICE FOR USE IN CONNECTION WITH POTHEADS AND SIMILAR STRUCTURES. PAUL F. WILLIAMS, Chicago, Ill., assignor to G. & W. Electric Specialty Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 10, 1917. Serial No. 185,454. 1 Claim. (Cl. 173—353.)

The combination with a pothead device consisting of a body and a cap to be mounted thereon, a dummy device provided with a cap adapted to fit upon the upper end of the pothead body when the pothead cap is removed, and a body on which said pothead cap may be mounted, and means for mounting said pothead and dummy devices near one another.

1,577,434. ELECTRIC-RADIANT-HEATER STRUCTURE. ARTHUR KEMPSTON and GEORGE J. HENRY, San Francisco, Calif., assignors to Majestic Electric Appliance Co., San Francisco, Calif., a Corporation of California. Filed Sept. 8, 1925. Serial No. 54,911. 3 Claims. (Cl. 219—34.)

3. In an electric heater, a refractory member, with an electric resistance mounted on said member, a diaphragm to the rear of said member and forming therewith an air passage closed at the top and open at the bottom, a plurality of smaller ducts opening from said air passage and through said member and adapted to heat air currents passing therethrough and to discharge said currents in front of said member in combination with an enclosing casing having an open grille work spaced from and in front of the member, a back spaced from said diaphragm whereby air is adapted to circulate between the said back and the member and a discharge passage for said last mentioned air above the member and diaphragm and through the grille.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 344—No. 4. TUESDAY, MARCH 23, 1926. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disbarment of Attorneys—Appeals—Amendment to the Rules.

SUPREME COURT OF THE DISTRICT OF COLUMBIA.

Chambers of the Chief Justice.

THE COMMISSIONER OF PATENTS,
Patent Office, Washington, D. C.

DEAR MR. COMMISSIONER: An order has been signed to-day amending the rules relating to appeals to this court from your decisions in regard to attorneys practicing before your Office (320 O. G. 1) by adding to the first section of the rule an unnumbered paragraph as follows:

The time for doing any of the foregoing acts may be reasonably extended by order of the court for good cause shown upon motion in writing, notice of the presentation of which with a copy thereof shall be served upon the Commissioner of Patents not less than two days before the time set for its submission to the court.

This amendment will become effective 30 days from to-day.

Very truly yours,

WALTER I. McCOY,
Chief Justice.

March 6, 1926.

Notice.

Classification Bulletin No. 55, containing changes in classification from July 1, 1925, to December 31, 1925, is now on sale for 10 cents per copy at the Patent Office.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Mar. 10, 1926.*

Archie W. Tipps, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Josie B. Sample, of Eudora, Ark., for registration of a trade-mark and trade-mark registered February 27, 1923, No. 164,916, to Archie W. Tipps, 3211 Thomas Avenue, Dallas, Tex., and a notice of such declaration sent by registered mail to said Archie W. Tipps at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Archie W. Tipps, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *First Assistant Commissioner.*

U. S. PATENT OFFICE, *Washington, Mar. 4, 1926.*

John Densley, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Enos Ashley, 88 Oliver Avenue north, Minneapolis, Minn., and John Densley, 89 South Thirteenth Street, Minneapolis, Minn., and a notice of such declaration sent by registered mail to said John Densley at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said John Densley, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Mar. 5, 1926.*

Tennessee Packing & Provision Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Wagner & Company, 4123–29 West Grand Avenue, Chicago, Ill., and Neuhoff Packing Company, Nashville, Tenn., for registrations of trade-marks and trade-marks registered March 7, 1905, No. 44,290, and June 11, 1907, No. 63,296, to Tennessee Packing & Provision Company, Nashville, Tenn., and a notice of such declaration sent by registered mail to said Tennessee Packing & Provision Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Tennessee Packing & Provision Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business March 12, 1926.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 40,925; Trade-Mark Division, 1,906. Oldest new case, Aug. 7, 1925; oldest amended, Sept. 10, 1925. The dates given are 1925 except where † indicates 1926.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
112	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plant Husbandry; Plows; Planting; Scattering Unloaders.	Dec. 26	Dec. 31	574
126	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tobacco	Nov. 23	Nov. 12	586
331	3. RICH, WM. J., Electric Heating; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Nov. 27	Dec. 1	962
234	4. MERRITT, A. D., Conveyers, Chutes, Skids, Guides, and Ways; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Material or Article Handling; Pushing and Pulling Implements; Traversing Hoists.	Dec. 19	Dec. 31	518
108*	5. MACNAB, J. F., Harvesters; Jewelry; Music; Acoustics; Sound Recording and Reproducing; Tying Cords or Strands.	Oct. 15	Oct. 16	847
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemistry; Chemistry—Carbon Compounds; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Substance Preparation; Hides, Skins and Leather; Sugar and Starch; Concentrating Evaporators.	Nov. 25	Nov. 7	1,107
106	7. JARBOE, C. G., Amusement and Exercising Devices; Toys; Optics; Photography	Dec. 24	Dec. 18	794
133	8. HENRY, C. C., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture	Dec. 23	Dec. 25	1,013
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	Dec. 7	Oct. 27	527
118	10. HUNTER, O. F. (Acting), Motor Vehicles; Land Vehicles—Animal Draft Appliances, Bodies and Tops, Dumping.	Nov. 27	Nov. 28	956
148*	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus; Cutting and Punching Sheets and Bars; Driven, Headed, and Screw-Threaded Fastenings.	Dec. 22	Dec. 24	711

DECISIONS IN PATENT AND TRADE-MARK CASES.

Supreme Court of the United States.

THE ALEXANDER MILBURN COMPANY *v.* DAVIS-BOURNONVILLE COMPANY

Decided March 8, 1926.

1. ANTICIPATION—PRIOR INVENTION—PATENT TO ANOTHER BASED ON PRIOR BUT COPENDING APPLICATION AND DISCLOSING BUT NOT CLAIMING THE INVENTION.

Where W. obtained a patent on an application filed during the pendency of an application filed by C., and C.'s application resulted in a patent which completely disclosed but did not claim the invention claimed by W., and there was no evidence carrying W.'s invention back of C.'s filing date, *Held* that W.'s patent was not valid, because W. was not the first inventor of the thing patented.

2. SAME—WRITTEN DESCRIPTION OF INVENTION NOT COMMUNICATED TO ANYONE NOT A BAR.

In view of the gain to the public that the patent laws mean to secure the Court assumed for the purposes of decision that it would have been no bar to W.'s patent if C. had written out his prior description and kept it in his portfolio uncommunicated to anyone.

3. ABANDONED APPLICATIONS—DISREGARD OF BY PATENT OFFICE IN ASCERTAINING STATE OF PRIOR ART.

As an empirical rule the disregard of abandoned applications by the Patent Office in ascertaining the state of the prior art is no doubt convenient, if not necessary, and the Court is not disposed to disturb it; but it cannot be taken to establish a principle beyond the rule as actually applied.

On a writ of certiorari to the United States Circuit Court of Appeals for the Second Circuit.

Mr. James A. Watson for the Alexander Milburn Company.

Messrs. Pennie, Davis, Marvin & Edmonds for Davis-Bournonville Company.

Mr. Thomas Ewing filed a brief as amicus curiæ.

Mr. Solicitor General William D. Mitchell, Mr. Harry E. Knight, and *Mr. John W. Loveland,* Special Assistants to the Attorney General, filed a brief on behalf of the United States as amicus curiæ.

Mr. Justice HOLMES delivered the opinion of the Court.

[1] This is a suit for the infringement of the plaintiff's patent for an improvement in welding and cutting apparatus alleged to have been the invention of one Whitford. The suit embraced other matters but this is the only one material here. The defense is that Whitford was not the first inventor of the thing patented, and the answer gives notice that to prove the invalidity of the patent evidence will be offered that one Clifford invented the thing, his patent being referred to and identified. The application for the plaintiff's patent was filed on March 4, 1911, and the patent was issued on June 4, 1912. There was no evidence carrying Whitford's invention farther back. Clifford's application was filed on January 31, 1911, before Whitford's, and his patent was issued on February 6, 1912. It is not disputed that this application gave a complete and adequate description of the thing patented to Whitford, but it did not claim it. The district court gave the plaintiff a decree, holding that while Clifford might have added this claim to his application, yet as he did not, he was not a prior inventor. 297 Fed. Rep. 846. The decree was affirmed by the circuit court of appeals. 1 Fed. (2d) 227. There is a conflict between this decision and those of other circuit courts of appeal, especially the sixth. *Lemley* v. *Dobson-Evans Co.*, 246 O. G. 1203; 243 Fed. Rep. 391; *Naceskid Service Chain Co.* v. *Perdue*, 1 Fed. (2d) 924. Therefore a writ of certiorari was granted by this Court. 266 U. S. 596.

[2] The patent law authorizes a person who has invented an improvement like the present, "not known or used by others in this country, before his invention", etc., to obtain a patent for it. Rev. Stats. sec. 4886, amended, March 3, 1897, c. 391, sec. 1, 29 Stat. 692. Among the defenses to a suit for infringement the fourth specified by the statute is that the patentee "was not the original and first inventor or discoverer of any material and substantial part of the thing patented." Rev. Stats. sec. 4920, amended, March 3, 1897, c. 391, sec. 2, 29 Stat. 692. Taking these words in their natural sense as they would be read by the common man, obviously one is not the first inventor if, as was the case here, somebody else has made a complete and adequate description of the thing claimed before the earliest moment to which the alleged inventor can carry his invention back. But the words cannot be taken quite so simply. In view of the gain to the public that the patent laws mean to secure we assume for purposes of decision that it would have been no bar to Whitford's patent if Clifford had written out his prior description and kept it in his portfolio uncommunicated to anyone. More than that, since the decision in the case of *The Corn planter Patent*, 23 Wall 181, it is said, at all events for many years, the Patent Office has made no search among abandoned patents, and by the words of the statute a previous foreign invention does not invalidate a patent granted here if it has not been patented or described in a printed publication. Rev. Stats. sec. 4923. See *Westinghouse Machine Co.* v. *General Electric Co.*, 196 O. G. 276; 207 Fed. Rep. 75. These analogies prevailed in the minds of the courts below.

On the other hand publication in a periodical is a bar. This as it seems to us is more than an arbitrary enactment, and illustrates, as does the rule concerning previous public use, the principle that,

subject to the exceptions mentioned, one really must be the first inventor in order to be entitled to a patent. *Coffin* v. *Ogden*, 18 Wall. 120. We understand the circuit court of appeals to admit that if Whitford had not applied for his patent until after the issue to Clifford, the disclosure by the latter would have had the same effect as the publication of the same words in a periodical, although not made the basis of a claim. 1 Fed. (2d) 233. The invention is made public property as much in the one case as in the other. But if this be true, as we think that it is, it seems to us that a sound distinction cannot be taken between that case and a patent applied for before but not granted until after a second patent is sought. The delays of the Patent Office ought not to cut down the effect of what has been done. The description shows that Whitford was not the first inventor. Clifford had done all that he could do to make his description public. He had taken steps that would make it public as soon as the Patent Office did its work, although, of course, amendments might be required of him before the end could be reached. We see no reason in the words or policy of the law for allowing Whitford to profit by the delay and make himself out to be the first inventor when he was not so in fact, when Clifford had shown knowledge inconsistent with the allowance, of Whitford's claim. [*Webster*] *Loom Co.* v. *Higgins*, 21 O. G. 2031; 105 U. S. 580, and when otherwise the publication of his patent would abandon the thing described to the public unless it already was old. *McClain* v. *Ortmayer*, 57 O. G. 1129; 141 U. S. 419, 424. *Underwood* v. *Gerber*, 63 O. G. 1063; 149 U. S. 224, 230.

The question is not whether Clifford showed himself by the description to be the first inventor. By putting it in that form it is comparatively easy to take the next step and say that he is not an inventor in the sense of the statute unless he makes a claim. The question is whether Clifford's disclosure made it impossible for Whitford to claim the invention at a later date. The disclosure would have had the same effect as at present if Clifford had added to his description a statement that he did not claim the thing described because he abandoned it or because he believed it to be old. It is not necessary to show who did invent the thing in order to show that Whitford did not.

It is said that without a claim the thing described is not reduced to practice. But this seems to us to rest on a false theory helped out by the fiction that by a claim it is reduced to practice. A new application and a claim may be based on the original description within two years, and the original priority established notwithstanding intervening claims. *Chapman* v. *Wintroath*, 272 O. G. 913; 252 U. S. 126, 137. A description that would bar a patent if printed in a perodical or in an issued patent is equally effective in an application so far as reduction to practice goes.

[3] As to the analogies relied upon below, the disregard of abandoned patents however explained can not be taken to establish a principle beyond the rule as actually applied. As an empirical rule it no doubt is convenient if not necessary to the Patent Office, and we are not disposed to disturb it, although we infer that originally the practice of the Office was different. The policy of the statute as to foreign inventions obviously stands on its own footing and can not be applied to domestic affairs. The fundamental rule we repeat is that the patentee must be the first inventor. The qualifications in aid of a wish to encourage improvements or to avoid laborious investigations do not prevent the rule from applying here.

Decree reversed.

ADJUDICATED PATENTS.

(C. C. A. N. Y.) The Wagner & Malocsay patent, No. 920,698, for cigar-banding machine, claims 22 and 88 *Held* valid and infringed and claim 97 *Held* not infringed. *International Banding Mach. Co.* v. *American Bander Co.*, 9 F. (2d) 606.

(D. C. N. Y.) The Paridon and Palmer patent, No 1,042,472, for making match books, claims 18, 21, 22, and 26 *Held* valid, but not infringed. *Diamond Match Co.* v. *Sun Match Corporation*, 9 F. (2d) 695.

(C. C. A. N. Y.) The Malocsay patent, No. 1,261,832, for cigar-banding machine, claim 5 *Held* valid and infringed. *International Banding Mach. Co.* v. *American Bander Co.*, 9 F. (2d) 606.

Re. 15,427, H. M. Boe, Grease or oil dispensing apparatus, suit filed Aug. 20, 1923, D. C., N. D. Ohio (E. Div.), Doc. 959, *H. M. Boe et al.* v. *The Lomis-Sielaff Co.* Dismissed without prejudice on application of plaintiffs Nov. 28, 1925.

Des. 68,077, R. M. Wyle, Thermometer, suit filed Jan. 7, 1926, D. C., E. D. Pa., Doc. 3537, *The National Souvenir Co.* v. *S. Marcus.*

T. M. 110,004, Orange Whistle Co., Nonalcoholic beverage, by agreement of counsel temporary injunction made permanent Jan. 11, 1926, D. C., M. D. Pa., Doc. 379, *V. Jones et al.* v. *H. Stone (Stone's Bottling Works).*

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,215,885, F. E. Kling, Filtering medium for cleaning furnace gases, decided February 1, 1926, claims 1 and 2.

Pat. 1,504,573, J. H. Miller, Shutter-operating apparatus, decided February 11, 1926, claims 1, 2, 3, 5, and 6.

Pat. 1,515,908, C. H. Stephenson, Process for the removal of maggots, insects, green berries, trash, and similar objects from blueberries, decided January 29, 1926, claim 1.

Pat. 1,535,937, J. H. Millholland, Floor-waxing device, decided March 6, 1926, claims 4 to 8, inclusive.

Final decisions in interferences have been rendered against the following registered trade-marks:

T. M. 112,312, Eggs, butter, and dressed poultry, F. M. Risk, Chicago, Ill. Registered August 29, 1916. Decided January 4, 1926.

T. M. 200,764, Sweaters, hosiery, caps, hats, infants' bootees, scarfs, and shirts, Torian Brothers Company, Evansville, Ind. Registered July 7, 1925. Decided January 30, 1926.

TRADE-MARKS CANCELED.

58,908. Nonalcoholic hop beverage. American Beverage Co., Inc., Atlanta, Ga. Registered December 25, 1906. Canceled March 4, 1926.

58,930. Pocketknives. Son Brothers & Co., San Francisco, Calif., and Meriden, Conn. Registered December 25, 1906. Canceled March 3, 1926.

80,864. Boots and shoes. The Miller Bros. Star Shoe Co., Cleveland, Ohio. Registered February 7, 1911. Canceled March 3, 1926.

106,997. Cake. Palmer Candy Co., Sioux City, Iowa. Registered November 9, 1915. Canceled March 3, 1926.

134,651. Hosiery. Fulfashon Hosiery Company, New York, N. Y. Registered September 14, 1920. Canceled February 26, 1926.

147,444. Liquid and plastic surface-coating waterproofing material in the nature of a paint. L. Sonneborn Sons Inc., New York, N. Y. Registered October 11, 1921. Canceled March 3, 1926.

189,906. Salad dressing. Scholl Bros., Houston, Tex. Registered September 30, 1924. Canceled February 26, 1926.

193,342. Writing paper. Empire Paper Company, Chicago, Ill. Registered December 23, 1924. Canceled February 26, 1926.

Disclaimers.

1,546,173.—*Herman J. H. Huber*, Schenectady, N. Y. ELECTRIC SWITCH. Patent dated July 14, 1925. Disclaimer filed March 3, 1926, by the assignee, *General Electric Company.*

Hereby enters this disclaimer under the provisions of and for the purpose set forth in rule 181, to the following claims in said Letters Patent, to wit:

"1. In an electric switch device, the combination of a supporting member, a fixed contact, an adapter for supporting said fixed contact and means for securing said adapter to said member in various positions of angular adjustment.

"2. In an electric switch device, the combination of an inclined supporting member, a washer secured thereto, a fixed contact, an adapter adjustable on said washer for supporting said fixed contact, and means for clamping said adapter to said washer in adjusted position.

"3. In an electric switch device, the combination of a supporting insulator bushing, an annular member at the end thereof, means for rigidly securing said member to said bushing, a fixed contact, an adapter for supporting said fixed contact in a substantially vertical position and means for clamping said adapter to said member in various positions of angular adjustment.

"7. In an electric switch device, the combination of an insulator bushing, an adapter carried thereby, a contact retainer and means for adjustably securing said contact retainer to said adapter."

1,026,721.—*Henry Thomas*, East Ham, London, England. MEAT HOLDER. Patent dated May 21, 1912. Disclaimer filed March 8, 1926, by the assignee, *U. S. Slicing Machine Company.*

Hereby enters this disclaimer to the said claims 9, 12, and 13 in said specification, which claims are in the following words, to wit:

"9. In an apparatus for holding material to be sliced, the combination with a support for holding the article to be sliced, of a face plate mounted upon the support for ready adjustment into and out of operative position with respect thereto, and means for cooperating with the face plate for holding the material to be sliced against the face of the said face plate.

"12. In an apparatus for holding the material to be sliced, the combination with a support, of a face plate mounted upon the support and adapted to be readily moved into and out of operative position, means adapted to be projected and retracted with respect to the face of the face plate to hold the material to be cut and for releasing said material, and mechanism for controlling the last said means at will.

"13. In an apparatus for holding material to be sliced, the combination with a support, of a face plate mounted upon the support and adapted to be moved into and out of operative position, means adapted to be projected and retracted with respect to the face of the face plate, to hold the material to be cut and for releasing said material, means for controlling the last said means at will, said holding means penetrating the material and operating to draw the material against the face of the plate."

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 23, 1926.

[VOL. 344. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 189,987. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE PANELYTE BOARD COMPANY, Trenton, N. J. Filed Dec. 21, 1923.

PANELYTE

The vertical lines shown in the drawing indicate that the oval panel on which the mark is displayed is red in color.

Particular description of goods.—Electrical Insulation Boards, Panels, Blocks, Rods, Bars, Tubes, Knobs, Handles, and Washers.

Claims use since May 1, 1923.

The lining appearing on the drawing is used for shading purposes only. No claim is made to the word "Butter" apart from the mark shown.

Particular description of goods.—Butter.

Claims use since Mar. 1, 1924.

Ser. No. 195,917. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE STANLEY WORKS, New Britain, Conn. Filed Apr. 21, 1924.

Trade-mark consists of the color black arbitrarily applied by enameling, lacquering, or otherwise to the handles and to unpolished metal surfaces of a line of tools, as shown on the specimens filed.

Particular description of goods.—Hammers, Saws, Bit Braces, Auger Bits, Chisels, Screw Drivers, Planes, Files, Wrenches, Axes, Vises, Putty Knives, Awls, Pry Bars.

Claims use since Oct. 20, 1922.

Ser. No. 198,652. (CLASS 7. CORDAGE.) THE LINEN THREAD CO., New York, N. Y. Filed June 16, 1924. Under ten-year proviso.

ELM FLAX MILLS BRAND

Particular description of goods.—Twine, Rope Yarn, and Roving Made of Cotton, Jute, Hemp, or Flax.
Claims use since 1870.

Ser. No. 199,611. (CLASS 2. RECEPTACLES.) DOBER MANUFACTURING COMPANY, Grand Rapids, Mich. Filed July 5, 1924.

VANI-DOR

Particular description of goods.—Base-Metal Receptacles for Attachment to the Inside of Automobiles for Holding Toilet or Similar Articles.
Claims use since Dec. 1, 1923.

Ser. No. 201,881. (CLASS 28. JEWELRY, AND PRECIOUS-METAL WARE.) CARSON PIRIE SCOTT & CO., Chicago, Ill. Filed Aug. 26, 1924.

Particular description of goods.—Pearls and Pearl Necklaces.
Claims use since April, 1924.

Ser. No. 202,221. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) PFANSTIEHL RADIO SERVICE COMPANY, Highland Park, Ill. Filed Sept. 4, 1924.

Pfanstiehl

The word "Pfanstiehl" in the form shown in the drawing is a facsimile of the signature of Mr. Carl Pfanstiehl.
Particular description of goods.—Radioamplifiers, Radiosilencers, Radio Condensers, Apparatus, Machines, and Supplies.
Claims use since Jan. 31, 1923.

Ser. No. 202,519. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE SANITARY POTATO CHIP COMPANY, Washington, D. C. Filed Sept. 11, 1924.

GOLDEN CRISP
BRAND
POTATO CHIPS

No claim is made to the words "Crisp Brand" and "Potato Chips" except as associated with other features of the mark.
Particular description of goods.—Potato Chips.
Claims use since Aug. 18, 1924.

Ser. No. 204,416. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) JEAN NAZELEY, doing business as J. Nazeley Co., New York, N. Y. Filed Oct. 25, 1924.

"SELECTO"

Particular description of goods.—Antenna Loops, Radio Receiving Sets, Fixed and Variable Condensers, Rheostats, Transformers, Radio Tube Sockets, Tuning Coils and Mountings, Panels for Receiving Sets, Switch Points.
Claims use since Apr. 15, 1924.

Ser. No. 204,528. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) GEORG CHRISTIAN STOLTZ, New York, N. Y. Filed Oct. 28, 1924.

Panta

Particular description of goods.—Radio Receiving Sets and Parts Thereof.
Claims use since Oct. 22, 1924.

Ser. No. 206,281. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) DEUTSCHE GASGLUHLICHT-AUER-GESELLSCHAFT MIT BESCHRANKTER HAFTUNG, Berlin, Germany. Filed Dec. 5, 1924.

Degea

Particular description of goods.—Electric Household Appliances.
Claims use since Jan. 8, 1915.

Ser. No. 206,952. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) FRENCH BATTERY & CARBON COMPANY, Madison, Wis. Filed Dec. 19, 1924.

CHECKER

Particular description of goods.—Dry Batteries.
Claims use since Oct. 1, 1924.

Ser. No. 207,067. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DELILAH H. CHESTER, New York, N. Y. Filed Dec. 22, 1924.

Mlle. Delilah.

Particular description of goods.—Toilet Powders, Facial Creams, Skin Tonics, Perfumes, Hand and Face Lotions, Lip and Skin Cosmetics, Hair and Scalp Pomades, and Antiseptic Mouth Wash.
Claims use since Nov. 16, 1924.

Ser. No. 207,977. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE EMPIRE PLOW COMPANY, Cleveland, Ohio. Filed Jan. 12, 1925.

"EMPIRE"

Particular description of goods.—Plows, Cultivators, Harrows, Handles for Agricultural Implements, Weeders, Garden Plows, Garden Cultivators, and Agricultural Steel Shapes.
Claims use since 1890.

Ser. No. 208,100. (CLASS 38. PRINTS AND PUBLICATIONS.) LOUIS HURWITZ, Philadelphia, Pa. Filed Jan. 14, 1925.

UNITED

Particular description of goods.—Picture Post Cards.
Claims use since Oct. 30, 1924.

Ser. No. 208,333. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) THE E. Z. WALK ARCH CORPORATION, New York, N. Y. Filed Jan. 20, 1925.

STEP RITE

Particular description of goods.—Supports for Arches and Other Parts of the Feet and Inner Supporting Soles.
Claims use since 1912.

Ser. No. 208,334. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) THE E. Z. WALK ARCH CORPORATION, New York, N. Y. Filed Jan. 20, 1925.

FOOT-RAISE

Particular description of goods.—Supports for Arches and Other Parts of the Feet and Inner Supporting Soles.
Claims use since 1912.

Ser. No. 208,335. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) THE E. Z. WALK ARCH CORPORATION, New York, N. Y. Filed Jan. 20, 1925.

VELVET

Particular description of goods.—Supports for Arches and Other Parts of the Feet and Inner Supporting Soles.
Claims use since 1912.

Ser. No. 208,336. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) THE E. Z. WALK ARCH CORPORATION, New York, N. Y. Filed Jan. 20, 1925.

MEDICO

Particular description of goods.—Supports for Arches and Other Parts of the Feet and Inner Supporting Soles.
Claims use since 1912.

Ser. No. 208,337. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) THE E. Z. WALK ARCH CORPORATION, New York, N. Y. Filed Jan. 20, 1925.

CUM-FUT

Particular description of goods.—Supports for Arches and Other Parts of the Feet and Inner Supporting Soles.
Claims use since 1912.

Ser. No. 208,564. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) THE BROOKS TENT & AWNING COMPANY, Denver, Colo. Filed Jan. 24, 1925.

Particular description of goods.—Tent Cloth.
Claims use since Dec. 20, 1924.

Ser. No. 208,589. (CLASS 39. CLOTHING.) JAMES A. HEARN & SON, INC., New York, N. Y. Filed Jan. 24, 1925.

Fleur

Particular description of goods.—Infants' Wear—Viz, Bootees, Jackets, Dresses, Shirts, Coats, Caps, Hats, Drawers, and Mittens.
Claims use since Mar. 20, 1924.

Ser. No. 208,590. (CLASS 39. CLOTHING.) JAMES A. HEARN & SON, INC., New York, N. Y. Filed Jan. 24, 1925.

MonPetit

Particular description of goods.—Infants' Wear—Viz, Bootees, Jackets, Dresses, Shirts, Coats, Caps, Hats, Drawers, and Mittens.
Claims use since Mar. 15, 1924.

Ser. No. 208,832. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) A. F. THIBODEAU COMPANY, INC., Detroit, Mich. Filed Jan. 29, 1925.

MED-O-DEW

Particular description of goods.—Butter.
Claims use since January, 1921..

Ser. No. 208,934. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE WARDROP CO., INC., New York, N. Y. Filed Jan. 31, 1925.

VEGEX

Particular description of goods.—Bread.
Claims use since Jan. 16, 1925.

Ser. No. 208,936. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE WARDROP CO., INC., New York, N. Y. Filed Jan. 31, 1925.

VEGEX MILK

Applicant disclaims any exclusive right to the word "Milk" apart from the mark shown on the drawing.
Particular description of goods.—Bread.
Claims use since Jan. 16, 1925.

Ser. No. 208,939. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE WARDROP CO., INC., New York, N. Y. Filed Jan. 31, 1925.

WARDWAY

Particular description of goods.—Bread.
Claims use since Jan. 16, 1925.

Ser. No. 209,071. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) HARRY S. WATERMAN, Los Angeles, Calif. Filed Feb. 3, 1925.

No claim is made for the words "Expanding Mandrels" apart from the mark shown in the drawing.
Particular description of goods.—Expanding Mandrels and Reamers.
Claims use since July 25, 1922.

Ser. No. 209,119. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CALIFORNIA HEALTH FOOD CO., Los Angeles, Calif. Filed Feb. 5, 1925.

Fig-Co

Particular description of goods.—Coffee Substitute.
Claims use since Nov. 1, 1924.

Ser. No. 209,293. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) WM. H. HORSTMANN COMPANY, Philadelphia, Pa. Filed Feb. 9, 1925. Under ten-year proviso.

Particular description of goods.—Stamped Goods of Cotton, Wool, Silk, Linen, Artificial Silk, and Combinations of the Same to be Embroidered.
Claims use since 1890.

Ser. No. 209,997. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) FRANK LE BRON, New York, N. Y. Filed Feb. 21, 1925.

Particular description of goods.—Solid-Gold Articles—Namely, Bracelets, Bib Holders, Necklaces, Pins, Finger Rings, Earrings, and Napkin Rings.
Claims use since January, 1925.

Ser. No. 210,942. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WOLO A.-G. (WOLO LTD.), Zurich, Switzerland. Filed Mar. 12, 1925.

„THIORUBROL"

Particular description of goods.—Pharmaceutical Preparation Used for Preparing Sulphureted Baths Against Following Diseases: Rheumatic Affections, Skin Diseases, Scrofula, Varicose Ulcers on the Feet, Chronic Diseases of Women, Chronic Syphilis, Chronic Metal Poisoning.
Claims use since 1909.

Ser. No. 210,945. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WOLO A.-G. (WOLO LTD.), Zurich, Switzerland. Filed Mar. 12, 1925.

Lacpinin

Particular description of goods.—Products for the Preparation of White-Pine-Needle Baths Used for Treating Weakness Caused by Physical and Mental Overexertion, Affections of the Heart, Rheumatism, Women's Diseases, and Skin Diseases.
Claims use since 1909.

Ser. No. 211,873. (CLASS 15. OILS AND GREASES.) SLOANE-FORSBERG OIL COMPANY, Oklahoma City, Okla. Filed Mar. 30, 1925.

The word "Gasoline" is disclaimed except as associated with other features of the mark.
Particular description of goods.—Gasoline.
Claims use since Mar. 20, 1905.

Ser. No. 211,986. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) THE DALLAS MANUFACTURING CO., Huntsville, Ala. Filed Apr. 1, 1925.

HADLEY

No claim is made to the exclusive use of the word "Hadley" apart from the other features of the mark shown.

Particular description of goods.—Cotton Piece Goods.

Claims use since 1900.

Ser. No. 212,487. (CLASS 32. FURNITURE AND UPHOLSTERY.) EDSTROM-WESTMORE-HENDERSON CORP., Warren, Pa. Filed Apr. 10, 1925.

REDO TIP

Particular description of goods.—Shade Rollers.

Claims use since Mar. 23, 1925.

Ser. No. 212,634. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) J. A. PARDOE, doing business as J. A. Pardoe Company, Omaha, Nebr. Filed Apr. 13, 1925.

No claim is made for the words "Pardoes Station Service Sales System" except in association with the mark as shown.

Particular description of goods.—Ice Cream.

Claims use since May 10, 1924.

Ser. No. 212,734. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) HARDMAN, PECK & CO., New York, N. Y. Filed Apr. 15, 1925. Under section 5b of the act of 1905 as amended in 1920.

HARDMAN

Particular description of goods.—Radio Receiving and Transmitting Sets and Parts Thereof.

Claims use since Feb. 3, 1925.

Ser. No. 213,013. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOSEPH DUPEE, doing business as Lager Malt Extract Company, Chicago, Ill. Filed Apr. 20, 1925.

LAGER

Particular description of goods.—Malt Extract.

Claims use since Apr. 7, 1925.

Ser. No. 213,646. (CLASS 38. PRINTS AND PUBLICATIONS.) THE HOOVER COMPANY, North Canton, Ohio. Filed May 1, 1925.

THE HOOVER NEWSY NEWS

The trade-mark consists of the words "The Hoover Newsy News."

Particular description of goods.—Publication.

Claims use since May 23, 1919.

Ser. No. 215,021. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) POLYMET MANUFACTURING CORPORATION, New York, N. Y. Filed May 28, 1925.

POLY

Particular description of goods.—Plugs for Radio Apparatus, More Particularly for Plugs for Radio Apparatus Adapted for Radio Reception.

Claims use since Feb. 25, 1924.

Ser. No. 215,194. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THOMAS C. WHITEHEAD, doing business as The Shu Sheen Company, Detroit, Mich. Filed June 1, 1925.

Shu Sheen

Particular description of goods.—Shoe-Blacking Polish.

Claims use since May 7, 1925.

Ser. No. 216,245. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GUSTAV WIEDEKE CO., Dayton, Ohio. Filed June 22, 1925.

VICTOR

Trade-mark consists of the word "Victor."

Particular description of goods.—Tube and Flue Expanders, Tube and Flue Cutters, and Tube and Flue Beading Tools.

Claims use since June, 1915.

Ser. No. 216,276. (CLASS 25. LOCKS AND SAFES.) F. WILHELM LÜLING, Volmarstein on the Ruhr, Germany. Filed June 23, 1925.

Burg

Particular description of goods.—Padlocks, Door Locks, Furniture Locks, Latches, and Bolts for the Same.

Claims use since Jan. 1, 1925.

Ser. No. 216,295. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) J. D. and A. B. SPRECKELS SECURITIES COMPANY, doing business as Western Sugar Refinery, San Francisco, Calif. Filed June 23, 1925.

The lining of drawing indicates shading only.

Particular description of goods.—Cane Sugar.

Claims use since about May 15, 1918.

Ser. No. 216,305. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) UNITED STATES STORES CORPORATION, Orange, N. J. Filed June 23, 1925.

No claim is made to the word "Brands" except in connection with the balance of the mark.

Particular description of goods.—Canned Cherries and Canned Peaches.

Claims use since Mar. 20, 1925.

Ser. No. 216,395. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) INDERRIEDEN CANNING CO., Chicago, Ill. Filed June 25, 1925.

Peter-Pan

Particular description of goods.—Dried Fruits—Namely, Raisins, Pears, Apricots, Prunes, Peaches, Figs, and Nectarines.

Claims use since Jan. 31, 1922, on raisins; Apr. 29, 1925, on peaches; May 19, 1925, on pears, apricots, prunes, figs, and nectarines.

Ser. No. 216,550. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LAKEVIEW FRUIT CO., Union City, N. J., and Lakeview, N. C. Filed June 27, 1925.

The picture of a girl is not that of a living person, but is merely fanciful. The pictorial representation of a peach apart from the other features of the mark is hereby disclaimed.

Particular description of goods.—Fresh and Canned Fruits.

Claims use since June 24, 1925.

Ser. No. 216,607. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) KARAS ELECTRIC COMPANY, Chicago, Ill. Filed June 29, 1925.

KARAS HARMONIK

No claim is made to the exclusive use of the words shown except in the form and relation in which they are illustrated.

Particular description of goods.—Electrical Transformers for Radio Use.

Claims use since August, 1924.

Ser. No. 216,669. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) WILLIAM PERCY DEAN, Eldon, James Lane, Burgess Hill, Sussex, England. Filed June 30, 1925.

The device shown in the mark is a representation of the goods to which the mark is applied. No claim is made thereto apart from the other features.

Particular description of goods.—Device for Practicing Putting for the Game of Golf.

Claims use since Oct. 17, 1924.

Ser. No. 216,714. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) L. H. DAVIS & COMPANY, Fresno, Calif. Filed July 1, 1925.

MEMORIE

Particular description of goods.—Dried Raisins and Figs.

Claims use since Sept. 1, 1923.

Ser. No. 217,102. (CLASS 39. CLOTHING.) LEVINE BROS., New York, N. Y. Filed July 9, 1925.

LeVine Yeddo

The vertical lines forming the background of the cross indicate red. All other lining represents shading and rays of sun.

Particular description of goods.—Men's Straw Hats, Caps, and Felt Hats.

Claims use since July 1, 1924.

Ser. No. 217,805. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) LOUIS H. SMITH, doing business as Surplus Auto Supply Co., Chicago, Ill. Filed July 13, 1925.

GOLDEN RULE CORD

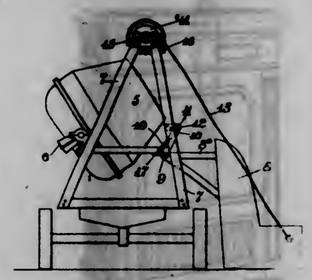
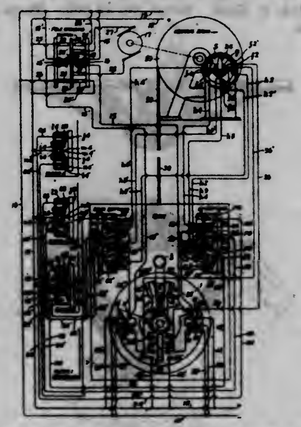
REISSUES



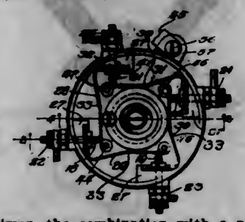
MARCH 23, 1926.

16,295. FLUID-PRESSURE BRAKE. SIDNEY G. DOWN, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 6, 1925. Serial No. 67,464. Original No. 1,468,479, dated Apr. 1, 1924, Serial No. 524,926, filed Dec. 27, 1921. 4 Claims. (Cl. 303—85.)



1. In a locomotive brake equipment, the combination with a primary reservoir adapted to be charged with fluid under pressure, a secondary reservoir, and a reducing valve device through which fluid under pressure is supplied at a reduced pressure from the primary reservoir to the secondary reservoir, of a brake pipe and a brake valve device having only one position in which fluid under pressure can be supplied to the brake pipe, said supply being only from said secondary reservoir.

16,296. CONCRETE MIXER. GERHARD JAEGER, Columbus, Ohio, assignor to The Jaeger Machine Company, Columbus, Ohio, a Corporation of Ohio. Filed Feb. 10, 1926. Serial No. 87,444. Original No. 1,535,159, dated Apr. 28, 1925, Serial No. 691,293, filed Feb. 7, 1924. 6 Claims. (Cl. 214—130.)

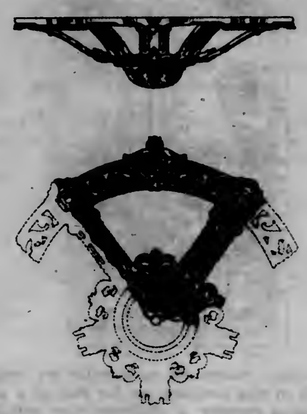


1. The combination with a mixing vessel and a frame for supporting the same, of a loader bucket for the mixing vessel, means for pivoting said bucket with reference to the frame consisting of a pendently hinged link, said link having a hinged connection at its free end with the loader bucket, and means for raising the bucket first on the lower axis and then on the other to mixing vessel charging position.

16,297. CONTROL FOR ELECTRIC ELEVATORS. HUMPHREY F. PARKER, Philadelphia, Pa., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 13, 1925. Serial No. 68,922. Original No. 1,506,380, dated Aug. 26, 1924, Serial No. 464,319, filed Apr. 25, 1921. 68 Claims. (Cl. 187—29.)

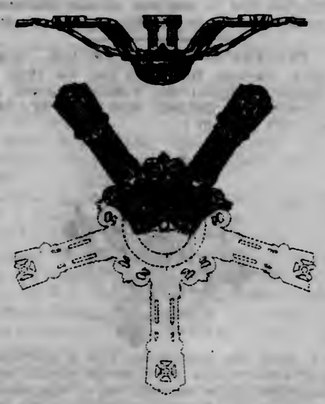
41. A control system for an elevator car comprising, a plurality of stop switches, one for each of a plurality of landings, a plurality of additional stop switches, one for each of said landings, start control switching mechanism, car actuating and stopping mechanism responsive to the first named stop switches to stop the car at the landings corresponding to said first named stop switches operated, only when the car is traveling in one direction, responsive to said additional stop switches to stop the car at the landings corresponding to said additional stop switches operated, only when the car is traveling in the other direction, and responsive to said start control switching mechanism to start the car, and means for preventing the operation of the car actuating and stopping mechanism to stop the car in response to the first named stop switches when the car is traveling in said other direction and in response to said additional stop switches when the car is traveling in said one direction.

16,298. ELECTRICAL TIMING DEVICE. GUSTAF A. SAFSTROM, Chicago, Ill. Filed Dec. 16, 1925. Serial No. 75,880. Original No. 1,499,479, dated July 1, 1924, Serial No. 583,262, filed Aug. 21, 1922. 7 Claims. (Cl. 200—27.)



6. In a timer, the combination with a relatively fixed contact, of a rotary cam and a spring contact extending under its spring tension normally out of engagement with said fixed contact and bent in a direction to extend at its bent portion into the path of said cam and move directly thereby against said fixed contact and relative thereto in face-to-face rubbing contact therewith as said cam tends to straighten out said bent portion.

DESIGNS



MARCH 23, 1926.

69,728. PLATE FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Jan. 8, 1926. Serial No. 16,003. Term of patent 7 years.

The ornamental design for a plate for lighting fixtures, as shown.

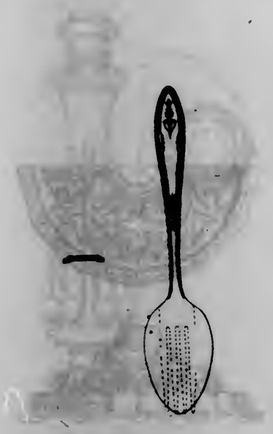
69,729. PLATE FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Jan. 8, 1926. Serial No. 16,004. Term of patent 7 years.

The ornamental design for a plate for lighting fixtures, as shown.

69,730. COFFEEPOT OR SIMILAR ARTICLE. GROSVENOR N. ALLEN, Oneida, N. Y., assignor to Oneida Community, Limited, Oneida, N. Y., a Corporation of New York. Filed Aug. 24, 1925. Serial No. 14,579. Term of patent 14 years.

The ornamental design for a coffeepot or similar article as shown.

69,731. STOVE. WILLIAM FRANKLIN ALLEN, Nashville, Tenn. Filed Jan. 6, 1926. Serial No. 15,970. Term of patent 7 years.



The ornamental design for a stove as shown.

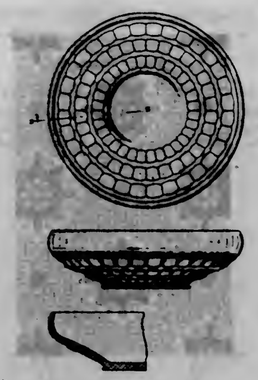
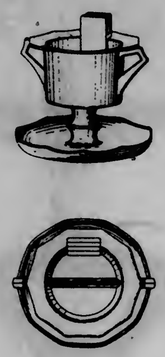
The ornamental design for a radioantenna, as shown.

69,733. SPOON OR SIMILAR ARTICLE. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,502. Term of patent 14 years.



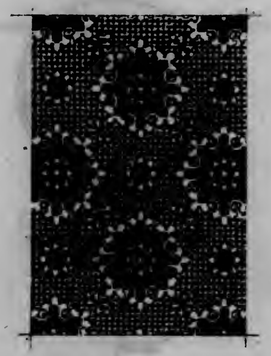
The ornamental design for a spoon or similar article as shown.

69,734. SPOON OR SIMILAR ARTICLE. ERNEST T. BECK, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,503. Term of patent 14 years.



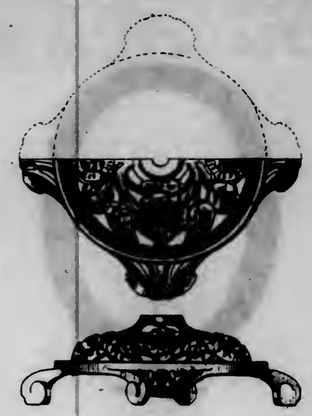
The ornamental design for a spoon or similar article as shown.

69,735. GLASS BOWL OR SIMILAR ARTICLE. ARTHUR J. BENNETT, Cambridge, Ohio. Filed Jan. 6, 1926. Serial No. 15,973. Term of patent 7 years.



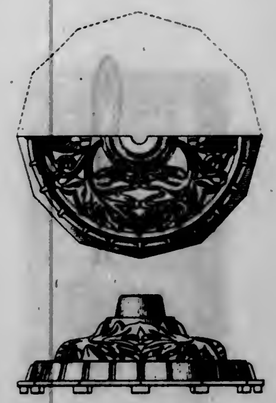
The ornamental design for a glass bowl or similar article, as shown.

69,736. SMOKER'S TRAY. ARTHUR J. BENNETT, Cambridge, Ohio. Filed Jan. 23, 1926. Serial No. 16,237. Term of patent 7 years.



The ornamental design for a smoker's tray, as shown.

69,737. LINOLEUM OR SIMILAR HARD-SURFACED COVERING. FRANK CARTWRIGHT, Trenton, N. J., assignor to The Geo. W. Blabon Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 25, 1925. Serial No. 15,536. Term of patent 3½ years.

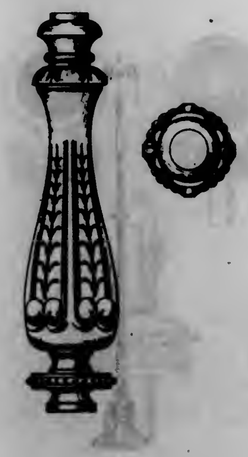


The ornamental design for linoleum or similar hard surfaced covering as shown and described.

69,738. LAMP BASE. THEODORE CHANOCK, Chicago, Ill. Filed Jan. 29, 1926. Serial No. 16,324. Term of patent 3½ years.

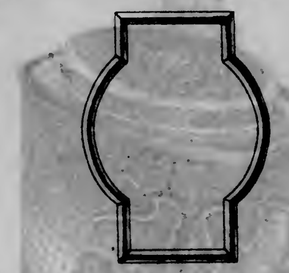
The ornamental design for a lamp base substantially as shown.

69,739. LAMP BASE. THEODORE CHANOCK, Chicago, Ill. Filed Jan. 29, 1926. Serial No. 16,325. Term of patent 3½ years.



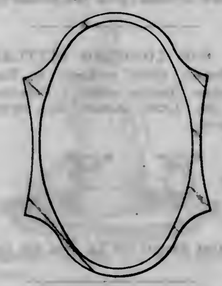
The ornamental design for a lamp base substantially as shown.

69,740. BRACKET FOR A LAMP-POST. THEODORE CHANOCK, Chicago, Ill. Filed Jan. 29, 1926. Serial No. 16,327. Term of patent 3½ years.



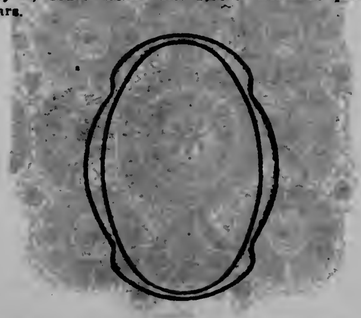
The ornamental design for a bracket for a lamp post, substantially as shown.

69,741. SPINDLE FOR LIGHTING FIXTURES. THEODORE CHANOCK, Chicago, Ill. Filed Feb. 3, 1926. Serial No. 16,380. Term of patent 3½ years.



The ornamental design for a spindle for lighting fixtures, substantially as shown.

69,742. INSTRUMENT BEZEL. AXEL CLEVEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed May 3, 1922. Serial No. 2,065. Term of patent 7 years.



The ornamental design for an instrument bezel substantially as shown.

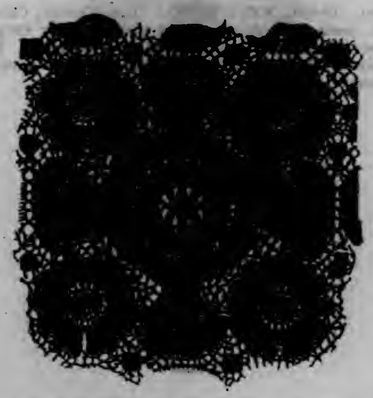
69,743. INSTRUMENT BEZEL. AXEL CLEVEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed May 3, 1922. Serial No. 2,066. Term of patent 7 years.

The ornamental design for an instrument bezel substantially as shown.

69,744. INSTRUMENT BEZEL. AXEL CLEVEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed May 3, 1922. Serial No. 2,067. Term of patent 7 years.

The ornamental design for an instrument bezel substantially as shown.

69,745. TEA CADDY. MARTHA HALLOWELL CONNOR, Baltimore, Md., assignor to Joseph Tetley & Company, New York, N. Y., a Corporation of New York. Filed Nov. 28, 1924. Serial No. 11,522. Term of patent 14 years.



The ornamental design for a tea caddy as shown.

69,746. ARM FOR LIGHTING FIXTURE. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed July 29, 1924. Serial No. 10,286. Term of patent 7 years.

The ornamental design for an arm for lighting fixture, as shown.

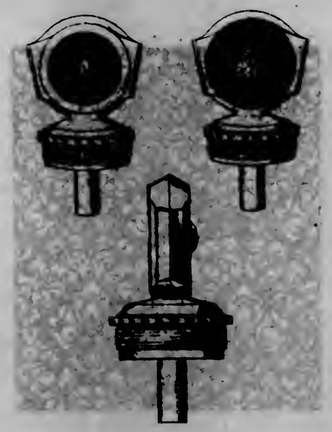
69,747. LACE. MARC H. DAUDY, Philadelphia, Pa., assignor to North American Lace Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 26, 1926. Serial No. 16,278. Term of patent 3½ years.

The ornamental design for lace, substantially as shown.

69,748. FLOOR-LAMP STAND. ISADOR DICHTER, Chicago, Ill. Filed Jan. 15, 1926. Serial No. 16,101. Term of patent 3½ years.

The ornamental design for a floor lamp stand, as shown.

69,749. FLOOR-LAMP STAND. ISADOR DICHTER, Chicago, Ill. Filed Jan. 15, 1926. Serial No. 16,102. Term of patent 3½ years.

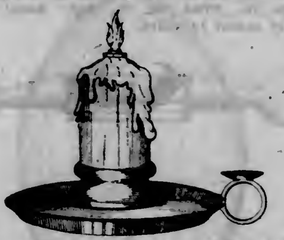


The ornamental design for a floor lamp stand, as shown.

69,750. FLOOR-LAMP STAND. ISADOR DICHTER, Chicago, Ill. Filed Jan. 15, 1926. Serial No. 16,103. Term of patent 3½ years.

The ornamental design for a floor lamp stand, as shown.

69,751. TEMPERATURE INDICATOR FOR AUTOMOBILES. CLAYTON A. DUNHAM, Glencoe, Ill., assignor to Dunhameter Corporation, Chicago, Ill. Filed Jan. 18, 1926. Serial No. 16,146. Term of patent 7 years.

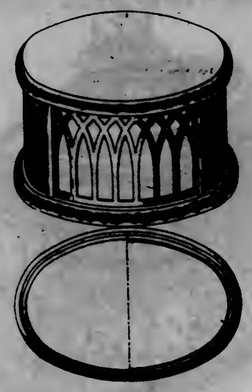


The ornamental design for a temperature indicator for automobiles, as shown.

69,752. DESK. RALPH C. ERSKINE, Stamford, Conn., assignor to Erskine-Danforth Corporation, a Corporation of New York. Filed Nov. 30, 1925. Serial No. 15,579. Term of patent 7 years.

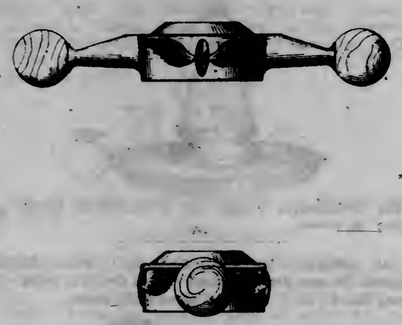
The ornamental design for a desk as shown.

69,753. COMBINED BOTTLE AND HOLDER. JOSEPH A. FIELDS, New York, N. Y. Filed Nov. 30, 1923. Serial No. 7,926. Term of patent 14 years.



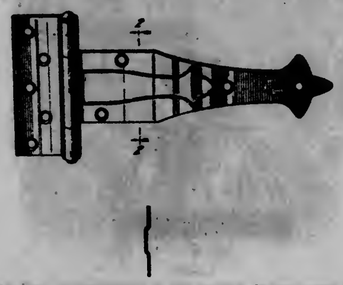
The ornamental design for a combined bottle and holder as shown.

69,754. COMBINATION DOLL AND PINCUSHION. RUTH GEORGE, Omaha, Nebr. Filed Oct. 22, 1924. Serial No. 11,145. Term of patent 3½ years.



The ornamental design for a combination doll and pincushion as shown.

69,755. SOUND-AMPLIFYING CABINET. JESSE B. HAWLEY, St. Charles, Ill. Filed Oct. 5, 1925. Serial No. 15,027. Term of patent 7 years.



The ornamental design for a sound amplifying cabinet substantially as shown.

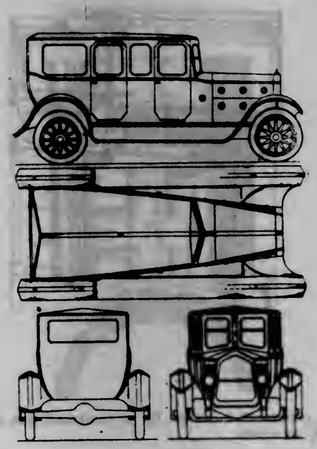
69,756. RADIATOR CAP. WILLIAM B. HAWTHORNE, Chicago, Ill. Filed Dec. 23, 1925. Serial No. 15,829. Term of patent 14 years.

The ornamental design for a radiator cap, as shown.

69,757. HINGE. JOHN B. HOWAT, Sharon, Pa. Filed Dec. 30, 1922. Serial No. 4,763. Term of patent 14 years.

The ornamental design for a hinge, as shown.

69,758. FEZ OR SIMILAR ARTICLE. CHARLES B. JENKINS, New Castle, Pa., assignor to The Howling Tom Cats of America, New Castle, Pa., a Corporation of Pennsylvania. Filed June 11, 1924. Serial No. 9,859. Term of patent 7 years.

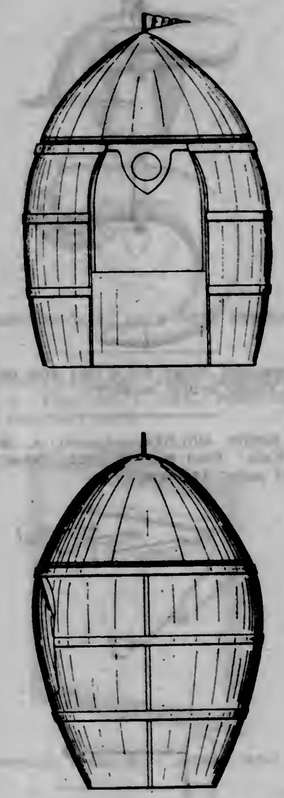


The ornamental design for a fez or similar article, as shown.

69,759. TEXTILE FABRIC. FRANK M. KAUFMAN, Philadelphia, Pa. Filed Jan. 28, 1926. Serial No. 16,313. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

69,760. AUTOMOBILE BODY. WILLIAM A. KING, Memphis, Tenn. Filed May 8, 1926. Serial No. 879,961. Term of patent 14 years.

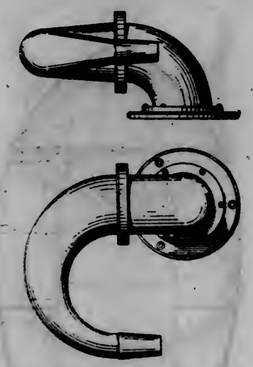


The ornamental design for an automobile body as shown and described.

69,761. COMBINED LAMP BASE AND ASH RECEIVER. MORRIS KOSHELUM, Brooklyn, N. Y. Filed Jan. 25, 1926. Serial No. 16,248. Term of patent 3½ years.

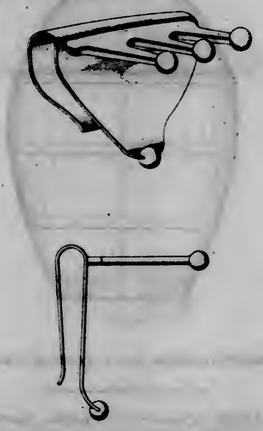
The ornamental design for a combined lamp base and ash receiver, as shown.

69,762. VENDING KIOSK. JULIAN BRONISLAW KUROWSKI, London, England. Filed Dec. 18, 1925. Serial No. 15,779. Term of patent 14 years.



The ornamental design for a vending kiosk as shown.

69,763. BADGE. CHARLES G. LENNOX, Rochester, N. Y., assignor to Warren-Kahse, Incorporated, Rochester, N. Y., a Corporation of New York. Filed Oct. 14, 1924. Serial No. 11,078. Term of patent 3½ years.



The ornamental design for a badge.

69,764. TONE ARM FOR A GRAMOPHONE OR SIMILAR ARTICLE. CHARLES MARÉ DE CHERMAL DE LA BOURDONNAIS, Loventor Manor, near Totnes, England. Filed Dec. 26, 1924. Serial No. 11,804. Term of patent 14 years.

The ornmental design for a tone arm for a gramophone or similar article, as shown.

69,765. SPOON HOLDER. ADOLPH A. MISSOW, Tacoma, Wash. Filed Mar. 25, 1922. Serial No. 1,897. Term of patent 14 years.

The ornamental design for a spoon holder as shown.

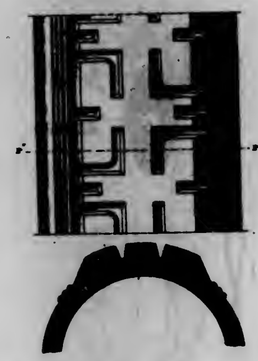
69,766. BOTTLE OR SIMILAR ARTICLE. GRAEFF MILLER, Ridgewood, N. J. Filed Dec. 11, 1925. Serial No. 15,711. Term of patent 14 years.

The ornamental design for a bottle or similar article, substantially as shown and described.

69,767. COMBINED GAS STOVE AND CABINET. MORTIMER L. PACKER, Columbus, Ohio. Filed May 21, 1924. Serial No. 9,671. Term of patent 14 years.

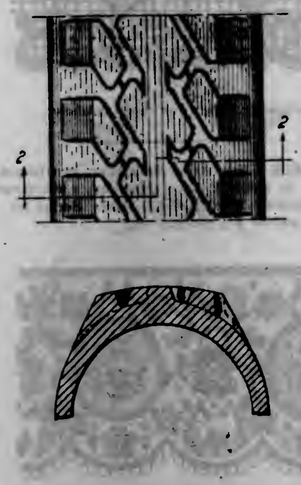
The ornamental design for a combined gas stove and cabinet, as shown.

69,768. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 25, 1925. Serial No. 15,545. Term of patent 3½ years.



The ornamental design for lace substantially as shown.

69,769. RING FOR LIGHTING FIXTURES. ROSCOE C. PFLEAGER, Cleveland, Ohio, assignor to Benjamin F. Klein, Cleveland, Ohio. Filed Dec. 2, 1925. Serial No. 15,602. Term of patent 3½ years.



The ornamental design for a ring for lighting fixtures, substantially as shown.

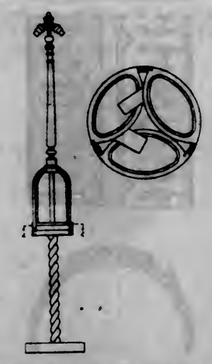
69,770. TIRE TREAD. HAROLD D. REICHARD, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 2, 1922. Serial No. 2,820. Term of patent 3½ years.

The ornamental design for a tire tread, as shown.

69,771. RESILIENT TIRE. HAROLD D. REICHARD, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 28, 1924. Serial No. 11,564. Term of patent 3½ years.

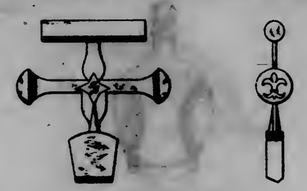
The ornamental design for a resilient tire, as shown.

69,772. BOTTLE. CHARLES C. RITZ, New York, N. Y. Filed Jan. 16, 1926. Serial No. 16,148. Term of patent 14 years.



The ornamental design for a bottle substantially as shown.

69,773. PICTURE FRAME. AARON ROSENBLUM, Union Hill, N. J. Filed Dec. 2, 1924. Serial No. 11,577. Term of patent 3½ years.



The ornamental design for a picture frame as shown.

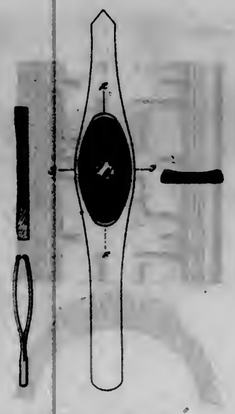
69,774. COMBINED LAMP, TELEPHONE, AND SMOKING STAND. GIACINTO ROSSI, Philadelphia, Pa. Filed Dec. 16, 1925. Serial No. 15,773. Term of patent 14 years.

The ornamental design for a combined lamp, telephone, and smoking stand, as shown.

69,775. SURGICAL INSTRUMENT. LEON SCHAEFER, Sulphur, Okla. Filed Nov. 2, 1925. Serial No. 15,237. Term of patent 14 years.

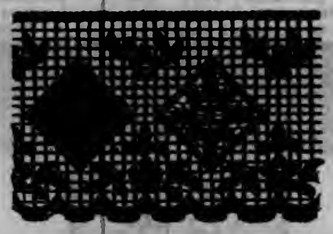
The ornamental design for a surgical instrument, as shown.

69,776. TIRE. HENRY F. SCHIPPEL, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 26, 1925. Serial No. 15,872. Term of patent 14 years.



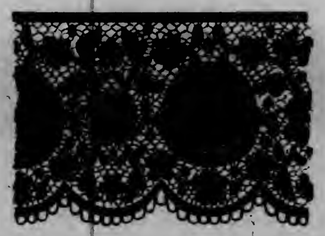
The ornamental design for a tire as shown.

69,777. TIRE. HENRY F. SCHIPPEL, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1925. Serial No. 15,914. Term of patent 14 years.



The ornamental design for a tire as shown.

69,778. TWEEZERS OR SIMILAR ARTICLE. MAX SCHNEFEL, Newark, N. J., assignor to Schnefel Brothers, a Firm composed of Max Schnefel, and Carl Schnefel, Newark, N. J. Filed Sept. 19, 1925. Serial No. 14,824. Term of patent 7 years.



The ornamental design for a tweezers or similar article, as shown.

69,779. LACE. BERTHA C. SELIGMAN, Providence, R. I., assignor to Seekonk Lace Company, a Corporation of Rhode Island. Filed Jan. 27, 1926. Serial No. 16,287. Term of patent 3½ years.

The ornamental design for lace, as shown.

69,780. LACE. BERTHA C. SELIGMAN, Providence, R. I., assignor to Seekonk Lace Company, a Corporation of Rhode Island. Filed Jan. 27, 1926. Serial No. 16,288. Term of patent 3½ years.

The ornamental design for lace, as shown.

69,781. RING. FREDERICK A. SHIMP, Philadelphia, Pa., assignor to Skillcrafters Incorporated, Philadelphia, Pa., a Corporation of Delaware. Filed July 19, 1923. Serial No. 6,808. Term of patent 3½ years.

The ornamental design for a ring, as shown.

69,782. PIN. WILLIAM D. M. SIMMONS, Brooklyn, N. Y. assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 19, 1925. Serial No. 12,428. Term of patent 14 years.

The ornamental design for a pin, as shown.

69,783. VANITY CASE. DENNIS SWEENEY, Farmingdale, N. Y., assignor of one-third to Michael Dunn and one-third to John Dunn, both of Brooklyn, N. Y. Filed Oct. 20, 1925. Serial No. 15,184. Term of patent 7 years.

The ornamental design for a vanity case, as shown.

69,784. GOBLET OR SIMILAR ARTICLE. JULES H. VENON, New York, N. Y. Filed Feb. 18, 1925. Serial No. 12,411. Term of patent 7 years.

The ornamental design for a goblet or similar article, as shown and described.

69,785. GOBLET OR SIMILAR ARTICLE. JULES H. VENON, New York, N. Y. Filed Feb. 18, 1925. Serial No. 12,412. Term of patent 7 years.

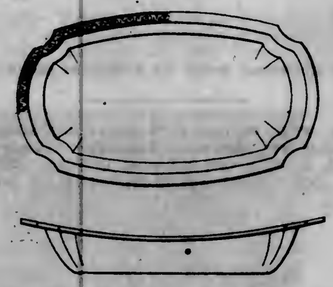
The ornamental design for a goblet or similar article, as shown and described.

69,786. GOBLET OR SIMILAR ARTICLE. JULIUS H. VERNON, New York, N. Y. Filed Feb. 18, 1925. Serial No. 12,413. Term of patent 7 years.

The ornamental design for a goblet or similar article, as shown and described.

69,787. SEWING-ARTICLE-SUPPORTING DOLL. INA H. E. VOGLE, San Francisco, Calif. Filed Dec. 29, 1925. Serial No. 15,894. Term of patent 7 years.

The ornamental design for a sewing article supporting doll, as shown.



69,788. TOY BARN. JAMES WHITELEY, North Tonawanda, N. Y. Filed Nov. 27, 1925. Serial No. 15,567. Term of patent 14 years.

The ornamental design for a toy barn, as shown.

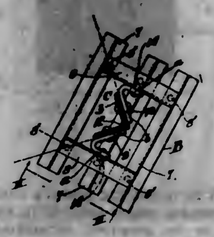
69,789. DISH OR SIMILAR ARTICLE. SAMUEL G. WILKES, Wallingford, Conn., assignor to R. Wallace & Sons Mfg. Co., Wallingford, Conn., a Corporation. Filed Nov. 4, 1925. Serial No. 15,337. Term of patent 14 years.

The ornamental design for a dish or similar article, as shown.

69,790. BOTTLE. JACQUES WORTH, Paris, France. Filed Oct. 8, 1925. Serial No. 15,016. Term of patent 7 years.

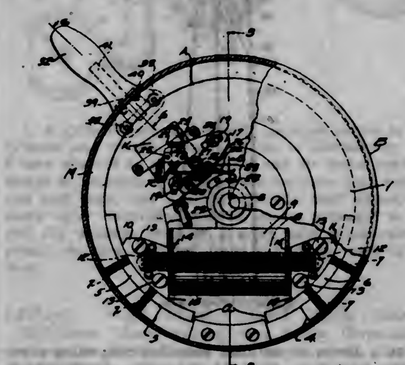
The ornamental design for a bottle as shown.

PATENTS



GRANTED MARCH 23, 1926.

1,577,485. FLYTRAP FOR STOCK. SELMON ABBOTT, Taylorville, Ill. Filed Feb. 29, 1924. Serial No. 695,958. 1 Claim. (Cl. 119—156.)



In a trap structure, a frame, door panels hingedly mounted upon the frame, pins mounted upon the frame, a platform slidably mounted upon the pins, springs interposed between the platform and the frame, a shaft journalled upon the frame and provided at its ends with crank arms and having an intermediate crank arm engageable with the intermediate portion of the platform, rollers carried by the platform and adapted to travel along the first mentioned crank arms, pulleys journalled at the upper portion of the frame, and cables connected at one end to the free ends of the crank arms and trained over the pulleys, and connected at their other ends with the door panels at intermediate points thereof.

1,577,486. GRILLAGE CONNECTION FOR TOWERS. DAVID TASKER ALEXANDER, Sandwich, Ontario, Canada. Filed Oct. 14, 1925. Serial No. 62,893. 2 Claims. (Cl. 189—21.)

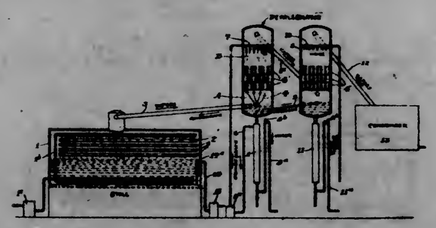
1. The combination with a grillage for transmission towers and the like including a pair of parallel spaced beams to which the stub angles or legs of the structure are attached, of an M-shaped support for said stub angles or legs, said support having its side flanges secured to said beams, and the center V-shaped portion forming a receiving pocket for receiving both flanges of the angle stub or leg of the structure and means for securing both flanges of said angle stub or leg to the side walls of said pocket.

1,577,487. MAGNETO. FREDERICK W. ANDREW, Glen Head, N. Y., assignor to Eisemann Magneto Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 11, 1923. Serial No. 667,950. 2 Claims. (Cl. 171—209.)

1. In a magneto, a ring-shaped permanent magnet having its polar ends separated, arc-shaped pole pieces mounted in contact with the polar ends of said magnet, said pole pieces being arranged to extend toward each other beyond the polar ends of said magnet, a magnetic core provided at its ends with a pair of magnetic pole shoes having substantially straight inner sides and curved polar faces, the polar faces of said pole shoes and the pole pieces of said magnet being shaped and arranged to rotate in close proximity relatively to each other, the distance between the inner sides of said pole shoes being substantially spanned by either pole piece of the magnet, the polar faces of said pole shoes having each a length substantially equal to the air gap between said pole pieces, and a coil mounted on said core between the inner sides of said pole shoes.

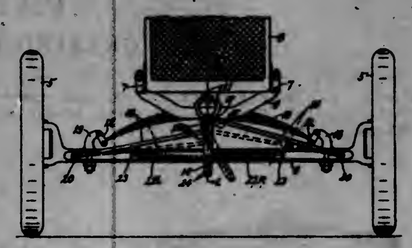
1,577,488. STEAM GENERATOR. VITTORIO ANDRIOLI, Foggia, Italy. Filed Mar. 31, 1924. Serial No. 703,110. 2 Claims. (Cl. 122—59.)

1. In a horizontal fire boiler having a fire box at one end thereof, a smoke box at the other end and boiler tubes adjacent the fire box, the combination of two vertical longitudinal partitions in the boiler dividing the interior of the boiler into three juxtaposed longitudinal compartments means for supplying feed water to the lateral compartments within the boiler, means providing intercommunication between the several compartments whereby highly heated boiler water in the central com-



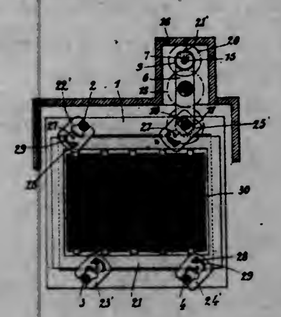
partment flows longitudinally of the boiler into the lateral compartments to mix with and entrain the feed water therein, and means for directing the water in the lateral compartments longitudinally of the boiler into the boiler tubes.

1,577,439. POST PULLER. HENRY ARMBRUSTER, Woodburn, Ind. Filed Jan. 11, 1924. Serial No. 685,598. 2 Claims. (Cl. 254—139.)



1. In a device of the class described comprising a vertical standard, fastening means thereon, comprising brackets, spaced shafts mounted in said brackets and carrying sprocket wheels, an endless chain mounted on said sprocket wheels, means for actuating the same, a flexible member adapted to encircle a post, hooks formed on certain of the links of said endless chain, and a detachable unit having hooks formed on the lower end thereof for engagement with said flexible member, and hooks being provided on the upper end of said unit for engagement with said hooks on said endless chain, substantially as described.

1,577,440. PROCESS FOR SEPARATING HYDROCARBONS. WILLARD C. AVERILL, Jr., Houston, Tex. Original application filed Oct. 7, 1922, Serial No. 593,084. Divided and this application filed Dec. 10, 1923. Serial No. 679,646. 5 Claims. (Cl. 196—94.)

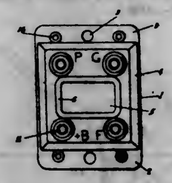


1. The method of obtaining light hydrocarbons from hydrocarbon oils containing water, which comprises vaporising the oil to be treated, partially condensing the hydrocarbon vapors and simultaneously condensing the water vapors, subjecting the remaining vapors thereof to previously condensed hydrocarbons of higher boiling point obtained from said vapors, which latter are supplied by removing the water collected from the condensed vapors, and continuously circulating through said vapors the hydrocarbons thus obtained.

1,577,441. STABILIZER FOR MOTOR VEHICLES. PHOEBE BAKKEN, St. Paul, Minn. Filed Mar. 10, 1924. Serial No. 698,003. 4 Claims. (Cl. 267—16.)

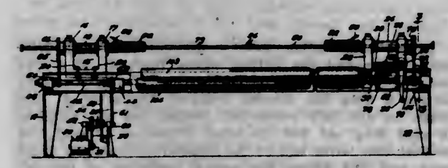
1. In a vehicle stabilizer of the class described the combination with a vehicle body supported in spaced relation to its running gear by springs, of a lever mounted pivotally and in fixed relation to a spring and oscillable in a plane parallel with the movement of the body spring, two radius rods extending in opposite directions from said lever and pivotally connected to said lever one at each side of fulcrum and their outer ends pivotally secured each to a fixed part of the running gear and means causing the said lever to be continuously impelled to a position coinciding with the direction in which the body springs are movable.

1,577,442. METHOD AND APPARATUS FOR MAKING PHOTOMECHANICAL PRINTING PLATES. LAURENT BASSANI, Corbeil, France, assignor, by mesne assignments, to Bassani Processes, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 11, 1922. Serial No. 606,078. 7 Claims. (Cl. 95—5.)



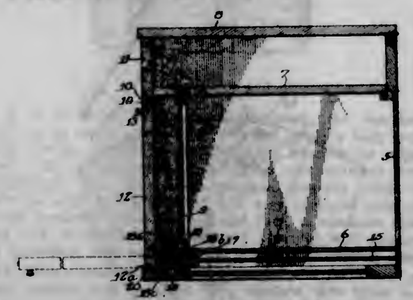
1. A method for preparing printing surfaces for phototypographic printing which consists in reproducing upon the surfaces to be prepared reticulated photographic plates obtained by the displacement of the screen in its plane during the exposure.

1,577,443. RADIO RESISTOR COUPLER UNIT. LEON S. BRACH, East Orange, N. J., assignor to L. S. Brach Manufacturing Co., Newark, N. J. Filed July 21, 1925. Serial No. 45,029. 8 Claims. (Cl. 250—16.)



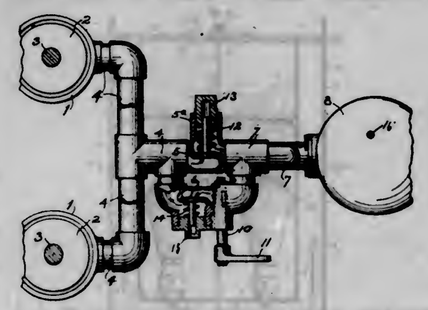
1. A radio resistor coupler unit comprising, a casing having a window therein and adapted to receive a designation card, a pair of resistance units mounted within

the casing and serving to hold the designation card in place in the window, terminal posts for each end of the resistance units extending through to the front of the



casing, a condenser within the casing and electrically bridging the ends of both resistance units and a cover plate for the bottom of the casing.

1,577,444. RUG AND CARPET WINDING MACHINE. OLIVER WILSON BRANTLEY, Jackson Heights, and WARNER MOREL BRANTLEY, Elmhurst, N. Y. Filed June 4, 1924. Serial No. 717,673. 11 Claims. (Cl. 242—55.)

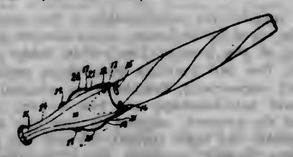


1. In a winding machine, a frame, winding spindles rotatably mounted on said frame and arranged in axial alignment with one another, an arbor removably supported by said spindles, and means for securing to said spindles the edges of the rug or carpet to be wound around said arbor.

1,577,445. TALKING-MACHINE CABINET. CHARLES BREMKEN, Chicago, Ill., assignor to Cheney Talking Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1919. Serial No. 279,951. 1 Claim. (Cl. 45—52.)

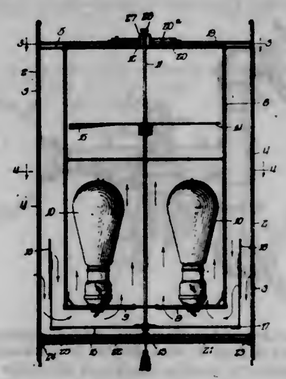
As a new cabinet manufacture, a door-receiving compartment separate from the body of the cabinet, said compartment having inclosing members two parallel ones of which are channeled on opposed surfaces, a follower, means for slidingly controlling its movement by said channels without binding therein, a door hinged to the follower and adapted to swing to the same plane with the follower and to slide with it in and out of the door-receiving compartment and held from binding and sagging by said follower-control means.

1,577,446. CUSHION FOR DIE-PRESS DRAW RINGS. STEWART BROWN, Chicago, Ill. Filed Dec. 19, 1924. Serial No. 757,076. 9 Claims. (Cl. 138—16.)



1. A cylinder, a longitudinally movable piston in said cylinder and a stem to said piston, in combination with a tank adapted to contain liquid and air under pressure, means to establish communication between said cylinder and said tank, and a check valve in said means, said check valve comprising yielding means arranged to control the pressure required to open said check valve to permit the flow of liquid from said check valve to said tank.

1,577,447. FUSE PLUG. HARRY ERICH VOLKMAR BRÜCKNER, Charlottenburg, near Berlin, Germany, assignor to Firm Parnox Aktiengesellschaft, Lucerne, Switzerland. Filed Apr. 18, 1923. Serial No. 631,753. 4 Claims. (Cl. 200—125.)

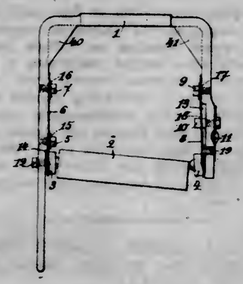


1. A fuse plug comprising a foot part having two contacts for engaging the connection-contacts of the lines one of which forming an Edison screw, and a freely removable fuse carrier containing a plurality of fuse wires with a common central fuse wire contact arranged on a centrally projecting journal of said fuse carrier and fitting into a corresponding contact bore of the foot part, metal pins forming the second and separate contacts of one of said fuse plug parts, the corresponding second contacts of the other part consisting of sockets, said metal pins engaging said sockets when the fuse plug is in use.

1,577,448. CIGAR HOLDER. JAMES R. CARDWELL, Chicago, Ill. Filed May 23, 1923. Serial No. 640,904. 6 Claims. (Cl. 131—10.)

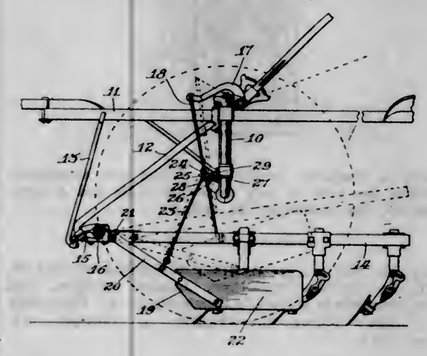
1. In a cigar holder, a body portion having a socket to receive a cigar and means on the body portion to grip the cigar and urge it into the socket.

1,577,449. DISPLAY LANTERN. TAK H. CHAN, Chicago, Ill. Filed July 24, 1924. Serial No. 728,650. 16 Claims. (Cl. 40—40.)



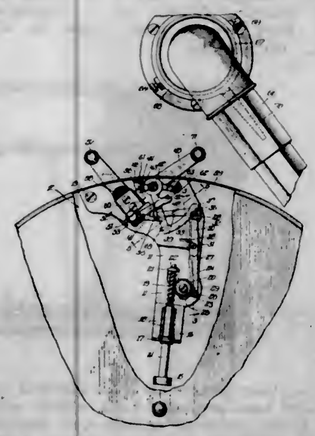
1. In a device of the class described, the combination with a stationary tubular casing, of a rotatably mounted impeller positioned crosswise of the casing within the length of the same at a point where it will occupy substantially all of the passage therethrough, objects connected with the impeller and adapted to travel around the outside of said casing, and means for producing an upward draft of air within the casing.

1,577,450. COATED FIBROUS ARTICLE AND COATING COMPOSITION THEREFOR. CHARLES H. CROWELL, Brooklyn, N. Y. Filed June 11, 1923. Serial No. 644,804. 14 Claims. (Cl. 134—16.)



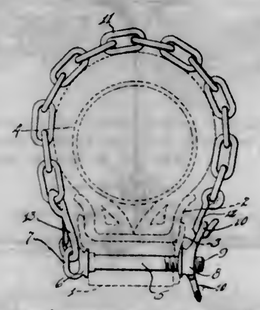
12. The coated fibrous article having a water-repellent silicate coating with which finely divided bentonite clay has been mixed to minimise chipping or cracking.

1,577,451. SUPPORT FOR BOBBIN HOLDERS. ALFRED DELBEUS, Roubaix, France, assignor to Société des Etablissements Ryo-Catteau, Roubaix, France. Filed Oct. 14, 1924. Serial No. 743,604. 4 Claims. (Cl. 242—130.)



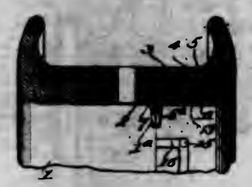
1. In a support for bobbin-holders, the combination of an axially bored bobbin-holder, a ball adapted to engage the opening of the bore of the bobbin holder at each of its ends, two ball bearings adapted to receive each the said ball respectively, flexible strips adapted to support the said ball bearings, and two locking members mounted on the support, adapted to stop the said ball bearings against the axial thrusts towards the exterior, one of these locking members being movable transversely so as to allow one of the said ball bearings to move away from the bobbin holder when the latter is to be removed from the support.

1,577,452. FENDER FOR CULTIVATORS. SAMUEL K. DENNIS, Chicago, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 25, 1922. Serial No. 596,743. 3 Claims. (Cl. 97—188.)



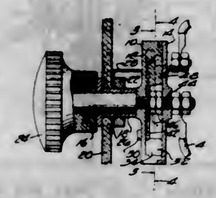
2. The combination with a pivotally mounted cultivator beam and the lifting means therefor, of a link connecting said beam to the lifting means, a fender having a drag bar pivoted adjacent the pivot of said beam, an auxiliary connection having one end attached to said drag bar and its other connected to said link so that this latter end of the auxiliary connection slides upon said link during the normal operation of the cultivator, and means for adjusting the latter end connection longitudinally of the link.

1,577,453. NONSET STOP. FRED H. DOBER, Grand Rapids, Mich., assignor to Cheney Talking Machine Company, Chicago, Ill., a Corporation of Illinois. Filed June 8, 1923. Serial No. 644,111. 9 Claims. (Cl. 192—118.)



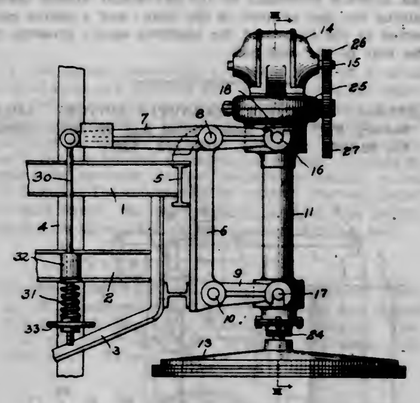
1. In combination with a rotating disk and a traversing member, means driven by contact with a lateral face of said disk and controlled by the movement of the traversing member adapted to release a brake for the disk upon cessation of movement by the traversing member.

1,577,454. ANTISKID CHAIN FOR MOTOR VEHICLES. CLIFFORD G. DRESCHER and CHESTER B. OSBISON, Villa Grove, Ill. Filed June 1, 1925. Serial No. 34,119. 1 Claim. (Cl. 152—14.)



An anti-skid chain for motor vehicles comprising a bolt having an eye member at the head thereof and arranged for projection transversely through the felly of a motor vehicle wheel, a nut for securing the bolt upon the vehicle wheel, said nut having a pair of diametrically opposed and radially extending eye members, a chain arranged for disposition over the tread of a vehicle tire carried by the wheel, and means at either end of the chain for engaging with the eye at the head of the bolt and one of the eyes on the nut, respectively.

1,577,455. DEMOUNTABLE RIM. WASHINGTON L. DULANY, Woodstock, N. Y. Filed Nov. 2, 1925. Serial No. 66,336. 2 Claims. (Cl. 301—35.)

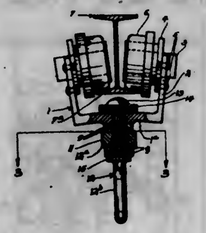


2. In a device of the class described, the combination of an auxiliary section provided with a body portion having outwardly-extending lugs between its edges and with a substantially L-shaped slot between two contiguous lugs, said body portion provided with an annular edge flange, each of said lugs provided with an inner inwardly extending inclined face, a rotatable locking ring on said body portion and provided with inwardly extending lugs and with an inwardly extending stem, said stem positioned in said L-shaped slot, said lugs of said locking ring provided with straight side faces and with inclined side faces, said inclined side faces adapted to fit against the similar faces of said lugs on said body of the auxiliary section, a primary section on said auxiliary section and said locking ring, said primary section provided with an annular groove in its edge, said annular edge flange of said auxiliary section fitting into said groove, said primary section provided with an annular edge flange fitting into said auxiliary section, and said primary section provided with inwardly extending lugs fitting against the straight side faces of said lugs on the locking ring.

1,577,456. ADJUSTABLE ELECTRICAL RESISTANCE APPARATUS. FRANK M. ENDE, New York, and PERCY A. E. ARMSTRONG, Loudonville, N. Y. Filed Apr. 28, 1924. Serial No. 708,324. 5 Claims. (Cl. 201—48.)

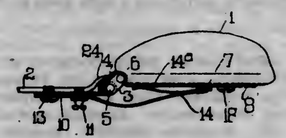
1. A variable electrical resistance device comprising a substantially cylindrical casing of insulating material, a contract pool of mercury therein, a resistor movable progressively with respect to the mercury upon the casing being angularly moved and a baffle plate in the casing.

1,577,457. DRIVE-GEAR MECHANISM FOR SURFACING MACHINES. ALBERT E. EVANS, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Original application filed May 3, 1923, Serial No. 636,327. Divided and this application filed Oct. 7, 1924. Serial No. 742,185. 9 Claims. (Cl. 74—7.)



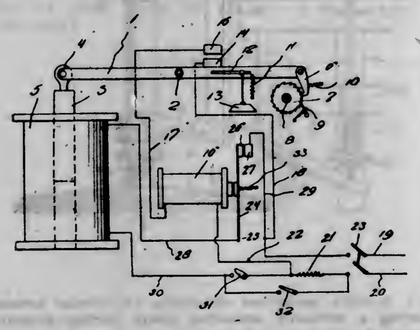
1. A drive mechanism comprising an annular housing having a vertically depending sleeve portion pivotally mounted at substantially its center of gravity, a work spindle journaled in said sleeve, a drive shaft journaled in said annular housing portion, a pair of gear wheels connecting said shaft and spindle and a motor geared to said drive shaft.

1,577,458. CHAIN TROLLEY. FRANK M. FISH, Crafton, Pa. Filed June 29, 1925. Serial No. 40,898. 9 Claims. (Cl. 105—154.)



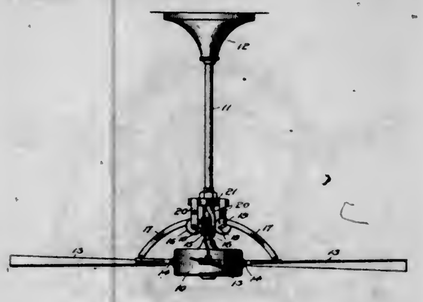
3. In a trolley, a carriage, anti-friction members carried by the carriage and disposed to travel upon a sup-

porting rail, a chain having overlapping links, and a load receiving member including a shank connected directly to the carriage, said shank passing through the



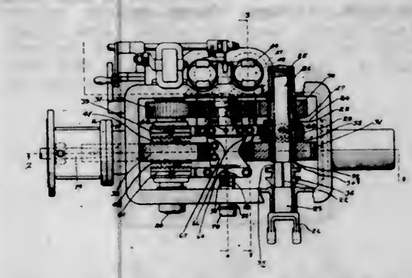
overlapping portions of the links and being provided with an abutment element supporting the lower one of the links.

1,577,459. SURGICAL TRUSS. GEORGE FOWLER, Liverpool, England. Filed Aug. 3, 1925. Serial No. 47,813. 7 Claims. (Cl. 128—122.)



1. A surgical truss, comprising a body-band; a hernia pad; a double-jointed hinge by which said pad is hinged to the body-band in such manner as to permit inward and outward movement of the pad whilst always maintaining the pad parallel to the body: and a spring connected to the body-band for applying spring pressure to the rear of the said pad.

1,577,460. ELECTRIC MAGNETIC MOTOR. ABILIO FRANCA, Fall River, Mass. Filed Aug. 26, 1925. Serial No. 52,597. 3 Claims. (Cl. 172—126.)

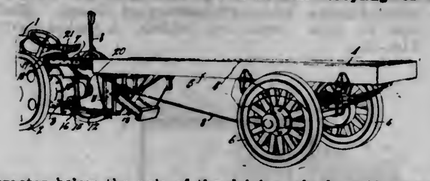


1. An electromagnetic motor comprising an oscillating member, an electromagnet for operating said oscillating member, a contact mechanism operated by said oscillating member, a solenoid having electrical connection with said contact mechanism for control and periodic energisation through operation of said contact mechanism by the oscillation of said member, and a contact mechanism operated and controlled by said solenoid for controlling circuits with said electro-magnet for periodically energising said magnet alternately with the energisation of said solenoid, whereby said member may be continuously operated.

1,577,461. CEILING FAN. MAURICE M. GLASSER, Charleston, S. C. Filed Oct. 7, 1922. Serial No. 593,081. 7 Claims. (Cl. 230—1.)

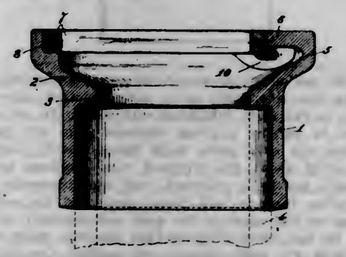
1. In a ceiling fan, the combination of a motor and its rotor, a series of hinged blades carried by said rotor, a shaft supporting said motor and blades, and means carried by the shaft and connected to said blades for swinging said hinged blades transversely of the plane in which they revolve, said means, with the exception of the connections with the blades, being fixed longitudinally of the shaft.

1,577,462. POWER-TRANSMISSION DEVICE. WILLIAM T. HANNA, Cincinnati, Ohio. Original application filed July 6, 1921, Serial No. 482,790. Divided and this application filed May 20, 1924. Serial No. 714,697. 12 Claims. (Cl. 74—54.)



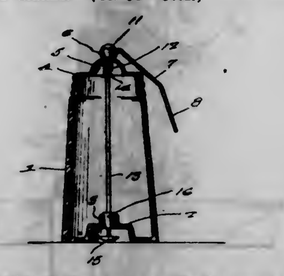
1. In a power transmission mechanism the combination of a reciprocating rack, parallel shafts disposed transversely of the line of reciprocation of the rack, a sleeve mounted on each of the parallel shafts, a gear revolubly mounted upon each of the sleeves and engaging the rack, gears fixedly mounted on each of the sleeves and being adapted to transmit motion one to the other, means adapted to transmit motion from one of the first mentioned gears to its supporting sleeve upon the forward movement of the rack and to transmit motion from the other of the first mentioned gears to its respective sleeve upon the return movement of the rack.

1,577,463. TRACTOR TRAILER. OTTO H. HESSE, Leavenworth, Kans. Filed June 12, 1923. Serial No. 644,947. 3 Claims. (Cl. 280—33.1.)



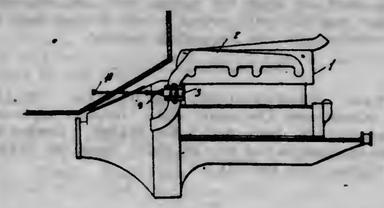
1. A trailer comprising a frame, a pair of wheels on which said frame is mounted, a forked tongue projected horizontally from one end of said frame, a standard

depending from said frame, a draw bar connection to said standard below the level of the tongue and adapted for connection with the draw bar coupling of a



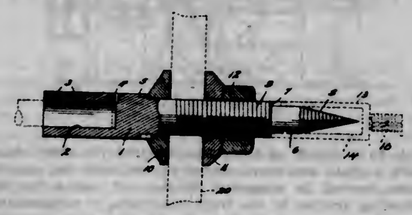
tractor below the axis of the driving wheels, said tongue being of greater length than said draw bar, said tongue including leaf springs at the fork.

1,577,464. VENT GUARD. JOSEPH A. HIGH, Washington, D. C. Filed June 13, 1922. Serial No. 568,064. 2 Claims. (Cl. 182—81.)



1. A plug or guard comprising a tubular body having a relatively short bell at its upper end, the throat or restricted portion of the bell being of a transverse area equal to that of the bore of a stack on which the tubular portion is adapted to be mounted, the bell being of less length than the remainder of the tubular body and being formed with a grid-receiving seat, and a fillet disposed above the plane of the seat for receiving a locking lug projecting laterally from a grid.

1,577,465. MUCILAGE BOTTLE. THOMAS S. HOUGH, Winona, Minn. Filed June 19, 1925. Serial No. 38,296. 2 Claims. (Cl. 91—67.4.)



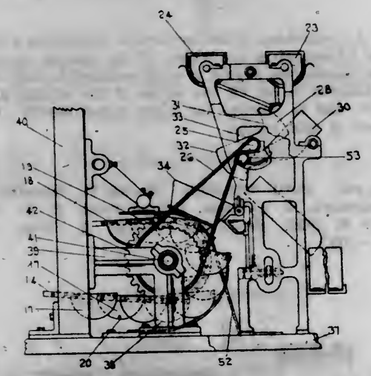
1. In a device of the class described, a bottle provided in its bottom with a depression at the center of which is a neck, the upper end of said bottle being screw threaded, a screw cap threaded onto said upper end, said cap being provided with outwardly pressed portion having a discharge mouth, a valve fitting into said mouth, an operating rod connected to said valve and extending downwardly through said neck, an enlargement carried by said rod and fitting normally into said neck, a finger piece on the lower end of said rod located in said depression, and a spring cooperative with a shoulder on said rod for maintaining said valve closed.

1,577,466. COMPRESSION BRAKE. GRATTON B. HYER, Pierce, W. Va. Filed Sept. 16, 1924. Serial No. 738,059. 2 Claims. (Cl. 188—99.)

1. A compression brake mechanism comprising a frame to be interposed in the length of the exhaust of an internal combustion engine, a valve mounted in said frame and adapted to cut off the escape of the exhaust of the engine, and to operate the valve independently of the control of said engine.

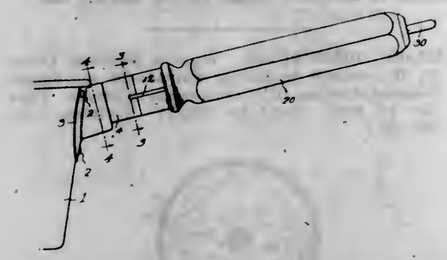
1,577,467. TOOL HOLDER. FRANK G. JEFFRIES and FREDERICK A. LAVEDAN, College Point, N. Y. Filed Apr. 9, 1924. Serial No. 705,219. 1 Claim. (Cl. 51—168.)

A tool holder comprising a spindle made of a single piece of stock and provided with a bore at one end adapted to fit on the end of a rotary shaft, the said spindle being provided with a reduced threaded intermediate portion forming thereby a flange with the main portion, and a further reduced threaded end portion, the said intermediate threaded portion adapted to engage a nut for clamping the rotary tool in position thereon against the said flange, the said reduced threaded end portion adapted to detachably engage another rotating tool.



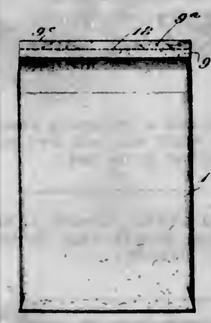
1,577,468. DISTRIBUTOR. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 12, 1920. Serial No. 373,117. 8 Claims. (Cl. 200—31.)

1. A device of the character described including a stationary casing, a driving shaft extending into said casing, a governor member secured to said driving shaft, a cam supporting member rotatable with said drive shaft but movable angularly with respect thereto, a governor weight pivotally supported by said governor member, a second governor member secured to said cam supporting member and having a straight slot therein, and a pin



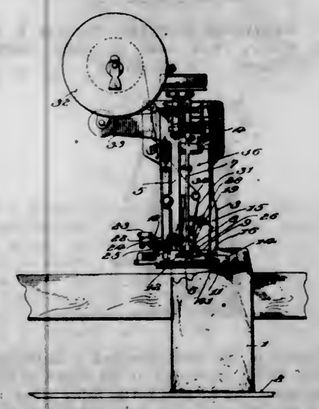
pivotally secured to said governor weight adapted to fit into said straight slot and slidable therein and rotatable in said governor weight when said governor rotates about its pivot for moving said cam supporting member angularly with respect to said driving shaft and for rotating said cam supporting member.

1,577,469. TRAY-LOADING MECHANISM. WILLIAM G. KIACHHOFF, Cincinnati, Ohio. Original application filed Apr. 26, 1923, Serial No. 634,897. Divided and this application filed May 20, 1924. Serial No. 714,693. 8 Claims. (Cl. 198—31.)



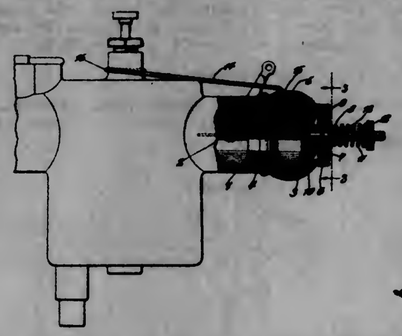
1. In a device of the class described the combination with a chain and trays carried by the chain on opposite sides thereof in staggered relation, of means for distributing articles to the trays comprising a reciprocating cup, for discharging alternately in trays on opposite sides of the chain, means for reciprocating the cup, and means for directing articles into the cup.

1,577,470. UTENSIL HANDLE. GEORGE H. KOEHLER, Cleveland, Ohio, assignor, by mesne assignments, to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 26, 1921. Serial No. 455,728. 8 Claims. (Cl. 16—116.)



8. In a handle construction of the character set forth, the combination of a ferrule having a shank receiving portion, a grip member having a shank fitting within said portion of the ferrule, the grip member having a longitudinal bore, a bolt extending through said bore, an anchorage element within the ferrule and wherewith the bolt has a screw threaded connection, the ferrule having a shoulder engaged by said anchorage member and against which it is drawn by the action of the bolt, and a key secured to the anchorage element and interengaging portions of the ferrule and grip member to hold said parts against relative angular movement.

1,577,471. PROCESS OF CLOSING FILLED PAPER SACKS. FRANK A. KUCHEA and CHARLES F. RUBEL, Chicago, Ill., assignors to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 10, 1924. Serial No. 705,569. 2 Claims. (Cl. 112—11.)

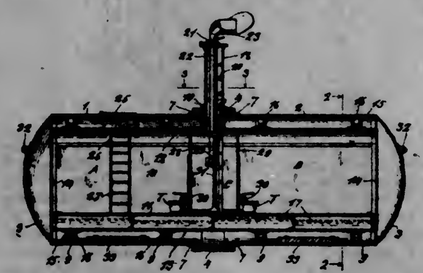


1. The method of closing filled paper sacks including bringing the side walls of a sack together above the content in the sack, trimming said side walls on a line parallel to and at a given distance from the support on which the sack rests while being closed, placing a fabric strip about the trimmed edge portions as said side walls are being trimmed, and simultaneously passing stitches through said fabric strip and the walls of the sack as the edges of the sack are trimmed and embraced by the fabric strip so that the side walls of the paper sack are held clamped one against the other by a line of stitches anchored in the fabric strip and the sack closed thereby.

1,577,472. MACHINE FOR CLOSING PAPER SACKS. FRANK A. KUCHEA and CHARLES F. RUBEL, Chicago, Ill., assignors to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 10, 1924. Serial No. 705,570. 6 Claims. (Cl. 112—11.)

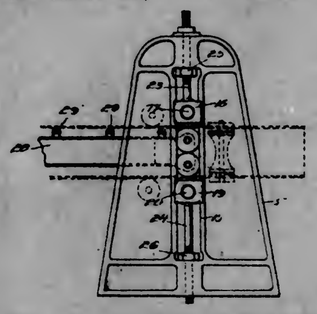
1. A sewing machine for closing a filled sack comprising a support for the filled sack, a sewing head overhanging the support and including stitching mechanism having a horizontally reciprocating needle, and a trimming mechanism having a trimming blade operating in front of and above said needle to trim and even the side walls of the sack prior to the stitching of said side walls together for closing the sack.

1,577,473. AIR-INTAKE CONTROL FOR CARBURETORS. CHARLES LATTA, St. Louis, Mo. Filed July 28, 1924. Serial No. 728,624. 4 Claims. (Cl. 261—145.)



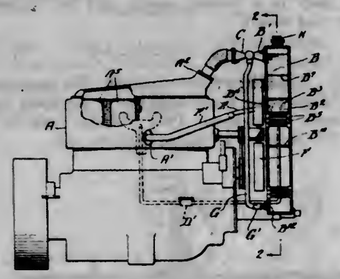
1. A device of the character described comprising a hollow member arranged to extend into the air intake of a carburetor and having an external enlargement arranged to bear against the end of the intake and having an air inlet through one side thereof intermediate of its ends and an air inlet to its outer end, a bearing within the outer end of said member beyond said inlet, a stem slidable in said bearing, a valve plate of larger area than said second air inlet attached to the inner end of said stem in said member outwardly from said first named air inlet for closing said second air inlet to said member adjacent to said bearing, and a spring controlling said valve.

1,577,474. INSIDE PIPE CUTTER. GEORGE F. LE BUS, Electra, Tex. Filed Feb. 17, 1925. Serial No. 9,805. 8 Claims. (Cl. 81—195.)



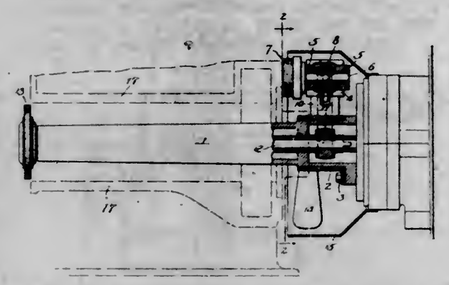
1. An inside pipe cutter comprising an elongated body having a head and having an axial stem, said head having a vertical recess in its outer wall extending from the end thereof from which said stem extends, a milling cutter pivotally supported at its inner end in said recess and swingable from position inwardly of the outer wall of the head to and from position to extend outward beyond the outer wall of the head, a presser ring slidable on said stem in contact with said milling cutter, a sleeve on said stem adjustably engaged with the stem, a coil spring disposed on the stem between said sleeve and said presser ring, means on said head frictionally engageable with the inner wall of a casing in which said body is received, and means for limiting the movements on said stem of said sleeve, said sleeve being adapted at its outer end for connection with a means for lowering said body in a tubular casing and for imparting a torque to said sleeve.

1,577,475. LIFE-SAVING DEVICE. FREDERICK W. LISKA, Englewood, Colo., assignor of one-third to Mary E. Nickels, Englewood, Colo. Filed June 9, 1925. Serial No. 35,889. 2 Claims. (Cl. 9—4.)



1. A life saving device comprising, in combination, an elongated cylindrical member formed of two sections each being closed at one end and open at the other end, the open ends being placed in juxtaposition, means for connecting the adjacent ends, said means being movable with respect to both sections, an elongated housing within said cylindrical member and means for permitting said housing to rotate with respect to the cylindrical member.

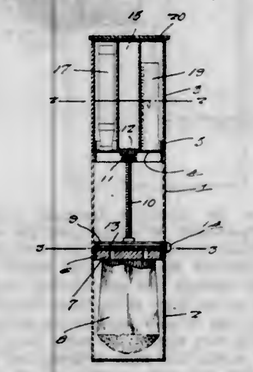
1,577,476. EQUALIZED ROLLER PRESS FOR PIPE MANUFACTURING. JOHN HAROLD MACGREGOR, Portland, Oreg. Filed June 12, 1925. Serial No. 36,764. 3 Claims. (Cl. 80—11.)



1. A roller press for pipe manufacturing including a pair of sides, a top platen between the sides, a bottom platen between the sides, a bracket depending from the top platen, press rolls journaled in the bracket, a ram slidable through the bottom platen, a bracket on the upper end of the ram, press rollers journaled in the bracket on the ram, a pair of journal boxes slidably mounted in each side, means for adjusting the journal boxes toward each other, a pair of shafts disposed transversely between the sides and mounted in the journal boxes, crimping rolls one on each shaft, said shafts being engageable with the adjacent press rolls so that said rolls are disposed one on each side of the respective crimping rollers, a pair of guide rolls having their axes extending rectangularly to the axes of the shafts, and means for mounting the guide rolls on the sides.

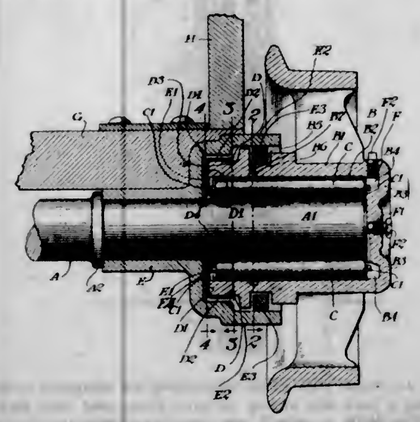
1,577,477. ENGINE-COOLING SYSTEM. HARRY C. MALLORY, New York, N. Y.; Sue B. Mallory administratrix of said Harry C. Mallory, deceased. Filed May 17, 1923, Serial No. 639,505. Renewed July 9, 1925. 2 Claims. (Cl. 123—174.)

1. In an internal combustion engine of the boiling and condensing type comprising a cooling jacket and a condenser having one portion located above the desired water level in the jacket and another portion including the condenser hotwell located below that level, the improvement which consists in a vapor connection, including a steam ejector provided with a suction chamber, between the upper portion of the jacket and the upper portion of the condenser, a conduit connecting said suction chamber to the condenser hotwell, and means for collecting liquid of condensation formed in the upper portion of the condenser and liquid discharged into the condenser by the ejector, and passing the liquid thus collected by gravity into said cooling space as required to maintain said level.



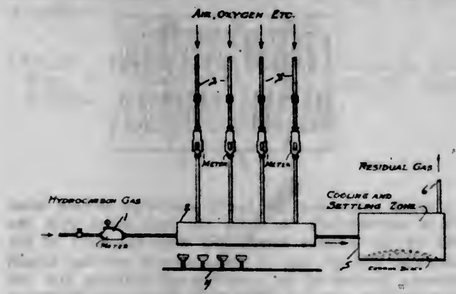
1,577,478. CYLINDER-GRINDING ATTACHMENT. LOUIS C. MARBURG, Montclair, N. J., assignor of one-half to Marburg Brothers, Inc., New York, N. Y., a Corporation of New York, and one-half to Mayer & Schmidt, Offenbach-on-the-Main, Germany, a Corporation of Germany. Filed Feb. 9, 1923. Serial No. 618,021. 5 Claims. (Cl. 51—3.)

1. In a grinding machine, a main grinding arm, a main grinding spindle being arranged rotatively within said arm, a main grinding wheel on said spindle and being adapted for internal cylindrical grinding, an auxiliary grinding device, consisting of an auxiliary arm, the latter being mounted on said main arm, an auxiliary grinding spindle being arranged rotatively within said auxiliary arm, an auxiliary grinding wheel adapted for face grinding, being mounted on said auxiliary spindle.



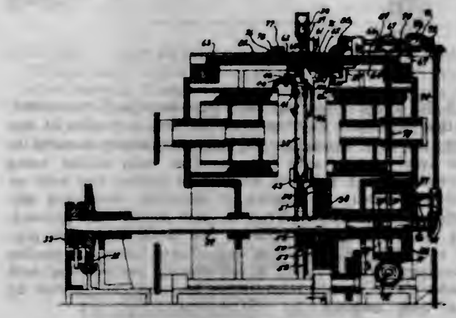
5. In a planetary type grinding machine, a main grinding arm being revolvable, a main grinding spindle being arranged rotatively within said arm, a main grinding wheel on said spindle and being adapted for internal cylindrical grinding, an auxiliary grinding device, consisting of an auxiliary arm, the latter being mounted on said main arm revolving with the latter, a slide being arranged on said arm, a bearing on said slide, an auxiliary spindle being placed rotatively in said bearing, an auxiliary wheel adapted for face grinding being mounted on said latter spindle, means for driving said latter spindle and wheel from said main grinding spindle, and means for balancing said revolving auxiliary device.

1,577,479. SHAVING SET. JOSEPH MCEVOY, Hamilton, Md. Filed Aug. 20, 1925. Serial No. 51,401. 2 Claims. (Cl. 132—80.)



1. In a structure of the class described, a cylindrical body comprising a pair of separable sections, one of which is formulated to provide a special article holder, and the other one of which is adapted to serve as a paste container, a plunger operable in said last named section, said plunger embodying a stem adapted for projection into the first named section.

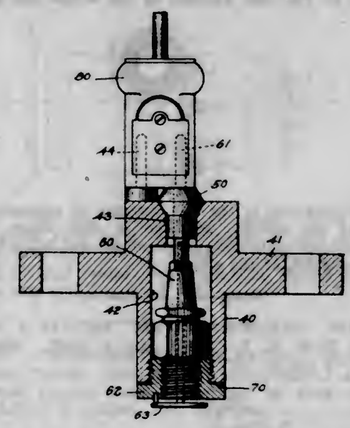
1,577,480. HUB AND JOURNAL BOX. WILLIAM O. MCKAMEY, Knoxville, Tenn. Filed July 27, 1923. Serial No. 654,246. 3 Claims. (Cl. 308—180.)



1. The combination of an axle, rollers surrounding the axle and having end extensions, a bearing surrounding the rollers and having an external circumferential channel, and a ring surrounding the axle and extending across the end of the bearing adjacent said channel and engaging in said channel and having a lip directed toward the rollers and extending between the axle and the end extensions on the rollers, substantially as described.

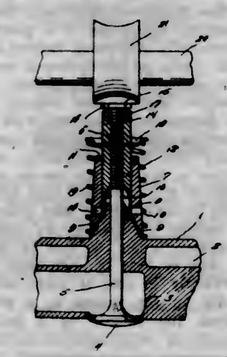
1,577,481. PROCESS OF MAKING CARBON BLACK. OTIS G. MESSENGER, Cranford, N. J., assignor to Standard Development Company, a Corporation of Delaware. Filed Oct. 18, 1923. Serial No. 669,817. 4 Claims. (Cl. 134—60.)

3. The process of making carbon black, which comprises reacting upon a hydrocarbon in gasiform condition with a successive series of small regulable portions of oxygen and recovering the residue of carbon black so formed.



1,577,482. CORE-HANDLING APPARATUS. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Original application filed Apr. 7, 1921, Serial No. 459,330. Divided and this application filed Mar. 5, 1924. Serial No. 696,955. 10 Claims. (Cl. 214—44.)

1. In combination with a trackway, a carriage adapted to run on the trackway, a hook swiveled to the carriage and adapted to support an annular core, means to raise free of said hook a core carried thereby, means to grasp the hook, means to rotate the hook about its swiveled connection, and means to swing the rotated hook clear of the core.

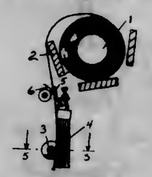


1,577,483. STARTING PLUG FOR INTERNAL-COMBUSTION ENGINES. FRANK B. MORRISON, Marion, Ohio, assignor to The Power Manufacturing Company, Marion, Ohio, a Corporation of Ohio. Filed July 3, 1925. Serial No. 41,343. 2 Claims. (Cl. 123—145.)

1. A firing device for an internal-combustion engine consisting, in combination with an engine cylinder with ported wall, of a stock of conducting material applicable to and removable from such cylinder and when applied closing the port in the cylinder wall, said stock being formed with an internal bore of larger diameter inwardly and of smaller diameter outwardly, a bushing of insulating material within the outer and smaller portion of said bore, a perforate block of insulating material provided with a collar of conducting material and by such collar removably united in screw-threaded engagement with the wall of the bore in said stock in the larger and inner portion thereof, a rod of conducting material extending through said bushing and through said block

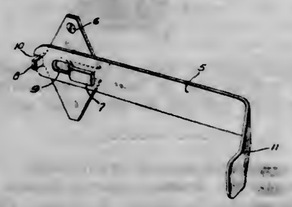
of insulating material, and an ignition affording member arranged between and in electric continuity with said rod at its inner end and the said collar upon said block.

1,577,484. ENGINE-VALVE STRUCTURE. RICHARD W. MUNDER, Telkwa, British Columbia, Canada. Filed Apr. 11, 1925. Serial No. 22,358. 2 Claims. (Cl. 123—90.)



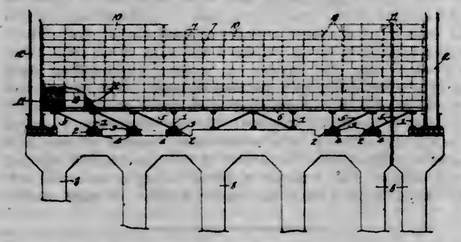
1. In a structure of the class described, a cylinder head, the latter having a valve seat formed thereon, a valve cooperative with said seat, said valve including a stem, and a portion of said stem being screw threaded and formed with a transverse bole, a guide socket carried by said head, a sleeve slidable in said socket, said sleeve being internally screw threaded and said valve stem being threaded into the sleeve, a washer surrounding said sleeve, a retaining pin passing through said sleeve and valve stem and cooperating with said washer to hold the same against movement in one direction, a coiled spring surrounding said socket and bearing at one end against said cylinder head and at its opposite end against said washer, and a tappet-head including a screw threaded shank tapped into the upper portion of said sleeve.

1,577,485. ABRASIVE APRON. JOHN M. NASH, Milwaukee, Wis. Filed June 19, 1925. Serial No. 38,283. 3 Claims. (Cl. 51—189.)



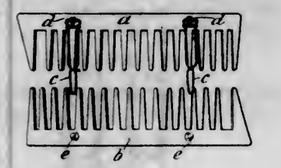
1. An abrasive apron for polishing machines slitted longitudinally to provide zones of longitudinally extend-

ing narrow strips substantially in lateral contact, each independently conformable to the surface contours of the work and each having the abrasive material extended wholly to the side margins of the strips and substan-



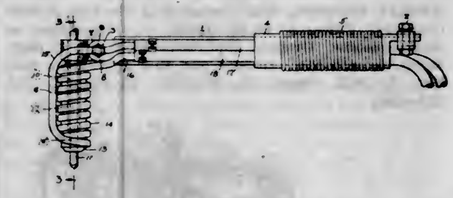
tially contiguous to the side margins of adjacent strips, whereby the abrasive material in such apron will be substantially continuous across all of said strips throughout the width of the apron.

1,577,486. CURTAIN DRAPER. ROXANNA A. NORTON, New York, N. Y. Filed Jan. 5, 1925. Serial No. 634. 1 Claim. (Cl. 156—33.)



A device of the character described, comprising two members, one member consisting of a plate, a laterally offset integral forwardly projecting tongue stamped from the metal of the plate at the forward portion of the plate, a laterally projecting integral lug on the plate bent at right angles thereto and located at the rear of the plate in horizontal alinement with said tongue, the other member constituting an arm bent at its forward end laterally and then rearwardly, constituting a hook-shaped barrier to prevent the escape of the curtain over the free end of the arm, and said arm also at its other end having a longitudinal slot therein receiving the tongue and having a recess in its extremity to receive the lug whereby when the arm is in engagement with the lug it will be held in horizontal position, and when moved forwardly to free it from the lug can be swung downwardly on the tongue as a pivot, and can be uncoupled from the tongue by a lateral twisting movement.

1,577,487. VERTICAL-CHAMBER-OVEN-SUPPORTING MEANS. CARL OTTO, Hellerup, Denmark. Filed Apr. 23, 1925. Serial No. 25,453. 5 Claims. (Cl. 263—10.)



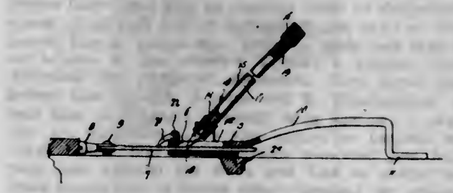
1. The combination with a row of vertical chamber ovens of a supporting framework therefor, said framework including a plurality of spaced supporting beams, and means for supporting the bottoms of said beams so as to permit bodily lateral movement of the beams.

1,577,488. MEANS FOR WAVING HAIR. FREDERICK PARKER, London, England, assignor to Parker and Company (London) Limited, London, England. Filed Aug. 31, 1925. Serial No. 53,678. 1 Claim. (Cl. 132—38.)

A comb comprising two bodily separable toothed members of substantially the same size and shape with the teeth of one member interlocked with the teeth of the companion member, one of said members carrying hinged fastening devices at its opposite end portions and the other member carrying studs with which said fastening devices engage.

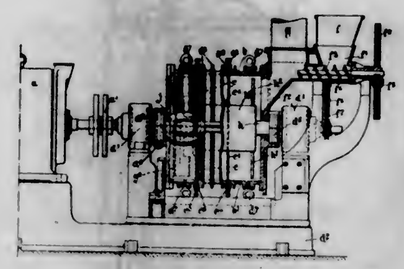
1,577,489. ELECTRODE HOLDER. CECIL C. PECK, Cleveland, Ohio, assignor to The Lincoln Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 11, 1925. Serial No. 22,443. 9 Claims. (Cl. 219—8.)

6. In a device of the character described, the combination of a body member provided with a handle at one end; an electrode holder angularly adjustably secured to the other end of said body member, said holder being formed with an aperture adapted to receive and hold an electrode pencil; a bushing of electrical insulating material fitted in the aperture in said holder and preventing electrical contact between the latter and such pencil except adjacent the free end of said holder; a cooling chamber in the form of a coil closely surrounding said holder; and flexible connections for said coil carried by said body member.



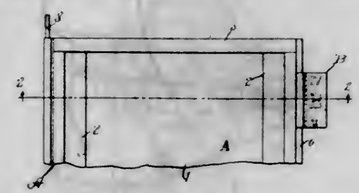
1,577,490. COMBINATION AUTO IMPLEMENT AND GAUGE. CHARLES HENRY POE, Houston, Tex. Filed Apr. 3, 1924. Serial No. 704,017. 3 Claims. (Cl. 137—139.)

1. A combination implement, comprising a staff having a bifurcated end, a reinforcing band or loop surrounding the staff at the inner end of the bifurcation, a pin or prong carried by the band or loop and extending perpendicularly to the staff, and a forwardly-extending arm carried by the pin or prong and terminating in an eye, said bifurcation being adapted to receive the thumbpiece of a pet-cock for opening the same, said pin being adapted to clear the passage therethrough, and said arm being adapted to support a receptacle for catching the drippings therefrom.



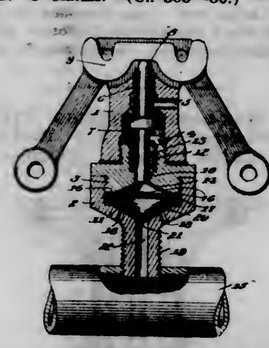
3. A combination implement comprising a wooden staff with a bifurcated end adapted to engage the thumbpiece of a pet-cock for turning the same, a reinforcing loop disposed about the staff near the bifurcated end to prevent the same from splitting, and means integrally connected to the loop for supporting a receptacle to catch the drippings from the pet-cock when the latter is opened.

1,577,491. FLOOR JACK. FRED C. PRENTICE, Great Bend, Pa. Filed Oct. 24, 1925. Serial No. 64,634. 3 Claims. (Cl. 254—11.)



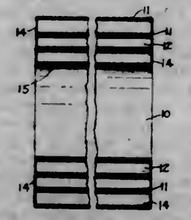
1. In a floor jack, a head, a rack bar slidable longitudinally through said head, a floor board engaging member carried by the forward end of said rack bar, a hollow lever pivoted adjacent its lower end on said head, a ratchet pin slidably disposed within the lever, the lower end cooperating with the ratchet teeth of said rack bar whereby the bar may be moved in one direction through the medium of the hollow lever and the pin, and means for maintaining the rack bar in its adjusted position.

1,577,492. DISINTEGRATOR FOR PULVERIZING SUGAR AND OTHER FRIABLE SUBSTANCES. WILLIAM EDWARD PRESCOTT, London, England, assignor to Baker-Perkins Company Incorporated, White Plains, N. Y., a Corporation of New York. Filed July 3, 1924. Serial No. 723,928. 12 Claims. (Cl. 83—11.)



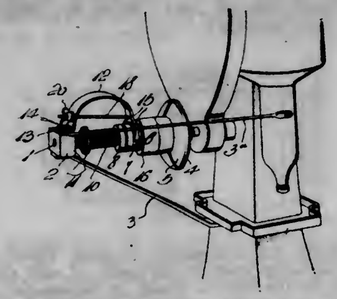
1. In a disintegrator the combination of a casing comprising relatively movable sections hinged together about a longitudinal axis, a feed hopper carried by one of said sections, means whereby the sections may be detached one from the other, a series of interior baffles carried by said casing sections and comprising separate elements each pertaining to the respective sections, rotary beaters mounted within the casing between the aforesaid baffles, a discharge outlet carried by another of said casing sections, means whereby said latter section can be rotated about the axis of the beaters, means whereby said last mentioned casing section can be held in various positions of rotation.

1,577,493. INDEX TAB. JAMES H. RAND, North Tonawanda, N. Y., assignor to Rand Kardex Company, Inc., North Tonawanda, N. Y., a Corporation of Delaware. Filed July 29, 1924. Serial No. 728,878. 9 Claims. (Cl. 40—102.)



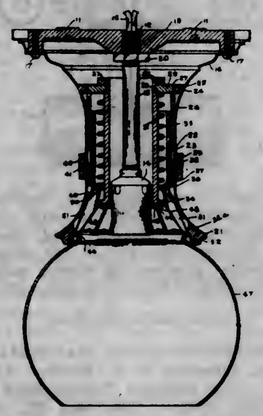
1. An index tab comprising an outer folded strip, an attaching strip fixed to the inside of said strip in the region of the fold, a sheath of transparent sheet material on said folded strip removable therefrom, and an index slip visible through said sheath.

1,577,494. AIR-BRAKE-RELEASE VALVE. PHILIP B. ROHNER, Carroll, Iowa, assignor of one-half to Andrew A. Drees, Carroll, Iowa. Filed Oct. 23, 1925. Serial No. 64,332. 3 Claims. (Cl. 303—80.)



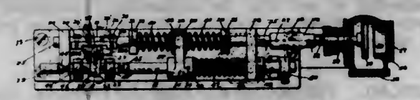
1. In a brake release device, a diaphragm having normally an inverted conical form with its apex presented to the flow of pressure fluid, there being a narrow slit through the apex of the diaphragm held open under normal pressure but closing under increased pressure which tends to flatten and invert the diaphragm.

1,577,495. HEAT-INSULATING MATERIAL. JOHN A. SCHARWATH, Elizabeth, N. J., assignor, by mesne assignments, to The Seaboard National Bank of the City of New York, trustee. Filed May 20, 1921. Serial No. 471,278. 3 Claims. (Cl. 154—45.)



1. A rigid cellular heat insulating unit comprising a plurality of layers of like material impregnated with a solidifying heat resisting compound to render the unit rigid and smooth, said unit having its cells closed by walls formed with said heat resisting compound.

1,577,496. FRICTION CLUTCH. OLE M. SKOLBERG, Fergus Falls, Minn. Filed Apr. 16, 1925. Serial No. 23,619. 4 Claims. (Cl. 192—94.)

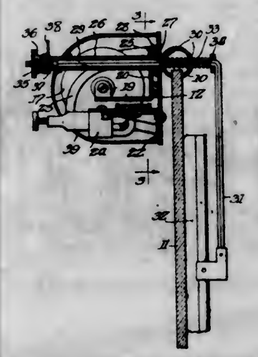


1. In combination with a slidable clutch controlling member, and a stationary member spaced therefrom in the direction of its axis; a U-shaped spring having one of its arms anchored to said stationary member and having a running connection between its other arm and said slidable member, the two arms of said spring having openings, a bolt passing through said openings and having a head contacting with the outer side of one of said arms, and a nut threaded on said bolt in contact with the outer side of the other arm, said nut and bolt being cooperable to draw said arms toward each other.

1,577,497. DECK-LAMP LIGHTING FIXTURE. EDWARD J. SCHRONDER, Summit, N. J. Filed Mar. 8, 1923. Serial No. 623,576. 3 Claims. (Cl. 240—78.)

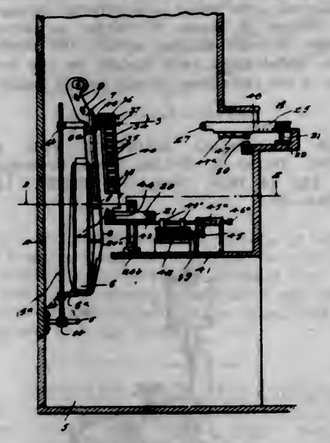
1. In a lighting fixture a spider adapted to be rigidly secured to the ceiling, a canopy rigidly secured to said spider, a threaded flange on the upper interior portion of said canopy, an outer cylindrical casing screwed into said flange, an inner cylindrical casing having exterior threading at its upper end adapted to screw into an interior threading on the flange of said outer casing at its upper end, a sliding cylinder mounted between said inner and outer casings by means of a spiral spring around said inner casing which is supported on an inturned flange around the lower edge of said sliding casing and at the upper end bears against the inturned flange of the outer casing, a spring clamping finger member rigidly secured to said inner casing at its lower edge, a spring pressure member secured to the base of said sliding member, an annular ring around said canopy connected through openings in said canopy to said sliding cylinder and a socket support rigidly secured to said spider within said canopy.

1,577,498. QUICK-RELEASE SPEED AMPLIFIER. ANDREW G. SPINNEY, Portland, Me., assignor of one-half to Charles A. Twigg, Portland, Me. Filed Apr. 6, 1925. Serial No. 21,254. 3 Claims. (Cl. 74—14.)



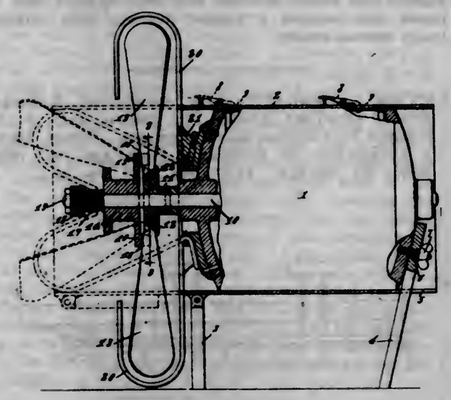
1. In a quick-release speed-amplifier, consisting of a base, bearings on said base, a shaft reciprocable in said bearings, means to actuate said shaft, a second shaft reciprocable in other bearings on said base,—said second shaft to be in parallel relation to said first shaft, means on said first shaft co-acting with means on said second shaft whereby a yielding pressure may be exerted on said second shaft, alternately, forwardly and backwardly, longitudinally of the same, a stop on said second shaft, a two-way pawl pivotally mounted on said base and adapted to engage said stop, alternately, in forward and backward movements of said second shaft, and means on said first shaft for tripping said pawl whereby the acquired energy stored in said second shaft may be precipitately released.

1,577,499. WALL COVERING AND PROCESS OF MAKING THE SAME. JAMES H. STEDMAN, Braintree, Mass. Filed Sept. 7, 1922. Serial No. 586,786. 16 Claims. (Cl. 18—52.)



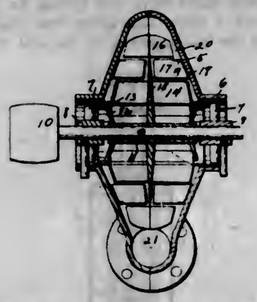
15. As an article of manufacture a rubber sheet having contained cotton threads in both individual strands and fabricated pieces, the threads being unshredded but twisted and commingled throughout the thickness of the sheet and being present in sufficient quantity to give a gnarled appearance to its surface.

1,577,500. WINDSHIELD CLEANER. FRANKLIN W. STEWART, Chicago, Ill. Filed May 31, 1922. Serial No. 564,794. 7 Claims. (Cl. 15—253.)



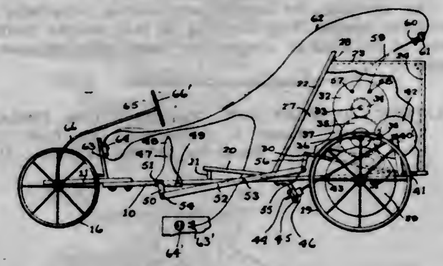
1. A windshield cleaner comprising a rod, a member rotatable therewith, said rod being slidable relatively to said member, a squeegee arm at the outer end of said rod, a resilient member thereon adjacent said arm tending to urge said rod outwardly of said member and a member on the inner end of said rod cooperating with said first named member for adjusting the squeegee on said arm with reference to the windshield to be cleaned, said adjusting member being arranged to rotate with said rod and to contact only with said first mentioned member rotatable therewith.

1,577,501. VIOLIN PIANO. JESSE C. STRAWN, Buffalo Springs, Tex. Filed July 26, 1923. Serial No. 653,951. 6 Claims. (Cl. 84—326.)



2. A violin piano having a violin, a movable belt bow common to all the strings thereof, means to drive said belt bow, keys, string-engaging fingers, arms to shift the belt into engagement with the strings, and electric means simultaneously operable through operation of a key to move a finger and the belt into engagement with the same string.

1,577,502. FOLDING FAN. EDWARD P. TABOR, Worcester, Mass. Filed May 29, 1925. Serial No. 33,743. 5 Claims. (Cl. 230—1.)

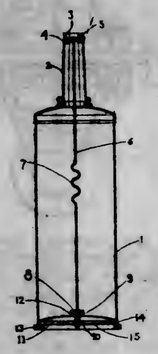


3. A collapsible electric fan comprising a motor, an operating shaft extending forwardly therefrom, a hub mounted on said shaft and having fan blades radiating therefrom, said blades being foldable, a spring pressed collar mounted on said shaft and having fingers to engage said blades to hold them in open position, said collar being movable to disengage said fingers from said blades, and a casing slidable on said motor and adapted to move forwardly, whereby the blades are folded therein and held in collapsed position.

1,577,503. BLOWER. JOHN TAYLOR, Salt Lake City, Utah. Filed Feb. 20, 1925. Serial No. 10,612. 1 Claim. (Cl. 230—11.)

A device of the character described comprising a casing having an enlarged, centrally disposed open hub, spokes carried thereby, bearings carried by said spokes and held thereby in spaced relation to the hub to permit of the entry of air between the hub and bearings, a shaft mounted in said bearings, a rotor carried by said shaft, a set of inner vanes carried by said rotor and comprising substantially horizontal collars which project into the hub of the casing, outwardly of the bearings, a second set of vanes disposed outwardly of the first set of vanes and spaced therefrom and an intermediate stationary set of vanes carried by the casing, the vanes of the rotor being spaced from each other, with openings therebetween which permit the passage of air inwardly through the horizontal collars to the interior of the rotor and thence radially outward between the vanes.

1,577,504. ELECTRICALLY-DRIVEN VEHICLE. M. EDGAR THOMAS, Riverview Manor, N. Y., assignor of one-half to Lawrence F. Sherman, Pelham Manor, N. Y. Filed July 21, 1922. Serial No. 576,584. 2 Claims. (Cl. 180—2.)

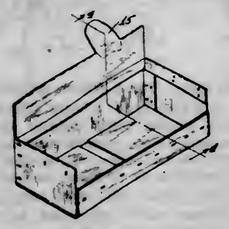


1. An electrically driven motor vehicle, comprising in combination, a wheel base, wheels supporting the same, certain of said wheels being readily dirigible so as to permit the vehicle to be propelled in any desired direction, an electric motor mounted on said wheel base and operatively connected to at least one of said wheels so as to drive the same and thus propel the vehicle, a flexible conducting cable connecting said electric motor to a suitable outside source of current for supplying current to said motor, and means for rendering said cable freely disconnectible upon a predetermined amount of tension being applied to the same.

1,577,505. LIQUID-DISPENSING DEVICE. DOUGLASS G. TOMKINS, New York, N. Y., assignor to Standard Development Company, a Corporation of Delaware. Filed Apr. 25, 1924. Serial No. 708,977. 4 Claims. (Cl. 221—45.)

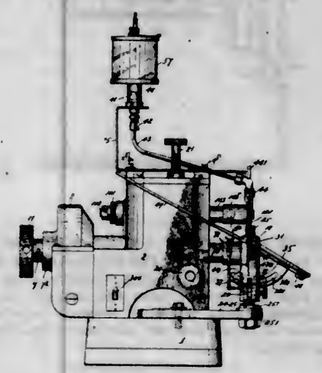
1. In a liquid-dispensing device, the combination of a container having a spout provided with an internal valve-seat and a bottom provided with a vent-opening,

a valve seat internally of said vent-opening, a valve for coacting with said spout valve-seat, a vent-valve for coacting with the vent valve-seat, a compensating valve-rod carrying said spout-valve and having an enlargement on its other end, a sleeve extending from said vent-valve and embracing the enlargement on the end of the valve-



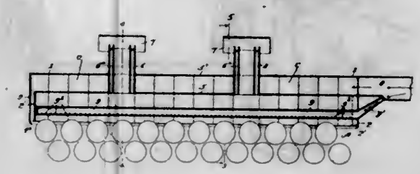
rod, and projecting as a tubular journal, an actuating bar mounted on said journal, a cam-surface on the bottom of the container against which said bar rides with its inner face, and an insert member presenting a cam-ridge parallel to the first mentioned cam-surface for engaging the outer face of said actuating bar.

1,577,506. ELECTRODE FOR ELECTRIC ARC WELDING. ERNST ALBERT EMANUEL TÖRNBLOM, Stockholm, Sweden, assignor to Carl Adam Carlson, Fritz Einar Arthur Hedborg, and Bror Sven Olof de Verdier, all of Stockholm, Sweden. Filed Aug. 14, 1923. Serial No. 657,376. 1 Claim. (Cl. 219—8.)



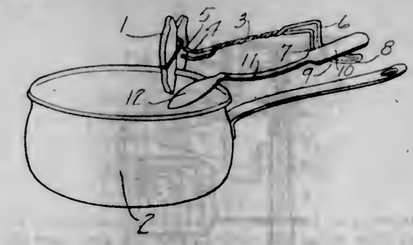
An electrode for electric arc welding comprising a metallic member, and a coating on said member consisting of an alkaline composition mixed with tragacanth gum.

1,577,507. DISPLAY BOX. ERSKINE WILDER, Hubbard Woods, and ALBERT J. OLLENDORF, Oak Park, Ill. Filed Dec. 9, 1922. Serial No. 605,964. 1 Claim. (Cl. 206—44.)



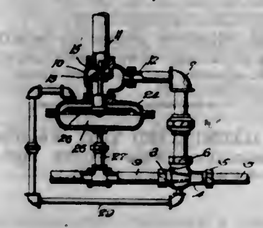
A carton for packing and displaying merchandise, comprising two blanks of sheet material and having the upper edges of its ends and its front of two thicknesses of material, each of said blanks being of substantially rectangular configuration and provided with two separated extension portions, said blanks cooperating one with another, when in assembled relation, to provide for said carton a bottom of three thicknesses of material, the body of the first of said blanks providing the back, top, and a lip at the front of said carton, the extensions on said blank forming means for uniting said first blank to said second blank, and the second of said blanks having extension portions and forming two layers of the bottom of said carton, the reinforced ends, and the reinforced front thereof, the extension portions of said blank overlapping the extension portions of said first blank for uniting said blanks one to another, said first blank being adapted to be folded longitudinally through the top section thereof to expose in outline an object advertising the contents of the carton, the cover section when so folded being held upright by the overlapping portions of the extensions on said second blank.

1,577,508. TRIMMING MACHINE FOR RUBBER GOODS. HARRY E. WILLS, North Brookfield, Mass. Filed Aug. 14, 1924. Serial No. 732,127. 14 Claims. (Cl. 164—60.)



1. A machine of the kind described comprising cutter blades, a table, means for pivotally supporting said table, means for establishing the normal height of said table support and means whereby said table support may be raised and lowered a limited distance with relation to its normal height.

1,577,509. APPARATUS FOR HANDLING VAPORS. GEORGE STANFORD WITHAM, Jr., Hudson Falls, N. Y., assignor to American Blower Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 10, 1922. Serial No. 551,416. 16 Claims. (Cl. 34—48.)



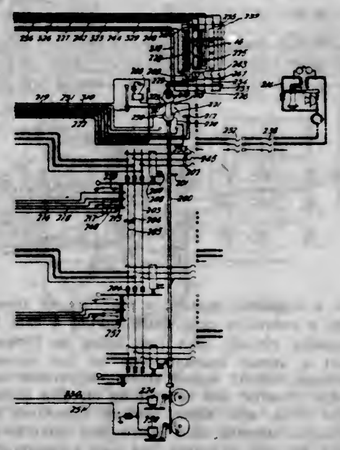
1. The combination with an apparatus from which condensable vapors are given off, of a hood associated with said apparatus to receive the vapors directly therefrom, and means for circulating a heating fluid in contact with the walls of the hood and inwardly around the bottom thereof to the interior of the same to maintain the hood at a certain temperature relative to the temperature of the vapors and to assist the circulation of the vapors through the hood.

1,577,510. SPOON RACK FOR KETTLES. RUBY WYMAN, Olympia, Wash. Filed Apr. 2, 1923. Serial No. 629,240. 1 Claim. (Cl. 65—65.)

A spoon rack for kettles formed entirely of wire and including a spring clamp for engaging the side of the kettle, a laterally and backwardly extended arm having its outer end turned angularly downward and laterally outward in a direction opposite to the lateral bend of the arm connecting with the clamp.

1,577,511. AUTOMATIC GAS-SUPPLY CONTROLLING MEANS. JOHN B. ALLINGTON and GEORGE S. DADY, Rochester, N. Y. Filed Nov. 9, 1922. Serial No. 599,780. 1 Claim. (Cl. 48—180.)

In combination with a gas supply, a valve controlling said gas supply and movable under the action of gravity to closed position, an air supply of greater pressure than the gas supply, a mixing chamber with which said gas supply and said air supply connect, a pressure operated member controlling said valve for the gas supply, means providing communication between one side of the pressure operated member and the air supply to effect the opening of the gas supply valve, the cross sectional area of such communicating means being smaller than the cross sectional area of the gas supply, so that the pressure operated member is operated through the static head of the air line, means providing communication between the opposite face of the pressure member and the mixing chamber, the cross sectional area of said means being smaller than the cross sectional area of the mixing chamber at the point where said means communicates with the mixing chamber, whereby the reduction of the pressure in the air supply below the pressure of the gas supply effects the cutting off of the gas supply and the building up of pressure in the mixing chamber due to interference with the flow from the mixing chamber will cut off the gas supply.

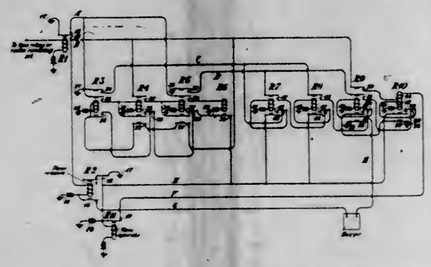


1,577,512. COUPLER. ALBERT H. ANDERSON, Woodsfield, Ohio. Filed Apr. 17, 1925. Serial No. 23,892. 2 Claims. (Cl. 294—96.)

1. In a device of the class described, a main tubular member having upper and lower inclined portions, a lower jaw slidable on the lower inclined portion of the main member, an upper jaw slidable on the upper inclined portion of the main member, a hollow plunger slidable in the main member, means for connecting the plunger with the lower jaw, to move the lower jaw longitudinally of the main member and to cause the lower jaw to move outwardly, and means located partly within the plunger and connected to the upper jaw to move the upper jaw longitudinally of the main member and to

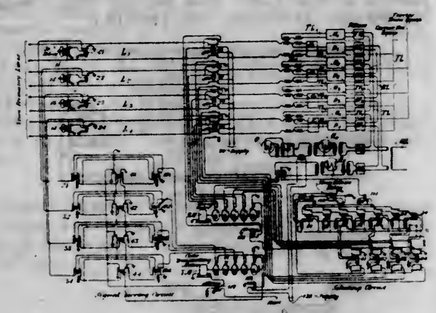
cause the upper jaw to move outwardly, the main member being provided with an outwardly expansible stop located between the jaws.

1,577,513. TELEPHONE-EXCHANGE SYSTEM. WILLIAM G. BLAUVELT, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 11, 1923. Serial No. 680,029. 14 Claims. (Cl. 179—18.)



1. In a telephone exchange system, a group of switches, a common shaft means to associate any one of said switches with said common shaft, means for operating said shaft to position said switch, means for restoring said common shaft, and means for again associating said shaft with said switch to restore said switch.

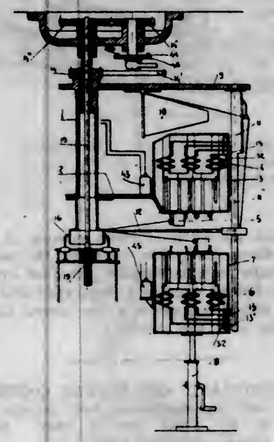
1,577,514. SELECTOR CIRCUITS. RALPH K. BONELL, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 2, 1923. Serial No. 672,354. 9 Claims. (Cl. 177—353.)



1. In a selector circuit, two sets of relays, circuit means whereby one relay of a set responds to the in-

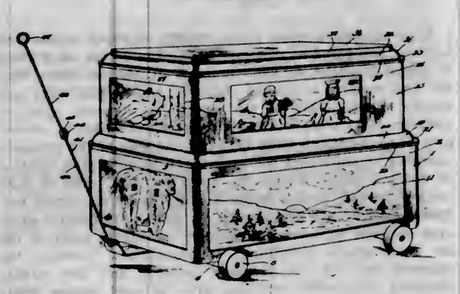
itiation of a signal impulse to permit the operation of another relay of the set upon the termination of that impulse, circuit means whereby the operation of the latter relay releases the former, circuit arrangements whereby the second set of relays responds to the succeeding impulse in like manner, circuit arrangements

whereby the first and second sets of relays respond alternately to further succeeding impulses in new cycles of operations, a series of counting relays, and circuit means whereby said counting relays are actuated successively in response to the alternate operations of the two sets of relays.



1,577,515. SELECTIVE SIGNALING CIRCUITS FOR CARRIER SYSTEMS. RALPH K. BONELL, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 15, 1924. Serial No. 713,583. 13 Claims. (Cl. 179—15.)

1. In a signaling system, a plurality of transmission circuits, a rotatable cam shaft having a cam for each transmission circuit, each cam being so formed as to transmit a signal characteristic of the corresponding transmission circuit, signal storing apparatus associated with said circuits, and controlling circuits interconnecting said cams, said signal storing apparatus and said transmission circuits, said controlling circuits being so arranged that in response to signals substantially simultaneously incoming from a plurality of said transmission circuits said signals will be stored by said storing apparatus and the storing apparatus will control the cams to successively transmit to a distant station signals characteristic of the several transmission circuits, and means at the distant station individually responsive to the different characteristic signals.

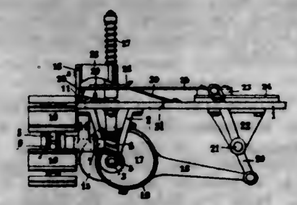


1,577,516. AUTOMATIC CIRCULAR LOOM. LUIGI BRUNO, Turin, Italy. Filed May 14, 1923. Serial No. 638,896. 9 Claims. (Cl. 139—14.)

1. An automatic circular loom comprising spaced discs, movable warp thread shuttle supports in each disc arranged in pairs facing each other and arranged in a plurality of circular series, a shuttle for each pair of

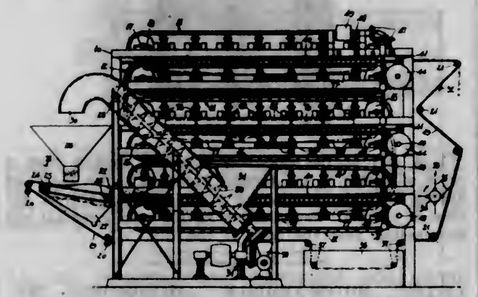
supports and adjustable means for selectively moving the supports of one disc toward their corresponding supports in the opposite disc and vice versa.

1,577,517. ILLUMINATED TOY. FRANCIS P. CHANDLER, Houston, Tex. Filed Oct. 23, 1923. Serial No. 670,311. 6 Claims. (Cl. 46—37.)



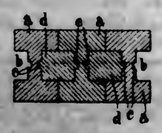
1. An illuminated toy comprising a hollow body to be interiorly illuminated and having a display opening in its wall, a display panel comprising a sheet of translucent material provided with oppositely located marginal pockets, rods fitted into the pockets, the sheet being disposed to extend over the opening, and resilient means carried by the wall at opposite sides of the opening and embracing the pockets of the panel and rods therein and maintaining the sheet in stretched condition.

1,577,518. MACHINE FOR REMOVING THE HEADS AND GUTS OF FISH. JOSEPH EUGENE AMAND CHAUVEUR, Concarneau, France, assignor to Société P. Navarre & Fils, Paris, France. Filed Feb. 14, 1925. Serial No. 9,335. 8 Claims. (Cl. 17—3.)



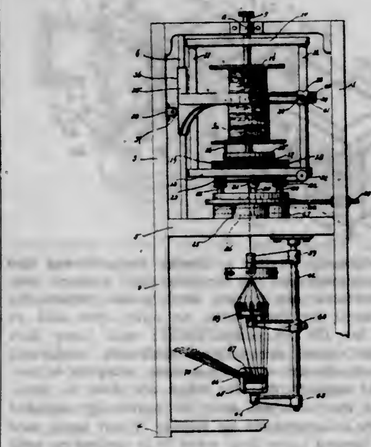
1. A machine of the character described including a support, a knife mounted for movement on said support

and adapted to sever the fleshy part of the fish head, a fork movable in a direction at right angles to the knife



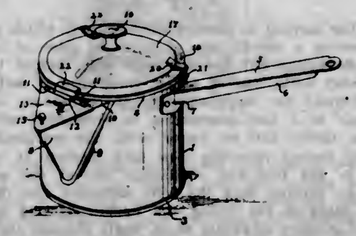
and including penetrating teeth adapted to penetrate the fish head and grip and remove the latter with the entrails from the fish.

1,577,519. CONTINUOUS PRESS. ANGELO COLUMBRO, Cleveland, Ohio. Filed Feb. 26, 1924. Serial No. 695,269. 5 Claims. (Cl. 100—37.)



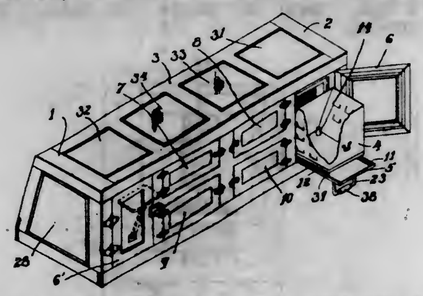
1. A continuous press comprising a frame, a pair of endless chains of presser bars mounted in the frame, and means carried by the frame for guiding and holding together the adjacent runs of said chains, said means of one chain including bars extending longitudinally of the chain and arranged end to end, members to which the adjacent ends of said bars are pivotally connected, means for guiding said members for movement toward and away from the other chain, rollers carried by said bars between said members to contact with the firstnamed chain, and spring means urging said members toward the lastnamed chain.

1,577,520. BLOCK AND THE LIKE FOR ROAD PAVING AND OTHER PURPOSES. JACK SHERIDAN COWPER, South Kensington, London, England. Filed Dec. 29, 1922. Serial No. 609,703. 5 Claims. (Cl. 94—11.)



1. A block comprising a moulded shell of rubber material formed of upper, lower and end portions arranged integrally as one, a cavity in the shell between the said portions, a core member of relatively harder material than rubber adapted to fill in the cavity, and thickened inner corners upon the shell shaped to give increased resistance to the disruptive effect, between the shell and core produced by the traffic when the block is under traffic pressure.

1,577,521. CORD-MAKING MACHINE. FREDERICK S. DICKINSON and ALBERT E. SHEPARD, New York, N. Y., assignors to Dickinson Cord Tire Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 4, 1922. Serial No. 592,214. 16 Claims. (Cl. 117—49.)



1. A device of the class described, comprising in combination, means to supply a plurality of strands, means to twist said strands into a single cord, and stationary means to guide said strands into the twisted position along paths disposed angularly of the axis of said cord and corresponding to the angular position of said strands in said cord.

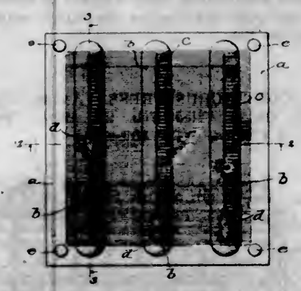
1,577,522. BOILING AND DRAINING KETTLE. BENJAMIN L. ECK, Marinette, Wis. Filed July 15, 1925. Serial No. 43,815. 1 Claim. (Cl. 53—8.)

A cooking utensil comprising a receptacle open at its upper end and having an annular wall, said wall being perforated to provide outlet openings, a handle extending from said receptacle, a spout secured upon the outer face of said annular wall and enclosing the perforated portion thereof, said spout being open at its upper end and having a fragmentary upper wall extending across its rear end portion and engaging the wall of said receptacle above the perforated portion thereof, said upper wall being provided at its forward edge with hinge ears, a cap for the open upper end of said spout resting upon the upper end thereof and at its rear end pivotally connected with said hinge ears for vertical swinging movement into and out of a closed position, a cover for the open upper end of said receptacle, a clip carried by the upper wall of said spout and extending in overlapping engagement with said cover, and latches carried by said cover for engaging the wall of said receptacle and cooperating with said clip to hold the cover in closing relation to the open upper end of the receptacle.

1,577,523. BUTCHER'S REFRIGERATOR DISPLAY CASE. ALONZO EGGLESTON, Rochester, Ill. Filed June 1, 1925. Serial No. 34,115. 1 Claim. (Cl. 62—37.)

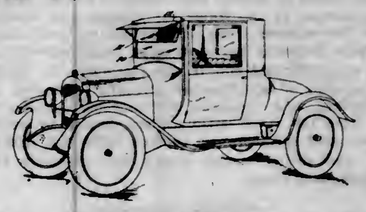
In a refrigerator having a display compartment and an ice compartment, an ice container and support comprising a container on trucks, fixed tracks within the ice compartment for the trucks, an outer door and an inner door for the ice compartment; said inner door provided with spaced rails aligned with said tracks and a U-shaped handle for said inner door, adapted to provide optional support therefor when the door is open; whereby the ice container may be optionally removed from said ice compartment by rolling it out upon said rails of the opened inner door when it is desired to refill the ice container.

1,577,524. METHOD OF MAKING SHOES. JULIUS F. G'SELL, Jerseyville, Ill., assignor, by mesne assignments, to International Shoe Company, St. Louis, Mo., a Corporation of Delaware. Filed Nov. 30, 1923. Serial No. 677,811. 3 Claims. (Cl. 12—142.)



1. The method of manufacturing shoes, which consists in forming a middle sole of a single piece of material and channeling out the marginal edge thereof to form separated walls, one of which constitutes a welt extension beyond the marginal edge of the other; securing the sole to a last, assembling in connection with said sole a lining and an upper with the marginal edges thereof turned inwardly into said channel at opposite sides of the last and outwardly against the welt extension; turning back the welt extension and the marginal edges of the lining and upper; passing a single row of stitches upwardly at an angle through the upper, the lining and through the middle sole adjacent to said welt extension while said parts are turned inwardly; and then turning said parts outwardly and securing the outer sole and a welt strip to said welt extension.

1,577,525. APPARATUS FOR MAKING SPRING-HEEL SHOE SOLES. JULIUS F. G'SELL, Jerseyville, Ill., assignor, by mesne assignments, to International Shoe Company, St. Louis, Mo., a Corporation of Delaware. Original application filed July 16, 1923, Serial No. 651,733. Divided and this application filed May 14, 1924. Serial No. 713,334. 5 Claims. (Cl. 12—21.)

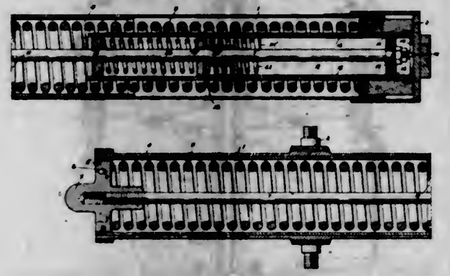


1. An apparatus for making spring heel soles, which consists in a base mold section having a shape-forming cavity therein, a top section adapted to be applied to said base section and cooperate therewith to shape a sole blank, a latch element in the base section comprising a ratchet, and a releasable lock bolt supported by the top section and adapted to cooperate with said ratchet to prevent separation of the two sections of the mold when latched.

1,577,526. FLOOR MAT FOR AUTOMOBILES. HENRY HELLWEG, Milwaukee, Wis., assignor, by direct and mesne assignments, of fifty-one per cent to F. O. Richey, Cleveland, Ohio, and forty-nine per cent to Edward E. Richardson, Maumee, Ohio. Filed Oct. 27, 1921. Serial No. 510,911. 10 Claims. (Cl. 74—81.)

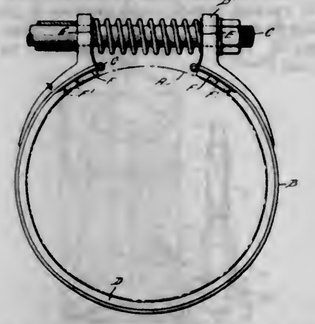
1. A mat of the character described formed from a sheet of rubber, a rib formed upon the upper face and having its ends terminating at points spaced from the edge of the mat, and said rib having a longitudinal slit terminating near the ends of the rib.

1,577,527. MOTOR-VEHICLE WINDSHIELD. WILLIAM H. HOYT and SWART B. MANN, Oneonta, N. Y. Filed Aug. 29, 1924. Serial No. 734,951. 3 Claims. Cl. 296—97.)



1. The combination with a windshield, of a tinted eye shading area having the tint thereof gradually fading out at the margins of said area.

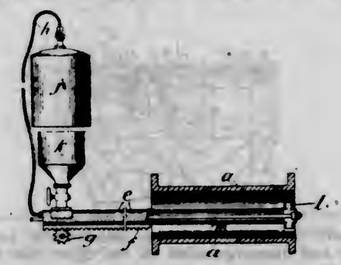
1,577,528. TUNNELING MACHINE. WILLIAM C. JAMESON, Sabinal, Tex. Filed June 19, 1924. Serial No. 720,984. 6 Claims. (Cl. 262—13.)



1. An apparatus of the class described comprising a carriage, a turn-table thereon, power means for rotating the table, a frame pivoted about a horizontal axis on the turn-table, manually operated means for rocking the frame on its pivot, a reciprocating tool carrying shaft in the frame, power means for reciprocating the shaft, means for propelling the carriage either forwardly or rearwardly, gathering means at the front of the carriage, a conveyor for receiving the material from the gathering means, an elevator at the rear of the carriage for receiving the material from the conveyor and means for operating the gathering means, the conveyor and the elevator from the carriage propelling means.

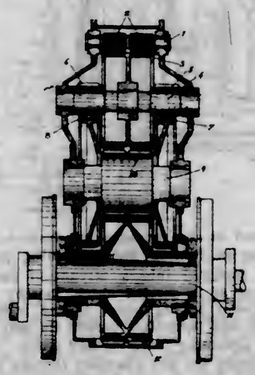
1,577,529. COUNTERPOISE. BRYAN P. JOYCE, Davenport, Iowa, assignor to David M. King. Filed May 2, 1923. Serial No. 27,570. 8 Claims. (Cl. 89—37.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

8. A counterpoise embodying a casing, a plunger reciprocally mounted therein, resilient means for extending the counterpoise, and means carried with the casing and cooperating with the plunger to oppose the extension of the counterpoise.



1,577,530. BRAKE-LINING FASTENER FOR AUTOMOBILE BRAKES. BRONISLAW KARASIEWICS, Cleveland, Ohio. Filed Mar. 26, 1925. Serial No. 18,337. 5 Claims. (Cl. 188—249.)

3. As a new article of manufacture, a brake lining hanger comprising two members and a pin hingedly securing said members together, one of said members having a slot therein and the other member having tongues punched therefrom adapted to be forced through a brake lining and turned down thereover to securely fasten said hanger to a brake lining.

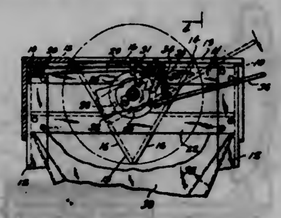


1,577,531. METHOD OF ENAMELING PIPES. WESLEY LAMBERT and ALBERT ALFRED MEAD, London, England, assignors to J. Stone & Company Limited, Deptford, England, a Corporation of Great Britain. Filed May 29, 1925. Serial No. 33,846. 2 Claims. (Cl. 91—73.)

2. Method of enameling a preformed metal pipe, comprising rotating said pipe while it still retains sufficient residual heat from a previous heat treatment, delivering onto the interior of said pipe and by the aid of a distributor nozzle a reducing gas having the capacity for preventing and removing oxide formations on said pipe,

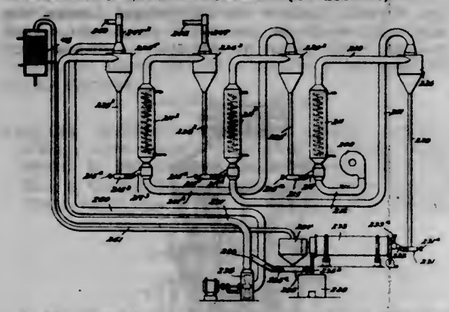
introducing enamel through said nozzle and utilizing said gas as a propellent for delivering said enamel onto said interior, and feeding said nozzle along the pipe, substantially as and for the purpose set forth.

1,577,532. TOOTHED GEARING FOR TURBINE LOCOMOTIVES. FREDRIK LJUNGSTRÖM, Brevik, Lidingon, Sweden, assignor to Aktiebolaget Ljungströms Ångturbin, Stockholm, Sweden, a Corporation. Filed June 16, 1923. Serial No. 645,819. 4 Claims. (Cl. 74—58.)



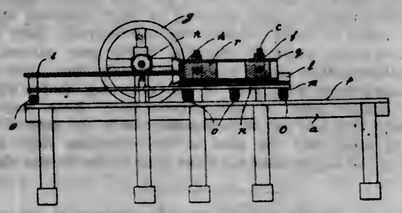
1. In turbine driven locomotives and similar vehicles, a gearing between the turbine and the driving wheels, comprising a driving shaft, a gear mounted on said shaft, an intermediate shaft, two gears of different sizes mounted on said intermediate shaft, the larger of which gears meshes with the gear of the driving shaft, a driven shaft, a gear mounted on said driven shaft, a reversing shaft, a gear mounted on said reversing shaft, and means to move radially the intermediate shaft and the reversing shaft so that the larger gear carried by the intermediate shaft may be brought into and out of engagement with gear of the reversing shaft, whilst the smaller gear of said intermediate shaft may be brought into and out of engagement with the gear of the driven shaft and the gear of the reversing shaft into and out of engagement with the gear of the driven shaft.

1,577,533. ROTARY COIN BOARD. GEORGE H. MERWIN, Milford, Conn. Filed Aug. 2, 1924. Serial No. 729,804. 8 Claims. (Cl. 232—44.)



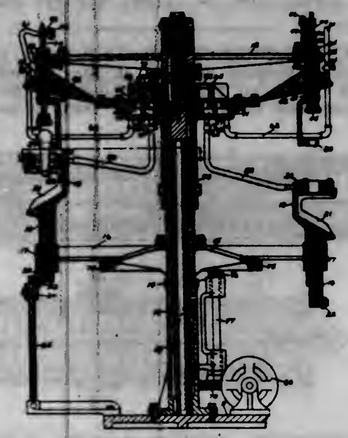
2. In a device of the character described, a substantially flat topped table or counter having a substantially rectangular opening in the top thereof, a coin board in said opening and mounted to rotate about a horizontal axis, said coin board being polygonal in cross section with rectangular faces adapted to close said

opening and arranged for deposit of coins thereon, and manual means accessible from the rear of the table or counter for rotating said board with a step by step



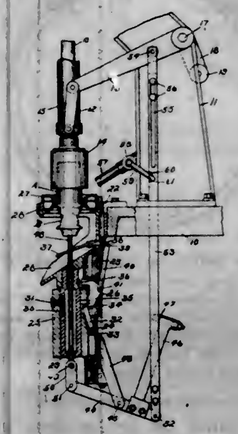
movement to bring the faces successively into said opening and discharge coins on the upper face through the opening.

1,577,534. METHOD AND APPARATUS FOR SEPARATING OR RECOVERING A GAS FROM A MIXTURE OF GASES. ERNEST B. MILLER, Baltimore, Md., assignor to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed June 15, 1922. Serial No. 568,666. 20 Claims. (Cl. 183—4.)



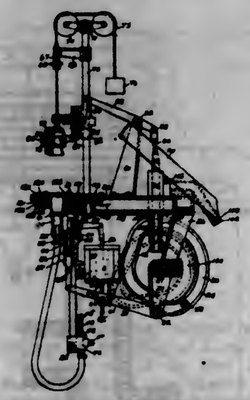
1. The method of separating a gas from a mixture of gases consisting in feeding finely dividing porous solid gas adsorbing material into a stream of said mixture of gases so that it is carried along thereby in suspension, said material having pores of the proper size to adsorb said gas and thereafter permit its easy liberation, separating the adsorbing material and gases, treating the material to liberate the gas adsorbed thereby and returning the material for use again, all of said steps being performed in a continuous closed cycle.

1,577,535. MACHINE FOR TAKING OUT GEOLOGICAL SAMPLES. KEIJIRO NISHIO, Tokyo, Japan. Filed Apr. 23, 1925. Serial No. 25,458. 2 Claims. (Cl. 255—1.)



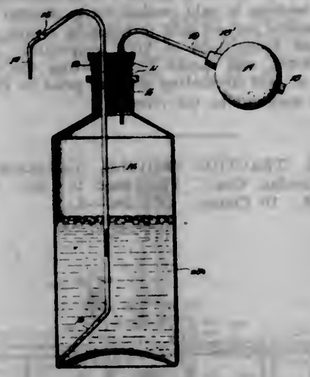
1. A machine for taking out a geological sample from a sample tube, comprising a device to support the sample tube horizontally, a receiver arranged in continuance to the sample tube and a piston to push out the sample from the tube, the piston and receiver being moved or propelled in the same direction with the same speed longitudinally along the in and out sides of the tube, substantially as shown and described.

1,577,536. APPARATUS FOR SEVERING GLASS. ALVAH C. PARKER and CARL W. SCHREIBER, Toledo, Ohio, assignors to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 3, 1924. Serial No. 703,855. 14 Claims. (Cl. 49—2.)



1. Apparatus for severing glass articles having forms of rotation, comprising means to support such an article, means to move the support in a closed path, an annular burner, and means to move the burner into position about the proposed line of severance of an article in the support and move the burner with the support until the glass is melted along said line.

1,577,537. APPARATUS FOR BURNING OFF GLASS. ALVAH C. PARKER, Toledo, Ohio, assignor to The Libbey Glass Manufacturing Company, a Corporation of Ohio. Filed Apr. 7, 1924. Serial No. 704,579. 24 Claims. (Cl. 49—50.)



1. In an apparatus for severing glass, a melting-off burner, a holder adapted to hold a glass article with its point of desired severance exposed to a flame from the burner, and automatic means operable upon the completion of a severance to increase the distance between the burner and holder and means to stop said increase at a fraction of an inch.

1,577,538. APPARATUS FOR BURNING OFF GLASSWARE. ALVAH C. PARKER, Toledo, Ohio, assignor to The Libbey Glass Manufacturing Company, a Corporation of Ohio. Filed Nov. 1, 1924. Serial No. 747,807. 32 Claims. (Cl. 49—50.)

1. In apparatus for burning-off glassware, a burner, a vertically reciprocable article carrier beneath the burner, and automatic means whereby an article is held in position on the carrier when the carrier is raised and is released when the carrier is lowered.

1,577,539. DISPENSING DEVICE. ALEXANDER HAMILTON POLK, Pig Point, Va. Filed Aug. 23, 1922. Serial No. 583,837. 3 Claims. (Cl. 215—47.)

1. The combination with a container having a discharge neck, the inner wall of which is smooth and unobstructed, of a truncated elastic stopper fitting within the neck of the container and provided with a longitudinally extended series of stepped circumferential resilient lips provided with upwardly directed feather edges bearing against the smooth wall of the neck of the container and compressed thereagainst to form an air and liquid-tight joint between the parts.

1,577,540. HAND PROTECTOR. GEORGE B. PUNCHES, Eagle River, Wis., assignor of one-half to George F. Sanborn, Eagle River, Wis. Filed July 31, 1925. Serial No. 47,849. 2 Claims. (Cl. 2—16.)

1. The combination with a glove, of a soft compressible pad attached throughout the major portion of its length to the back of the glove with its forward end portion free from connection with the glove, and a rigid guard

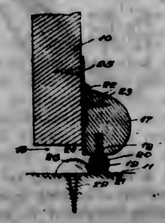


plate secured upon the pad and extending throughout the major portion of the length of the pad and over the unattached portion of the pad.

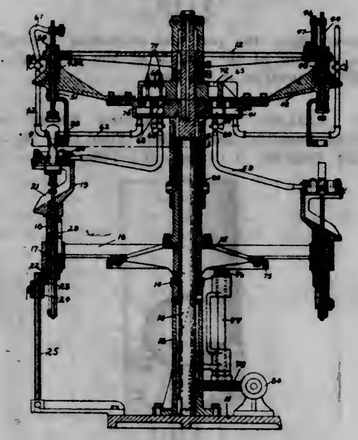
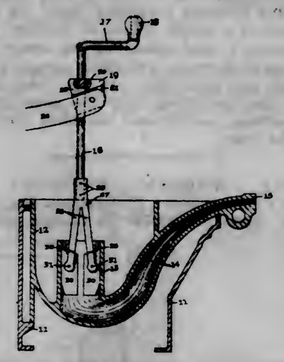
1,577,541. BAILER. HARRY WILLIAM RHINELANDER, Palembang, Sumatra, East Indies. Filed Oct. 29, 1924. Serial No. 746,609. 1 Claim. (Cl. 166—19.)

The combination with a bailer, a ring constituting the bottom thereof, said ring having a flared upper portion constituting a valve seat, and an inner annular flange at the bottom of the ring and integral therewith, of a valve normally engaging the seat, a stem depending from the valve and normally projecting below the ring, and a latch formed in a single length of resilient metal, said latch including a yoke straddling the lower end of the stem, terminal portions extending along and secured to the stem and projecting into the yoke, downwardly diverging arms projecting from the upper ends of the terminal portions, and opposed shoulders connecting said arms to the yoke.



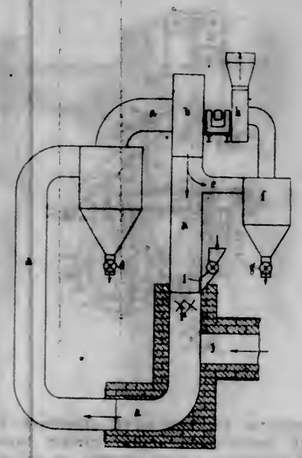
1,577,542. ACOUSTIC THRESHOLD CLOSURE. MAURICE C. ROSENBLATT, Philadelphia, Pa. Filed June 22, 1925. Serial No. 38,787. 7 Claims. (Cl. 20—69.)

1. An acoustic threshold closure, comprising a strip, a cushion carried by the strip, means carried by the strip for hingedly connecting the strip to a door, and a thin



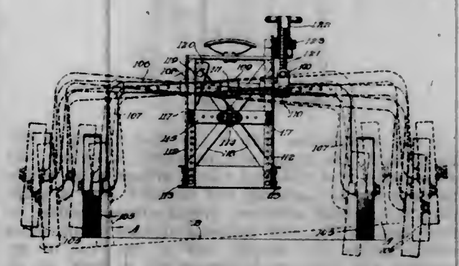
laterally projecting stop mounted on the strip and extending substantially in line with the rear face thereof in position to engage a stop on such door frame.

1,577,543. METHOD OF AND APPARATUS FOR SEVERING GLASS. ERNEST C. SCHRADER, Toledo, Ohio, assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 26, 1923. Serial No. 627,762. 8 Claims. (Cl. 49—2.)



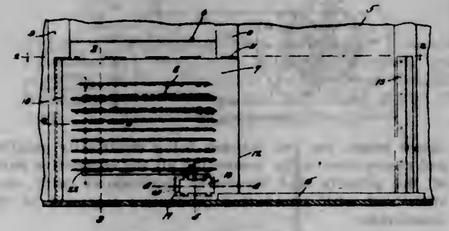
1. A method of making glass articles, comprising blowing an article with a bead between the point of its attachment to the blow iron and the line of severance of the moil, utilizing the bead to apply stretching strain to said line of severance, and melting the glass along said line while the strain is being applied.

1,577,544. SCRAPER. LOUIS A. SENGELE, San Antonio, Tex. Filed Oct. 11, 1923. Serial No. 667,896. 1 Claim. (Cl. 15—104.02.)



In combination, a base formed to be supported from the pot pump lever of a casting machine and provided with a depending lug arranged to seat within the pot pump piston receiving recess in lieu of said piston, and mechanism supported by said base effective to clean said pot when said base is so supported on said lever.

1,577,545. DRYING APPARATUS. OLOF SÖDERLUND, THORVON HOSBRO, and NILS TESTRUP, London, England, assignors to Techno-Chemical Laboratories, Limited, London, England. Filed June 9, 1924. Serial No. 719,001. 10 Claims. (Cl. 34—34.)

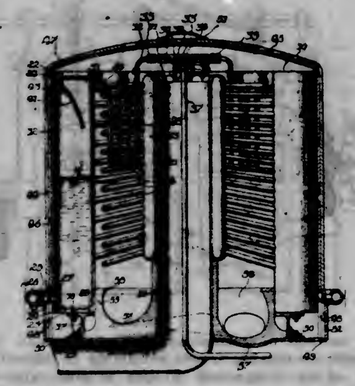


1. A drying apparatus comprising in combination a closed circuitous conduit, means for circulating a gaseous medium therein, means on the inlet side of said circulating means for separating from said medium divided dried substance carried thereby, means on the delivery side of said circulating means for introducing into the gaseous medium in said conduit finely divided moist substance, means beyond said introducing means for adding determined proportions of high temperature medium to said medium, and means for rejecting equivalent proportions of said circulating medium prior to the addition of moist material to the circuit.

1,577,546. TRACTION VEHICLE. LAWRENCE Y. SPEAR, New London, Conn. Filed Sept. 2, 1922. Serial No. 585,866. 10 Claims. (Cl. 280—6.)

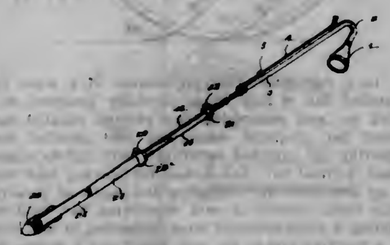
8. In a machine of the class described, the combination of a chassis frame, a pair of axle guides thereon, an axle carrying member slidably mounted on each said guides, an axle comprising a pair of axle sections adjustable transversely of the chassis frame in both said axle carrying members, and a ground wheel on each said axle sections.

1,577,547. GRAIN DOOR. THEOPHILUS VINCENT STRALKA, Colgate, N. Dak. Filed Feb. 7, 1925. Serial No. 7,571. 1 Claim. (Cl. 20—31.)



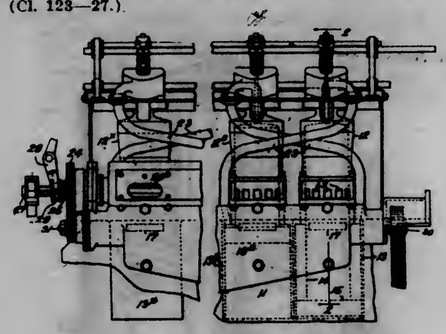
In a car door construction, vertical flange members positioned adjacent to the door of a car, a wear plate adjacent to the lower end of the door and having an upstanding flange forming a part thereof and having a rearwardly extended flange formed integral therewith, said door including a length of sheet metal formed with central corrugated portions, a rod extending vertically with respect to the ends of the door, said rod passing through the corrugations to provide hand grips, said rod having its ends bent to prevent the rod from moving with respect to the door, an inwardly extended flange at one end of the door and adapted to move behind one of the flanged members to hold the door against outward movement, and the forward edge of the door adapted to move behind the opposite flange member of the door.

1,577,548. FOUNTAIN PEN. HENRY J. UPTON, Medford, Mass., assignor to The Moore Pen Co., Boston, Mass., a Corporation of Massachusetts. Filed Jan. 12, 1925. Serial No. 1,720. 2 Claims. (Cl. 41—35.)



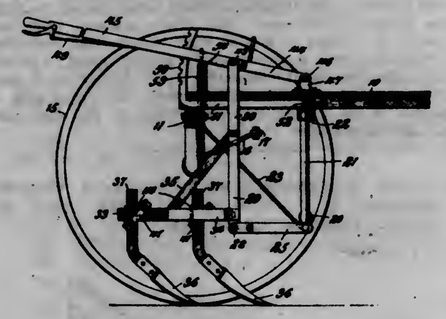
1. The pen cap above described, made up of a tube having walls of two diameters within separated by a shoulder abutment and two diameters without separated by a shoulder abutment the smaller diameters of the tube within and without being at the same end of the tube and the smaller inner diameter being screw threaded at its outer end; a ring or rings fitting upon the smaller exterior surface of the tube; a clamping plug, made up of a head of greater diameter than the small outer diameter of the tube and having a screw threaded tang to cooperate with the threaded open end of the smaller interior diameter of the tube, to close one end of the cap and clamp the fitted rings upon the outer surface of the tube, between the clamping head and the shoulder abutment.

1,577,549. BOILER. WILLIAM H. WINSLOW, River Forest, Ill., assignor to Winslow Safety High Pressure Boiler Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 12, 1919. Serial No. 344,355. 24 Claims. (Cl. 122—236.)



1. In a high pressure boiler, the combination of a plurality of independently functioning sections, each of said sections comprising an outer header and an inner header consisting of sections of tubing closed at their ends, a plurality of transverse tubes extending between said headers, said transverse tubes being spaced to form flue areas therebetween, said boiler sections being arranged in circular formation with each section radiating divergingly from a substantially central point, a manifold, and individual connecting tubes for each of said sections, each tube having threaded connection with a header of its section, and connecting at its other end to said manifold.

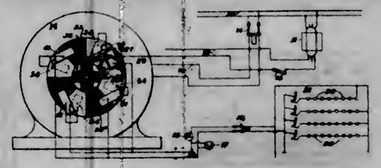
1,577,550. EXTENSIBLE ROD. WILLIAM J. WOERNER, Rochester, N. Y. Filed Nov. 17, 1925. Serial No. 69,720. 5 Claims. (Cl. 67—6.)



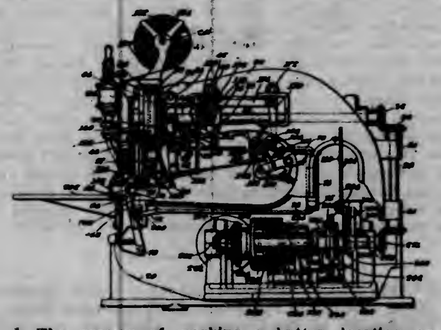
1. An extensible rod comprising two members, one of which is tubular and has the other sliding therein, a sleeve fitted in one end of said tubular member and formed with a rib on its inner side, the other member having a longitudinally extending groove receiving the internal rib of the sleeve, and a combined guide and stop member arranged at the inner end of the other member of the rod and cooperating with the interior face of the tubular member to guide the inner end of said other member of the rod and also cooperating with the sleeve to limit the movement of said other member in one direction in the tubular member.

1,577,551. PROCESS OF REGULATING INTERNAL-COMBUSTION ENGINES. ANDRÉ C. ATTENDU, Montreal, Quebec, Canada, assignor to Attendu Engines Limited, Montreal, Canada, a Corporation of Canada. Filed Dec. 27, 1921. Serial No. 524,987. 8 Claims. (Cl. 123—27.)

1. A method of regulating high compression engines to operate at varying speeds consisting in adjusting the volume of air compressed in such inverse ratio to the rate of compression as to maintain constant ignition temperatures irrespective of variations of engine speed.



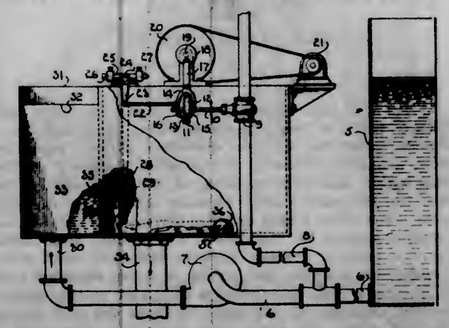
1,577,552. CULTIVATOR. SILAS E. BAILOR, Atchison, Kans. Filed Mar. 5, 1924. Serial No. 697,087. 11 Claims. (Cl. 97—158.)



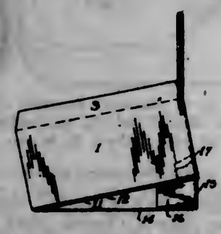
1. In a cultivator, the combination of a main frame, an arched bar, a link frame pivotally mounted on said arched bar and comprising two pivoted parallel bars, a vertical bar pivotally connecting said parallel bars, a supporting bar carrying cultivator teeth rigidly connected to said vertical bar, and means for moving said vertical bar up and down for adjusting the depth of penetration of the teeth carried by said supporting bar, said means including a hand-operated lever connected to said vertical bar, a latching means for said lever, and a spring means for said latching means and said lever, whereby the cultivator teeth are permitted to yield upwardly in the event an unusual obstruction is encountered.

1,577,553. ROTARY RECTIFIER. WALTER J. BAKER, Chillicothe, Mo. Filed Sept. 14, 1920. Serial No. 410,143. 12 Claims. (Cl. 175—364.)

2. A rectifying device comprising a synchronous motor, a commutator rotated by the shaft of said motor, said commutator comprising a disk composed of arcuate segments of approximate equal size, half of said segments being conductors and the other half being insulators alternating therewith, a primary interrupter and a secondary interrupter mounted on the same shaft with the commutator, a brush conducting alternating current to said primary interrupter, a brush conducting current from the same source to the secondary interrupter but set so as to break the contact later than the first mentioned brush, the two brushes being electrically parallel, and means electrically connecting all the conductive parts of the primary and secondary interrupters with each other and with alternating conductive segments of the commutator.

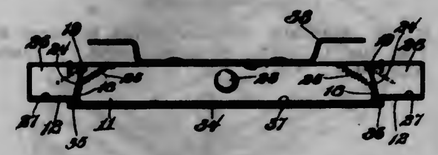


1,577,554. BUTTON-LOCATION-MARKING MACHINE. LEWIS J. BAZZONI, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 29, 1920. Serial No. 369,737. 65 Claims. (Cl. 216—25.)



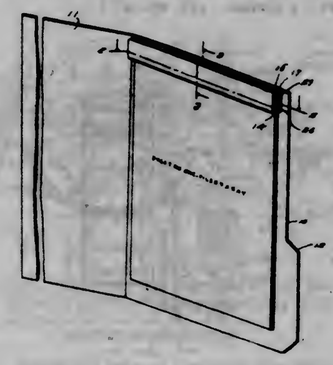
1. The process of marking a button location on a shoe upper which consists in cutting a piece of suitable size from a strip of marking material, pressing said piece against the shoe upper to indicate the point of attachment of the button, and feeding the upper a distance determined by a characteristic of said upper to bring the point at which it is desired to make the succeeding mark into operative position.

1,577,555. PROCESS AND APPARATUS FOR REGULATING PAPER STOCK AND THE LIKE. WARREN E. BEADLE, Wisconsin Rapids, Wis. Filed Dec. 14, 1922. Serial No. 606,917. 5 Claims. (Cl. 92—46.)



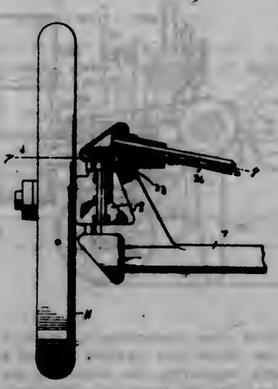
3. An apparatus for regulating the consistency of a flowing liquid comprising a valve for controlling the admission of water thereto, means rotatable in one direction to open the valve and rotatable in the other direction to close the same, means including a rock shaft for controlling the rotation of said rotatable shaft, a paddle secured to and depending from the rock shaft, and means for directing a constant stream of said liquid against the paddle with a force varying inversely with the consistency of the liquid.

1,577,556. PAPER BOX AND THE LIKE. SAMUEL BERGSTEIN and WILLIAM C. MILLER, Middletown, Ohio, assignors to The Interstate Folding Box Company, Middletown, Ohio. Filed Jan. 26, 1925. Serial No. 4,769. 5 Claims. (Cl. 206—44.)



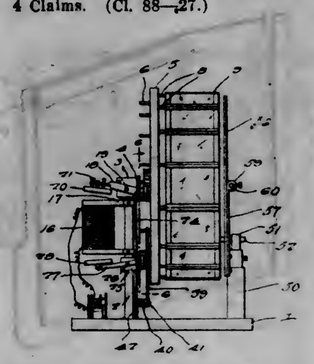
2. A paper box comprising bottom portions adapted to be interlocked one part with another by a coacting tongue and slots, and a part arranged normally parallel to said interlocked portions and adapted to be adjusted at an angle relative thereto, said adjustable part comprising parts adapted, as said part is adjusted outwardly, to be interposed between said adjustable and said other bottom parts, whereby said box is adapted to be arranged suitably to display the contents thereof.

1,577,557. COMBINED SIGNAL AND LICENSE-PLATE HOLDER FOR VEHICLES. JOHN E. BINNS, Nashville, Tenn., assignor of one-half to Osie E. Bell, Nashville, Tenn. Filed June 17, 1924. Serial No. 720,590. 1 Claim. (Cl. 116—45.)



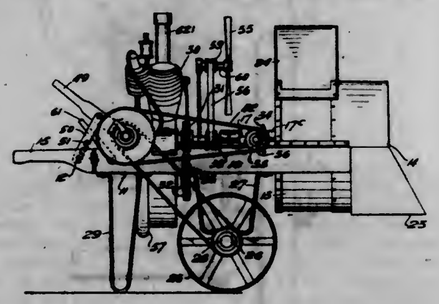
A signal light comprising a rectangular compartment having an opening in one side wall thereof of less length than such side wall and arranged centrally of the side wall, the margins of said opening having means for supporting a stencil sheet, the end margins of the opening being formed to provide inwardly projecting flanges, the ends of such side walls at the ends of the opening being perforated to form a stencil sheet, doors pivoted adjacent the opposite side wall of the casing in alignment with the ends of the opening and having their free edges movable into and out of contact with said flanges, means normally maintaining the doors in engagement with the flanges, and means for shifting said doors to place the compartments formed between the ends of the casing and the doors in communication with the central portion of the casing, the central portion of the casing being provided with an illuminating element, the last named wall of the end walls of the casing providing reflecting surfaces, the faces of the doors next adjacent the center of the casing being likewise in the form of a reflecting surface whereby said doors, when in closed position reflect light through said stencil sheet and when in the open position reflect light through the stencil sheets at the ends of the side walls.

1,577,558. PAPER FILE. CYRUS O. BROWN and RAY E. MORRISON, Douglas, Wyo., and IRA J. MANDIGO, Rapid City, S. Dak. Filed Dec. 13, 1924. Serial No. 755,748. 1 Claim. (Cl. 129—16.7.)



In a paper file, a backing having an extension for fastening edges of papers, the said extension having a portion folded downwardly on the inner surface of the backing, the said extension being doubled on itself to form a pleat, the layers of the said pleat having coinciding apertures for the reception of fastenings, a further portion of the extension being folded inwardly to form an accordion pleat and the said extension at its edge remote from the backing being doubled on itself with the edge folded inwardly, the said inwardly folded portion lying parallel with the surface of the backing, and a fastening having a head portion lying between the last-mentioned folds and having tangs extending through the aperture of the inturned edge and the apertures of the first-mentioned pleat.

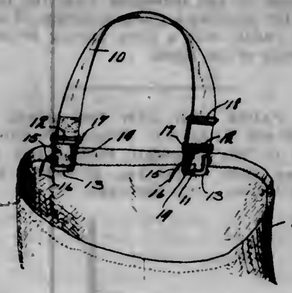
1,577,559. MOTOR VEHICLE. WALTER P. BUDD, Pittsburgh, Pa. Filed Jan. 21, 1925. Serial No. 3,850. 5 Claims. (Cl. 280—91.)



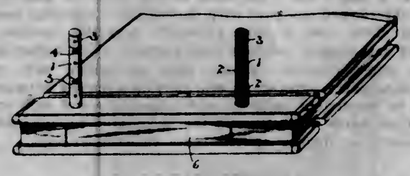
1. The combination with a four wheel driven automobile, of means for steering the rear wheels thereof including a steering wheel, operative connections between the steering wheel and rear wheels, and means for normally holding the rear wheels against steering movement, said means including spring pressed latch elements normally engaging a part of the wheel driving means, rods connected with the latch elements and operating means connected with the rods for retracting the latch elements from the part of the wheel driving means.

1,577,560. ADVERTISING DEVICE. ALBIMS CARRIER, Van Buren, Me., assignor of one-eighth to J. B. Pelletier, one-fourth to Eugene J. Lebrun, one-fourth to Cyr R. Violette, and one-fourth to L. Y. Violette, all of Van Buren, Me. Filed Jan. 7, 1925. Serial No. 1,049. 4 Claims. (Cl. 88—27.)

2. An advertising device comprising a rotatable member, a ratchet wheel fixed for rotation with the rotatable member, a pivotally mounted lever, a pawl on the lever for engagement with the ratchet wheel, a plurality of spaced pins mounted in circumferential relationship on the rotatable member about its axis, a second pivotally mounted lever, means on the second lever adapted to cooperate with the pins, an electromagnet mounted between said levers and adapted, when energized, to swing the levers for producing a cooperation of the pawl with the ratchet wheel and the means on the second lever with said pins for effecting a step by step rotation of the rotatable member.



1,577,561. SNOWPLOW. RICHARD T. CHILDS, Portland, Me. Filed June 19, 1924. Serial No. 720,922. 14 Claims. (Cl. 37—43.)

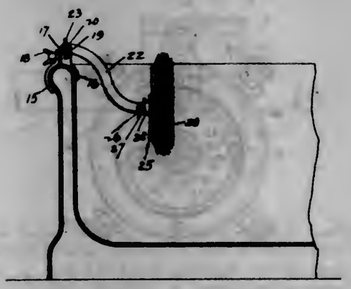


1. A snow plow comprising a frame, a shovel at one end of the frame and handles formed at the opposite end, wheels supporting the shovel in spaced relation to the ground when the frame is in horizontal position, said wheels being located substantially midway between the shovel and handles.

1,577,562. COTTON-SACK STRAP. JAMES H. COOPER, Snyder, Okla. Filed Mar. 12, 1925. Serial No. 15,106. 4 Claims. (Cl. 150—2.)

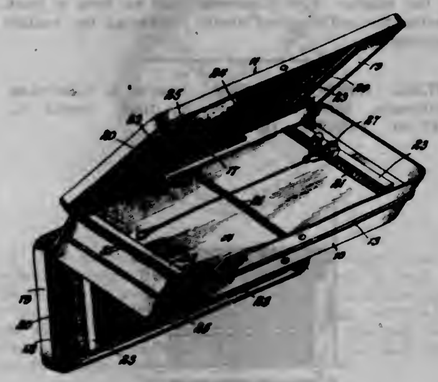
2. Means for attaching the ends of supporting straps to the top of a cotton picking bag comprising a clamp formed of a folded piece of metal between which the top of the bag is to be inserted, the metal being provided at its fold with a bead and the two parallel pieces of metal having registering perforations at a plurality of points, a link engaged with the bead, and a flexible element adapted to be threaded through the perforations and through the edge of the bag, the perforations on both sides of the clamp being struck up in the same direction.

1,577,563. LOOSE-LEAF BINDER. ROBERT J. COPELAND, Toronto, Ontario, Canada. Filed May 22, 1924. Serial No. 715,232. 3 Claims. (Cl. 129—8.)



1. In a loose leaf binder, the combination with the sheets and posts secured to the binder back, of tubular posts formed in short lengths adapted to slip over the aforesaid posts to receive and hold the perforated sheets, said tubular posts having interlocking ends.

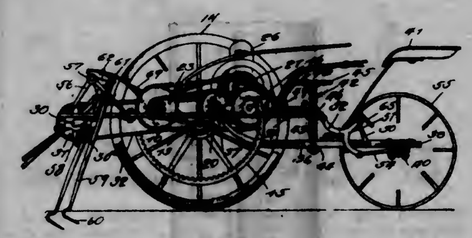
1,577,564. NECKTIE. WILLIAM COPLAN, Baltimore, Md. Filed Oct. 17, 1925. Serial No. 63,027. 9 Claims. (Cl. 2—146.)



1. A necktie formed of bias cut material, a lining therefor also cut on the bias, and a reinforcing tape, one portion of said tape being sewed to the tie, and the remaining portion of the tape extending through the remaining portion of the tie but freely movable with respect to the latter portion.

1,577,565. BATH BRUSH. VINNIE FLORENCE CERROAN, Los Angeles, Calif. Filed Mar. 10, 1925. Serial No. 14,529. 2 Claims. (Cl. 4—184.)

1. In combination, a clamp comprising a pair of jaws adjustable with respect to each other, a pair of ears upon one of the jaws, an arm having one end extending between the ears, a bolt and nut extending through the ears in the arm of pivotally supporting the arm on the clamp and for securing the former in any adjusted position on the latter, and a brush adjustably mounted on the arm.

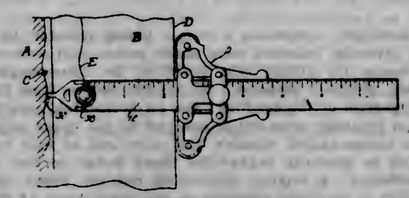


1,577,566. ANGLER'S ARTIFICIAL-FLY CASE. DONALD STEVENS CRYDER, State College, Pa. Filed Aug. 6, 1924. Serial No. 730,431. 1 Claim. (Cl. 43—32.)

An artificial fly case having a puncturable strip into which flies are adapted to be hooked, and a band extending along one face and opposite ends of said strip and embracing the same, the ends of the band being angularly bent and secured to the case, said band being permanently mounted in place and holding by friction the said strip which may be readily removed for the insertion of a new strip.

1,577,567. TRACTOR CULTIVATOR. CHARLES R. DAVID, Tiernan, Oreg. Filed Sept. 19, 1923. Serial No. 663,647. 4 Claims. (Cl. 97—19.)

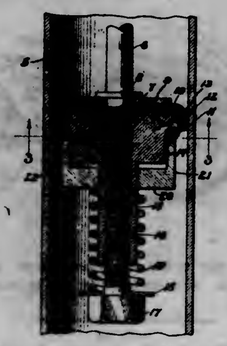
1. In a cultivator, a supporting frame, a crank shaft arranged transversely of the frame, a shaft arranged above and rearwardly of the crank shaft, arms loosely mounted upon the shaft, hoes having the shanks thereof connected intermediate their ends to the throws of said crank shaft, a connection between the upper end of the hoe shank and said arms, the connections of said hoe shanks with said crank throws and with said arms permitting lateral shifting of the arms upon the shaft to thereby adjust the point of engagement of said hoes with the ground, and means for adjusting said arms upon said shaft.



1,577,568. SPRING JACK. LORENZO C. DENSLOW, Falls Church, Va. Filed Mar. 1, 1924. Serial No. 696,281. 6 Claims. (Cl. 179—96.)

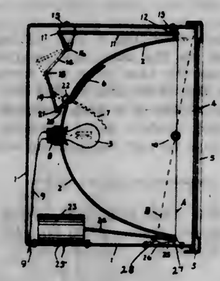
5. A spring jack including a base having an opening, a contact carried by the base, and another contact inclining away from the base over the former contact to normally engage therewith and having its free end disposed to impinge a side of a plug inserted through said opening, the latter contact being movable by the plug away from the base out of engagement with the former contact.

1,577,569. GAUGE AND SCRIBING TOOL. ALFRED J. DONLEY, Bridgeport, Conn. Filed May 12, 1924. Serial No. 712,678. 2 Claims. (Cl. 33—42.)



1. In a tool of the character described, a rule, a metallic piece having a surface follower, said piece being carried by said rule, and a ferrule securing said metallic piece to said rule, said ferrule being adapted to receive a pencil.

1,577,570. PUMP. FRED EGLI, Alliance, Ohio. Filed Aug. 20, 1925. Serial No. 51,445. 5 Claims. (Cl. 74—109.)



1. The combination with a pump rod and a flexible cup adapted to be secured thereto and to engage the wall of the pump cylinder, of means for clamping said

cup comprising a head secured to the end of the pump rod and having a conical base portion and a stem portion, a contractile coiled spring encircling said conical

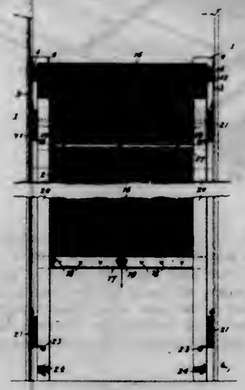
base portion, and means supported by said stem and yieldably urging said spring against the inside of the cup rim to cause said rim to bear against the wall of the cylinder.

1,577,571. TILTING SHADE-DIMMER HEADLIGHT. FRANK FOLEY, Clarksburg, W. Va. Filed Feb. 3, 1925. Serial No. 6,555. 1 Claim. (Cl. 240—41.)

A headlight, comprising a case, a tilting reflector, having a pivotally attached lamp shade within said reflector and means for tilting said reflector; an obtuse-angled member, pivotally suspended by bracket means, from the upper portion of the headlight case; a horizontal connecting rod pivotally attached at one end to the upper angle of the obtuse-angled member, the other end of said rod adapted to pivotally engage the upper flange portion of the reflector; a vertical connecting rod the upper end of which is pivotally attached to the lower angle of the obtuse-angled member, the lower end of said rod adapted to pivotally engage the lever connection of the lamp shade; and by means of said connections and the tilting of the reflector, the said lamp shade is automatically raised and lowered as shown and described.

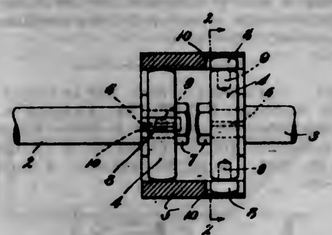
1,577,572. TIMER BRUSH. MILTON FORDER, Thief River Falls, Minn., assignor to William H. Forder and Milton H. Forder, both of Buhl, Minn. Filed Apr. 25, 1924. Serial No. 709,027. 4 Claims. (Cl. 200—26.)

2. In a timer mechanism, the combination of a timer cam shaft, a hub therefor, means for removably securing the hub to the shaft, said hub having a laterally projecting wing with a radial slot therein enlarged at its inner end, and a flat spring having a brush at its outer end and having its inner end turned at an angle to the



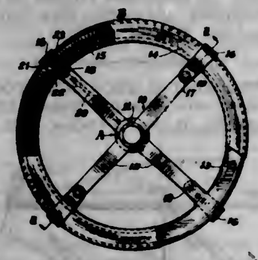
body portion of the spring and formed with an enlarged end fitting within said slot and removably held therein by the same means which secures the hub to the shaft.

1,577,573. PROCESS OF RECOVERING OXALATE FROM THE TREE BARKS. WILLIAM ADOLF FRAYMOUTH, Bhopal, Central India, assignor to The Bhopal Produce Trust Limited, Bhopal, Central India, a Company incorporated in Bhopal State. Filed Nov. 30, 1923. Serial No. 677,888. 16 Claims. (Cl. 260—122.)



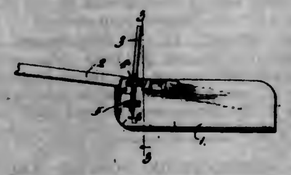
1. The process of obtaining oxalates from the Terminalia Arjuna, or like trees, which consists in crushing or grinding the bark so as to liberate contained oxalate crystals, mixing it with sufficient water, and then agitating the mixture with a gaseous fluid to form a froth carrying the oxalate, and finally recovering the oxalate therefrom.

1,577,574. WINDOW SCREEN. AUGUST A. GABSINGER, Baltimore, Md. Filed July 25, 1921. Serial No. 487,391. 3 Claims. (Cl. 156—39.)



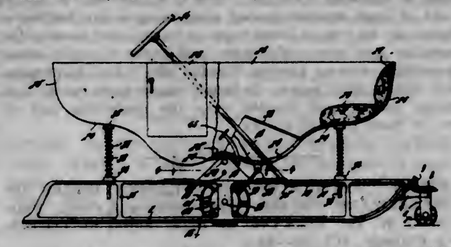
1. A mounting for a roller carried screen comprising an angle iron frame, a plate hingedly connected to the frame for engaging the longitudinal edges of the screening when the same is unwound from the roller, and means carried by the plate and adapted to engage over the edge of the frame for holding the plate away from the screening.

1,577,575. SHAFT COUPLING. HERMAN R. GRIGGS, Bronxville, N. Y. Filed Jan. 16, 1923. Serial No. 612,893. 5 Claims. (Cl. 64—90.)



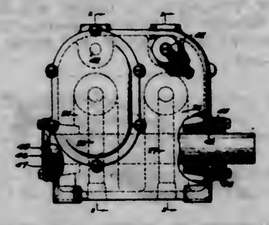
1. In a shaft coupling, a coupling member comprising a hub adapted to be secured to one of the shafts to be connected, a ring rotatably mounted on the hub, said hub and ring being provided on corresponding faces with teeth arranged in concentric circular series, a locking-ring adapted to engage both series of teeth simultaneously and exposed for manipulation at one end of the coupling, said hub being extended through the latter ring and adapted to support it when out of engagement with the teeth, and means for removably securing said ring in locking position.

1,577,576. ELECTRICALLY-HEATED STEERING WHEEL. TYRE MARCELLUS HAMILTON, Hapeville, Ga. Filed Dec. 26, 1924. Serial No. 758,169. 2 Claims. (Cl. 219—19.)



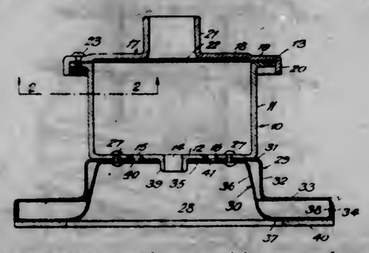
1. In a steering wheel, a relatively stationary portion including spokes carrying a metallic concaved ring, a rim of tubular insulating material mounted on and supported by the ring, a resistance coil within the tubular rim, and means for securing the rim upon the ring comprising clips embracingly engaging the rim and ring and detachably secured in place.

1,577,577. SLIP SCOOP. PHILIP H. HASKINS, Charlotte, N. C. Filed Sept. 2, 1924. Serial No. 735,484. 6 Claims. (Cl. 37—137.)



1. In combination with a slip scoop of a member rising from the scoop adjacent its rear or closed end for engaging the ground when the scoop is inverted for holding said scoop at an angle to the ground.

1,577,578. AMUSEMENT DEVICE. BALDOMERO M. HERRERA, Alfonso, Cavite, P. I. Filed Aug. 7, 1925. Serial No. 48,826. 3 Claims. (Cl. 208—33.)

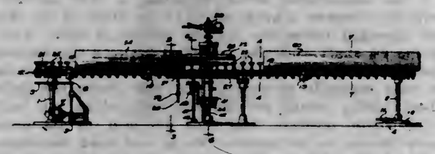


1. An amusement device including a skid provided with side runners, a guide wheel at the front of the skid and arranged below the runners thereof, a drive wheel having its shaft centrally journaled between the runners and skid and projecting below said runners, a body having its base centrally pivoted to the skid above the drive wheel, spring means for normally sustaining the body in horizontal position, said body designed, by the occupants thereof, to be imparted an up and down movement with a reciprocating motion and means between the body and the shaft of the drive wheel for turning the shaft when motion is imparted to the body.

1,577,579. MOTION-TRANSMITTING DEVICE. HORACE L. HIRSCHLER, San Francisco, Calif. Filed Jan. 21, 1924. Serial No. 687,668. 29 Claims. (Cl. 138—23.)

1. In a motion transmitting device, an actuating motor having reversely arranged cylinders and pistons therein movable relatively to the cylinders, and adapted to transmit their motion through a non-compressible fluid according to the direction in which the motive force is caused to actuate the said cylinders and pistons, and adjustable means arranged to be engaged by the cylinders for controlling the extent of relative movement of the pistons and cylinders.

1,577,580. LOUD-SPEAKER CASING. THOMAS W. KIRKMAN, New York, N. Y. Filed Jan. 17, 1924. Serial No. 686,857. 15 Claims. (Cl. 179—179.)

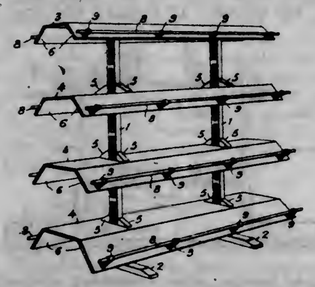


3. A loud speaker casing comprising a cup-shaped part open at its top and having a flat bottom, a cover secured to said cup-shaped part to close the top thereof, and a support attached to the bottom cup-shaped part, said

support comprising upper and lower telescoping shell members each of which is stamped up from a single sheet of material.

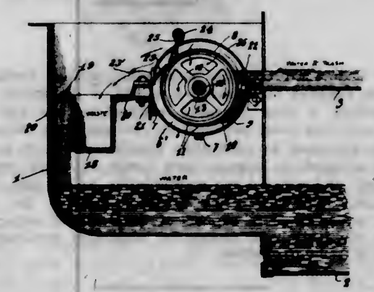
14. A loud speaker casing comprising a cup having a flange at its top, a diaphragm, a cover, and means for securing said cup, diaphragm and cover to each other comprising screws passing through the cover, diaphragm and flange into screw threaded engagement with said flange, and a seal molded over the projecting end of one or more of said screws.

1,577,581. APPARATUS FOR GLAZING EDGES OF GLASSWARE. ALBERT BREAKENRIDGE KNIGHT, Fairmont, W. Va. Filed Dec. 18, 1923. Serial No. 680,518. 2 Claims. (Cl. 49—58.)



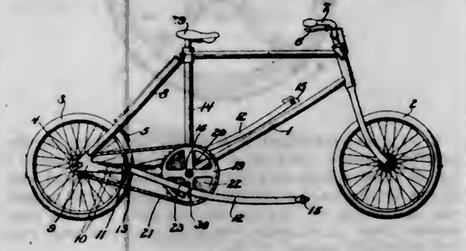
1. A device of the character described comprising a preheating hood, means for heating said hood, a heat retaining hood in alinement therewith and spaced therefrom, a conveyor adapted to move articles of glassware through said hoods, and a burner mounted between said hoods.

1,577,582. ANTISQUEAK WEB. RUDOLPH KRENZ, Buffalo, N. Y., assignor to Buffalo Weaving and Belting Co., Buffalo, N. Y., a Corporation of New York. Filed Nov. 7, 1925. Serial No. 67,506. 3 Claims. (Cl. 180—69.)



1. An anti-squeak web adapted to be arranged between opposing metal parts of an automobile, comprising superposed strips connected at corresponding longitudinal edges, one of said strips adapted to be connected by a fastening to one of said metal parts and the other strip adapted to overhang said fastening and prevent contact of the other metal part therewith.

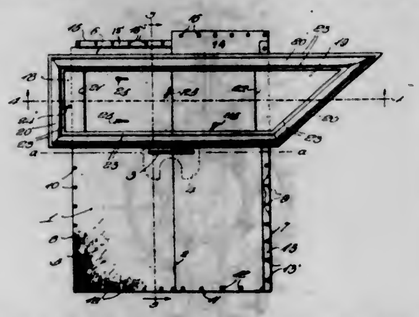
1,577,583. DISPLAY STAND. JOHN L. MCCARTNEY, Wellston, Ohio, assignor to I. W. Warden, Wellston, Ohio. Filed June 3, 1925. Serial No. 34,709. 5 Claims. (Cl. 211—14.)



1. A display-stand comprising uprights, a plurality of shelves slidable upward and downward on said uprights, a leaf hinged to each longitudinal edge of each shelf, and means for supporting said leaves at any degree of downward inclination from the horizontal, or in a horizontal or depending vertical position, said means comprising a pair of slide-bars for the leaves of each shelf, the slide-bars of each pair being rectilinearly movable in opposite directions.

1,577,584. APPARATUS FOR SEPARATING TRASH FROM WASHING SOLUTIONS. CHARLES A. MILLER, Jr., Bainbridge, Ga., assignor to Miller Manufacturing Co., Bainbridge, Ga., a Corporation of Georgia. Filed July 26, 1921. Serial No. 487,080. 4 Claims. (Cl. 210—201.)

3. In a device of the character described, a main tank, a secondary tank leading from the main tank, an open-ended foraminous cylinder rotatably mounted in the secondary tank, a trash receiving receptacle at one side of the cylinder, the foraminous cylinder permitting water to pass therethrough, and a trash blade suitably attached to the foraminous cylinder.

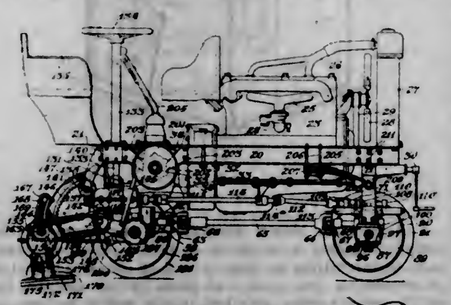


1,577,585. PROPELLING MECHANISM FOR BICYCLES. FRANCK MONTIGLIO, Wichita, Kans. Filed Sept. 22, 1925. Serial No. 57,886. 2 Claims. (Cl. 208—19.)

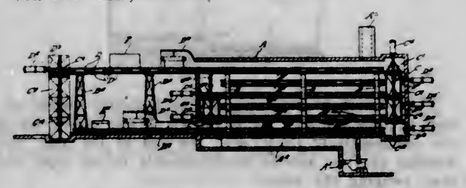
1. Propelling mechanism for bicycles comprising longitudinal, horizontal guideways located at either side of the rear drive wheel, slidable blocks mounted in the guideways, a drive shaft having a drive sprocket and chain connection to the rear wheel, said sprocket having a radial slot, a disc carried by the shaft on the opposite side of the bicycle and having a radial slot diametrically opposite to the first named slot, pedal levers terminally pivoted at their rear ends to said sliding blocks, and means for intermediately pivoting the levers in adjusting position in the oppositely-disposed slots in the drive sprocket and disc respectively.

1,577,586. COMBINATION PONCHO AND GROUND CLOTH. SAMUEL C. MOREHOUSE, New Haven, Conn. Filed Oct. 18, 1923. Serial No. 669,431. 5 Claims. (Cl. 5—344.)

1. An article of the character described comprising a substantially oblong rectangular sheet of water-proof material provided with a central transverse neck slit and adapted to be folded along a transverse line coincident with the slit to form the shoulder portions and the front and back portions of a poncho, a ground cloth extending transversely of the inner side of the back section of the poncho between said neck slit and the transverse edge of said poncho portion, said cloth including a hollow inflatable rim and end portions adapted to be extended beyond the longitudinal edges of the sheet and to be folded backwardly upon themselves and over upon said sheet, the longitudinal side edges of the sheet being provided with suitable means whereby similar edges of said poncho portions may be united when the sheet is folded into poncho forming condition.

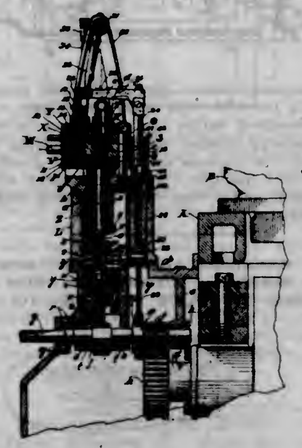


1,577,587. FURNACE-CHARGING METHOD. WILLIAM E. NEWNAM, Collinsville, Ill., assignor to National Lead Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed July 27, 1922. Serial No. 577,923. Divided and this application filed July 5, 1924. Serial No. 724,369. 10 Claims. Cl. 214—152.)



1. In the art of charging elongated furnaces, the process comprising, weighing and assembling the components of a charge to form a body of the material, transferring the body and extending the same horizontally and depositing the extended body in the furnace.

1,577,588. COMBINED TRACTOR AND ROAD VEHICLE. DARIUS T. PHILLIPS, Chicago, Ill. Filed May 3, 1923. Serial No. 636,283. 25 Claims. (Cl. 180—8.)



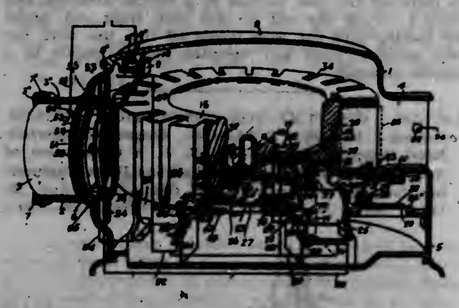
1. In an implement of the class described, the combination of a frame, front and rear ground wheels supporting the frame, transmission elements for imparting power to the rear wheels, a steering wheel, a connection for imparting steering movements to the front wheels, a foot frame, a foot secured to the foot frame, power transmission elements for imparting walking movements to the foot, and means for raising and lowering the foot frame to bring the foot out of and into ground engaging position, said means adapted to be entertained with the steering wheel and to be actuated thereby.

1,577,589. OVEN AND CONVEYING SYSTEM THEREFOR. AXEL G. J. RAPP, Chicago, Ill., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 27, 1925. Serial No. 18,796. 12 Claims. (Cl. 104—128.)

4. In a conveyor system, a plurality of parallel tracks, cars arranged end to end on and movable along and completely filling each track, means for moving all the cars on each alternate track in one direction so as to force a car off the end of each such track, means for moving each car thus forced off a track into line with the next adjacent track and moving it on to such track to move all the cars thereon in a reverse direction and force a car off the end of each such track and means for moving each car thus forced off into line with the next adjacent track and repeating the movements in a reverse direction.

1,577,590. OIL PUMP FOR COMBUSTION ENGINES. GEORGE J. RATHBUN, Toledo, Ohio, assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey, jointly with the Rathbun-Jones Engineering Company, a Corporation of Ohio. Filed Apr. 25, 1924. Serial No. 708,837. 1 Claim. (Cl. 123—139.)

A pump for a combustion engine comprising the combination of a frame, a shaft having an eccentric, a tappet, a connecting rod connecting said tappet and said eccentric, a block provided with a chamber and mounted on said frame, a spring pressed plunger in said chamber arranged to be actuated by said tappet, a guide support between said frame and block for said plunger, an inlet,



and inlet valve in said chamber inlet, and mutually engaging members on said plunger and said inlet valve to hold said valve open for a portion of the pumping stroke of said plunger, an outlet and a by-pass for said chamber.

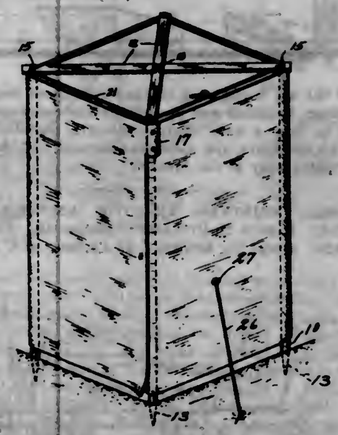
1,577,591. METHOD OF FORMING PIPE COUPLINGS AND THE LIKE. WALTER NICKLES RINGER, Taft, Calif. Filed Dec. 16, 1922. Serial No. 607,395. 8 Claims. (Cl. 29—156.)

1. The method of making a pipe coupling, which consists in assembling an inside and an outside sleeve, which are comparatively thick, with the end of the pipe, and welding the two sleeves simultaneously to the pipe, and then swaging the same.

1,577,592. AUTOMATIC MACHINE FOR EJECTING MEMOS AND THE LIKE. JAMES RUSSELL ROBERTSON and DAVID SAMUEL ROBERTSON, Toronto, Ontario, Canada. Filed Feb. 20, 1925. Serial No. 10,685. 13 Claims. (Cl. 161—1.)

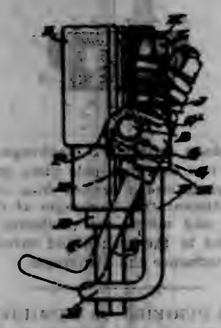
2. An automatic memo ejecting machine comprising a main casing provided with an ejecting chute, a member revolubly mounted within the casing and having radial memo containing recesses, means for revolving the member to carry the recesses successively by a step by step movement to a position opposite the inner end of the ejecting chute, and a time clock for timing such step by step movement.

1,577,593. EXTERNAL ARCH SUPPORT FOR SHOES. LAZARUS ROSENTHAL, Pittsburgh, Pa. Filed July 29, 1924. Serial No. 728,879. 3 Claims. (Cl. 36—76.)



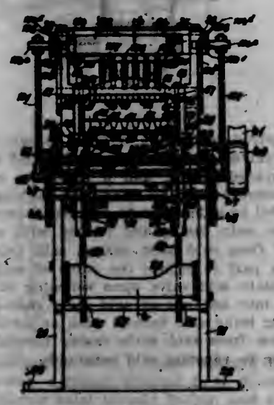
1. An arch support adapted to be secured to the shank of a shoe comprising a resiliently compressible elongated body having a rear portion of substantially constant thickness throughout its length, a tapering forward portion, and a button of less length and width than the body projecting from the lower face of said rear portion thereof.

1,577,594. COMPRESSOR FOR GASES. NORMAN M. SMALL, Waynesboro, Pa., assignor to Frick Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Sept. 24, 1924. Serial No. 739,719. 4 Claims. (Cl. 230—24.)



1. A compressor for gas comprising a cylinder, a piston, a cylindrical clearance pocket opening into the cylinder adjacent the end of the stroke of the piston, and a plunger in the cylindrical clearance pocket adjustable lengthwise thereof without stopping the compressor to vary the rate of operation of said compressor, substantially as set forth.

1,577,595. PORTABLE TOILET. NELLIE B. SMITH, Englewood, Colo. Filed Aug. 27, 1925. Serial No. 52,875. 6 Claims. (Cl. 4—116.)

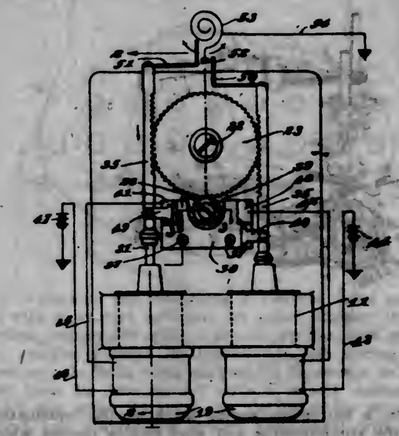


1. A portable closet structure of the character described including a plurality of posts, each post being made in interfitting sections, a wall of canvas adapted to go around all four posts and form an end closure, the middle portion being attached to the middle sections of the posts, means for bracing the upper ends of the posts from each other to thereby keep the canvas stretched taut, and a seat operatively supported upon said posts.

1,577,596. STEEL RETAINER FOR ROCK DRILLS. WILLIAM A. SMITH, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 20, 1925. Serial No. 31,506. 3 Claims. (Cl. 121—82.)

1. In a steel retainer for rock drills, the combination of a front head having cylindrical trunnions, blocks pivoted on said trunnions, a yoke to partly encircle a drill steel, a pair of rearward extensions on said yoke slidable through said blocks, a collar on each extension to limit movement of the extensions in one direction, springs about said extensions to absorb blows of the drill steel against the yoke and to hold the collars against the block, and means on said blocks to engage the front head for holding the yoke in retaining and releasing positions.

1,577,597. MOLDING MACHINE. HERMAN SONNENBERG, Middle Village, N. Y. Filed Oct. 2, 1924. Serial No. 741,190. 10 Claims. (Cl. 25—6.)



1. In a molding machine the combination of a table, connected thereto, a bottom mold supported on said table, a cross head guided in the machine, an upper mold depending from said cross head, a cam shaft journaled in the machine, means to turn the shaft, a pair of cams fastened to the cam shaft, a pair of guided reciprocating members in the machine, connections between said members and the cross head, said cams adapted to reciprocate said members, a second reciprocating cross head in the machine and plungers depending from the second cross head coacting with both of said molds.

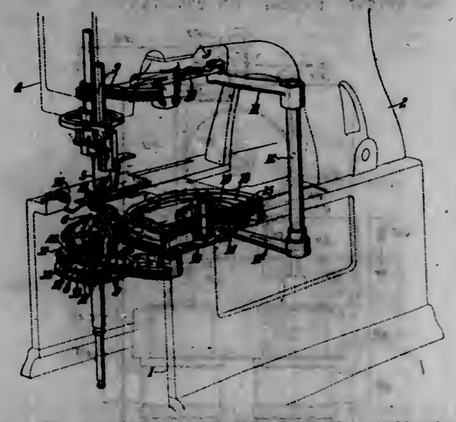
1,577,598. HAIR WAVER. MARGARET B. SYLVA, Springfield, Ill. Filed Feb. 18, 1925. Serial No. 8,982. 7 Claims. (Cl. 132—38.)

1. A hair waver, a body portion having parallel slots therein, said slots having angular end portions and arcuate bearing surfaces between said slots and removable bars adapted to be positioned within said slots.

1,577,599. ELECTROMAGNETIC VALVE. EUGENE T. VINCENT, Boston, Mass. Filed Dec. 10, 1923. Serial No. 679,787. 1 Claim. (Cl. 236—75.)

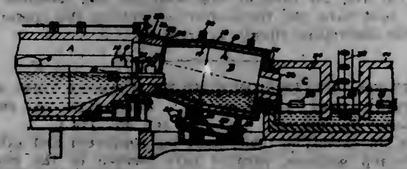
In an electromagnetically operated valve structure, the combination of a valve, including a rotatably mounted valve stem, a pinion secured to one end thereof, a rotatably mounted gear associated with said pinion, a pair of solenoids, a plunger armature for each solenoid, a rack bar connected to one end of each plunger armature, said rack bars meshing with said gear on opposite sides thereof, independent controlling circuits for each of said solenoids, a thermostat associated with said solenoids controlling a break point in each of the independent circuits, a switch in each of said controlling circuits, and a switch arm for each of said switches and mounted on the rack bars, the thermostat controlling the operation of the controlling circuits alternately.

1,577,600. EXTENSION TABLE. ANTHONY VOLPI and FRANK PANE, Dunmore, Pa. Filed Mar. 10, 1924. Serial No. 698,242. 1 Claim. (Cl. 45—114.)



In an extensible table, fixed leg supported and extensible top sections, parallel bars secured to the under face of the fixed top section and provided with horizontally arranged substantially U-shaped slots, flexible parallel strips carried by the opposite ends of the extensible section, a plurality of parallel strips extending entirely across the extensible top section and having their

ends connected to the flexible strips to integrally support the latter, such strips extending through the U-shaped slots and adapted for movement therein, members carried by the bars and extending laterally therefrom along the inner edge of the slots, sets of rollers carried by the



under face of the strips and disposed upon opposite sides of the bars and movable over the said members, and spring urged rollers supported upon the under face of the fixed top section and bearing against the under face of the strips.

1,577,601. STAY-CORD GUIDE FOR BUTTONHOLE-SEWING MACHINES. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Apr. 8, 1925. Serial No. 21,468. 10 Claims. (Cl. 112—161.)

1. In a buttonhole sewing machine, the combination with the stitch-forming and work-holding devices which are relatively movable to sew about a buttonhole, of an under stay-cord guide adapted to deliver and laterally position a stay-cord within the range of action of the stitch-forming devices, said guide being movable laterally of the direction of seam-formation during the sewing operation.

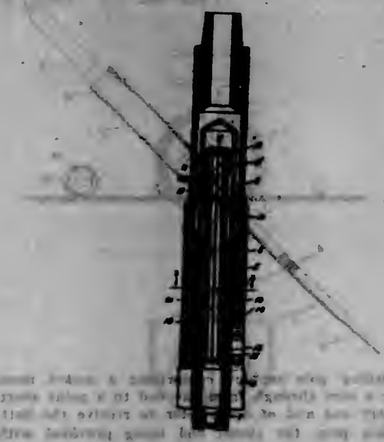
1,577,602. PROCESS AND APPARATUS FOR REFINING GLASS. WALTER O. AMSLER, Toledo, Ohio. Filed Mar. 30, 1925. Serial No. 19,265. 12 Claims. (Cl. 49—54.)

1. The process which consists in melting glass, introducing the molten glass into one end of a refining pool, refining the glass in the pool while rolling it about the longitudinal axis of the pool, and discharging the refined glass from the other end of the pool.

1,577,603. TELEPHONE RECEIVER. PAUL G. ARCHER, River Forest, Ill., assignor, by mesne assignments, to Automatic Electric, Inc., Chicago, Ill., a Corporation of Delaware. Filed May 8, 1922. Serial No. 559,378. 9 Claims. (Cl. 179—115.)

1. In a telephone receiver, a diaphragm, a permanent magnet having two soft iron pole piece extensions adjacent the diaphragm and a branch from one of said extensions also adjacent the diaphragm at the geometrical center thereof, and means for producing variations in the magnetic flux in the branch and extension of which it is a part to influence the diaphragm.

1,577,604. AIR PURIFIER OR HUMIDIFIER AND INHALER. ADOLPH BAUER, Newark, N. J., assignor to Richard C. Jenkinson, doing business as R. C. Jenkinson & Co., Newark, N. J. Filed Mar. 20, 1924. Serial No. 700,496. 6 Claims. (Cl. 167—3.)



2. A vaporizer comprising a main casing to be connected to a valved source of vaporizing fluid and having a screw threaded outlet, and a vaporizer casing containing a substance to be vaporized having one end screw threaded to adjustably fit into said screw threaded outlet of the main casing and formed with an inlet to receive fluid from said main casing, said vaporizer casing having a part to engage the valve of said source of fluid to regulate said valve upon screwing of the vaporizer casing into and out of said main casing, said vaporizer casing being also formed with an outlet whereby fluid may flow from said main casing through said vaporizer casing to vaporize said substance.

1,577,605. COMBINATION CORE BARREL AND REAMER. HARRY E. BUCKER, Bren, Calif., assignor to Regan Forge and Engineering Company, Inc., San Pedro, Calif., a Corporation of California. Filed Mar. 7, 1923. Serial No. 623,555. 4 Claims. (Cl. 255—72.)

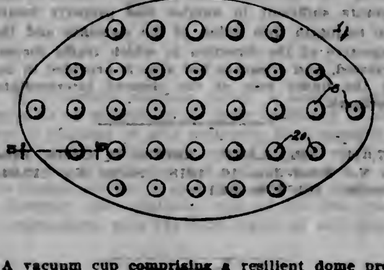
1. A rotary core drill comprising an outer tubular member having a plurality of vertically disposed reamer cutting blades secured to the end thereof, an annular boring bit detachably secured to the lower end of the tubular member and below the reamer blades, a sectional core barrel mounted within said tubular member for relative rotation therewith, and a valve cap for said core barrel, a cap member of greater diameter than said core

barrel secured to said within said tubular member, whereby to protect the core barrel from wash water during the operation of the drill, said tubular member provided

with fluid outlets leading from the hollow cap and tubular member to the exterior surface of the tubular member adjacent the boring bit and reamer blades.

1,577,606. CRANE. EARL T. BENNINGTON, Willoughby, Ohio, assignor to The Cleveland Crane and Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed Mar. 14, 1923. Serial No. 624,939. 7 Claims. (Cl. 212—134.)

1. In combination with a crane adapted to be moved along a runway, a trolley adapted to be moved along the crane, an electric hoist in said trolley, and a rigid member extending down from the trolley and carrying hoist controlling switches.



1,577,607. FIRE-TRUCK APPARATUS. JACOB B. BLAW, Atlantic City, N. J. Filed Feb. 4, 1924. Serial No. 690,419. 3 Claims. (Cl. 169—25.)

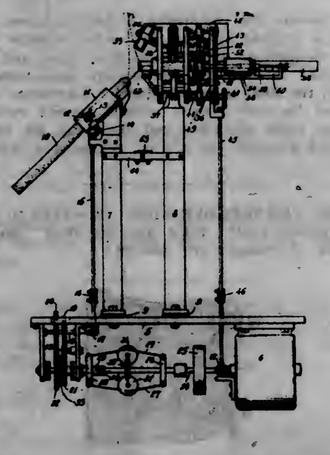
1. The combination with a truck of a water main arranged along the length thereof and provided with a plurality of lateral valved outlets in transverse spaced opening to the circumferential extremity of the truck and said main also having an inlet for receiving water supply, a plurality of fire nozzles universally supported at the outside of the truck and spaced along its length at a distance from the outer side thereof, said nozzles detachably positioned and arranged for throwing streams of water in all directions and from one side of the truck over the same to the other side thereof, means for clamping the fire nozzles rigidly in their various posi-

tions of adjustment whereby a plurality of streams may be directed upon a fire occurring at either side of the truck and continued as to direction without immediate attention of firemen, and flexible hose sections arranged entirely at the outside of the truck and extending from the fire nozzles and detachably connected with the lateral outlets of the water main.

1,577,608. BATH MAT AND THE LIKE. FREDERICK C. BROWER, Los Angeles, Calif. Filed Sept. 4, 1924. Serial No. 735,877. 4 Claims. (Cl. 4—185.)

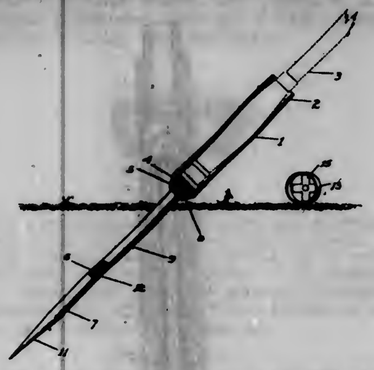
1. A vacuum cup comprising a resilient dome provided with a central aperture, an outer annular lip for suction engagement with a smooth surface, and an inner annular integral lip immediately surrounding said aperture; the dome being adapted for depression to bring said inner lip into contact with a smooth surface on which the outer lip rests and the inner lip being resilient and adapted for suction engagement with such surface.

1,577,609. CHANGEABLE SIGN. ROWLAND N. CHUBB, Los Angeles, Calif. Filed Apr. 30, 1924. Serial No. 710,073. 6 Claims. (Cl. 40—28.)



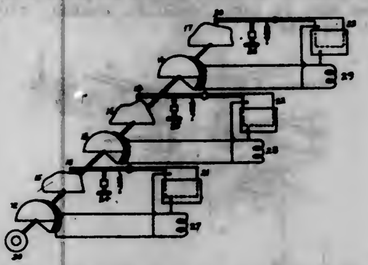
1. In a sign, a plate provided with a plurality of openings arranged in line formations, the openings being spaced apart and the width of each opening being greater than the width of the intervening spaces, and a sectional shutter for each opening having its sections adapted to be moved into superimposed relationship to each other into an adjacent intervening space to uncover said opening.

1,577,610. PAVING OR FLOORING. ERNEST CLARK, New York, N. Y., and DANIEL T. GILMARTIN, Jr., East Orange, N. J. Filed Aug. 7, 1924. Serial No. 730,635. 5 Claims. (Cl. 94—6.)



1. A paving or flooring comprising, a bed of hardened plastic material, and a plurality of rubber surface elements intimately united therewith, each element being provided, on its under face, with a plurality of projections composed of substantially the same material as the element itself, the projections being so formed as to embody within themselves substantial anchoring properties and constituting the sole means of securing the element to the bed, a plurality of said projections being spaced from the edges of the element and so arranged that, on any sectional plane substantially parallel to the paving or flooring surface and passing through a projection, continuous strips of substantial width of bed material extend from each side of each element to the opposite side thereof, and pass between a plurality of said projections spaced from the edges of the element, whereby the elements are secured to the bed material at points sufficient in number and properly located so as to maintain firm union of the elements and the bed irrespective of the direction in which traffic forces may be exerted, and adequate bed area is provided in contact with the under side of the element intermediate the projections.

1,577,611. ARC LAMP. ARTHUR P. DAVIS, Brooklyn, N. Y. Filed Jan. 16, 1918. Serial No. 212,043. 9 Claims. (Cl. 176—51.)

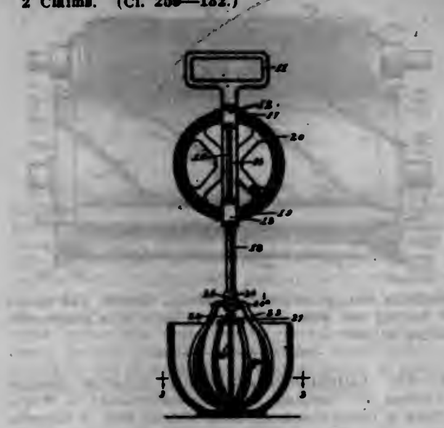


1. In an arc lamp, a support for an electrode, a feeding member extending substantially transverse to the electrode, means for reciprocating the feeding member over a path extending substantially transverse to the electrode and means for causing the feeding member to engage the electrode when moved in one direction and disengage it when moved in the other direction; substantially as described.

1,577,612. FISHING-POLE SUPPORT. JOHN W. DUNN, Stockton, Calif. Filed Jan. 16, 1925. Serial No. 2,880. 1 Claim. (Cl. 248—37.)

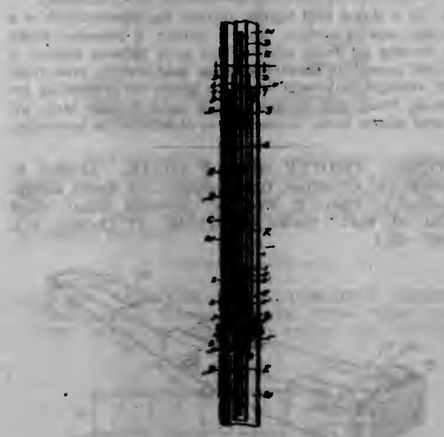
A fishing pole support comprising a socket member having a bore through from one end to a point short of the other end and of a diameter to receive the butt of a fishing pole, the closed end being provided with a threaded orifice, and a spike threaded for engagement with the said threaded orifice and of a length to be received and enclosed within the socket member.

1,577,613. RADIO RECEIVING APPARATUS. FRANCIS W. DUNMORE, Washington, D. C. Filed Feb. 4, 1925. Serial No. 6,898. 6 Claims. (Cl. 250—40.)



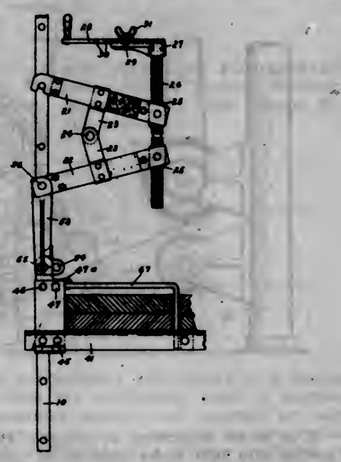
2. The combination in a radio receiving device of cams rotating on the same shaft with continuously variable condensers, each of said condensers being so connected mechanically as to be both varied by one manual control, said condensers having connected in parallel with them continuously variable compensating condensers whose capacities are caused to vary dependent upon the shape of the respective cam to which they are connected.

1,577,614. ATTACHMENT FOR CANOES. CHARLES L. EDWARDS, Hackensack, N. J. Filed Nov. 12, 1924. Serial No. 749,542. 6 Claims. (Cl. 114—123.)



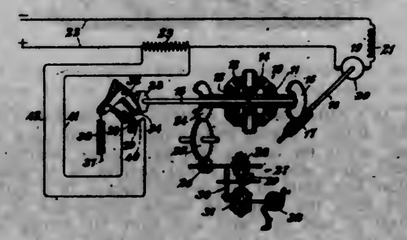
1. An attachment for water-craft comprising a pair of sponsons, an angle bar extending longitudinally of said sponsons and connected therewith, and U-shaped clamps formed integral with said bar for attaching the same to the sides of the craft.

1,577,615. EGG BEATER. HARRY LE ROY EMERY, Peoria, Ill., assignor of one-half to Earl H. Jeffries, Peoria, Ill. Filed June 9, 1924. Serial No. 718,709. 2 Claims. (Cl. 259—132.)



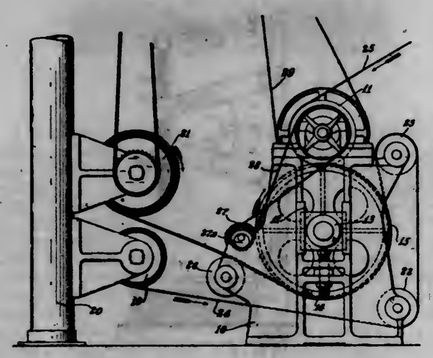
1. In combination, concentrically arranged driving members, the end of the inner member extending beyond the outer member, a collar on each member, each collar being slidably adjustable on its respective member independent of the other, beater members fastened to said collars at one end and journaled at their other end on the inner driving member, whereby each beater may be expanded outwardly independent of the other, in order that the spacing between the oppositely rotating beater members may be varied.

1,577,616. METHOD AND MEANS FOR PUMPING DEEP WELLS. CARL B. FARRIS, Los Angeles, Calif. Filed Nov. 6, 1923. Serial No. 673,157. 6 Claims. (Cl. 103—41.)



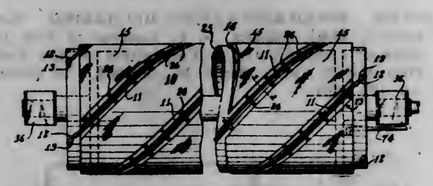
1. In a deep well pump a working barrel, and a plurality of spaced reservoirs attached to the exterior of said barrel, and means for affording communication between said reservoir and the interior of the working barrel near the bottom of the reservoir, and for affording communication between the upper ends of said reservoirs and the well.

1,577,617. SCAFFOLD HOIST. WALTON C. FERRIS, Lincoln, Nebr., assignor to National Manufacturing Company, Lincoln, Nebr., a Corporation of Nebraska. Filed Sept. 25, 1925. Serial No. 58,564. 14 Claims. (Cl. 304—18.)



1. In a scaffold hoisting device, a support which is adapted to be secured at its upper extremity to an outrigger, a plurality of pins projecting from opposite sides of said support, a platform, means on said platform for engaging one of said pins, and a machine which is adapted to engage another of said pins and said platform and to disengage said platform and to lift the platform into engagement with the next higher of said pins.

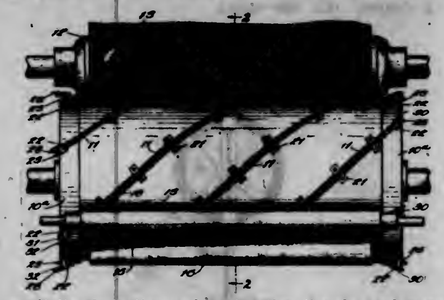
1,577,618. SPEED-REGULATING MECHANISM. HANNIBAL C. FORD, Jamaica, N. Y., assignor to Ford Instrument Company, Inc., a Corporation of New York. Filed May 6, 1922. Serial No. 558,961. 13 Claims. (Cl. 171—229.)



1. In speed regulating apparatus, a prime mover, an epicyclic gear train to one member of which the prime mover is connected, speed limiting mechanism connected to another member of the gear train, means for applying a substantially constant torque to a third member of the gear train, means for altering the speed of the prime mover, and means actuated by movement of the third member for controlling the speed altering means.

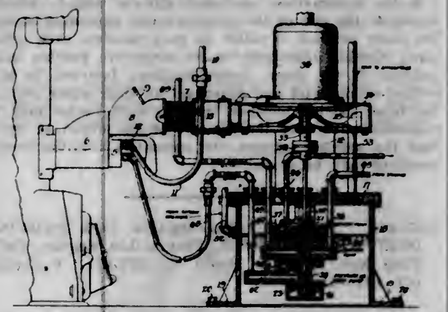
1,577,619. ROTARY CUTTER. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 2, 1921. Serial No. 474,320. 27 Claims. (Cl. 164—68.)

1. A cutter comprising an elongate knife, means for holding said knife under longitudinal tension, a resilient backing underlying said knife, and a platen member adapted progressively to meet the cutting edge of said knife in rolling contact.



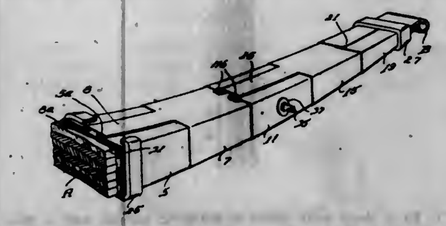
1,577,620. ROTARY CUTTER. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 25, 1922. Serial No. 563,570. 25 Claims. (Cl. 164—68.)

1. In a cutter for sheet material, the combination of a rotary drum, a flexible knife wound helically upon said drum, means for holding said knife under longitudinal tension upon said drum, a roll adapted to be pressed against said knife in face-to-edge contact, in a cutting action upon the work, and means independent of the contact of said roll with said knife for driving said drum and said roll at the same peripheral speed.



1,577,621. CUTTER FOR SHEET MATERIAL. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 16, 1924. Serial No. 706,843. 10 Claims. (Cl. 164—68.)

1. In a cutter for sheet material, the combination of a knife-holding member formed with a knife-receiving slot of substantially uniform width throughout its knife-receiving region, an upstanding, strip-metal knife of substantially uniform thickness slidably mounted in said slot, means for so holding the knife in the slot as to

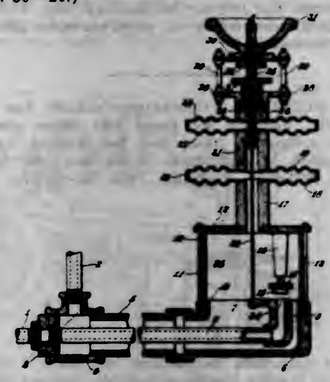


permit its elongation and contraction therein, and means for forcing the work against said knife in a progressive cutting action.

1,577,622. LIQUID-FUEL BURNER. RALPH M. GASTON, Chicago, Ill., assignor, by mesne assignments, to Wayne Tank & Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Jan. 2, 1924. Serial No. 683,856. 17 Claims. (Cl. 158—360.)

1. In a liquid fuel burner system, the combination of a storage tank, a service tank, a burner, a pressure pump for forcing oil from said service tank to said burner, a suction pump for supplying oil to said service tank from said storage tank, and a return pump for returning excess oil from said service tank to said storage tank, all of said pumps being connected for simultaneous operation.

1,577,623. VEHICLE SPRING COVER. ALBERT R. GOLDRICK, Cleveland, Ohio, assignor, by mesne assignments, to Albert E. Hodgins, Cleveland, Ohio. Filed Oct. 30, 1922. Serial No. 597,749. 17 Claims. (Cl. 267—37.)

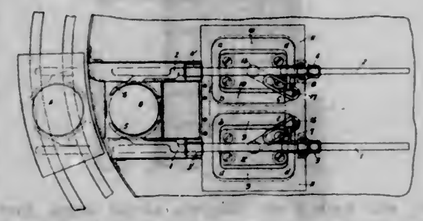


1. In a vehicle spring cover, the combination of an inner inbricant impervious lining surrounding the spring laminations, and an outer metallic casing comprising a plurality of inter-engaging sections, each section provided with means for engaging longitudinal flanges formed on the adjacent section.

1,577,624. FUR CLASP. SAMUEL GOLDSTEIN, New York, N. Y. Filed Feb. 11, 1922. Serial No. 535,677. 3 Claims. (Cl. 2—65.)

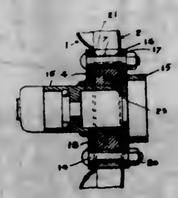
1. A fur clasp comprising pivoted upper and lower jaw members, the upper jaw member including downwardly turned pintle-bearing flange portions, the lower jaw member comprising a unitary piece provided with spaced integral upstanding pintle-bearing ear portions, each ear portion being longitudinally grooves to provide a recess or socket receiving a flange portion of the upper jaw, the construction being such that each ear portion provides upstanding walls located on opposite sides of a flange portion with the flange portion substantially concealed by the outer wall and a hinge pintle or pivot pin received by the said pintle-bearing portions.

1,577,625. PRESSURE REGULATOR. EDWARD C. WALKER, Kinlock, Mo., assignor to National Lead Company, New York, N. Y., a Corporation of New York. Filed Nov. 8, 1920. Serial No. 422,684. 5 Claims. (Cl. 50—21.)



4. A fluid controlling device, comprising, a casing, a nozzle and a cooperating baffle therein, and a flexible pipe fixed at one end and supporting said nozzle at its free end, said nozzle being movable with said pipe in order to control the flow.

1,577,626. MUFFLER FOR AUTOMOTIVE ENGINES. NATHANIEL G. WARTH, Gallipolis, Ohio. Filed July 5, 1922. Serial No. 572,801. 1 Claim. (Cl. 137—160.)

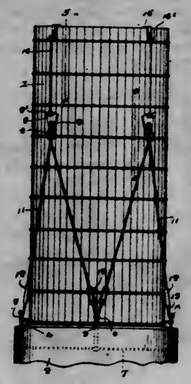


A muffler for automotive gas engines including, in combination, an elongated cooling and muffling chamber having a longitudinal axis and an outlet at one end, an imperforate cylindrical engine exhaust pipe extended into the other end of said chamber axially thereof, a funnel air collector extending externally of the chamber for freely admitting atmospheric air into said chamber, said funnel having its discharge end tapered and extending into the muffling chamber substantially beyond the end of the engine exhaust pipe and spaced from and surrounding the discharge of said engine exhaust pipe whereby the hot exhaust gas as it discharges into said cooling and muffling chamber is met with a surrounding condenser flow of cooling air.

1,577,627. MEANS FOR HANDLING PROJECTILES AND OTHER BODIES. THOMAS HERBERT WEBSTER, London, England. Filed Sept. 14, 1925. Serial No. 56,207. 3 Claims. (Cl. 198—218.)

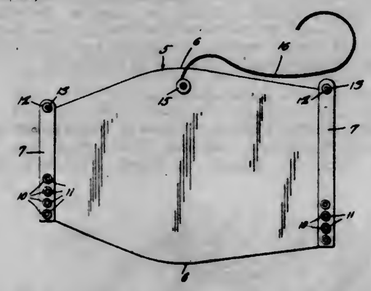
1. Apparatus for moving a body resting on a surface or guide-way from one determinate point to another, comprising companion parallel bars disposed on each side of the body to be moved and having cooperating jaws engageable with the body, a follower connected to each bar, rectangularly slotted cams, and means for moving the followers along the slots whereby said bars are moved in unison in a cycle comprising four consecutive steps, namely, partial rotation in opposite directions, endwise movement in the same direction, reverse partial rotation and reverse endwise movement, each side of the rectangle corresponding to one step of said cycle.

1,577,628. DISK WHEEL. THOMAS WILKINSON and WILLIAM WILKINSON, Oakland, Calif. Filed Dec. 18, 1923. Serial No. 680,314. 2 Claims. (Cl. 301—63.)



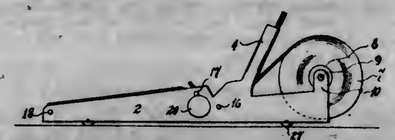
1. An automobile disk wheel constructed to be attached to the hub of an ordinary wood spoke wheel, which disk wheel embodies in its construction spaced disks having central hub openings, an annular member interposed between the disks and surrounding the hub openings, said disks and annular member having registering openings for reception of hub bolts, said disks having projections around the margins of the openings therein adapted to engage in the openings of the annular member, said annular member having the beveled face 22, one of the disks being bent inwardly at the margin of the hub opening to engage said bevcled face, and a felly band secured to said disks.

1,577,629. ANCHORING SYSTEM. ALVIN J. WINGE, Blanchardville, Wis. Filed Feb. 5, 1923, Serial No. 617,006. Renewed Jan. 22, 1926. 2 Claims. (Cl. 20—1.4.)



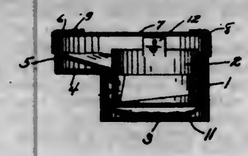
1. In a silo, anchor strips embedded in the foundation thereof, means for bolting each strip to a stave

of the silo, hooked plates bolted to other staves thereof, each plate being connected with a single stave, brace rods having their upper ends engaging the hooks of the



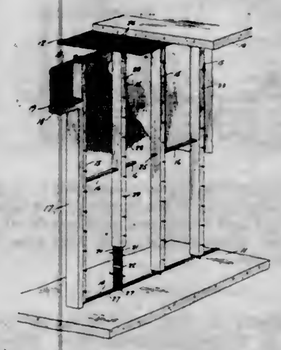
plates and their lower ends the anchor strips, turn buckles forming portions of the rods and adjustable means for connecting the plates with the top of the silo.

1,577,630. SLEEVE PROTECTOR. WILL YERGER, West Philadelphia, Pa. Filed Feb. 20, 1925, Serial No. 10,616. Renewed Jan. 8, 1926. 1 Claim. (Cl. 2—59.)



A device of the character described comprising a sheet of flexible material adapted to encircle the forearm of a human being, reinforcing strips carried by the ends thereof to engage the arm at points above the elbow and wrist respectively, a plurality of double female fastener members carried by each strip near one end, and a double male fastener carried by each strip near its other end, the male and female members on each strip being adapted to cooperate.

1,577,631. PERPETUAL DESK CALENDAR AND MEMORANDUM PAD. ALTON D. BAGGETT, RAYMOND E. MILLER, and FRANK WRIGHT, Temple, Tex. Filed Sept. 28, 1925. Serial No. 59,120. 2 Claims. (Cl. 281—6.)

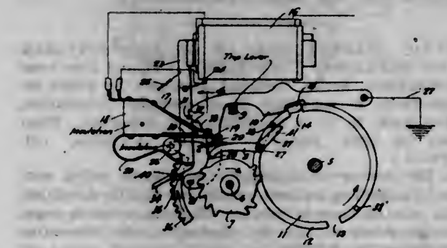


1. A device of the character described comprising, a horizontally disposed frame having interconnected upper and side walls, said upper wall being inclined from end to end and terminating short of one end of the side wall to form a pair of transversely spaced paper roll supporting arms at said one end, an upwardly inclined article supporting pocket at the end of the upper wall adjacent said arms, said upper wall having an inwardly stamped transverse channel adjacent said pocket and a longitudinal slot in the bottom of said channel, said upper wall having additional transverse slots, guide rollers beneath said upper wall, and a feed roller coacting with one of the guide rollers adjacent said slots to direct paper through said slots.

1,577,632. CAP AND COLLAR CASE. JAMES J. COLES, Los Angeles, Calif. Filed Oct. 22, 1923. Serial No. 670,175. 4 Claims. (Cl. 206—8.)

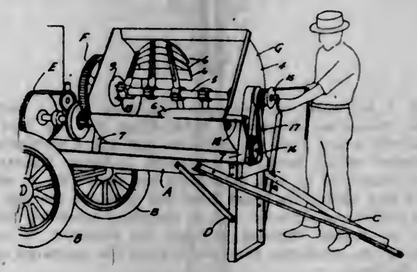
1. In a casing for caps, collars, etc., an outer container, an extension formed on the forward edge of the container, the said container being adapted to receive a cap and the extension the peak thereof, an inner container loosely positioned in the outer container so as to be mounted within the interior of the cap, and a cover member hingedly mounted on the outer container adapted to enclose the same.

1,577,633. STUDDING. CORNELIUS COLLINS, Los Angeles, Calif., assignor, by direct and mesne assignments, to Arthur W. Nash, Inc., Los Angeles, Calif., a Corporation of California. Filed Nov. 30, 1923. Serial No. 677,669. 4 Claims. (Cl. 72—115.)



1. A stud comprising a metallic channel bar covered by a comparatively soft cementitious body, said bar being provided with bendable attachment prongs supported thereby projecting through said body.

1,577,634. SIGNAL TRANSMITTER. FRED E. DETMERS, Los Angeles, Calif., assignor to Lewis Degen, Pasadena, Calif. Filed Mar. 20, 1924. Serial No. 700,581. 6 Claims. (Cl. 177—361.)

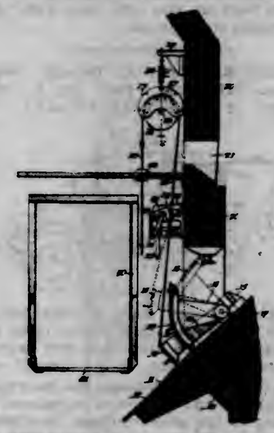


1. In a non-interference ground connection transmitter, the combination of a signal transmitting train having a stop and starting means, a signal key, means

actuated by said train to operate said key, a ground connection comprising a control switch having a pair of relatively movable contacts, non-interfering means to maintain said key closed during movement of said train at the tripping of the latter, said non-interfering means having an actuating member to cause one of said movable contacts to be moved to break position upon said

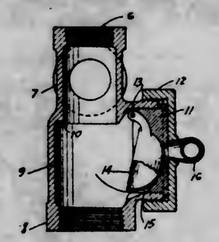
non-interfering means being in line releasing position and to be moved toward make position upon said non-interfering means being in line control position, the other of said movable contacts being positioned by said stop means in make position when said stop means is in train releasing position and in break position when said stop means is in train stopping position.

1,577,635. POWER DUMP STRUCTURE. NEWMAN ESSICK, Los Angeles, Calif. Filed Oct. 20, 1925. Serial No. 63,691. 4 Claims. (Cl. 83—73.)



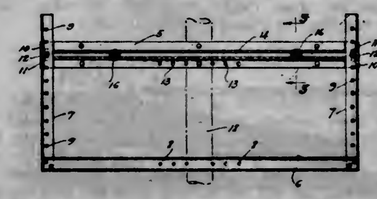
1. In a mixer, the combination of bearing supports, a tiltable member, tubular trunnions secured to the ends of said members and journalled in said supports so as to rotatably support said member thereon, a shaft journalled in said trunnions so as to be rotatable in said member, a winch head secured to said shaft, and a line for winding on said head, said line being secured to said member at one end.

1,577,636. APPARATUS FOR OPERATING BIN GATES. JOHN C. HAYES, Jr., Chicago, Ill., assignor to Freyn, Brassert & Company, Chicago, Ill., a Corporation of Illinois. Original application filed Apr. 11, 1921, Serial No. 460,554. Divided and this application filed July 11, 1924. Serial No. 725,530. 6 Claims. (Cl. 221—144.)



1. Door opening apparatus comprising in combination a line shaft, a pulley fixed to said line shaft, a sheave over said pulley having a guide way formed therein, and a lifting member normally out of engagement with said pulley but adapted to be brought into frictional contact therewith, the lifting member being normally carried by said sheave.

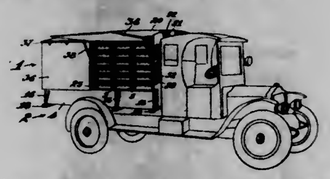
6. Door operating mechanism comprising in combination a power shaft, a pulley mounted thereon, a flexible door operating member passing over said pulley, a spring mounted sheave over said pulley, means in said sheave to hold said flexible member normally out of contact with said pulley but allowing said flexible member



to be pulled into engagement with the said pulley, and a hand operated pivotally mounted toggle member adapted to engage said flexible member to hold the gates in open position.

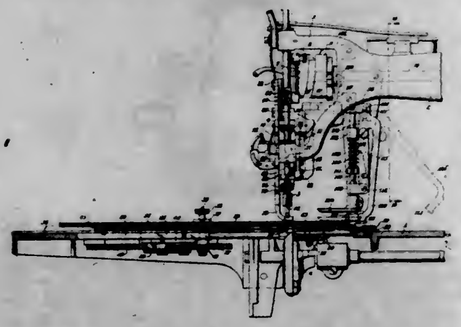
1,577,637. BACKFLOW CHECK. ARTHUR HESS, Los Angeles, Calif., assignor of one-half to Samuel L. Marsh, Los Angeles, Calif. Filed Nov. 13, 1924. Serial No. 749,628. 2 Claims. (Cl. 251—118.)

1. A fitting having a way therethrough for the passage of liquid, a recession chamber at the side of said fitting, a float check pivotally suspended in said chamber substantially filling the same and arranged to be swung outwardly into said passage to close the same by back flow, and a clean-out connection mounted to communicate with said chamber back of said check.



1,577,638. BRACKET-HANGER BACKING. ARTHUR HESS, Los Angeles, Calif., assignor of one-half to Samuel L. Marsh, Los Angeles, Calif. Filed Mar. 23, 1925. Serial No. 17,690. 5 Claims. (Cl. 4—170.)

1. A backing of the character described comprising a rectangular frame formed of bars having a hanger bar adjustably mounted on the intersecting bars so as to be movable to and from the parallel bar and provided with



an elongated slot, means on the hanger bar for securing said frame to a supporting member, means on said parallel bar for securing said frame to said supporting member and bolts in said slot with their shanks extending forwardly therethrough.

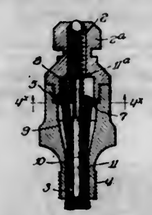
1,577,639. CHICKEN-CARRIER TRUCK. BERT R. HOLLOWAY, Van Nuys, Calif. Filed Oct. 3, 1922. Serial No. 592,107. 2 Claims. (Cl. 119—12.)

1. In a chicken carrier truck, a truck body, a series of superposed slide-ways carried on the truck body opening to the opposite sides thereof, a roof extending over the slide-ways, spaced walls at the forward end of the slide-ways forming an air passage, the innermost of said walls being formed with a series of superposed spaced air outlets opening to the spaces between the slide-ways and the outermost of said walls being formed with a series of superposed spaced air inlets opening to the air passages at points offset relatively to the air outlets, there being an air inlet adjacent each of the air outlets, and means for varying the extent of opening of the air inlets.

1,577,640. MACHINE FOR SEWING BUFFING PADS. CHARLES M. HORTON, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 16, 1922. Serial No. 588,553. 28 Claims. (Cl. 112—2.)

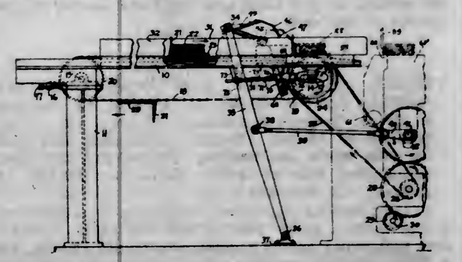
7. Feeding mechanism for sewing machines comprising, a feed-bar, a feed-dog freely carried by said feed-bar, and means including a pivoted guide apertured to embrace said feed-dog for directing its movement.

1,577,641. PAPER-BAG DISPENSER. WILLIAM H. HUNT, San Jose, Calif. Filed Mar. 28, 1923. Serial No. 628,362. 3 Claims. (Cl. 211—29.)



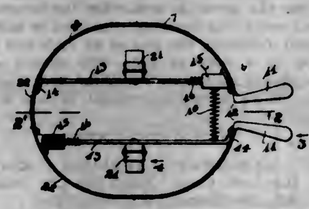
3. A case having an opening arranged in the forward end of its top, a stop arranged in said case to limit the rearward movement of bags placed therein, resilient means arranged in said case for elevating the forward ends of the bags below said opening, and means for securing said resilient means to the bottom of said case adjacent to said stop, said resilient means having portions thereof adjacent to and forwardly of said securing means raised a distance whereby to permit bags placed therein to pass over said securing means into engagement with said stop.

1,577,642. MANUFACTURE OF GELATIN SUITABLE FOR EMULSIONS. ALEXANDER JENNY and JOHANNES ANGERSTEIN, Berlin, Germany, assignors, by mesne assignments, to American Electro-Osmosis Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 13, 1924. Serial No. 699,128. 4 Claims. (Cl. 204—1.)



1. The process of manufacturing gelatin which consists in subjecting an acid gelatin solution to the action of an electric current between diaphragms which separate the solution from the electrodes and thereafter neutralizing the solution.

1,577,643. LUBRICANT CUP. CLARENCE H. JORGENSEN and PETER J. JORGENSEN, Waupaca, Wis. Filed Oct. 17, 1921. Serial No. 508,367. 7 Claims. (Cl. 184—64.)

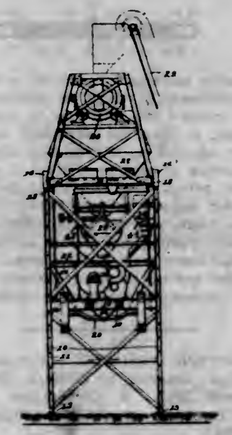


3. A lubricant cup having a discharge port, a perforate transverse diaphragm subdividing the cup into a reservoir which feeds the discharge port and a provisional chamber which feeds the reservoir, a direct discharge duct supported by said diaphragm and delivering to said port and having its upper inlet end adjacent the top of the provisional chamber, and an absorbent extending from the provisional chamber through the reservoir to and beyond the discharge port and beyond the discharge end of the duct.

1,577,644. TRIMMER FEEDER. CHARLES A. JUENGST, Croton Falls, N. Y., assignor to American Assembling Machine Company, Memphis, Tenn., a Corporation of Delaware. Filed May 16, 1923. Serial No. 639,452. 30 Claims. (Cl. 164—48.)

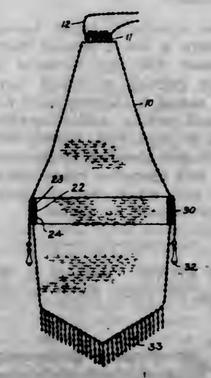
1. In a trimmer feeder, a cutting-bed, a conveyor having book-pad supports continuously moving substantially in the plane of the cutting-bed, and means for advancing book-pads from the moving conveyor supports at an accelerated speed, said means thereafter delivering said book-pads at a retarded speed upon the cutting-bed.

1,577,645. HAT SUPPORT. BENEDIKT JUTS, Wilmington, Calif. Filed Oct. 15, 1923. Serial No. 668,712. 1 Claim. (Cl. 45—13.)



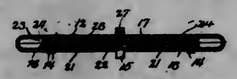
In a hat support, a clamping member made in loop-like form with its free ends terminating short of touching each other adapted to be moved towards each other so as to decrease the outer contour of the loop, yielding braces disposed within the contours of the loop and being each attached at one end at a point near the middle of the loop and at the other end near the open end of the loop, means by which the loop can be suspended when attached to some other object, and handle-members extending from the free ends of the loop-like member projecting practically radially from the loop.

1,577,646. FOUNTAIN OR RESERVOIR PEN. CHARLESWORTH LIVESEY, Wallasey, England. Filed Feb. 21, 1921. Serial No. 446,904. 1 Claim. (Cl. 120—49.)



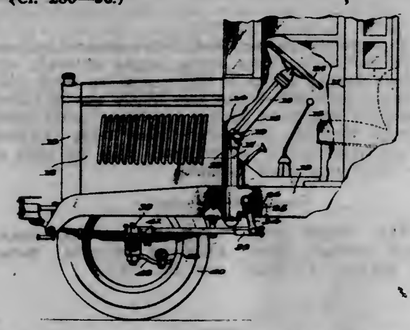
In a fountain pen of the safety type wherein a nib carrying stem has a lateral projection adapted to engage in and be adjusted by a reservoir sleeve on the stem:—means for causing a variable movement of the nib carrying stem by less than a complete revolution of said sleeve, said means comprising a spirally slotted sleeve to provide a slot for the lateral projection of the nib carrying stem, said slot having an outer end portion of less pitch than the intermediate portion of said slot and an inner end portion corresponding to the outer end portion of said slot so that actuation of said stem to project a nib is at first slow, then comparatively rapid, and then slow again, with the pitch of the slot in the outer end of said sleeve preventing retraction of the stem during a writing operation.

1,577,647. PORTABLE PAVING PLANT. MARTIN MADSEN, Monterey Park, Calif. Filed July 7, 1924. Serial No. 724,698. 4 Claims. (Cl. 94—43.)



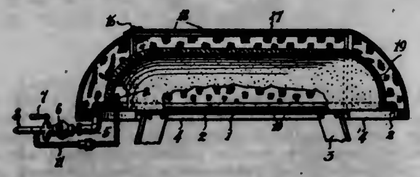
3. In a portable paving plant, frames adapted to have secured thereto means for mixing paving material; corner posts forming a part of lifting jacks on which said frames are mounted, whereby said frames may be raised and lowered, said jacks forming supporting means when positioned for use, said corner posts being removed from the other portions of said jacks when the plant is to be moved from place to place.

1,577,648. MESH BAG. SAMATHL G. MANDALIAN, North Attleboro, Mass. Filed Oct. 22, 1923. Serial No. 669,927. 2 Claims. (Cl. 150—28.)



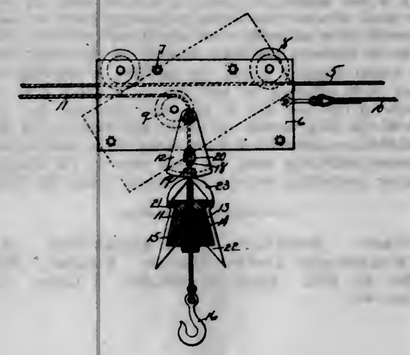
1. As an improved article of manufacture, a bag of the type set forth comprising a flexible mesh fabric body portion having a mouth portion and non-adjustable, non-collapsible member permanently affixed within the mesh of the bag substantially midway between its ends to hold the body portion of the bag permanently in distended position to maintain the flexible mesh portion thereof against collapse, and means holding said member against collapse or extension.

1,577,649. SEWING-MACHINE ATTACHMENT. FRED L. MARK, deceased, late of Chicago, Ill.; Helene D. Mark, administratrix, Chicago, Ill. Filed Aug. 10, 1922. Serial No. 580,897. 11 Claims. (Cl. 112—2.)



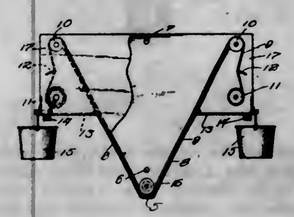
1. In a sewing machine attachment, a holder adapted to clamp thicknesses of cloth in position, adapted to be turned to receive the stitching in the cloth in the desired manner, so that the cloth will be sewed wrong side out, and adapted to be removed when the article is stitched, having provisions to form a gap in the line of stitching to permit the cloth to be turned right side out, said holder comprising two halves hinged together to receive the cloth between them, which holder has a slot therein for guiding the needle of the sewing machine, and the lower half having means for engaging the feed of the sewing machine, whereby the holder is automatically turned in the desired manner.

1,577,650. MOTOR VEHICLE. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 11, 1921. Serial No. 460,540. 8 Claims. (Cl. 280—96.)



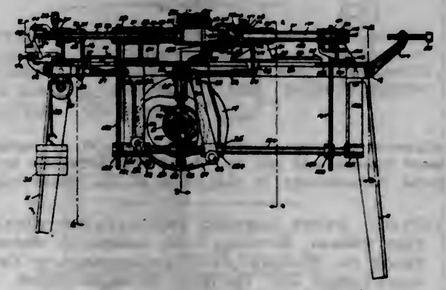
1. In a motor vehicle, a frame having longitudinal side frame members, a casing secured thereto, gearing in the casing a shaft rotatably mounted in said casing connected to the gearing, a second casing secured to said first named casing, a steering shaft rotatably mounted in said second casing and operatively connected through gearing to said first named shaft, a steering wheel secured to said steering shaft, supporting wheels for said vehicle and operative connections including the gearing between said wheels and the first named shaft, whereby said wheels may be angled.

1,577,651. GAS STOVE. AEOLIAN E. MOORES, Dallas, Tex. Filed Aug. 27, 1925. Serial No. 52,787. 1 Claim. (Cl. 126—85.)



A gas heater stove comprising a base, legs attached thereto, a gas burner pipe supported upon the base and having means for connecting said burner to a gas feed pipe; a pilot with pipe connection to said feed pipe and providing a constant lighting means for said burner with means for adjusting the pilot; said pilot disposed adjacent a control valve; a heat deflecting dome of suitable material seated upon the base; a reticulated covering for the stove, a frame for the covering and a door in one end of the covering; the sides of said covering substantially following the line of an arch and connected at the top by a ridge or strip with spaced apertures; said door hinged to the covering, the door and opposite end of the stove having a rounded bottom and arched formation.

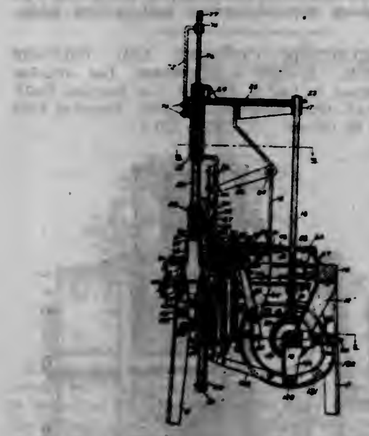
1,577,652. CABLEWAY CARRIAGE. KENNETH B. NOBLE, Hartford, Conn. Filed Feb. 28, 1925. Serial No. 12,446. 20 Claims. (Cl. 212—109.)



1. A cable carriage with a support therefor, an operating line movably mounted on said carriage, a catch block secured to said line and relatively immovable thereof, a member to engage said block to retain it in a raised position, means operating by movement of said member to disengage the latter from said block and means operating when said member is stationary to engage it with said block.

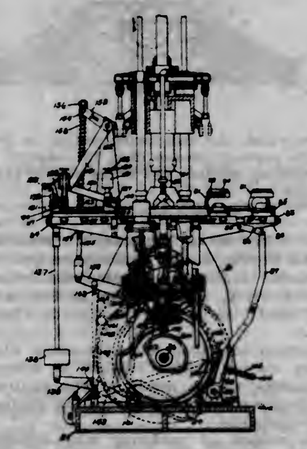
1,577,653. OIL-SEDIMENT REMOVER. WILLIAM W. NUGENT, Chicago, Ill. Filed Jan. 12, 1920. Serial No. 350,763. 20 Claims. (Cl. 210—55.)

1. In a liquid sediment remover, the combination with a portable settling tank, of a flexible gathering member in said tank, means for exerting a pull on one end of said member to effect elevation of the portion thereof in the tank, and means elevated together with said flexible member for automatically restoring said member toward the bottom of said tank when said member is released.



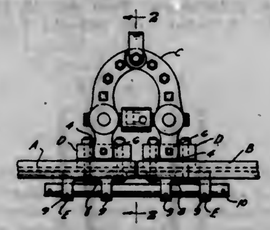
1,577,654. PROCESS AND APPARATUS FOR BURNING OFF GLASSWARE. ALVAH C. PARKER, Toledo, Ohio, assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 4, 1924. Serial No. 690,409. 18 Claims. (Cl. 49—50.)

1. In apparatus for severing glass articles, a holder adapted to support an article from one end, a guide adapted to be positioned in close proximity to but normally out of engagement therewith outside of the other end of the article, and a burner adapted to apply a melting flame across the glass between the holder and guide.



17. The process of burning off glass articles, which consists in applying to the glass along a line of desired severance a flame sufficiently intense to melt the glass and produce a severed edge along said line and, after said edge is produced, applying thereto a less intense flame to fire-finish the same.

1,577,655. METHOD OF AND APPARATUS FOR BURNING OFF GLASSWARE. ALVAH C. PARKER, Toledo, Ohio, assignor to The Libbey Glass Manufacturing Company, a Corporation of Ohio. Filed May 16, 1924. Serial No. 713,709. 13 Claims. (Cl. 49—50.)



1. In a glass severing device, a chuck, a burner in position to apply a melting-off flame to a glass article in the chuck, automatic means to vary the intensity of the flame, and synchronized automatic means for moving the chuck a slight distance away from the burner at a predetermined time during a period of intensified flame.

1,577,656. AUTOMATIC BURNING-OFF MACHINE. ALVAH C. PARKER, Toledo, Ohio, assignor to The Libbey Glass Manufacturing Company, a Corporation of Ohio. Filed Oct. 17, 1924, Serial No. 744,185. Renewed Dec. 23, 1925. 30 Claims. (Cl. 49—50.)

1. In glass working apparatus, a vertically reciprocable chuck, a horisontally movable charging table having an article holder, and automatic means to reciprocate the table and thereby move the holder between a position in alignment with the chuck and a position at one side thereof.

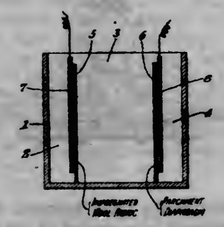
1,577,657. RAIL-JOINT SPREADER BLOCK. WILLIAM F. PRICE, Topeka, Kans. Filed Mar. 10, 1925. Serial No. 14,574. 5 Claims. (Cl. 254—43.)

5. In a device of the class described, the combination of lug blocks adapted to be secured on one side of adjacent rails at a joint to provide a hold for an expander which operates upon said rails by pressure in opposite directions upon said blocks, and brace blocks adapted to be rigidly fastened to the side of said rails opposite said lug blocks, said brace blocks having laterally extending eyes, and a brace rod extending slidably through said eyes in a longitudinal direction so as to hold the rails in alignment and permit movement to and from each other.

1,577,658. FINGER RING FOR CROCHETING. HELEN REBECCA EMM, Portland, Oreg. Filed Jan. 28, 1925. Serial No. 5,387. 3 Claims. (Cl. 242—150.)

1. In a finger ring for crocheting, the combination of a ring, a stud extending radially from said ring, the surface of the ring around the stud being flattened, a large flat disk on the stud and resting on the flat surface

of the ring, a convexo-concave disk of smaller diameter resting on the larger disk, a nut at the end of the stud, and a disk spring between the nut and the con-

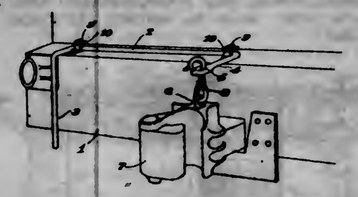


vexo-concave disk, the disk spring resting on the concave side of the convexo-concave disk, the edge of said disk spring extending substantially to the edge of the convexo-concave disk.

1,577,659. METHOD OF KILLING MICROORGANISMS. WILHELM RUPPEL, Berlin, Germany, assignor, by mesne assignments, to American Electro-Osmosis Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 4, 1921. Serial No. 489,837. 22 Claims. (Cl. 167—7.)

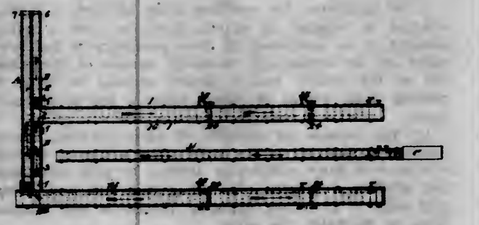
1. A method of killing micro-organisms with aid of an electric current, which consists in subjecting the micro-organisms to the action of the electric current between diaphragms which separate the electrodes from the micro-organisms.

22. The method of rendering micro-organisms non-pathogenic, which consists in passing an electric current through a medium containing the micro-organisms, the current being so great in amperage and low in voltage that the micro-organisms are rendered non-pathogenic by the passage of the current instead of by heat generated therein or by the formation of germicidal electrolytic products produced.



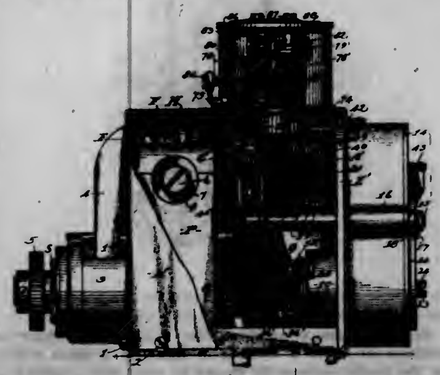
1,577,660. PROCESS FOR THE ELECTROOSMOTIC PURIFICATION OF GLUE AND GELATIN. WILHELM RUPPEL, Berlin, and KUNO WOLF, Berlin-Charlottenburg, Germany, assignors, by mesne assignments, to American Electro-Osmosis Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 13, 1924. Serial No. 699,153. 5 Claims. (Cl. 204—1.)

1. The process of purifying glue, gelatin and the like which consists in submitting an aqueous solution thereof to the action of an electric current with the solution separated from the electrodes by diaphragms, the anodic diaphragm being of wool fabric impregnated with chromated gelatin and the cathodic diaphragm being of parchment.



1,577,661. UNCOUPLING DEVICE FOR CAR COUPLERS. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 12, 1922. Serial No. 581,465. 4 Claims. (Cl. 213—170.)

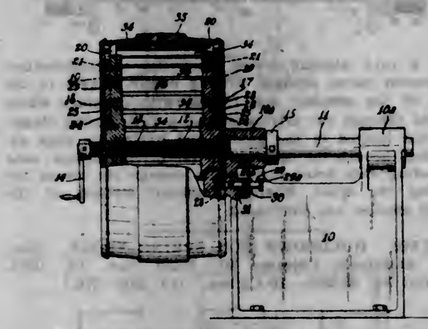
1. An uncoupling device for car couplers comprising an operating rod provided with a vertically disposed eye and a single link connecting said operating rod to said coupler, formed of a single piece of metal bent to form a closed loop at the bottom for connection to the coupler with the ends robent and brought together in parallel



alignment to form a vertical shank for slidable engagement through said eye, said shank bent forwardly in a plane perpendicular to the plane of the closed loop.

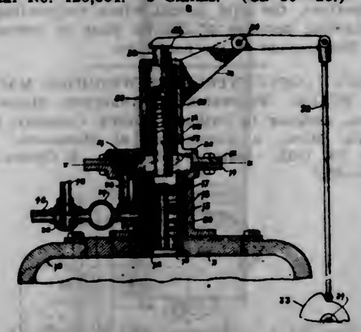
1,577,662. FRUIT SORTING AND PACKING TABLE. FRED STEBLER, Riverside, Calif., assignor to Stebler-Parker Co., Riverside, Calif., a Corporation of California. Filed Apr. 14, 1925. Serial No. 22,990. 6 Claims. (Cl. 209—125.)

1. A fruit sorting and packing apparatus including a plurality of sorting tables, one serving as a fruit receiving member and the other adapted for receiving sorted fruit from the first member, a plurality of packing tables disposed angularly in the same direction from said sorting tables and one communicating with the discharge end of each of the sorting tables, each including endless belt conveying members, means for imparting movement to the sorting table forming belts, means for imparting movement to the packing table forming belts, and a filled box conveyer member disposed between said packing tables.



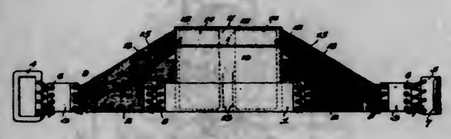
1,577,663. ELECTRIC CURRENT AND VOLTAGE REGULATOR. EDMUND E. TABUSSAT, Los Angeles, Calif., assignor to Leo M. Harvey, Los Angeles, Calif. Filed June 21, 1920, Serial No. 393,450. Renewed June 17, 1925. 10 Claims. (Cl. 171—221.)

1. In a regulating system for electric circuits comprising a generator having relatively stationary and movable brushes, a regulator having field coils apart from said



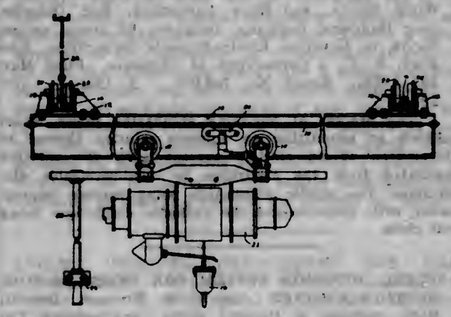
generator and electrically connected with said generator brushes, respectively, a rotatable armature between and connected with said coils, a train of gears connected with said armature shaft, a spring for actuating said gears and an escapement device operatively connected with said armature and said movable brush.

1,577,664. APPARATUS FOR MAKING TIRE CASINGS. JAMES D. TEW, Hudson, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 15, 1923. Serial No. 639,086. 4 Claims. (Cl. 154—10.)



1. Tire-building apparatus comprising a circumferential set of transversely disposed, deformable, tire-stretching structures adapted to form substantially a cylindrical structure to receive a transversely flat, endless band of tire-building material, means for deforming said structures to stretch the middle portion of said band, and additional means for moving said structures radially, each as a whole, while they are so deformed, to change the effective diameter of their composite structure.

1,577,665. STARTING VALVE FOR ENGINES. RICHARD E. B. WAKEFIELD, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 30, 1920. Serial No. 420,664. 4 Claims. (Cl. 60—16.)

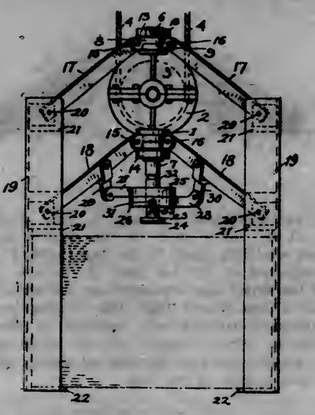


2. In an air starting mechanism for internal combustion engines, a reciprocating plunger, means operatively connected to a moving engine part for reciprocating the plunger, an air valve arranged to be opened and closed by the reciprocation of the plunger, and means for changing the effective length of the plunger, the plunger being so disposed with relation to the valve that when the effective length of the plunger is increased the valve will be opened by the reciprocation of the plunger, and when the plunger is at its shortest effective length, the valve will not be opened by the reciprocation of the plunger.

1,577,666. ABDOMINAL BANDAGE. HARVEY W. WALTER, Philadelphia, Pa. Filed Nov. 12, 1924. Serial No. 749,482. 5 Claims. (Cl. 128—99.)

3. In an abdominal bandage, a belt, a frontal bag secured at its lower part to the central part of the belt, pads relatively short in the bag, inclined elastic supports connected to the top part of the bag on opposite sides of the latter and connected to the belt, and elastic supports of less length than that of the inclined supports arranged substantially parallel to the belt and connected to central parts of the inclined supports and to opposite sides of the bag at points intermediate the top and bottom of the bag.

1,577,667. CRANE. WILLIAM G. WEHR, East Cleveland, Ohio, assignor to The Cleveland Crane and Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed Sept. 4, 1923. Serial No. 660,754. 11 Claims. (Cl. 104—98.)

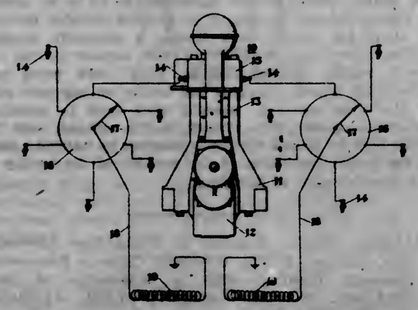


1. The combination with a crane runway consisting of two spaced tracks flexibly suspended so as to be capable of limited lateral movement, of a crane movable manually along the runway and having a manually movable trolley, said crane comprising a cross member having end trucks rigidly secured thereto, each truck being provided with wheels engaging the tracks on opposite sides of the cross member, whereby they tend to maintain the crane square with respect to the runway, and the crane may be moved along the runway by applying force to the trolley regardless of the position of the trolley on the cross member of the crane.

1,577,668. GRAB. WILLIAM G. WEHR, East Cleveland, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed Sept. 18, 1925. Serial No. 57,076. 17 Claims. (Cl. 294—106.)

2. A grab comprising a central supporting head, a plurality of members mounted on said head to turn independently about the vertical axis thereof, and load gripping devices carried by said members and movable therewith about the axis of the head.

11. A grab comprising a central supporting member, four pairs of superposed parallel links pivoted at their inner ends to said supporting member said pairs of links

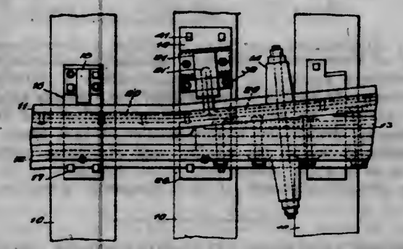


being angularly disposed with respect to each other, and a vertical load engaging member pivotally connected to the outer ends of the links of each pair.

1,577,669. PROCESS FOR THE ELECTROOSMOTIC PURIFICATION OF SACCHARINE JUICES. KUNO WOLF, Berlin, and EGON LANGSTEIN, Bad Oldesloe, near Hamburg, Germany, assignors, by mesne assignments, to American Electro-Osmosis Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 29, 1924. Serial No. 702,937. 3 Claims. (Cl. 204—1.)

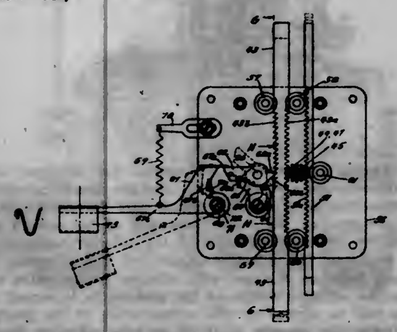
1. The process of purifying saccharine juices which consists in submitting an aqueous solution thereof to the action of an electric current with the solution separated from the electrodes by semi-permeable diaphragms, the anodic diaphragm being leather impregnated with quinone and the cathodic diaphragm being sail cloth.

1,577,670. IGNITION SYSTEM FOR INTERNAL-COMBUSTION ENGINES. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 15, 1924. Serial No. 706,726. 15 Claims. (Cl. 123—148.)



1. The combination with an ignition system including a pair of windings, of switch means adapted to control the flow of current through said windings and adapted for connection thereto either singly or together in parallel, and an inductance coil in series with the switch.

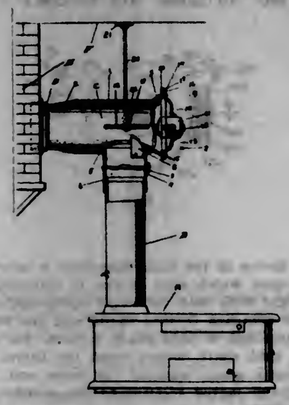
1,577,671. YARN-WINDING SPOOL. ROBERT ASHMEAD and JOSEPH COLLINS, Indian Orchard, Mass., assignors to Hodges Carpet Company, Indian Orchard, Mass., a Corporation of Massachusetts. Filed Oct. 14, 1925. Serial No. 62,419. 5 Claims. (Cl. 242—74.)



1. A yarn winding device comprising in combination, a grooved barrel member, driving means secured to the ends of the member, and formed with openings which extend through the driving means, a yarn strand clamping rod located in the groove and having its ends extending through the openings in the driving means; said extending ends being designed to engage the means for driving the spool, whereby torsional stresses of the barrel member are eliminated.

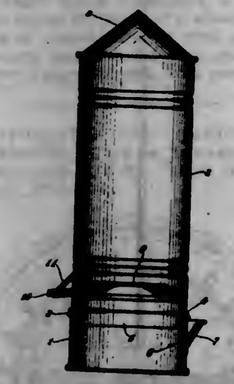
1,577,672. HOLDDOWN FOR SPRING FROGS. CARL G. ALMQUIST, Chicago, Ill. Filed Nov. 16, 1925. Serial No. 69,268. 15 Claims. (Cl. 246—276.)

3. In combination, a tie plate having an aperture therein, and a hold-down projecting through the said aperture and having a pair of lateral wings extending under portions of the said tie plate on either side of the aperture, the said lateral wings cooperating with the abutting portions of the tie plate to prevent upward displacement of the hold-down.



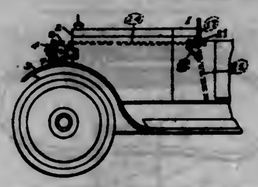
1,577,673. COIN-CONTROLLED WEIGHING MACHINE OR SCALE. FREDERICK R. ANDERSON, Minneapolis, Minn., assignor to National Novelty Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Feb. 28, 1922. Serial No. 539,950. 5 Claims. (Cl. 194—35.)

1. In a coin controlled weighing machine, an indicating mechanism embodying a reciprocatory member having a series of ratchet teeth beveled to permit return



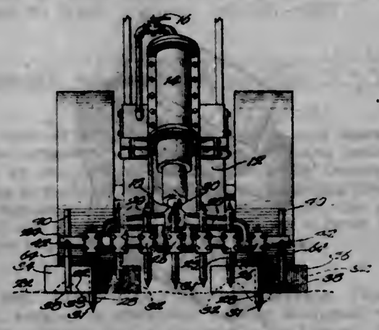
movement of said member, controlled step means therefor, coin controlled locking means for said mechanism including a locking pawl co-operating with said teeth, and a coin released locking latch for said pawl, said latch and pawl being spring held and said pawl being swingable and longitudinally movable.

1,577,674. KITCHEN VENTILATOR. WALTER H. ANDERSON, San Rafael, Calif. Filed Mar. 18, 1925. Serial No. 16,336. 6 Claims. (Cl. 126—80.)



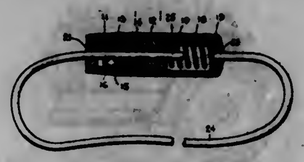
1. A kitchen ventilator comprising in combination a stove pipe, a flue, a horisontal pipe crossing the stove pipe and leading into the flue, and a motor driven fan mounted in the horisoptal pipe on the inner end.

1,577,675. AIR-COOLED STILL. EDWIN C. BALLMAN, St. Louis, Mo., assignor to John H. Cassidy, St. Louis, Mo. Filed Jan. 19, 1920. Serial No. 352,591. 2 Claims. (Cl. 203—5.)



1. An air-cooled still, comprising, a pot open at the top adapted to provide a boiler, an enlarged can open at its bottom and closed at its top and substantially unobstructed within so as to provide for free circulation of steam and air throughout the interior thereof, said can being adapted for setting on said pot so as to provide an air condenser, a narrow gutter on and extending along the inner wall of said can near its bottom adapted to collect the condensate but arranged so as to leave the steam inlet opening from said pot substantially unobstructed, an outlet connection on said can and to said gutter adapted to drain the condensate therefrom, and means for admitting air to aerate the condensate.

1,577,676. SIGNALING APPARATUS FOR MOTOR VEHICLES. DAVID BAUGHMAN, Pittsburgh, Pa. Filed Jan. 20, 1925. Serial No. 3,682. 1 Claim. (Cl. 116—51.)

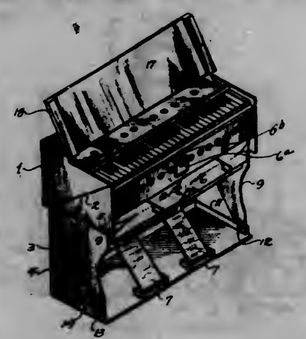


In combination, a signaling apparatus for motor vehicles comprising a signal member provided with a pair of apertured laterally disposed lugs; a vertically disposed supporting pin fixed to the fender of the vehicle and pivotally engaging said apertured lugs; a spring mounted on said pin and disposed intermediate of the said fender and the said signal member for tensionally cushioning the latter on said pin; said signal member provided with a laterally extending shifting arm disposed rearwardly of said lug, an operating rod having its forward end extending through and rotatably supported in the radiator of the vehicle engine, and the bear end thereof rotatably mounted in the dash board of the vehicle; the forward end of said operating rod formed with a right angularly disposed depending lug; a connecting rod having one end pivotally connected to the said shifting arm and the other end thereof being pivotally connected with the said depending lug of the said operating rod; a collar adjustably mounted on said operating rod adjacent to the rear end thereof; a spring mounted on said operating rod intermediate of said collar and the vehicle dash board; and a spring connected with said collar and with said vehicle dash board for limiting the shiftable movement of said operating rod, for returning the latter to the normal inoperative position, and in conjunction with the associated spring mounted on said operating rod, providing a resilient attachment for the latter on the vehicle dash board, substantially as described and for the purpose set forth.

1,577,677. SCRAPER ATTACHMENT FOR ROAD SCARIFIERS. WILLIAM T. BEATTY, Flossmoor, Ill. Filed Sept. 18, 1922. Serial No. 588,826. 15 Claims. (Cl. 262—8.)

1. In a scarifier, the combination with tines adapted to enter a road surface, of a road scraper slidably mounted on the tines, and means to cushion sliding movement of said scraper on said tines.

1,577,678. FASTENING MEANS. MARCUS B. EHRMAN, New York, N. Y., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 17, 1925. Serial No. 23,833. 3 Claims. (Cl. 292—325.)



1. A fastener comprising, in combination, a wire substantially symmetrical and uniform throughout its length, a casing having an opening in one end properly porportioned to receive an end of the wire inserted slidably therein, means at the opposite end of the casing to maintain an end of the wire associated therewith, a spring pressed block within the casing having a passage in alignment with the opening in the casing, and a member carried by the block proportioned for wedging engagement with the wire and actuated by the spring action.

1,577,679. COLLAPSIBLE LID FOR SODA FOUNTAINS AND THE LIKE. THOMAS DICKSON BIBBY, Los Angeles, Calif., assignor to Commercial Fixture Company, Los Angeles, Calif., a Corporation of California. Filed June 30, 1925. Serial No. 40,619. 4 Claims. (Cl. 220—9.)

1. A collapsible cover for soda fountains, comprising two sections hingedly united at their inner edges, and each of which sections includes a shell enclosing an insulating material, and means secured to the rearward section for removably securing the cover in position at the top of the soda fountain cover.

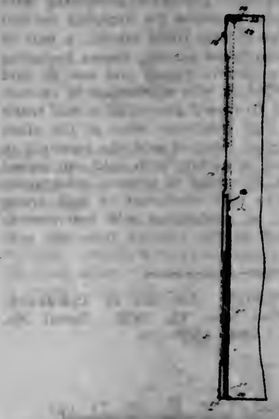
1,577,680. PORTABLE ORGAN. PETER P. BILHORN, Chicago, Ill. Filed Nov. 24, 1924. Serial No. 751,783. 4 Claims. (Cl. 84—352.)

3. In a portable organ, a casing comprising a pair of sections adapted to be moved relative to each other into open or closed position, one of said sections being adapted to support therein an organ mechanism, a pair of brackets adapted to support said section in position relative to the other of said sections for operation of said organ, means for normally impelling said brackets into inoperative folded position within said section and means for retaining said brackets in supporting position against the action of said first mentioned means, said second means being also adapted to hold said sections in closed position.

1,577,681. CYLINDER-GRINDING TOOL. GEORGE H. BLEITNER, Chicago, Ill. Filed Sept. 2, 1922. Serial No. 585,880. 10 Claims. (Cl. 51—206.)

1. In a device of the class described, a carrier, a driving shaft upon which said carrier is rotatably mounted, a barrel rigid with said carrier, a spiral spring, one end of which is attached to said barrel and the other end of which is attached to said shaft, a cover for said barrel rigid with said shaft, means upon the barrel and cover for affording a grasp whereby the cover and barrel may be grasped and moved relative to one another for winding said spring.

1,577,682. CONTAINER. MICHAEL BLOCK, South Boston, Mass., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 27, 1921. Serial No. 465,023. 12 Claims. (Cl. 220—62.)

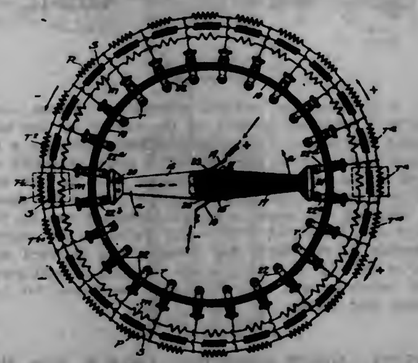


9. In a cracker or like container, a sheet metal display wall having an opening, and a transparent display member hinged to said wall and swingable inwardly from its display position and upwardly to a protected position behind a solid part of said wall.

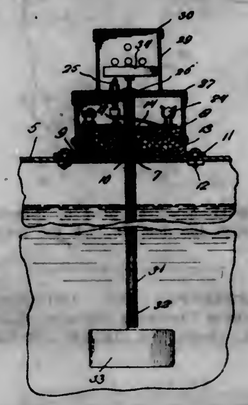
1,577,683. CONTAINER. MICHAEL BLOCK, South Boston, Mass., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 27, 1921. Serial No. 465,024. 2 Claims. (Cl. 220—62.)

1. A display container having a wall formed with a display opening and a continuous closed portion, and a

display section having a glass and hingedly connected with said wall and swingable to a position behind said opening and to a protected position behind said closed portion of the wall, and means in the container and movable into and out of engagement with said display section when the latter is in said protected position.



1,577,684. ANTISKID DEVICE. FRANK A. BOND, Pittsburgh, Pa., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 24, 1924. Serial No. 701,483. 4 Claims. (Cl. 152—14.)



1. An anti-skid device comprising a strap member adapted to lie across the tread of a wheel, the said strap member being of flexible material with a tension device embedded therein and provided with openings adjacent to its ends for engagement with hook members.

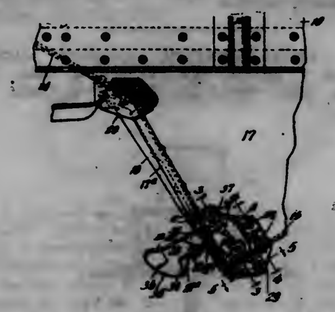
1,577,685. APPARATUS FOR COMMUTATING ELECTRIC CURRENTS. CHARLES S. BRADLEY, New York, N. Y. Filed July 6, 1922. Serial No. 573,115. 10 Claims. (Cl. 171—123.)

1. A method of conserving the magnetic flux of a transformer having a primary coil and a secondary coil carrying the working currents and means for commutating the currents flowing through said coils and a tertiary coil of relatively low resistance magnetically associated with said working coils, the method consisting in closing the circuit through said tertiary coil during the commutation of said working currents.

1,577,686. FLOAT-OPERATED CIRCUIT CLOSER. THEODORE V. BEETEM, New Philadelphia, Ohio. Filed July 24, 1924. Serial No. 727,981. 1 Claim. (Cl. 200—84.)

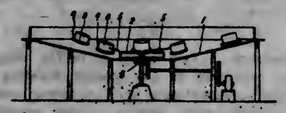
In combination, a fuel tank, a casing disposed upon the tank, a partition in the casing dividing the same into an upper compartment and a lower compartment, said upper compartment having a vent opening, a tube extending through the partition, through the lower compartment, and a distance down into the tank, a rod slidable through the tube, a float on the rod within the tank, an abutment on the rod within the upper compartment of the casing, a normally opened circuit closer in the lower compartment of the casing, a sleeve extending through the partition, a plunger slidable through the sleeve and having one end in the path of the movement of the abutment in the upper compartment and having its other end adapted for engagement with the circuit closer in the lower compartment so that when the float recedes to a predetermined level, said abutment will engage the plunger to actuate the circuit closer to a closed position.

1,577,687. UTILITY TOOL FOR AUTOMOBILES. HARRY H. BUSS, Merrill, Wis. Filed Feb. 2, 1925. Serial No. 6,341. 1 Claim. (Cl. 137—139.)



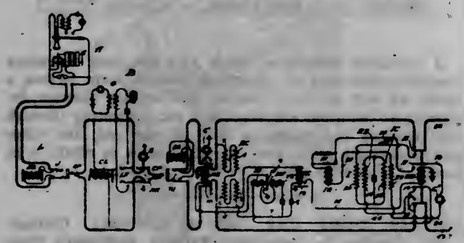
A combined measuring stick and pet cock operating member comprising an elongated wooden strip having a notch at one end and having graduations thereon beginning at the other end thereof, a pin projecting through said member and having a head at one end, the other end of said pin being bent at right angles to retain it in position in pivotal relation to the said stick.

1,577,688. DUMP CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 20, 1922. Serial No. 532,788. 12 Claims. (Cl. 105—306.)



1. In a car provided with a hopper defined by side and bottom hopper sheets, the outer side hopper sheet forming a corner with the bottom sheet at the discharge opening, and a pivoted door to close said opening: the com-

bination with a bracket having integral portions thereof secured to said bottom and side wall sheets at the intersecting corner; of a latch movably mounted on said

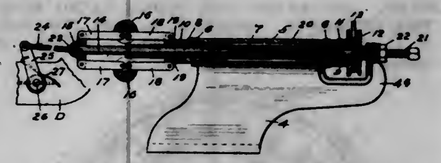


bracket, said latch being adapted to cooperate with a member rigid with the door to lock the latter in closed position.

1,577,689. APPARATUS FOR AMUSEMENT PURPOSES. CELESTE CAPITELLI, Margate, England. Filed Oct. 7, 1924. Serial No. 742,147. 2 Claims. (Cl. 272—35.)

1. An apparatus for amusement purposes including a conical stationary platform over which freely movable cars are adapted to be impelled, a circular rotating device centrally disposed with respect to said conical platform, a plurality of cars rotatable with said rotating device for imparting movement to said first-mentioned cars, a plurality of flexible members, one for each of said second-mentioned cars, constituting each a deformable and direct connection between its car and said circular rotating device, said flexible members connected to said rotating device at points spaced short angular distances apart and of such length as to prevent jamming of any of the freely movable cars between the rotating device and the connected cars.

1,577,690. COMPOSITE RINGER CIRCUITS. ORMOND F. CARRADAY, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed May 21, 1919. Serial No. 298,765. 11 Claims. (Cl. 179—4.)

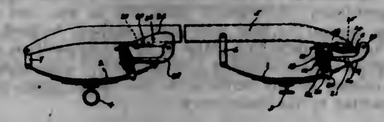


2. A system of the character described including a trunk circuit terminating in a pair of terminals, a high frequency generator connected in circuit with said trunk circuit, a high frequency relay and an alternating current relay in multiple circuit at each end of said trunk circuit, said relays being connected in circuit with said trunk circuit, a normally energized relay at each end of said trunk circuit, a central office call signal connected to one of said terminals, means controlled by said normally energized relay of said one terminal for operating said call signal, a low frequency generator associated with the other of said terminals, means for applying current from said last generator to said trunk circuit, a pair of switching relays for said trunk circuit, means including one of said alternating current relays and one of said switching relays controlled by said application of current for connecting said high frequency generator to said trunk circuit to operate the high frequency relay at the other end to effect said energized relay of said one terminal to connect said first means in circuit with said call signal whereby said call signal is caused to operate, telegraphic instruments connected to each conductor of said trunk circuit, and means for so connecting said instruments that they are unaffected by the current from the said generators.

1,577,691. GOVERNOR. LINCOLN H. CLEMENTS, Clements, Minn. Filed Mar. 18, 1925. Serial No. 15,403. 1 Claim. (Cl. 264—15.)

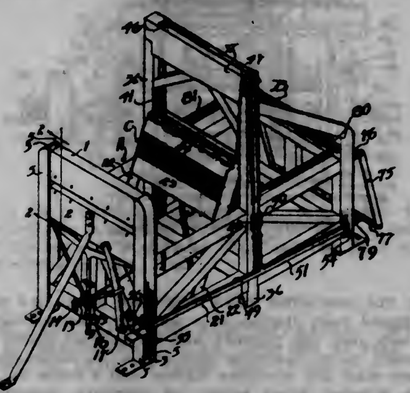
A governor for internal combustion engines, comprising a standard secured to the engine on one side thereof, a sleeve rotatable in the standard, operative connection between the forward end of the sleeve and the fan shaft of the engine, a rod slidable in and projecting rearwardly from the sleeve, governor balls and links connecting said balls to said sleeve and said rod, a spring for yieldingly pressing the rod rearwardly, and means connected with said rod and operated thereby for controlling the volume of gas consumed by the engine.

1,577,692. GOVERNOR FOR INTERNAL-COMBUSTION ENGINES. LINCOLN H. CLEMENTS, Clements, Minn. Filed Aug. 24, 1925. Serial No. 51,992. 2 Claims. (Cl. 264—3.)



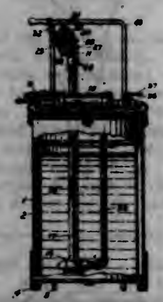
1. A governor for internal combustion engines, comprising a standard secured to the engine on one side thereof, and having a goose neck extension forming a U-shaped opening in its forward end, a sleeve rotatably secured in the standard and extending with its fore end into said opening, means on said fore end of the sleeve for rotating the same, a weight actuated rod in the sleeve and associated with a gas valve in the engine, a spring in the sleeve for resisting the forward motion of the rod, and a set screw threaded in said goose neck extension and extending into the sleeve for adjusting said spring.

1,577,693. SHOCK ABSORBER. COLIN B. DALE, Milwaukee, Wis. Filed May 5, 1921. Serial No. 467,147. 3 Claims. (Cl. 267—17.)



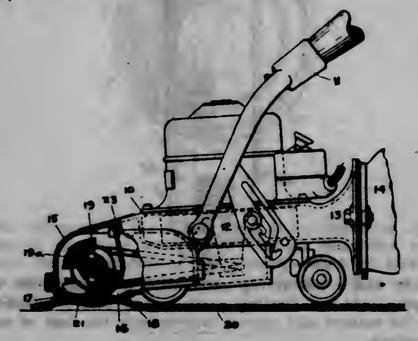
1. A shock absorber for an automobile having a chassis and a main spring, said shock absorber comprising a

member adapted to be secured to the chassis, a lever pivotally secured at one end to said member and adapted to be pivotally secured intermediate its ends to the main spring, a helical spring upon each side of said lever and



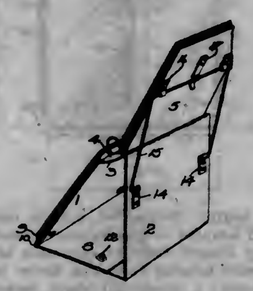
engaged therewith, the spring upon one side of said lever being secured to said member and the spring upon the other side of said lever being engaged with said main spring.

1,577,694. WIRE-WEAVING LOOM. JOHN J. DANNER, St. Paul, Minn. Filed Apr. 5, 1924. Serial No. 704,392. 1 Claim. (Cl. 139—33.)



A wire weaving loom of the character described, comprising a frame, a pair of reciprocable heddles mounted upon the frame, lever means for manipulating the heddles, releasable locking means to lock the heddles in alternately raised and depressed position, a batten pivotally connected to the frame, and clamp means having teeth pivotally connected to a support member removably mounted on the clamp means.

1,577,695. DISPENSING MACHINE. EDWIN B. DAVENPORT, Ross, Calif. Filed Oct. 20, 1923. Serial No. 669,678. 1 Claim. (Cl. 221—80.)



A dispensing machine for semifluid materials comprising a portable receptacle having a removable cover, a pump within said receptacle, a measuring chamber horizontally mounted upon said cover, a pipe line leading from said pump to said measuring chamber, a piston reciprocating within said measuring chamber, a piston rod carried by said piston and ratchet mechanism carrying indicating means disposed in a plane parallel to said cover and adapted to be operated by said piston rod.

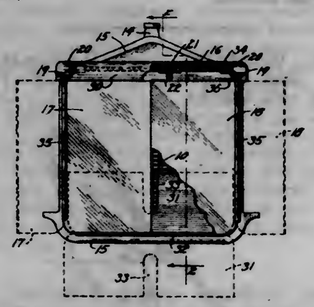
1,577,696. SUCTION CLEANER. HARRY S. DEMAREE, Chicago, Ill., assignor to The Hoover Company, a Corporation of Ohio. Filed Feb. 1, 1923. Serial No. 616,384. 5 Claims. (Cl. 15—157.)

8. In combination with a suction cleaner, having a brush chamber provided with an inlet mouth, a series of guards secured at one end to the brush housing near the inlet mouth and at the other end to the top wall of the brush housing.

1,577,697. PORTFOLIO. JAMES D. DOUGLAS, Detroit, Mich. Filed Sept. 21, 1925. Serial No. 57,538. 6 Claims. (Cl. 129—1.)

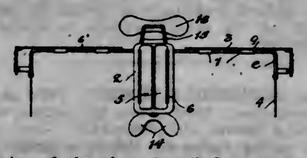
1. A portfolio comprising two cover members connected at their inner ends and adapted to open so that their outer surfaces are towards one another thereby forming two sides of a triangle, an element flexibly mounted in proximity to the inner end of one of the cover members and adapted to assume an upwardly inclined position, means for holding said element in said upwardly inclined position, and means for holding the outer ends of the cover members in spaced relation to one another.

1,577,698. SUSPENSION SPRING. JOHN A. ESSELS, St. Louis, Mo. Filed June 13, 1922. Serial No. 568,028. 2 Claims. (Cl. 267—74.)



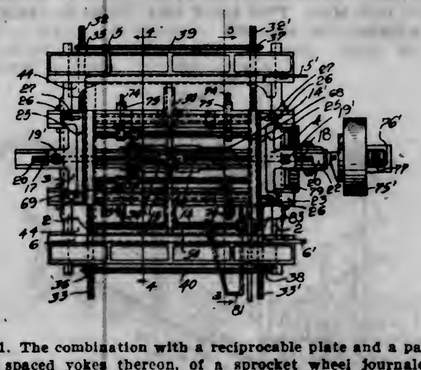
1. In a spring suspension device, a single length of wire bent at its middle to form an enclosed eye portion of restricted diameter and extending outwardly and angularly from said eye portion to complete a U-shaped

frame member, a similar U-shaped frame member telescopingly assembled with said first-mentioned member, said members having their legs juxtaposed and slidably interengaging and with their eye forming portions spaced



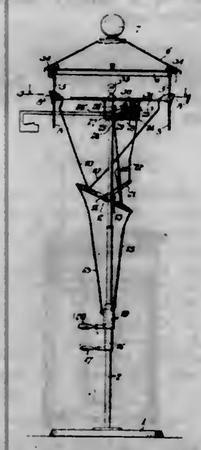
apart, and a coil spring terminating in hooked ends engaging said eye forming portions and thereby centered by its tension and spaced intermediate the legs of said members.

1,577,699. AIR CONTROL FOR VEHICLE RADIATORS. BENJAMIN O. EDGERTON, Denver, Colo. Filed Apr. 29, 1924. Serial No. 709,812. 4 Claims. (Cl. 257—132.)



3. An air control device for vehicle radiators comprising a shell adapted to fit over and around said radiator; vertically hinged doors at each side of said radiator; a horizontal housing extending across said radiator above said doors; a horizontal shaft contained within said housing and operatively connected to said doors and means for operating said shaft from the driver's position in said vehicle.

1,577,700. VISION DEFLECTOR. ARTHUR JAMES EDWARDS, Toronto, Ontario, Canada. Filed Apr. 12, 1924. Serial No. 706,024. 5 Claims. (Cl. 2—12.)

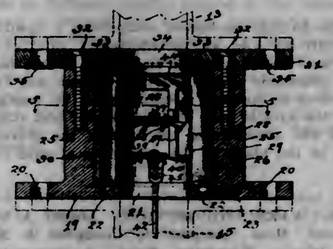


1. A device of the class described comprising a substantially vertically disposed elongated nose plate intended to be located when in use in front of the nose; a pair of elongated deflectors each hinged at its rear longitudinal edge to said nose plate to extend longitudinally thereof and so as to be moved each in a substantially horizontal plane, said deflectors being located substantially equidistant of the vertical centre of said support, and positioned convergently when not in use, and supporting means for said nose plate adapted to hold the same and said deflecting plates in operative position, said supporting means including a frame-work, a nose-engaging plate carried by the frame-work, and ear-engaging members carried by the frame-work.

1,577,701. WOODWORKING MACHINE. OSCAR G. EDMOND, Spokane, Wash., assignor of one-half to White Pine Sash Company, Spokane, Wash. Filed July 25, 1924. Serial No. 728,246. 3 Claims. (Cl. 144—291.)

1. The combination with a reciprocable plate and a pair of spaced yokes thereon, of a sprocket wheel journaled in each yoke and provided with an internal thread, a sprocket chain connecting said wheels, an intermediate power shaft and eccentrics thereon, and a screw bar in each sprocket wheel having an operative connection with an eccentric.

1,577,702. TRAFFIC SEMAPHORE. ANNA ESTELLE ENGLISH, Philadelphia, Pa. Filed Mar. 24, 1923. Serial No. 627,268. 5 Claims. (Cl. 116—63.)



3. A traffic semaphore comprising a casing having walls provided with directional indicia, shutters hinged relatively to said walls and superposable thereon, a fulcrumed lever, links connected with shutters aforesaid and with said lever on one side of said fulcrum, and links connected with shutters aforesaid and with said lever on the other side of said fulcrum.

1,577,703. METHOD OF CLEANING AND CHARGING AIR FILTERS. JOHN H. FLEMING, New York, N. Y. Filed Oct. 17, 1925. Serial No. 63,201. 2 Claims. (Cl. 183—44.)

1. The process of washing and charging air filter mediums by alternately subjecting the top and bottom of the same to a spray of water and then to a spray of viscous material.

1,577,704. VAPORIZER AND SEPARATOR. EDWARD R. FLEMING, Baltimore, Md. Filed Mar. 11, 1925. Serial No. 14,761. 8 Claims. (Cl. 48—180.)

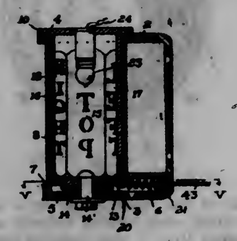
1. In a vaporizer for internal combustion engines that employ a carbureter and a throttle valve mechanism, the combination with a cylindrical structure through which the mixture from the carbureter passes said structure having rotary means for whirling the mixture, screen means in said structure through which the mixture is passed to separate condensed particles of liquid therefrom and means actuated by the throttle-valve mechanism for varying the size of the passage in said cylindric structure as the throttle valve is moved.

1,577,705. ROLLER BEARING. JOHN F. FOSTER, Fort Madison, Iowa. Filed Oct. 8, 1923. Serial No. 667,195. 3 Claims. (Cl. 308—216.)

1. A roller bearing, comprising outer and inner bearing members, an outer shell between said bearing members, an inner shell within said outer shell, said inner and outer shells being formed with a series of openings, a series of rollers mounted in said openings, the openings in said inner shell being of width substantially equal to the diameters of the rollers, and the openings in the outer shell being provided with flanges for preventing

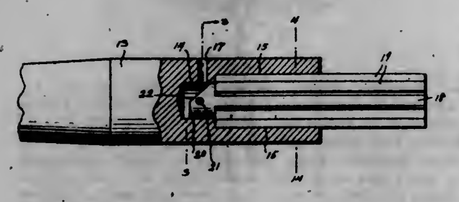
the ejectment of the rollers from their respective openings in the inner shell and to support said inner shell with the medial line of the opposite edges of each of its openings in substantially the circular plane of the axes of the rollers.

1,577,706. PUMP ATTACHMENT. BERT C. FOWLER, Huntington Beach, Calif. Filed Mar. 5, 1924. Serial No. 697,082. 6 Claims. (Cl. 103—180.)



1. In a pump, a relatively movable fluid pumping element, a relatively stationary standing valve having a movable valve stopper, and fluid pressure means operated by the movable element and adapted to move the stopper,

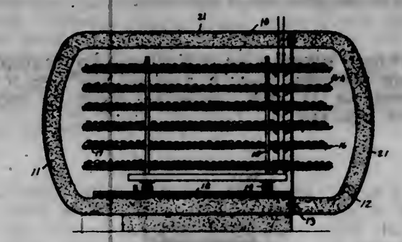
---



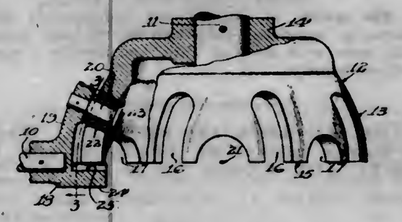
1,577,707. SIGNALING DEVICE FOR MOTOR VEHICLES. JAMES A. FOX, Warren, Ohio. Filed Mar. 24, 1924. Serial No. 701,821. 1 Claim. (Cl. 116—63.)

In combination, a signaling apparatus for motor vehicles comprising a bracket including a horizontally disposed upper arm and a horizontally disposed lower arm, said upper arm having an enlarged outer end formed with a large opening and said lower arm having

an enlarged outer end, a cylindrical casing mounted on the said enlarged outer end of said lower arm and extending vertically into the said opening in the enlarged outer end of said upper arm, said casing provided with a pair of vertically extending lenses disposed diametrically relatively to each other on respective front and rear sides of said casing, a vertically disposed cylinder mounted in said casing and rotatably connected to the said enlarged outer end of said lower arm, said cylinder hexagonal-shaped in transverse cross section, corresponding signal designations formed on each pair of diametrically opposed side walls of said cylinder, a cover plate for said casing secured to the enlarged outer end of said upper bracket arm, an illuminating lamp carried by said cover plate and depending into said cylinder, a spring member carried in said lower bracket arm and connected with said cylinder for normally maintaining a pair of opposed designations in registration with said lenses means for shifting said cylinder in said casing to selectively position the other of said designations in registration with said lenses, means for illuminating said lamp, and means for limiting the shiftable movement of said cylinder in said casing, substantially as described and for the purpose set forth.

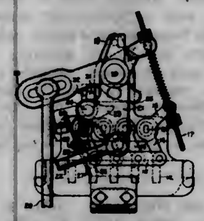


1,577,708. SECTIONAL JOINT. ERNEST W. GALLENKAMP, Connersville, Ind. Filed Oct. 6, 1923. Serial No. 666,953. 3 Claims. (Cl. 287—53.)



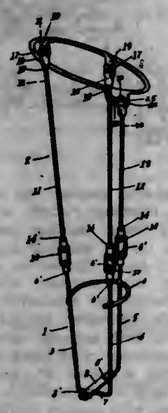
1. In a vehicle axle, a main body formed at its end with an axial socket and having a plurality of grooves in the wall thereof, said grooves terminating at a point short of the bottom of the socket, the body having a transverse hole leading into the ungrooved portion of the socket, a ribbed stub engaged within the grooved portion of the socket and having a reduced smooth extension fitting within the ungrooved portion of the socket, the extension having a beveled face opposite said transverse hole, and a removable pin extending transversely through the body and the extension at right angles to said hole and serving to prevent longitudinal movement of the stub, said hole serving to permit the insertion of a punch adapted to be engaged with said beveled face for driving out the stub.

1,577,709. VACUUM DEHYDRATOR. CHARLES E. GLESSNER, Portland, Oreg. Filed July 21, 1923. Serial No. 652,919. 1 Claim. (Cl. 34—30.)



The combination of a vacuum pump with a concrete container of sufficient strength and density to withstand atmospheric pressure, and an electrically heated truck provided with shelves adapted to transport food to and from said container and to hold said food during the drying operation.

1,577,710. MECHANICAL MOVEMENT. MORRIS GOLDBERGER, Chicago, Ill., assignor to Cresco Creamery Supply Co., Chicago, Ill., a Corporation of Illinois. Original application filed Feb. 5, 1921, Serial No. 442,738. Divided and this application filed Mar. 8, 1922. Serial No. 541,966. 9 Claims. (Cl. 74—7.)

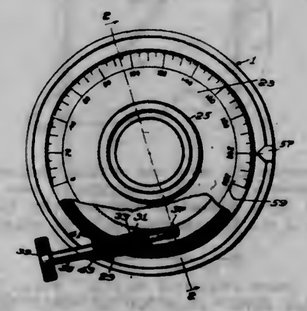


1. A mechanical movement comprising a continuously rotative driving and an intermittently rotative driven element, said driven element embracing a unit having a series of angularly spaced driving recesses, and the said driving element having a crank stud to engage said recesses, the axes of said driving element and stud being radial to and intersecting the axis of the driven unit, which is in the plane of the open ends of said recesses.

1,577,711. WARP STOP MOTION. ALBERT A. GORDON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed June 25, 1924. Serial No. 722,410. 1 Claim. (Cl. 139—360.)

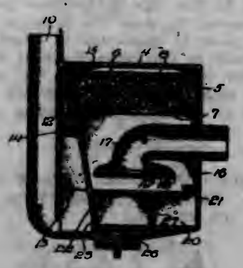
In a warp stop motion, a regularly moving actuator traveling in a fixed path, a pivotally mounted knock-off lever, a pawl pivoted to the lever and normally lying in the path of the actuator, a fixed abutment, means to move the pawl out of the path of the actuator under normal conditions at the beginning of the stroke of the actuator and to permit the pawl to remain in the path of the actuator at warp fault to cause said lever to be moved with the actuator, the movement of said lever with the actuator carrying the pawl against the abutment to move the pawl out of the path of the actuator as the latter nears the end of its working stroke.

1,577,712. FRACTURE FRAME. JAMES M. GRAHAM, Atlanta, Ga. Filed May 9, 1923. Serial No. 637,739. 5 Claims. (Cl. 128—85.)



1. In a device of the class described, comprising a frame extending from the region of the pelvis to and across the sole of the foot, means for releasably attaching the foot to said frame, means for arbitrarily extending said frame, including two removably attached extension rods of different lengths located at the front of the frame and a shorter rod spaced rearwardly therefrom and located midway therebetween, a ring adapted to receive the thigh of the leg and abut against the trunk of the body, a laterally adjustable pivotal connection between said ring and said shorter rod, and a detachable connection between each of said extension rods and said ring whereby said extension rods may be detached and interchanged.

1,577,713. DIRECTION INDICATOR. THOMAS H. HALE, Spokane, Wash. Filed Mar. 2, 1925. Serial No. 12,541. 2 Claims. (Cl. 116—54.)

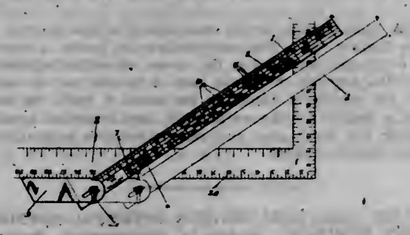


1. A direction indicator comprising a support, a housing secured thereto, a rock shaft journaled through said support and having a bearing in a part of said housing, an extension formed laterally on said rock shaft, a semaphore arm mounted in said extension, an operating handle connected to said rock shaft at one side of said support, means for adjusting said operating handle longitudinally of said rock shaft, and a spring detent carried by said support for engaging said rock shaft extension to retain the semaphore arm in any of a plurality of positions.

1,577,714. RADIO TUNING DEVICE. ARTHUR C. HAYDAN, Brockton, Mass. Filed Apr. 27, 1925. Serial No. 26,022. 6 Claims. (Cl. 74—7.)

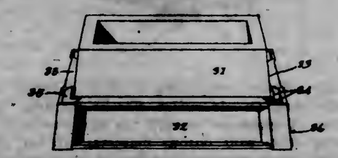
4. A radio tuning device comprising a base having a recess therein and a rim surrounding the recess, a worm and worm gear mounted in the recess, an adjusting shaft projecting through the worm gear, a handle fast on said shaft for rotatively adjusting the same, a shaft for the worm, a handle for the worm shaft, and frictional means whereby the worm gear may impart rotative adjustment to the adjusting shaft.

1,577,715. AIR CLEANER FOR INTERNAL-COMBUSTION ENGINES. ROBERT O. HENDRICKSON, Racine, Wis., assignor to J. I. Case Plow Works Company, Racine, Wis., a Corporation of Delaware. Filed Apr. 20, 1921. Serial No. 463,074. 5 Claims. (Cl. 183—45.)



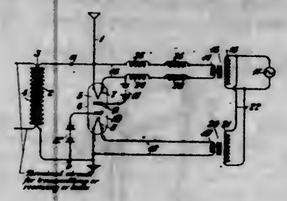
1. An air cleaner comprising a filter chamber having an air inlet and an air outlet, fibrous material in said chamber, an oil chamber beneath the same to receive the oil dripping from said fibrous material, an air passage adjacent the oil chamber and leading to the chamber containing the fibrous material, there being an unobstructed passage for oil between said chamber and said air passage, and an outlet for air intermediate the filter and oil chamber.

1,577,716. PROTECTOR FOR SHOES AND STOCKINGS. RUTH HERRICK, Minneapolis, Minn. Filed Oct. 27, 1924. Serial No. 746,012. 3 Claims. (Cl. 36—72.)



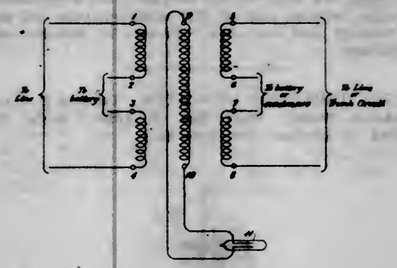
1. A protector for shoes and stockings adapted to be worn underneath overshoes comprising a boot of thin fabric and tapes secured to opposite sides thereof in position to be tied over the stocking of the wearer.

1,577,717. ROOF-FRAMING SCALE. FRANK F. HIBBARD, Lodi, Calif. Filed Oct. 29, 1923. Serial No. 671,311. 1 Claim. (Cl. 33—94.)



A roof-framing calculator for use in connection with an ordinary carpenter's square comprising a scale calibrated along one edge to correspond with the edge calibrations on the square, rows of figures under the edge calibrations precalculated to represent hip rafter lengths of different pitches corresponding to main rafter lengths as determined by the edge calibrations and a pair of indicia numbers on the scale for each row of figures; said numbers being in proportion to lengths along the legs of the square so that when the scale is laid across the square and its edge intersects the edges of the square-legs at such lengths, the scale will be disposed on the square at an angle corresponding to a desired pitch of roof.

1,577,718. MOLD CONTAINER. JAMES F. HINES, Lakewood, Ohio. Filed Jan. 2, 1926. Serial No. 78,796. 11 Claims. (Cl. 22—116.)

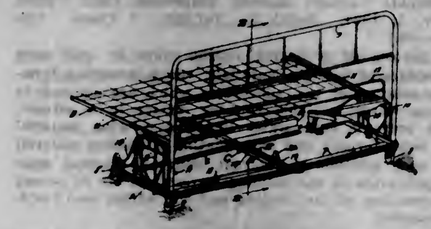


1. A joint securing together two substantially non-integrated members of a metal mold container, comprising cooperating joint sections formed one on each of said members, and abutting, and formed to provide a recess between said sections, and a metal tie cast in said recess and effective alone to hold said members firmly and fixedly rigidly assembled.

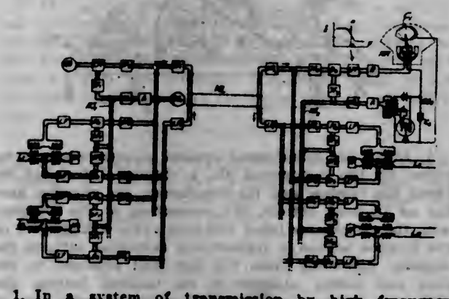
1,577,719. ELECTRICAL PROTECTIVE DEVICE. WILLIAM H. T. HOLDEN, Brooklyn, N. Y., assignor to American Telephone & Telegraph Company, a Corporation of New York. Filed Dec. 30, 1922, Serial No. 609,889. Renewed Oct. 9, 1925. 9 Claims. (Cl. 250—20.)

1. In a radio signaling system, the combination with an antenna, of a terminal circuit, a coupling transformer having an antenna winding connected with the said antenna and a circuit winding connected with the said terminal circuit and a thermionic protective device bridged across the said antenna winding, the said protective device having an evacuated sealed envelope containing a cathode individual to and connected with each terminal of the said antenna winding, a grid individual to and connected with each terminal of the said antenna winding, a source of current for heating said cathodes, a source of potential to negatively bias each of the said grids with respect to the nearer cathode and means to prevent the flow of antenna currents over the circuit connecting the said source of heating current with the said cathodes.

1,577,720. ACOUSTIC SHOCK ABSORBER FOR TELEPHONE LINES. WILLIAM H. T. HOLDEN, Brooklyn, N. Y., assignor to American Telephone & Telegraph Company, a Corporation of New York. Filed May 29, 1924. Serial No. 714,696. 10 Claims. (Cl. 179—78.)



1. In association with a telephone line, a repeating coil comprising a plurality of talking windings of relatively low impedance and an additional winding of relatively high impedance, and a discharge device connected across the terminals of the high impedance winding.



1,577,721. BED CONSTRUCTION. VERNE LAWRENCE HOLMES, Los Angeles, Calif. Filed Jan. 17, 1924. Serial No. 686,705. 2 Claims. (Cl. 5—168.)

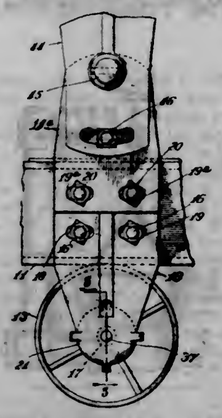
1. In a folding bed having a carriage and a bed frame pivotally secured thereto, a horizontal stabilizing

leg pivoted intermediate its ends on said carriage, said leg having a supporting foot at one end and an offset abutment at the other end, said abutment being disposed to be engaged by said bed frame on raising the latter and to retract said leg, and means tending to project said leg into supporting position.

1,577,722. GENERATION AND CONTROL OF ELECTRIC WAVES. JOSEPH W. HORTON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 24, 1922. Serial No. 556,179. 14 Claims. (Cl. 179—15.)

1. In a system of transmission by high frequency waves, the method of coordinating separate wave sources in separate stations comprising modulating a wave derived from a source at a sending station by a relatively low frequency wave, transmitting the wave so modulated to a distant receiving station, demodulating the received wave by combining it with a wave derived from a source at the receiving station to produce a low frequency wave having a normal frequency when said sources are in exact synchronism and a frequency different from normal when said sources are out of synchronism, and controlling the frequency of the wave generated at said receiving station in accordance with deviations of the demodulated low frequency wave from its normal frequency.

1,577,723. PROCESS OF MAKING ORGANIC-ACID SOAP FROM MINERAL OILS. HOWARD M. HUGHES, Chester, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed July 2, 1918. Serial No. 242,969. 3 Claims. (Cl. 87—9.)

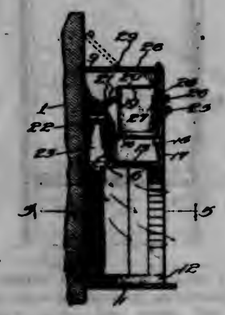


1. The process of making cutting oil exclusively from mineral oil which comprises distilling from crude petroleum a relatively heavy distillate adapted for lubricating oil stock, treating the same with a mineral acid, drawing off the precipitate, treating the remaining body of acid-containing oil with an alkali, separating out the precipitated emulsion comprising soap, salt water, and some free alkali and unsaponifiable mineral oil, decomposing the soap with a relatively weak solution of a mineral acid, separating out the precipitate of water and salts, saponifying the remaining product, and mixing it with mineral oil, thereby producing a cutting oil which, when mixed with water, forms a milk-white and substantially perfect emulsion.

1,577,724. DISPLAY STAND FOR SOAP BOXES. WALTER S. JENKINS, Brooklyn, N. Y., assignor to Colgate & Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 4, 1925. Serial No. 48,025. 2 Claims. (Cl. 211—24.)

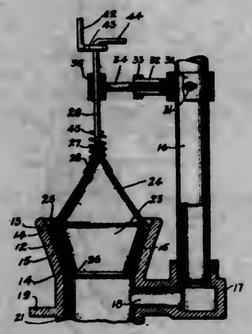
2. A display stand adapted to support a soap box or the like, comprising two units, each embodying two vertical bars and upper and lower cross members, a cross member of one unit being adapted to interlock with a corresponding cross member of the second unit, so that the units may be rigidly connected or separated at will, a vertical bar of one unit being formed with a longitudinal channel, and a vertical bar of the second unit being formed with a like channel, and a sheet or panel removably fitted within said channel.

1,577,725. TROUGH BELT CONVEYER. FRANK JONES, Salt Lake City, Utah, assignor, by mesne assignments, of one-half to Inland Engineering Company, a Corporation of Illinois. Filed Sept. 7, 1923. Serial No. 661,398. 4 Claims. (Cl. 198—192.)



1. In a conveyer apparatus, the combination with a flexible belt of a main frame, a plurality of angularly disposed revoluble members for supporting the belt, a transverse frame member on which said revoluble members are supported, brackets longitudinally adjustable on the main frame, and brackets depending from the transverse frame and pivotally secured to the first men-

tioned brackets, whereby the angularly disposed revoluble members may be adjusted longitudinally of the belt and also rotatably adjusted about a transverse horizontal axis.

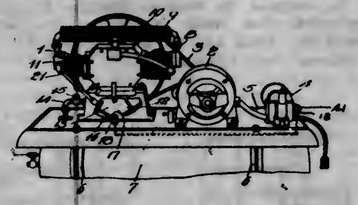


1,577,726. [WITHDRAWN.]

1,577,727. COMBINATION FIREPLACE AND CONTAINER FOR RADIO RECEIVING SETS. FRED W. KARGE, Chicago, Ill. Filed Apr. 20, 1925. Serial No. 24,711. 3 Claims. (Cl. 250—16.)

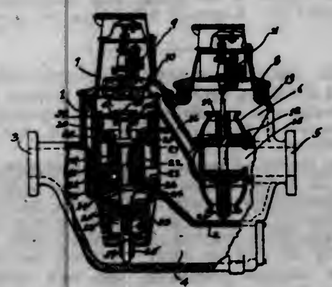
1. A construction of the character described, comprising front and side walls and arch of a fireplace, a supporting structure above the arch for a radio receiving set and accessories, manually operable regulating means for the set mounted on the exposed surface of a wall of said fireplace having connections through the wall with said accessories, and an amplifying device connected with the set for discharging sound into the space formed by the arch.

1,577,728. FLUSH-TANK-VALVE MECHANISM. JACOB S. KATZIN, Newark, N. J., assignor of one-half to Morris Mandelstein, Newark, N. J. Filed Apr. 17, 1925. Serial No. 23,782. 2 Claims. (Cl. 4—56.)



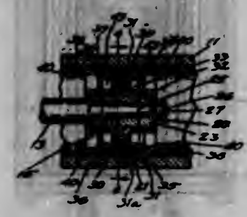
1. In a flush tank, the combination of a frusto-conical valve having seating rings at the upper and at the lower ends thereof, a frusto-conical valve seat within which said valve is arranged to seat and with the ring portions thereof alone in contact with said seat, and means for mounting said valve axially of said seat and to permit the same to be lowered thereinto through the operation of gravity upon the valve.

1,577,729. PROCESS FOR THE PRODUCTION OF LASTING COLORED STAINS IN AND UPON THE SURFACE OF CEMENT OR OTHER BUILDING MATERIAL. JULIUS KOENIG, Hollywood, Calif. Filed Nov. 1, 1924. Serial No. 747,398. 1 Claim. (Cl. 91—68.)



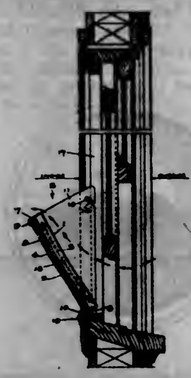
A process of producing lasting stain in and upon the surface of building materials, which comprises forming a solution of two substances which are adapted to form a water insoluble coloring matter in a solvent, which prevents such water insoluble coloring material from being formed, and impregnating a building material with such solution, the solvent being one adapted upon its application to the building material to act to permit the formation of the coloring material within said building material.

1,577,730. AIR-COMPRESSING SYSTEM. HORACE H. KOUKA, Chicago, Ill., assignor to Champion Pneumatic Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1920. Serial No. 403,466. 3 Claims. (Cl. 230—6.)



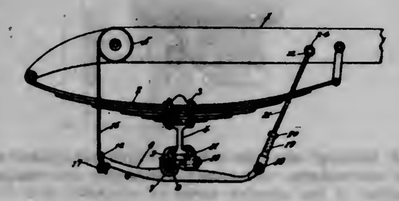
1. In an air compressing system, a compressor, a receiver for the compressed air, a chamber interposed between the receiver and the compressor, the chamber having an inclined bottom, the connection of the chamber with the compressor being arranged above a high part of the inclined bottom, a transversely extending baffle in the chamber depending from the top wall adjacent to the inlet and ending adjacent to the inclined bottom, the outlet for the receiver arranged on the opposite side of said baffle to cause the air to flow in contact with the inclined bottom and to deposit thereon any carried liquid, and means for discharging collected liquid from said chamber.

1,577,731. COMPOUND METER VALVE. EMIL M. KRUEGER, Milwaukee, Wis., assignor to Badger Meter Mfg. Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 23, 1921. Serial No. 479,769. 4 Claims. (Cl. 73—167.)



1. In a meter mechanism, a valve casing provided with a pair of axially aligned valve seats and with a port between said seats, a tubular valve adapted to rest simultaneously upon both seats and provided with end faces of different diameters whereby said valve will normally be held upon its seats by liquid pressure, and an auxiliary valve operable by a predetermined flow of liquid thru the tubular valve to close the passage therethru, whereby the pressure upon the larger face of said tubular valve will be cut off.

1,577,732. PISTON FOR SLUSH PUMPS. CHARLES LAMB, Los Angeles, Calif., assignor to West American Rubber Company, Inc., Los Angeles, Calif., a Corporation of California. Filed Sept. 14, 1925. Serial No. 56,205. 8 Claims. (Cl. 74—109.)



1. In a pump piston, the combination of: a metallic hub comprising a cylindrical nave and a radial flange extending from said nave; and a packer moulded on said hub comprising an inner band formed around said nave, a radial wall enclosing said radial flange, and a peripheral wall formed at the outer part of said radial wall.

1,577,733. DRAFT DEFLECTOR FOR WINDOWS. JAMES B. LAMONT and FERDINAND A. LORENZ, San Francisco, Calif. Filed Jan. 31, 1925. Serial No. 6,093. 1 Claim. (Cl. 98—31.)

In a device of the character described, comprising, in combination with a window casement, attaching-screws mounted in the casement frame, and a pair of slidable frames carrying window panes, said frames comprising end pieces and connecting pieces, triangular end brackets carried by the outer end pieces, said outer end pieces being offset with respect to their respective connecting pieces and thereby adapted to lie in a common plane when telescoped or extended, one of said frames being provided with channelled guide-ways secured to its upper and lower edges to receive the other of said frames, one of said frames being provided with a stop-pin adapted to extend into the path of the end-piece of the other frame to limit the movement of said frames relative to each other, said triangular brackets being provided at their upper edges with obliquely arranged slots open at their outer ends and adapted for adjustable engagement with said attaching-screws.

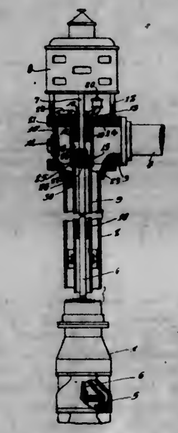
1,577,734. SHOCK ABSORBER. RUPERT H. LANGDALE, Cincinnati, Ohio. Filed Feb. 21, 1925. Serial No. 10,960. 8 Claims. (Cl. 267—10.)

1. In a mounting device in combination with a shock absorber on a vehicle, a lever with means for mounting the fulcrum of said lever on the axle of the vehicle, the one arm of the lever adapted to retain the resilient connecting member of the shock absorber, and the other arm of the lever adapted to retain one end of an adjustable rod with means for pivotally mounting the other end of said rod in a desired position on the frame of the vehicle.

1,577,735. VALVE-TRUING TOOL. EDWARD LAPARLE, Oakland, Calif. Filed Aug. 27, 1919. Serial No. 320,235. 1 Claim. (Cl. 82—1.)

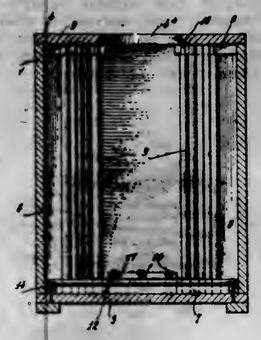
A valve truing tool comprising a pair of jaws pivotally connected adjacent one edge and arranged to be longitudinally disposed along the valve stem, a plurality of longitudinally spaced teeth on the inner side of each jaw arranged to cooperatively engage only full-sized portions of said stem throughout its length, the teeth of each jaw being arranged to engage in the spaces between the teeth of the other jaw, a cutting member adjustably secured to one end of one of said jaws and having its cutting portion positioned to lie in the path of the valve face when the valve is operatively held in the tool, means resiliently urging said jaws apart a single means for holding said jaws together to retain the teeth in engagement with said stem and means provided on the jaw carrying said cutting member for limiting the movement of the valve against said cutting member.

1,577,736. SHORT CIRCUITER. EVERETT P. LARSH, Dayton, Ohio. Filed Feb. 15, 1924. Serial No. 693,020. 7 Claims. (Cl. 172—279.)



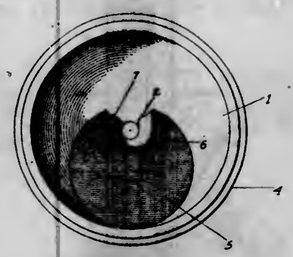
1. In a short circuiter for motor commutators, an annular series of weights disposed concentrically and radially in relation with the armature shaft, and movable radially in relation thereto under centrifugal influence, a flexible contractile band circumferentially sur-

rounding the series of weights against the tension of which the weights move radially under centrifugal influence to effect the short circuiting of the commutator.



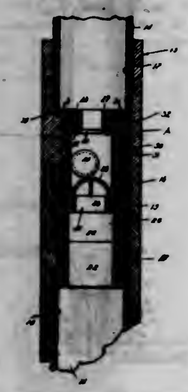
and a yielding mounted indexible band interposed between the weights and spring restraining the unequal distension of the annular series of weights.

1,577,737. MEANS FOR FACILITATING THE REMOVAL OR DISASSEMBLING OF ROTARY PUMP MECHANISM. MARLON E. LAYNE, Houston, Tex., and SAMUEL N. HALL, South Pasadena, Calif., assignors to Layne & Bowler Corporation, Los Angeles, Calif., a Corporation of California. Filed June 23, 1924. Serial No. 721,746. 3 Claims. (Cl. 103—102.)



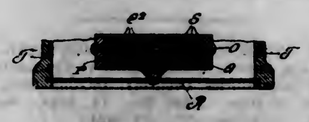
1. In a deep well rotary pump mechanism, the combination of a rotary pump, a discharge casing suspending the pump and extending vertically, a pump shaft extending vertically from the pump and within the discharge casing, a casing enclosing the pump shaft, a discharge head connected to the upper end of the discharge casing, an electric motor mounted upon the casing head and having a motor shaft axially aligned with the pump shaft, means connecting the motor shaft to the pump shaft, said means being disposed within the discharge head, a detachable packing box connected to the upper end of the shaft-enclosing casing and forming a cap for the discharge head, said packing box being upwardly movable to permit the coupling of the pump shaft and motor shaft, the casing head being provided with a wrench-admitting opening.

1,577,738. CONTAINER. CHARLES LEFKOWITZ, Newark, N. J. Filed Mar. 7, 1925. Serial No. 13,678. 6 Claims. (Cl. 217—52.)



1. A container provided with retainers comprising blocks located in the corners at the bottom thereof, said retainers having annularly disposed openings, retainers comprising blocks located in the corners at the top of the container provided with annularly disposed openings, and bars vertically disposed within the container and having their ends located in the corresponding openings of the retainers.

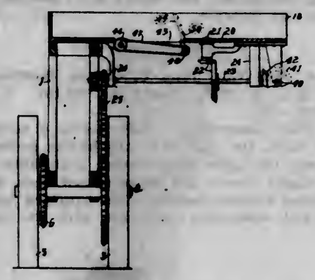
1,577,739. HEADLIGHT REFLECTOR. HARRIS F. LOUKES, Stockton, Calif. Filed May 2, 1925. Serial No. 27,445. 1 Claim. (Cl. 240—41.)



A headlight reflector comprising a main parabolic member having a central opening to receive the socket of a light bulb, said bulb being arranged to be disposed inwardly of the reflector and being larger than said opening, an auxiliary flat reflecting element extending transversely of the main reflector from a point above the light therein toward the bottom rim of said main reflector; said auxiliary reflector at its upper end being cut away to form a U-shaped opening of greater width than the light, and whose lower periphery is concentric with the central opening in the main reflector, and a reflecting surface extending straight from the edges of said U-shaped opening to said central opening.

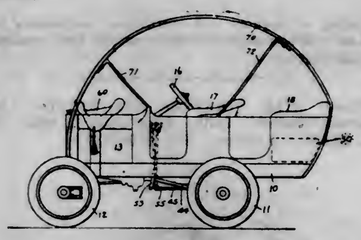
1,577,740. DEVICE FOR USE IN CONNECTION WITH DRILLING TOOLS. HARRY M. MACOMBER, Downey, and HOMER H. PERON, Fullerton, Calif. Filed July 23, 1923. Serial No. 653,088. 7 Claims. (Cl. 166—4.)

1. In combination with drilling tools, a seat in the tools, a valve member to cooperate with the seat to prevent flow of fluid upwardly through the tools, and means for allowing some flow upwardly in the tools when the valve member is in cooperative engagement with the seat.



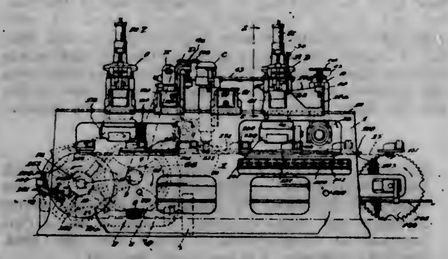
1,577,741. ELECTROMAGNETIC SOUND APPARATUS. ALARD DU BOIS-REYMOND, Pion, near Kiel, and LEONID ADELMANN, Kiel, Germany, assignors to the Firm Signal Gesellschaft m. b. H., Kiel, Germany. Filed Jan. 5, 1921. Serial No. 435,297. 5 Claims. (Cl. 177—386.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

5. An electromagnetic system comprising a vibrating member and laminated iron electromagnet cores adapted to cooperate with the vibrating member, said laminæ having lateral fixing lugs outside of the normal magnetic flux path and being welded together at the outer edges of said lugs.



1,577,742. BEET TOPPER. ABILIO F. GARCIA, Santa Clara, Calif. Filed Oct. 8, 1925. Serial No. 61,206. 5 Claims. (Cl. 146—85.)

1. In a beet topper, a table, a cutter element operatively mounted parallel with and in close proximity to the bottom thereof, a belt operatively mounted on the table to move in a plane parallel to the cutter and adjacent thereto, spaced beet engaging elements mounted on said belt and arranged to support the beets at right angles to the cutter, resilient means mounted in opposed relation to said belt and adjacent to said cutter and

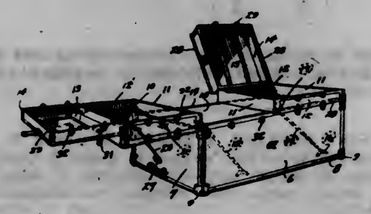


adapted to engage the beets carried thereby, and means for operating the belt and cutter in coordinate relation with each other.

1,577,743. BUCKING AUTOMOBILE. PURK T. GOSSETT, Frankfort, Ind., assignor to Alonzo P. Green and Robert J. Moran, both of Attica, Ind. Filed Nov. 26, 1923. Serial No. 677,065. 14 Claims. (Cl. 180—1.)

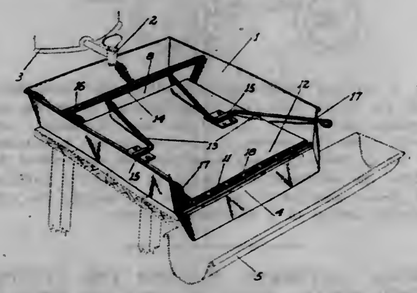
1. A bucking automobile including the combination with the front axle and front wheels, of means for mounting the axle in the wheels that is movable outwardly from the center of each wheel for decentering the wheel, releasable means mounted in each wheel for locking the axle-mounting means in a central position, and means mounted in each wheel for locking the axle mounting means in a decentered position.

1,577,744. AUTOMATIC MACHINE FOR CUTTING DOOR STILES. GEORGE W. GOULD and MONTE B. GATHMAN, Detroit, Mich., assignors to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Dec. 7, 1923. Serial No. 679,184. 33 Claims. (Cl. 144—3.)



1. In a machine for the purpose specified, the combination of means for moving door pillars through the machine, means for shaping the pillars traveling longi-

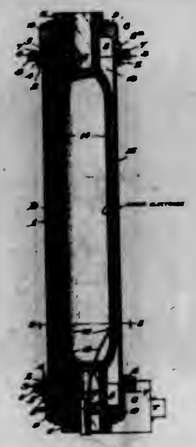
tudinally thereof means for cutting off the pillars to length, means for cross gaining the pillars, means for grooving the end of the pillars, means for longitudinally rabbeting the pillars, and means for releasing the pillars from the conveyor.



1,577,745. TRUNK. JOHN C. GRIDER, Berkeley, Calif. Filed May 9, 1925. Serial No. 29,162. 2 Claims. (Cl. 190—19.)

1. A trunk comprising a body having a bottom, side and end walls, the said side walls having pockets opening through the upper edges thereof, a plurality of trays having hinged covers and superimposed upon the body and forming a cover therefor, links arranged within the pockets and connecting the trays with the body and

permitting of angular and rectilinear movements of the trays in a direction outwardly from the body and beyond the ends thereof.

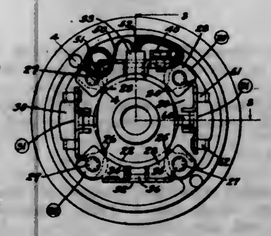


1,577,746. MILK STRAINER AND FILTER. HENRY HANSEN, Modesto, Calif. Filed June 1, 1925. Serial No. 33,961. 8 Claims. (Cl. 210—157.)

1. A liquid filter including a pan having an outlet at one end and adapted at its opposite end to receive the liquid to be filtered whereby such liquid will tend to flow from the receiving to the outlet end of the pan, the pan having longitudinal grooves closed at their rear ends, a filtering element over the grooves and making a closure with the rear ends thereof, and means whereby liquid received into the pan can pass only along the grooves, whereby to reach the outlet end of the pan the liquid must pass upwardly through the element.

1,577,747. AIR-COOLED GENERATING UNIT FOR LOW-FREQUENCY APPARATUS. HARRY BUXTON HARTMAN, Scottdale, Pa., assignor to Electric Water Sterilizer and Ozone Company, Scottdale, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1924. Serial No. 746,692. 8 Claims. (Cl. 204—32.)

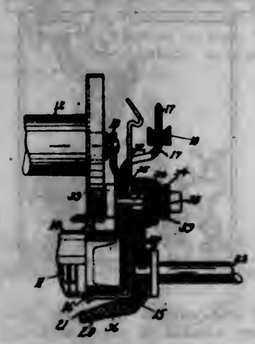
1. A tubular ozone generator including a tubular electrode, end caps fitted thereto and having ports, and a tubular dielectric member carried by said end caps and cooperating with said electrode to provide a relatively constricted ozone generating chamber, a metallic electrode carried by the inside face of the tubular



dielectric, and means for establishing electrical connection with the electrode carried within the tubular dielectric member.

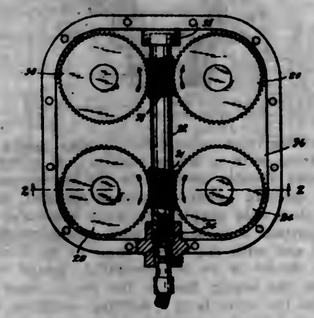
1,577,748. ELECTRICAL CONDENSER. DIMMITT ROSS LOVEJOY, New York, N. Y., assignor to Lovejoy Development Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1924. Serial No. 732,022. 2 Claims. (Cl. 250—41.)

1. In a fixed condenser, the combination of an inner cylindrical core forming one electrode, an outer tube surrounding the core forming the other electrode, and insulating collars having conical surfaces whereby the electrodes are held rigidly concentric.



1,577,749. COMMUTATOR-BRUSH MOUNTING. JERRY MCDONALD, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 14, 1924. Serial No. 699,162. 5 Claims. (Cl. 171—324.)

2. In an electric dynamo having a stationary frame and four commutator brushes mounted thereupon, in combination, four supporting brackets for said brushes arranged about the axis of rotation of the dynamo, each

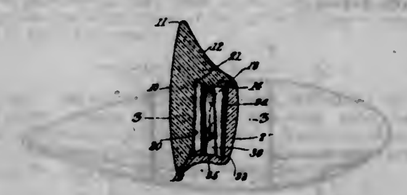


bracket having portions mutually overlapping the two adjacent brackets, and securing means passing through said overlapping portions for securing said brackets to the stationary frame, two of said brackets being insulated from said securing means.

1,577,750. TUBE FRAME. BENJAMIN F. MCGUINNESS, Grafton, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 6, 1923. Serial No. 673,183. 13 Claims. (Cl. 139—10.)

1. In a tube frame for Axminster looms, a longitudinally extending frame member, a chain engaging element rigid with respect to the member, and a chain engaging hook mounted for sliding movement with respect to the member element, said hook being movable as a whole toward and from the said element, and all portions of said hook having substantially the same amount of motion.

1,577,751. MECHANISM FOR MASSAGING. BENJAMIN STUART PARCHALL, Seattle, Wash. Filed Aug. 9, 1921. Serial No. 490,852. 21 Claims. (Cl. 128—51.)



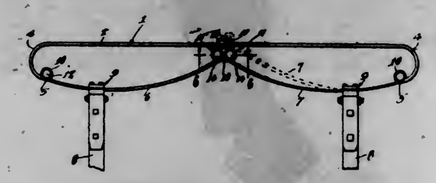
1. A device of the character described including a plurality of applicators each movable bodily about an endless path, and means for operating said applicators to cause them to move in unison, and alternately towards and from every applicator in succession.

1,577,752. ELASTIC GARMENT. JOSEPH T. PRICE, Philadelphia, Pa., assignor to Horn Surgical Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 28, 1922. Serial No. 578,041. 9 Claims. (Cl. 16—172.)

1. As a new article of manufacture, a garment characterized by an integrally-knit ornamental edging of tucked stitches and elastic inlay thread.

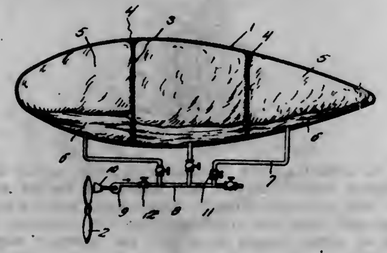
1,577,753. ARTIFICIAL TOOTH AND KEY. MAURICE M. RAPKIN, New York, N. Y. Filed Dec. 9, 1924. Serial No. 754,728. 4 Claims. (Cl. 32—9.)

1. An artificial tooth comprising a labial facing and a support therefor having flat juxtaposed median surfaces, said surfaces containing longitudinal recesses having parallel sides and communicating with undercut recesses of wedge shaped formation, the undercut recess in said facing being wider at its open cervical end and the corresponding undercut recess in said support being tapered reversely thereto, said undercut recesses having concavely curved bottoms, a reversible key having flanged edges fitting the recesses indiscriminately to extend level with the cervical end of the tooth, and a groove formed in the convex portions of said key to extend centrally throughout the length thereof.



1,577,754. SWITCH-CONTROLLED ILLUMINATED FOUNTAIN PEN. FRANK RAUCH, Brooklyn, N. Y. Substitute for application Serial No. 340,503. Filed Nov. 25, 1919. This application filed June 29, 1925. Serial No. 40,444. 3 Claims. (Cl. 240—6.4.)

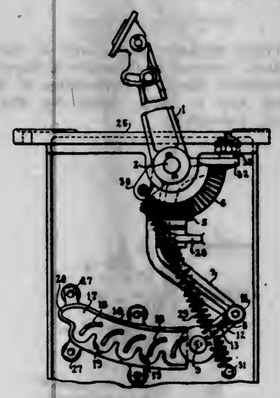
1. A fountain pen comprising a casing, a source of electrical energy in said casing, a switch controlling the current therefrom, a cap engageable with said casing, a



lamp embedded in said casing except at its face, said lamp being disposed over the pen, and means within said cap adapted to receive, move and maintain said switch in open position when disposed on said casing.

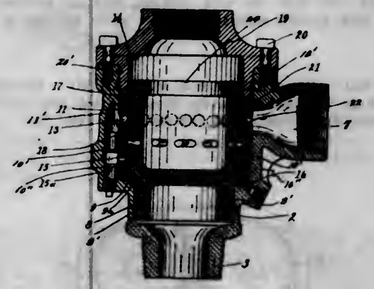
1,577,755. BUMPER. JOHN B. RAUEN, Los Angeles, Calif., assignor to United States Bumper Company, Inc., Los Angeles, Calif., a Corporation of California. Filed May 20, 1925. Serial No. 31,612. 7 Claims. (Cl. 293—55.)

1. In a bumper, a forward impact section comprising a plurality of spaced bars, and a rear supporting section including a pair of separate bars connected at their outer ends to the forward impact section, and connected at their inner ends in strained condition to the forward impact section intermediate the ends thereof.



1,577,756. BALLOON. IRVIN W. REAGAN, Elfers, Fla. Filed Dec. 10, 1924. Serial No. 755,001. 2 Claims. (Cl. 244—3.)

1. A balloon including in combination with the usual propeller associated therewith, an imperforated envelope, partitions in the envelope dividing the same into a plurality of compartments, an inflated gas bag separate from and independent of the envelope in each compartment, an air bag separate from and independent of the envelope and gas bag in each compartment below the gas bag therein, means for inflating the air bag, said means including an air receiving and discharging member, disposed rearwardly of the propeller and communicating therewith, a feed pipe extending from said member, and distributor pipes connecting said air bags with the said feed pipe.

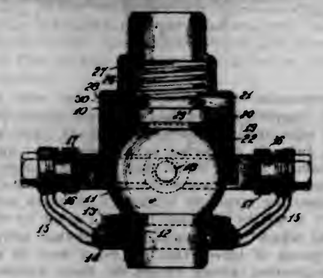


1,577,757. CHECKING MECHANISM. FREDERICK L. RE QUA, Waukegan, Ill., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 24, 1922. Serial No. 570,759. 5 Claims. (Cl. 74—88.)

3. The combination with a pivoted operating member, of means for checking said member in given positions, said means including a pivoted arm movable with said member and located at a point removed from the axis thereof, a pin carried by said arm, a series of vanes in the path of said pin to move the same in a plane parallel to the plane of movement of said operating member in opposite directions from a given normal position upon

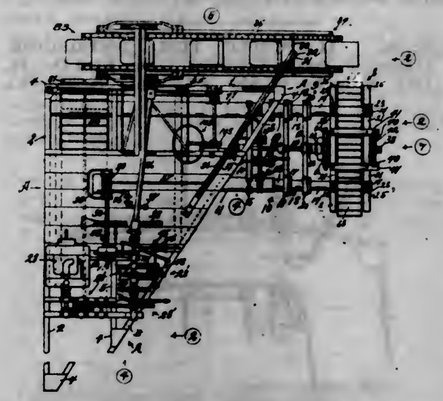
movement of said member in reverse directions and a series of stops adapted to coact with said pin during movement thereof in a given direction between said vanes.

1,577,758. DRIFTING AND RELIEF VALVE. HUGO F. BIRKEN, Minneapolis, Minn., assignor of one-half to Charles A. McCulloch, Minneapolis, Minn. Filed Aug. 24, 1921. Serial No. 495,027. 5 Claims. (Cl. 121—137.)



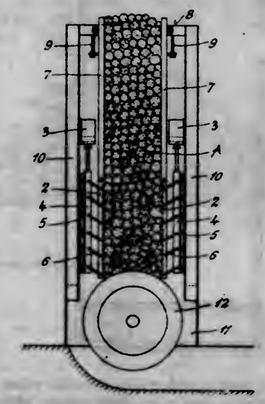
1. A drifting valve, comprising a valve casing in open communication with a steam supply line, a differential valve member slidably mounted in the casing, said valve having a drifting condition and a normal condition, means to close said supply line when the valve is in a normal condition, a passage in open communication with the casing and with the steam chest of an engine with which the device is to be associated, means to admit steam from the supply line to the steam chest of said engine when the valve is in a drifting condition, a steam by-pass opened by the operation of the valve to conduct steam from the steam supply line to an offset portion of the differential valve to sustain the valve in a drifting condition, and a chamber in open communication with said steam supply line when the valve is in a normal condition, said chamber having a bottom formed by an offset portion of the valve and a top formed by part of the casing to exert a downward pressure on the valve when in a normal condition.

1,577,759. MALLEABLE NONCORROSIVE CASING FOR AUTOMOBILE BUMPERS. CHARLES G. ROSS, Los Angeles, Calif., assignor of one-half to William L. Ross, Chicago, Ill. Filed Jan. 19, 1924. Serial No. 687,342. 10 Claims. (Cl. 293—55.)



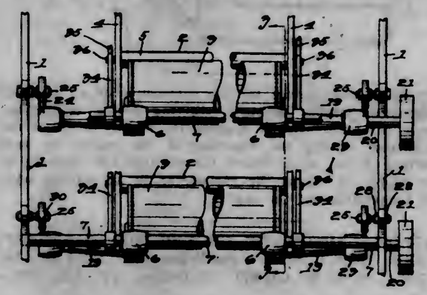
1. The combination of a bumper bar, surrounded by a thin snug fitting metal sheath.

1,577,760. FLEXIBLE JOINT. EDWARD A. RUSSELL, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed May 17, 1923, Serial No. 639,495. Renewed Aug. 31, 1925. 12 Claims. (Cl. 285—93.)



1. In a flexible joint, the combination of ball and socket members and a gasket arranged within the space between the inner end of the ball member and the interior surface of the socket member comprising a wedge-shaped body having a curved surface to fit the ball member, and an inwardly projecting lip of thinner and tougher material than the body and arranged to bear against the socket member.

1,577,761. DOUBLE-TRACK EXTENSIBLE DREDGER. CHARLES H. RUTH, Huntington, Park, Calif. Filed July 18, 1923. Serial No. 652,260. 28 Claims. (Cl. 37—85.)

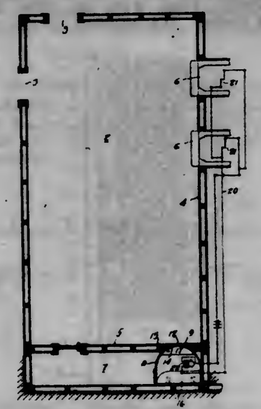


1. A dredger comprising a frame; a main track laying tractor supporting a major part of said frame; a flank track laying tractor for supporting a minor part of said frame; means for adjusting said flank tractor toward or from said main tractor; excavating appliance on said frame; and means for actuating said tractors to transport said frame and operate said excavating appliance.

1,577,762. MAGAZINE WOOD-PULP GRINDER. PEDER CHRISTIAN SCHAANNING, Vestre Holmen, near Christiania, Norway. Filed Sept. 23, 1924. Serial No. 739,244. 3 Claims. (Cl. 83—75.)

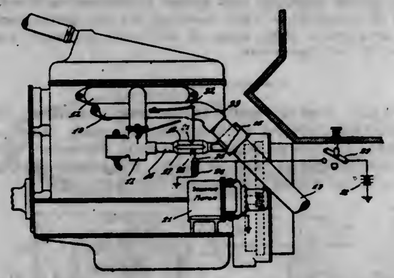
1. In a magazine wood pulp grinder, a rotating grindstone, a shaft-shaped magazine for the logs to be ground, two sets of longitudinal members forming at least a part of the walls of the magazine, log-gripping means associated with said members, said members and the log-gripping means being arranged to grip the sides of the logs in the magazine and means to reciprocate the two sets of members so that those of one set move toward the grindstone while those of the other set move away from it and vice versa.

1,577,763. DRIVE MECHANISM FOR WINDING MACHINES. JOSEPH F. SCHIMEK, Worcester, Mass., assignor to Cashiko Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 30, 1925. Serial No. 59,734. 9 Claims. (Cl. 242—55.)



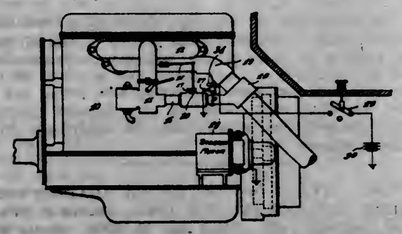
1. In a machine of the class described, a rotatably mounted drum, a winding spool having a central portion adapted to carry wound material in engagement with the periphery of said drum, and provided at its ends with enlarged heads embracing said drum, and a single rotatable shaft, with its axis disposed entirely outside the periphery of said drum, for applying a driving force thereto.

1,577,764. MEANS OF PROTECTION AGAINST ROBBERY IN BANKS AND THE LIKE. HOMER E. SHEPARD, Oakland, Calif. Filed Dec. 21, 1920. Serial No. 432,368. 1 Claim. (Cl. 20—1.01.)



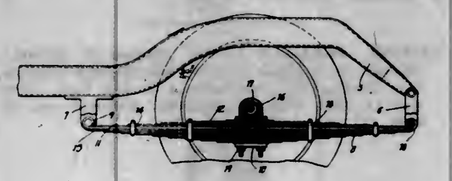
The combination with a corridor having an opening at the outer side of the corridor at one side and pro-

vided with a closed end, of an armored cage disposed at said end and having an aperture communicating with



the interior of said corridor and through which a missile may be discharged, and signalling means affording communication between said corridor opening and said cage.

1,577,765. AUTOMATIC CHOKER FOR CARBURETORS. GLEN R. SISSON, Pendleton, Ind. Filed Apr. 25, 1923. Serial No. 634,576. 13 Claims. (Cl. 123—119.)

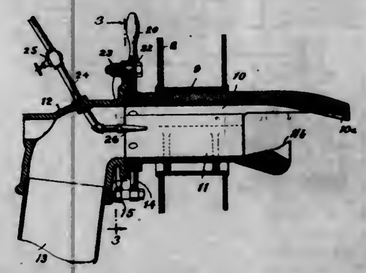


1. A choking device for the carburetor of an internal combustion engine having a starting device, comprising means for automatically choking the supply of air to the carburetor during the starting of the engine by said starting device, and means for varying the choking of the supply of air to the carburetor in accordance with the temperature of the engine.

1,577,766. AUTOMATIC CHOKER FOR CARBURETORS. GLEN R. SISSON, Pendleton, Ind. Filed July 16, 1923. Serial No. 651,871. 22 Claims. (Cl. 123—119.)

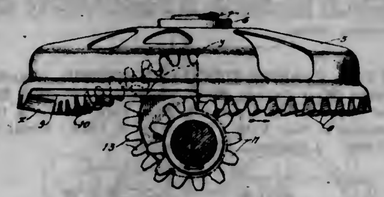
1. A choking device for the carburetor of an internal combustion engine, comprising a choker valve for controlling air-flow to said carburetor, electro-magnetic operating means for said choker valve, and thermostatic means for controlling said choker valve jointly with said electro-magnetic operating means.

1,577,767. AUTOMOBILE SPRING. FRANCIS JOSEPH SMITH, New York, N. Y. Filed Dec. 12, 1923. Serial No. 680,260. 3 Claims. (Cl. 267—47.)



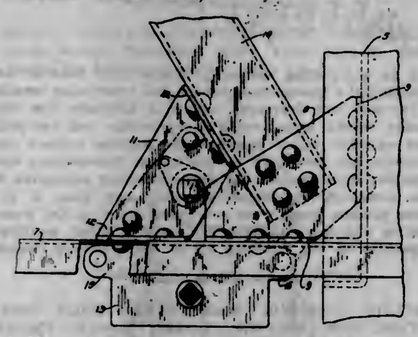
1. A suspension spring comprising a flat main leaf of soft steel, supported by a leaf of equal length that is a perfect semi-circle of tempered steel, of light weight, which, in turn, is supported by a plurality of superimposed, similarly arched leaves that gradually decrease in length, and that form segments of the same circle, the whole supporting structure being of a strength sufficient to support a weight at least twice as great as that of the car for which it is designed, and further comprising a second group of leaves that, in every way, is similar to the supporting group except in their number and strength, which is positioned reversely on the opposite side of the main leaf from the supporting group, and is urged into parallelism with the other group, to compensate for the difference between the weight being supported and the great strength of the supporting group.

1,577,768. TOBACCO DENICOTINIZATION. HOMER W. SMITH, Indianapolis, Ind. Filed June 7, 1922. Serial No. 566,560. 9 Claims. (Cl. 131—6.)



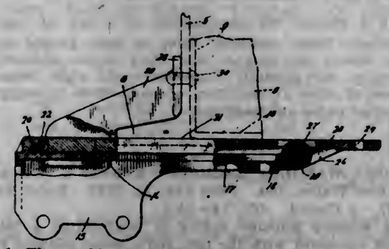
2. The process of de-nicotinising tobacco, comprising treating the tobacco with live steam at a temperature higher than 100° C. and a pressure greater than atmospheric, and then extracting the tobacco with an organic solvent and subsequently removing such solvent.

1,577,769. ADJUSTABLE FUEL DISTRIBUTOR. CLEMENT F. STREET, Greenwich, Conn. Filed Dec. 19, 1923. Serial No. 681,550. 4 Claims. (Cl. 302—61.)



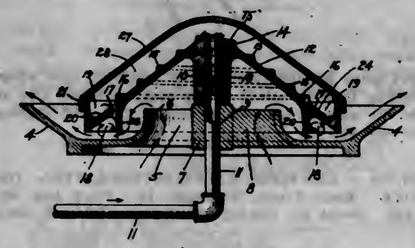
1. A fuel distributor formed in two sections, an upper and a lower, the lower section being adapted to be mounted in a furnace wall, and the upper section mounted on the lower section with the capacity of a partial rotary movement thereon, and means for rotatably adjusting the upper section relative to the lower.

1,577,770. GEARING. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed Dec. 11, 1925. Serial No. 74,745. 6 Claims. (Cl. 74—41.)



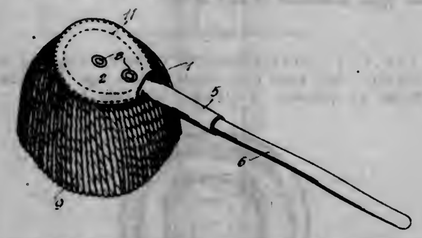
1. A gearing comprising two gear elements rotatable on axes at an angle to each other, one of said elements consisting of two segmental gear members formed upon concentric curves of different diameter and the second element consisting of a pinion member and a scroll gear member that engage the respective members of the first gear element.

1,577,771. MOUNTING FOR BRAKE GEARS. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed Dec. 11, 1925. Serial No. 74,746. 6 Claims. (Cl. 74—121.)



1. Means for mounting a brake gear comprising the combination with a car underframe having a corner bracket connecting adjacent longitudinal and transverse sills, an oblique brace secured at one end to said bracket and at its opposite end connected to another member of the underframe, of a plate extending from said brace to a transverse element at the end of the underframe, and a gear housing secured to said transverse element and having a portion extended back of said element and secured to said plate.

1,577,772. ADAPTER FOR BRAKE-GEAR MOUNTINGS. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed Dec. 11, 1925. Serial No. 74,748. 7 Claims. (Cl. 74—121.)



1. The combination with a railway car underframe, of a gear unit for actuating the brake, an adapter structure secured to the underframe, and means on the unit and adapter to interlock the one with the other and permit the unit to be readily removed from the car.

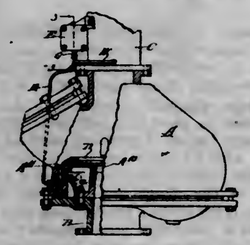
1,577,773. OIL BURNER. CHARLES M. STROUD, Minneapolis, Minn. Filed Sept. 4, 1924. Serial No. 735,867. 11 Claims. (Cl. 158—53.)

10. A device of the class described, comprising a saucer-like burner base providing an outer inclined wall and having a relatively large central opening and an integral upstanding flange surrounding said opening, and a central hub integrally connected within the opening by radial arms to provide a relatively large intake passage, a hollow conical vaporizing member overlying the burner base with its lower end spaced upwardly from the bottom of the burner base but disposed below the level of the top of the flange and with the base periphery adjacent the lower end of the inclined wall of the burner base to form a relatively large chamber above the relatively large air intake opening, and forming a substantially horizontal and constricted circular passage leading outwardly to the lower portion of the inclined wall of the base, an eddy-producing flange depending from the bottom of the conical member within the hollow portion thereof, spaced from the intake opening flange a greater distance than the spacing of the bottom of the conical member from the base, and forming adjacent the periphery of and with the conical member a downwardly faced channel or eddy chamber for obtaining a whirling, mixing action of the vapors introduced respectively through the air intake opening and cone vapor intake, a cover overlying the conical member to form a closed vaporizing chamber thereabove, and an oil intake conduit leading to the vaporizing chamber.

1,577,774. MOP. UBERT PETTINOILL TARBOX, Toronto, Ontario, Canada. Filed Dec. 29, 1924. Serial No. 758,500. 4 Claims. (Cl. 15—229.)

1. A mop comprising a flexible stem, a handle for said stem, two flexible discs secured to the stem, on opposite sides thereof, and absorbent material secured to, and extending beyond, the said discs.

1,577,775. MUFFLER. JOHN D. TEMPLETON, Detroit, Mich. Filed Mar. 6, 1924. Serial No. 697,174. 2 Claims. (Cl. 137—160.)

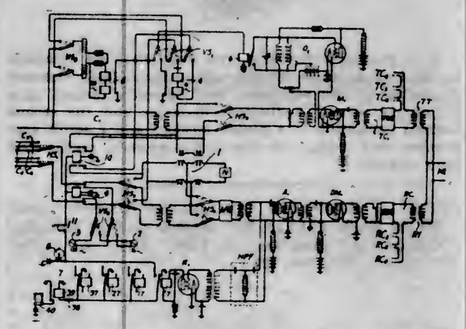


1. In a device of the character described, a sheet metal insert for cylindrical conduits comprising a flat central portion having slits at right angles to its edges and

wings extending from opposite sides thereof and having their edges adapted to fit the inner surfaces of the conduits, said wings being staggered to intercept and

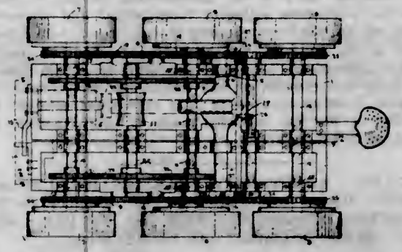
deflect gases passing through such conduits, said wings extending from the plane of the sheet at either side of each slit along a line approximately forty-five degrees from said slit.

1,577,776. DRY-PIPE VALVE-ACCELERATING DEVICE. EMIL TYDEN, Evanston, Ill. Filed Aug. 25, 1923. Serial No. 659,332. 7 Claims. (Cl. 169—22.)



1. In a dry pipe sprinkler system in combination with a dry pipe main valve, constructed for exposing different areas to the water and air pressure respectively at its opposite sides, and having for that purpose at the water inlet side, a chamber in which the pressure is normally substantially atmospheric; a passage leading from the region of one of said pressures to said chamber; a valve controlling said passage; an expansible and collapsible device exposed to the air pressure from the system reaching different areas of the movable wall of said device through unequal ports, whereby change of air pressure in the system causes temporarily unequal pressure at different areas; a chamber in which said device is enclosed; a lever in said chamber; means actuated by said lever for controlling the opening of said valve; a latch in the chamber engaging the lever to lock it in position for holding said valve closed, and connections from the latch to said device for disengaging the latch for releasing the lever upon movement of said device.

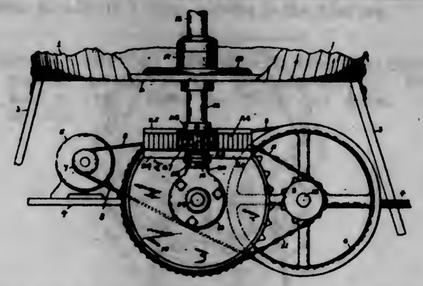
1,577,777. ILLUMINATING GLOBE. CHARLES E. WHALIN, Salt Lake City, Utah. Filed Apr. 15, 1924. Serial No. 706,640. 2 Claims. (Cl. 240—100.)



1. An illuminating globe comprising a transparent glass member spherical in general outward form except one portion thereof which is outwardly extended; and externally threaded; a plano-convex lens formed by a portion of said glass member with the plane surface formed by the bottom of a cylinder shaped opening concentric with the perimeter of said glass member and said neck piece; annular concavo-convex lenses formed by portions of the perimeter of said glass member and the annular concave portion of the cylindrical opening therein; and plano-convex lenses spaced apart by annular convex lenses.

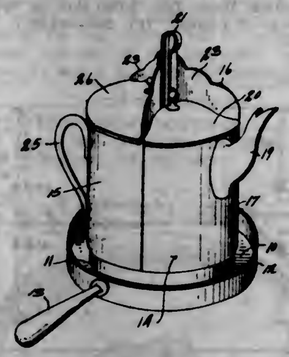
1,577,778. CARRIER-SIGNALING SYSTEM. CHARLES WHITE, West Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 5, 1923. Serial No. 661,008. 2 Claims. (Cl. 179—15.)

2. In a signaling system, a carrier wave channel terminating in a transmitting branch and a receiving branch, a two-wire low frequency circuit, a four-wire low frequency circuit, signal receiving apparatus, and two-position switches which when in one position connect the two-wire low frequency circuit to the transmitting and receiving branches and the signal receiving apparatus to the connected low frequency circuit and when in the other position connect the wour-wire circuit to the transmitting and receiving branches and the signal receiving apparatus to the incoming leg of the four-wire circuit.



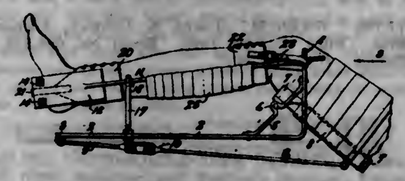
1,577,779. TRACTOR. ROBERT EDWARD WHITE, Smiths Creek, Mich. Filed Apr. 17, 1922. Serial No. 553,584. 7 Claims. (Cl. 180—22.)

6. In a tractor the combination of a pair of rigid longitudinal frame members, three or more ground engaging wheels on each of said rigid frame members, and means for pivotally connecting said rigid frame members to allow at least four of said wheels to engage the ground under all conditions.



1,577,780. WASHING MACHINE. EVERETT E. WILCKEN, Fort Wayne, Ind. Filed Jan. 12, 1925. Serial No. 2,047. 3 Claims. (Cl. 74—14.)

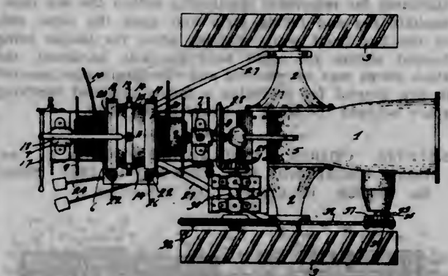
1. A washing machine having in combination a tub, a motor connected with the tub, and a wheel adapted to be operated by the motor continuously in one direction; an arm carried by said wheel, a port shaft carried bodily by said arm but without rotary or endwise movements imparted thereto, a main shaft located vertically at right angles to said short shaft, a pinion secured on the main shaft, a rack-bar carried by the outer end of the short



shaft and in mesh with said pinion, a slotted plate located between said arm and rack with the short shaft slidable in the slot thereof, an arm extending from said slotted plate with the main shaft revolvable therein and adapted to be supported thereby.

1,577,781. SECTIONAL FOOD COOKER. LETHA FLORENCE ADAMS, Smithdale, Miss. Filed Sept. 3, 1925. Serial No. 54,345. 3 Claims. (Cl. 53—1.)

1. A cooking utensil comprising a pan having a circular bottom, an outer upstanding wall and an inner upstanding wall, the two walls together defining an annular receptacle, and a plurality of interfitting cooking utensils adapted to fit within the inner rim.



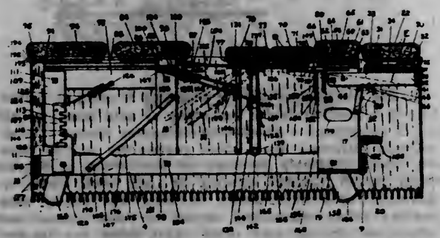
1,577,782. SURGICAL SPLINT. JAMES R. ATKINSON, Vancouver, British Columbia, Canada. Filed Feb. 14, 1923. Serial No. 618,981. 7 Claims. (Cl. 128—85.)

1. A leg splint comprising a rod extending along each side of the leg adjacent the knee joint to beyond the foot, each rod being inwardly turned beyond the foot and connected to the other, a frame, said frame including a portion projecting from it on each side of the knee joint

to receive the ends of the side rods, means for effecting separate adjustment of the length of each side rod, means pivotally mounting said frame removably to the lower part of the thigh adjacent the knee, means on said frame for supporting said rods adjacent the foot and means for holding said frame adjustably in position.

1,577,783. HOISTING ATTACHMENT FOR TRACTORS. WILBER FISK BAKER, Omaha, Nebr., assignor to Baker Steel & Machinery Company, a Corporation of Nebraska. Filed Apr. 25, 1923. Serial No. 634,437. 2 Claims. (Cl. 254—166.)

2. The combination with a rear axle housing of a tractor, of a hoisting device supported by said housing, said device comprising a rearwardly extending frame, a longitudinally disposed drum shaft rearwardly of the housing, drums rotatably mounted on said shaft, a slidably keyed clutch element carried by said shaft and cooperating with said drums between the same, independent brake controlling means for said drums and means for driving said drum shaft from the tractor, through the medium of gear connections and sprocket and chain connections.

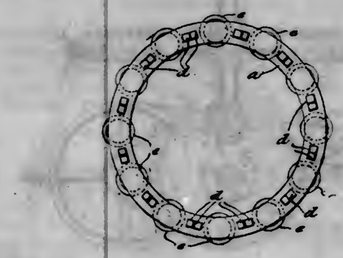


1,577,784. MOLD FOR CONCRETE WALL BLOCKS. HARRY T. BUMGARDNER, Waco, Tex. Filed Jan. 4, 1926. Serial No. 79,166. 2 Claims. (Cl. 25—121.)

2. In a block forming mold of the character described, a relatively elongated mold box being open at its top side, a block bottom facing strip adapted to be disposed within the box and for rest upon the bottom wall thereof, said strip being formed adjacent its opposite longitudinal edges with pendent channels, filler blocks

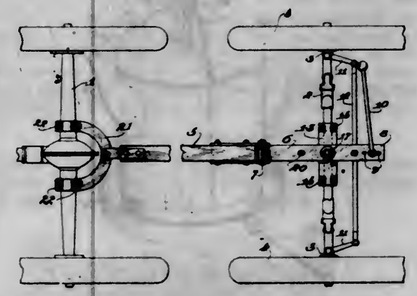
disposed within the box beneath the bottom facing strips at the opposite sides of the pendent channels, predetermined spacing block and forming strips removably and vertically disposed within the mold box, said end forming strips being provided adjacent their opposite edges with vertical channels, and a block top facing forming strip adapted to be disposed upon the mold box after the material has been poured therein, said last mentioned strip being also provided adjacent its opposite longitudinal edges with pendent channels, the channels of all of said forming strips adapted to provide interlocking tongues and grooves upon the bottom and top, and opposite ends respectively of the block, and interchangeable block from face forming strips of varying thickness for removable positioning within the box intermediate the end facing strip and upon the inner side of the box front wall whereby, after the blocks being formed within the mold have partially hardened, the thick strips may be removed and the thin strips inserted in lieu thereof for providing a facing material receiving space between the block and said facing strip.

1,577,785. CHIROPRACTIC TABLE. LUTHER L. CASTETTER, Indianapolis, Ind. Filed May 14, 1923. Serial No. 638,929. 62 Claims. (Cl. 128—72.)



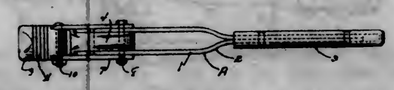
1. In a chiropractic mechanism, a pair of adjacent head cushions, independent slides secured to said cushions transversely to their interception, guide means adapted to guide said slides, slide means secured to said guide means parallel to said interception, guide means adapted to guide the last mentioned slide means, arm means supporting said last mentioned guide means and having notches on the underside thereof, stationary members pivoted to the extremities of said arm means, a toggle means pivoted to said members and adapted to selectively engage said notches to vary the height and angle of said head cushions as desired.

1,577,786. BEARING CAGE. LEO S. CHRISTOPHERSON, Spokane, Wash., assignor to Chris Double Taper Bearing Company, Spokane, Wash., a Corporation of Washington. Filed Aug. 27, 1924. Serial No. 734,418. 5 Claims. (Cl. 308—218.)



1. A bearing cage, having in combination a barrel portion provided with apertures, rolling elements projecting through and located by the apertures and arranged to contact with an outer bearing race, and a plurality of roller housings each separately secured to the barrel portion for separately supporting each rolling element and each provided with a perforation, the said rolling elements projecting therethrough to contact with an inner bearing race.

1,577,787. BEARING CAGE. LEO S. CHRISTOPHERSON, Spokane, Wash., assignor to Chris Double Taper Bearing Co., Spokane, Wash., a Corporation of Washington. Filed Sept. 27, 1924. Serial No. 740,215. 6 Claims. (Cl. 308—218.)



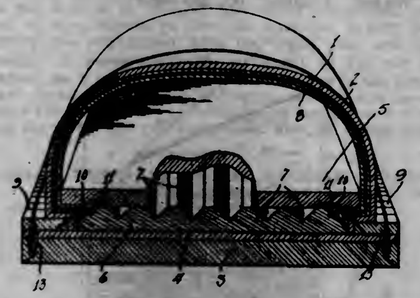
1. In a bearing cage, the combination of a pair of side rings, roller elements, two-part roller housings each part spaced apart and each part separately secured to the side rings for separately supporting a roller element therebetween, which permits the removable of any two part housing and roller supported therein independently of the other housings.

1,577,788. PERMANENT TRAILING COUPLING. ALBERT L. COLE, Anson, Tex. Filed Mar. 24, 1925. Serial No. 18,015. 2 Claims. (Cl. 280—33.55.)

1. The combination with the front axle of an automobile, of a plate mounted thereon, a cylindrical boss formed on said plate, a pair of U-bolts encircling said axle and anchoring the plate thereto, a lever apertured intermediate its end to receive said boss, a strap for holding said lever in contact with said plate, and means connecting one end of said lever with the steering mechanism of the automobile.

1,577,789. WRENCH. JAMES S. CONWAY, Rochester, Minn. Filed Oct. 20, 1923. Serial No. 669,848. 3 Claims. (Cl. 81—98.)

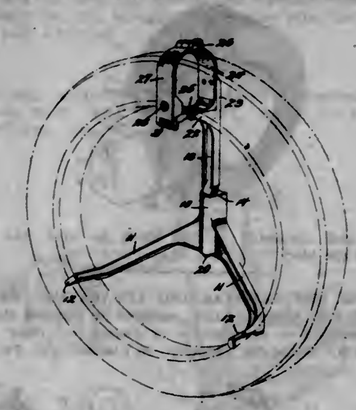
1. A wrench comprising a shank which includes a pair of spaced parallel bars, a longitudinally curved jaw arranged between the outer ends of the bars and extending at an oblique angle with respect thereto, a securing



pin passing through the bars and jaw intermediate the ends of the latter, a pivot pin passing through the bars and jaw adjacent its inner end, a pair of links pivotally supported on the ends of the pivot pin and a longitudinally curved jaw rigidly held between the links and being movable in a plane parallel to the fixed jaw.

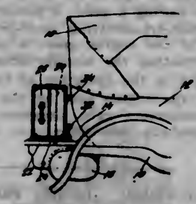
1,577,790. SUPPORT AND SHIELD FOR FLATIRONS. THOMAS ALFRED CHARLES COOK, Chicago, Ill. Filed Mar. 6, 1925. Serial No. 13,627. 1 Claim. (Cl. 68—27.)

The combination with a flatiron having a handle member, of a combined supporting member and shield comprising a casing and provided with a longitudinal slotted portion at the top wall thereof for yieldingly receiving the portion of the handle member between the handle and the body of the iron, whereby the flatiron may be supported in an upright or inverted position at will, said casing being of sufficient height to maintain the bottom of the iron entirely out of engagement with the adjacent portions of the supporting member and shield when the iron is in an upright position.



1,577,791. WATERPROOF FOOTWEAR. LOUIS DRESCHLER, St. Louis, Mo. Filed May 26, 1924. Serial No. 716,038. 2 Claims. (Cl. 36—30.)

1. A waterproof shoe or the like comprising an upper, an outer sole, said upper and said outer sole having outer portions of leather and inner rubber linings, an inner sole, a welt, means for securing said welt to said inner sole and said upper, means for securing said welt to said outer sole, and an intermediate rubber cushion between said inner sole and said outer sole, said rubber cushion having air spaces adjacent said inner sole, and the rubber portion of said upper being held in contact with said rubber cushion.



1,577,792. AUTOMOBILE TIRE CARRIER. FRANK J. G. DUCK, Scranton, and ROWLAND BENTLEY, Dunmore, Pa. Filed Oct. 22, 1923. Serial No. 670,148. 3 Claims. (Cl. 224—29.)

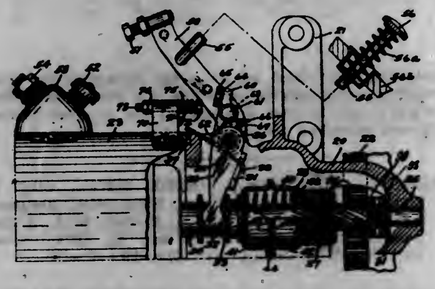
1. In a tire carrier, in combination, a member adapted to be secured to an automobile, two legs rigid with said member and having portions adapted to engage a tire rim, a third leg supported by said member, a rim engaging portion on said third leg provided with an inclined face at its outer end, and means for automatically

extending, said third leg to press against a tire rim, whereby a rim may be placed on the carrier by sliding it along said inclined face against the pressure exerted by said extending means.

1,577,793. AUTOMOBILE TRUNK RACK. CADY B. DURHAM and FRANK G. FAREY, Flint, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 12, 1924. Serial No. 706,145. 8 Claims. (Cl. 224—29.)

1. A device for attachment to an automobile having a chassis frame, and a body on the frame curved at its rear end to provide an overhanging portion, comprising a trunk rack having parallel longitudinal rails for attachment to the chassis frame, each of said rails having a trunk-supporting vertical hook portion at its forward end, the various hook portions being in alinement with each other transversely and being substantially in a plane tangent to the upper part of the curved end of the body vertically, means substantially in said tangent plane vertically above said hook portions and carried by the body for engaging and supporting the top of a trunk on the rack, and means for holding a rectangular trunk on said rails with its front face in supporting engagement with said hook portions and said means on the body.

1,577,794. COIL MOUNTING. JOHN S. ELLIOTT, Cranston, R. I., assignor to Coto-Coil Company, Boston, Mass., a Corporation of Massachusetts. Filed May 15, 1922. Serial No. 561,009. 8 Claims. (Cl. 175—359.)



1. An improved coil-mounting comprising a coil of substantially hollow form, a block fitted against the

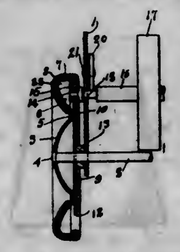
peripheral surface of the coil, and a lashing of cord passing through the opening in the coil a plurality of

times and connected to the block to bind the coil against the block.

1,577,795. ENGINE-STARTING APPARATUS. GEORGE W. ELSEY, Anderson, Ind., assignor to General Motors Corporation, a Corporation of Delaware. Filed May 1, 1924. Serial No. 710,470. 10 Claims. (Cl. 74—7.)

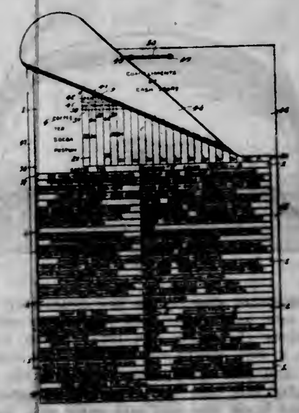
1. Engine starting apparatus comprising, in combination, an engine having a gear; a motor and gear driven thereby; a motion-transmitting member for meshing the motor gear with the engine gear; a manually operable member for actuating the motion-transmitting member; means responsive to the operation of the motor prior to the driving of the engine gear by the motor for automatically disconnecting said members; and automatic means for demeshing the motor gear when the engine starts.

1,577,796. SAW-CLAMP GUARD. FRED K. FINNEMAN, Portland, Oreg. Filed Jan. 17, 1925. Serial No. 3,075. 2 Claims. (Cl. 76—78.)



2. A guard for saw clamps consisting of a somewhat rectangular rubber block having a somewhat rounded side; and a strip of metal passing through said rounded side and projecting from each end thereof.

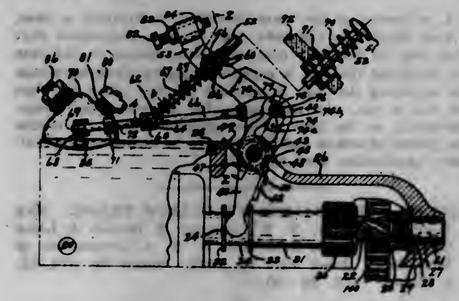
1,577,797. PROCESS OF MANUFACTURING AROMATICALLY-DISUBSTITUTED THIOUREAS OF SYMMETRIC CONSTITUTION. WALTER FLEMMING, Breslau, Germany. Filed Mar. 19, 1925. Serial No. 16,836. 5 Claims. (Cl. 260—125.)



1. The process of manufacturing aromatically disubstituted thio-ureas or symmetric constitution consisting in causing the amine to enter into a reaction with such amounts of aqueous solution of caustic alkali and of carbon disulphide that the formation of thio-urea and trithiocarbonate can take place simultaneously; the proportion of the said ingredients being such, that for each molecule of amine one molecule of caustic alkali and one molecule of carbon disulphide is employed.

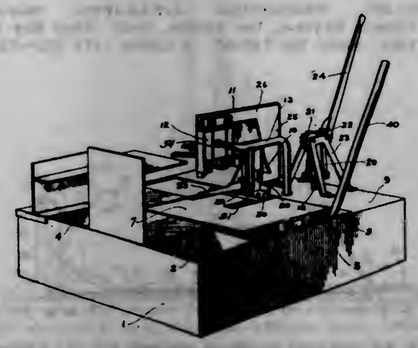
1,577,798. TOY POWER DRIVE. CLARENCE E. FLORKEY, Dayton, Ohio, assignor to The Schieble Toy and Novelty Co., Dayton, Ohio, a Corporation of Ohio. Filed Jan. 26, 1923. Serial No. 614,950. 4 Claims. (Cl. 46—48.)

4. In combination, a frame, an axle carried thereby, outwardly dished wheels mounted thereon, a plate gear joined to a portion of said wheel, said plate being flat, a broad bearing carried by said plate engaging with said axle, a downwardly extending and inwardly directed portion of said wheel spaced from but overlapping said teeth to form a rim within which said teeth and driving pinion are located, a driving pinion and driving axle connected thereto, and an inertia wheel mounted thereon, anti-friction devices carried by said frame in engagement with the inertia wheel axle, and resilient tires mounted on the rim of said wheel.



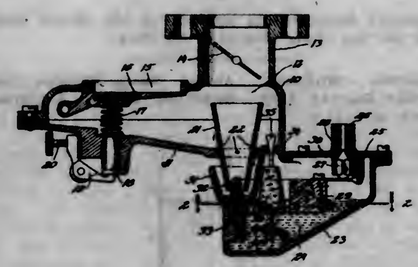
1,577,799. COMBINED MERCHANDISE INDICATOR AND HOUSEHOLD-ACCOUNT DEVICE. STANLEY R. FOOT, Choteau, Mont. Filed Dec. 8, 1924. Serial No. 754,602. 3 Claims. (Cl. 283—66.)

1. A combined merchandise indicator and household account device comprising a series of superposed combined merchandise indicating and recording sheets, each of the inner sheets projecting below the lower edge of an outer sheet, means on the outer face at the lower portion of each sheet for visually indicating the name of the general class of merchandise with which the sheet is associated, means on the outer face of each of said sheets to provide a group of appropriately designated pairs of spaces, the spaces of each pair associating with each other and for independently recording the amount and cost respectively of the merchandise purchased of



that class with which the sheet is associated for a predetermined period different from that of an adjacent pair, and means for connecting the sheets together at their upper ends.

1,577,800. ELECTRICAL STARTING APPARATUS. FREDERICK J. HARDMAN, Dayton, Ohio, assignor to General Motors Corporation, a Corporation of Delaware. Filed July 15, 1924. Serial No. 726,211. 3 Claims. (Cl. 74—7.)



1. Engine starting apparatus comprising, in combination, a gear connected with an engine to be started; and electric motor; driving connections between the motor and engine gear including a pinion driven by the motor and movable into engagement with the engine gear, said connections including means whereby the pinion will be moved by motor operation into full driving engagement with the engine gear after having been meshed therewith, and whereby the pinion may be automatically disconnected from the engine gear when the engine becomes self-operative; a motor switch; and means for moving the pinion into contact with the engine gear and for closing said switch, said means including a pinion shifting lever, a movable rod, connections between the rod and lever permitting the leverage of the rod with respect to the lever to be changed, and means for causing the rod to move endwise to move the lever and to shift the pinion into engagement with the engine gear and for tending to produce sidewise movement of the rod to reduce the leverage of the rod with respect to the lever, said connections normally preventing said sidewise movement but released by the operation of the motor in moving the pinion into full engagement with the engine gear.

1,577,801. TYPE-BAR-CASTING MACHINE. WILLIAM J. IRWIN, Tacoma, Wash. Filed Sept. 12, 1922. Serial No. 587,678. 9 Claims. (Cl. 199—47.)

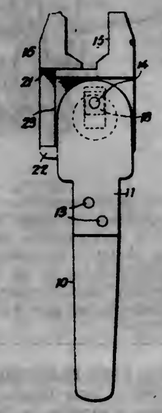
1. In a type bar casting machine, a housing forming the side walls of a mold, a type bar ejector slidably contained in the housing and forming the end walls and base of the mold, a series of matrices, means for moving the matrices into and from casting relation with the mold, means for actuating the ejector to advance the cast bar from the housing and yieldable means for pressing the cast bar from the ejector after the latter has been advanced.

1,577,802. CARBURETOR. CHESTER F. JOHNSON, Detroit, Mich. Filed Dec. 1, 1921. Serial No. 519,182. 8 Claims. (Cl. 261—70.)

1. In a carburetor, in combination, a vented fuel chamber, means for regulating the flow of fuel thereto, a mixing chamber, said fuel chamber arranged to supply fuel to said mixing chamber, a passage connecting said chambers, and means actuated by the liquid in said fuel chamber for controlling flow through said passage to apply suction increasingly to said fuel chamber as the fuel therein rises.

1,577,803. COMBINATION ELECTRIC SWITCH LOCK. MAURICE C. LEVINSON, Long Beach, Calif., assignor to Auto Theft Alarm Corporation, a Corporation of California. Filed Feb. 21, 1924. Serial No. 694,807. 6 Claims. (Cl. 200—45.)

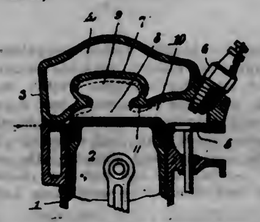
1. A combination locking device, comprising a casing having a plurality of electric switches mounted therein, a plurality of tumblers mounted within said case, a revoluble stem extending into said case, a switch operating arm loosely mounted on said stem capable of both sliding and rotary movements, and a tumbler disk having a cam edge for engaging and actuating the switch operating arm to control the opening and closing of said switches, said disk secured to said stem and revoluble therewith.



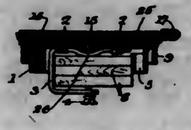
1,577,804. SAFETY GUARD FOR SHEAVE BLOCKS. BURT STANLEY MINOR, Los Angeles, Calif. Filed Apr. 14, 1924. Serial No. 706,825. 6 Claims. (Cl. 254—197.)

1. A guard for sheave blocks comprising a casing provided with cable slots through which the block cables

may be extended, said guard being divided transversely into sections through said slots, and means for independently securing said sections on the sheave block over the face of the sheaves of the block.

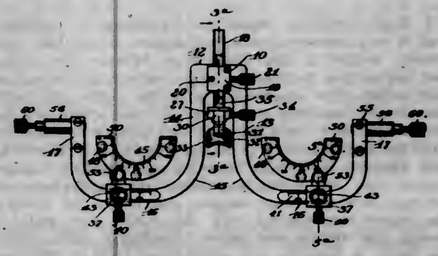


1,577,805. WRENCH. ALBERT NEAL, Kokomo, Ind. Filed Mar. 14, 1925. Serial No. 15,700. 2 Claims. (Cl. 81—128.)



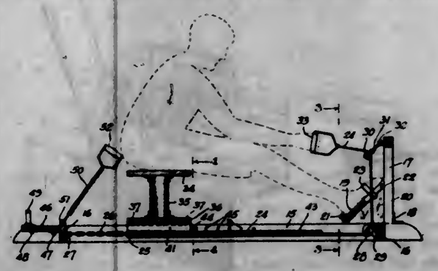
1. A wrench comprising a bifurcated handle, a pair of jaws between the forks of the handle, a connection between one of said jaws and the adjacent fork of the handle comprising a bearing element in the form of a circle on one of the members, an opening in the form of a circle in the other of the members for the reception of the circular bearing element, the other of said jaws having a slot, and a pin arranged eccentrically of said circular bearing element and extending through the slot in the last mentioned jaw, substantially as set forth.

1,577,806. INTERNAL-COMBUSTION ENGINE. WILLIE E. OGDEN and GERALD N. SMITH, Clarksburg, W. Va. Filed June 15, 1925. Serial No. 37,114. 2 Claims. (Cl. 123—191.)



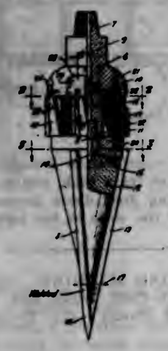
1. In an internal combustion engine, a head having an explosion chamber, a pocket in said head beyond said explosion chamber for the retention of dead gases and closed on all except one side, said one side communicating with said explosion chamber, a restricted passage leading to said explosion chamber, and ignition means beyond said passage.

1,577,807. CAMP CHAIR. NELSON ORWICK, Findlay, Ohio. Filed May 25, 1925. Serial No. 33,902. 2 Claims. (Cl. 155—133.)



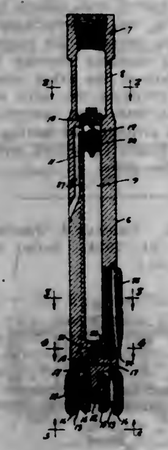
1. A device of the class described, comprising a base, a seat carried by the base, legs of such dimensions that they may be housed beneath the base, means on the base for receiving the legs, a support-engaging clamping-means for receiving the legs in stacked relation when the legs are not in use, and mechanism for mounting the clamping-means on the base for swinging movement, to enable the clamping-means and the legs to be swung to approximate parallelism with the base.

1,577,808. OPHTHALMIC TRIAL-LENS FRAME. MAX POSER, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed July 11, 1922. Serial No. 574,125. 4 Claims. (Cl. 88—20.)



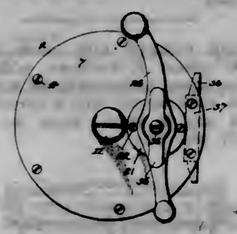
1. An ophthalmic trial lens frame comprising a central head portion provided with adjustable means for supporting engagement with a patient's head, limbs carried by said head portion having substantially horizontal portions extending outwardly below the positions of the patient's eyes, a carriage mounted on each of said horizontal portions and adjustable inwardly and outwardly thereon one independent of another, members extending laterally from the carriages, lens pockets supported by each of said members above and at one side of said horizontal portions and temple means carried adjacent the outer ends of said limbs.

1,577,809. EXERCISING APPARATUS. EDWARD THOMAS RANDALL, Los Angeles, Calif. Filed May 15, 1924. Serial No. 713,497. 3 Claims. (Cl. 272—72.)



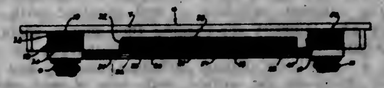
2. An exercising apparatus comprising a frame including parallel rails having grooves in the confronting sides thereof, a base, rollers carried by the base and engaging the top edge of the rails, brackets depending from the base, rollers carried by the brackets and engaging the inner sides of the rails, strips secured to the brackets and engaging within the grooves for preventing upward displacement of the base from the rails, and a seat carried by said base.

1,577,810. SIDE-TRACKING TOOL. EDWARD F. RAYMOND, Santa Fe Springs, Calif. Filed Mar. 5, 1925. Serial No. 13,209. 8 Claims. (Cl. 255—61.)



1. A tool of the character described comprising the combination of a tapered pilot body having mortises extending longitudinally, blades mounted in said mortises and welded to form an integral tip.

1,577,811. COMBINATION ROLLER BIT AND DISK STRUCTURE. EDWARD F. RAYMOND, Santa Fe Springs, Calif. Filed July 6, 1925. Serial No. 41,654. 6 Claims. (Cl. 255—71.)



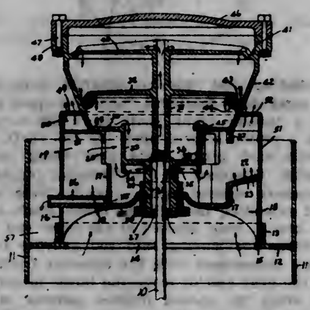
1. A hydraulic rotary boring tool comprising a body having rotatable cutters there being an expansible lubricant chamber in said body and lubricant ducts leading therefrom to the bearings of the cutters, the lubricant control means for preventing the flow of lubricant from said chamber and operable by rotation of said tool to permit the flow of lubricant therefrom.

1,577,812. FISHING REEL. MARK ALEXANDER ROBINSON and FRANK BARNARD SHANNE, Honolulu, Territory of Hawaii. Filed July 27, 1925. Serial No. 46,456. 10 Claims. (Cl. 242—84.5.)

1. In a fishing reel, the combination with a cage having an axial shaft journaled therein, a spool fixed on said shaft, a tubular crank shaft journaled in a cheek of the cage, a pinion secured upon the reel shaft, a gear meshing with said pinion, said gear being co-axially mounted with reference to the tubular crank-shaft, friction members secured upon opposite faces of said gear, a rod extending through the crank shaft and the hub of the gear, a head secured at the inner end of said rod, and means for moving said rod endwise to bring the head into engagement with the adjacent friction face carried by the gear and to move the latter laterally and to thereby bring the second friction member into contact with the adjacent portion of the crank shaft.

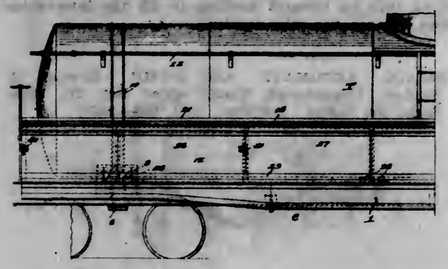
1,577,813. EXTENSION TABLE. CORNELIUS ROSS, Los Angeles, Calif., assignor to Woodcraft Cabinet Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed June 18, 1924. Serial No. 720,768. 1 Claim. (Cl. 45—112.)

In combination with an extension table consisting of a pair of sections adjustably secured together, of an extension table leaf divided into two hinged sections and normally supported by the table frame below the tops of the table sections, a pair of arms pivotally attached at one of their ends to one of the leaf sections, their free ends being pivotally secured to the table frame, and a second pair of arms pivotally attached to the last named leaf section, their free ends being pivotally attached to movable pivot blocks, whereby when the table sections are drawn apart the foldable table leaf may be swung into an elevated position to fill the intervening space between the table sections.



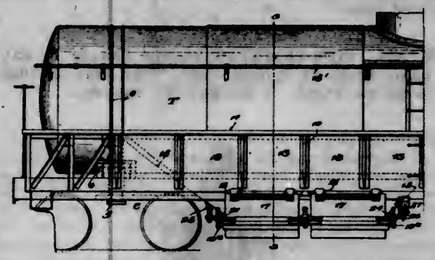
1,577,814. AUTOMATIC ASH DUMP. EDWARD H. SHOLAR, Chattanooga, Tenn. Filed Oct. 26, 1925. Serial No. 64,964. 2 Claims. (Cl. 126—245.)

1. The combination with a frame, of oppositely disposed shutters therein, pivot devices extending under the respective shutters, depending means upon the shutters engaging the pivot devices, weights depending from the outer end portions of the respective shutters for holding said end portions normally bearing downwardly on the



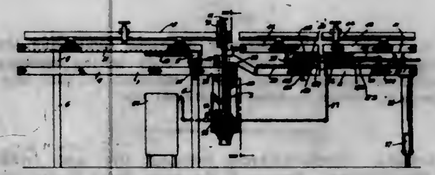
frame and the inner portions of the shutters normally closed together, said shutters and the sides of the frame cooperating to provide an ash receiving hopper, the upper surfaces of the shutters converging downwardly toward their inner ends.

1,577,815. OIL BURNER FOR COOK STOVES AND THE LIKE. PERRY J. SNOWDEN, Indianapolis, Ind., assignor, by mesne assignments, to E.-Z. Oil Burner Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 7, 1924. Serial No. 730,696. 11 Claims. (Cl. 158—64.)



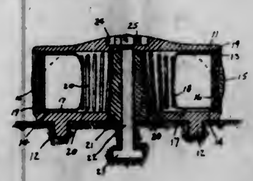
5. In an oil burner, the combination of a plurality of peripherally arranged laterally and inwardly discharging air tubes, a plurality of upwardly discharging air outlets positioned between said air tubes for forming a combined air stream, an upwardly directed air channel centrally positioned and including laterally and outwardly discharging air outlets communicating with the upwardly discharging air outlets, and a superposed vaporizing chamber including a well provided with outwardly and laterally discharging fuel supply ports for discharging fuel into the inwardly discharged air currents, a central air channel including laterally and outwardly discharge air outlets, both sets of said outlets being arranged for forming the combined air stream into which the fuel is discharged and said vaporizing chamber having depending portions positioned in radial registration with the outwardly discharging fuel supply ports and positionable between said air tubes for forming a baffle adjacent the fuel discharge.

1,577,816. FREIGHT-CAR CONSTRUCTION. LEWIS J. SPENCE, Brooklyn, N. Y. Filed July 2, 1924. Serial No. 723,780. 11 Claims. (Cl. 105—359.)



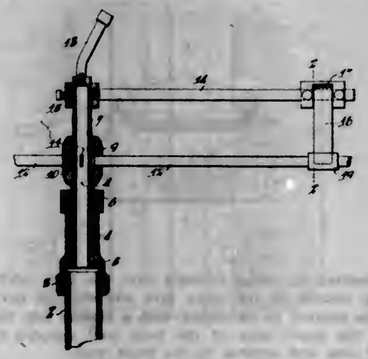
1. A freight car construction including a chassis having tank supporting means, a tank carried by said means and extending longitudinally of the chassis, and supplemental roofed cargo compartments carried by the projecting sides portions of the chassis and paralleling the tank outside of the latter.

1,577,817. FREIGHT-CAR CONSTRUCTION. LEWIS J. SPENCE, Brooklyn, N. Y. Filed July 2, 1924. Serial No. 723,781. 10 Claims. (Cl. 105—359.)



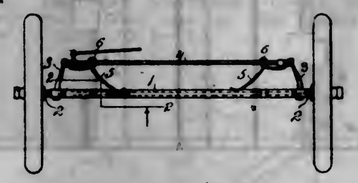
1. A freight car construction including a chassis having supporting means for a tank, and supplemental cargo compartments having drop doors beneath the tank and top openings along the sides of the tank.

1,577,818. WELDING MACHINE. CLIFTON L. STANCLIFF, Bakersfield, Calif. Filed May 17, 1923. Serial No. 639,685. 18 Claims. (Cl. 78—84.)



13. In a welding machine of the character described, means for supporting two elements to be welded in an angular plane in spaced and alined relation, a torch arrangement having means associated therewith for supporting the same between the elements, means for swinging one of the elements whereby its face is made parallel with the face of the other element and means for simultaneously swinging the torch arrangement into a position parallel to both faces, comprising a bar associated with the torch arrangement having a slide thereon, and arms of equal length associated with both elements pivotally engaging the slide.

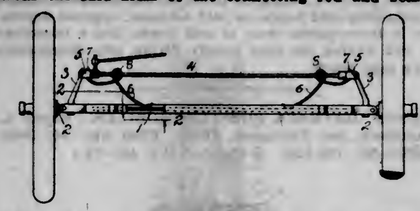
1,577,819. SIGNAL. THOMAS I. TEMPLE, Indianapolis, Ind. Filed Oct. 24, 1924. Serial No. 745,705. 3 Claims. (Cl. 88—1.)



1. In a signal device, a signal element comprising a metallic cup-shaped deflecting member of substantial depth, a lens mounted in the open end of said member, and a plurality of concentric diffusion rings formed in the reflecting surface thereof and spaced from said lens for receiving and diffusing the light rays throughout said element.

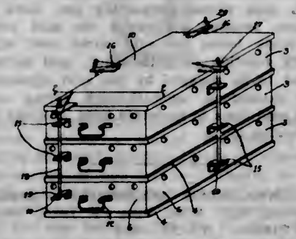
1,577,820. WATER SPRINKLER. WILLIAM CHARLES TODD and JAMES WILLIAM POMEROY, Victoria, British Columbia, Canada. Filed Sept. 12, 1924. Serial No. 737,268. 4 Claims. (Cl. 299—69.)

1. A water sprinkler of the class described, comprising in combination, a hollow stem to which water under pressure is admitted, a reaction sprinkler mounted on the stem and deriving its water supply therethrough, a central hollow stem independently rotatable about the same axis, a member secured to the central stem to project over a rotatable part of the reaction sprinkler, a swinging member mounted on the projecting member, a check secured to the projecting member to limit the swing, and means for imparting movement to the swinging member against its limiting check whereby an intermittent fractional movement is imparted to the central stem.



1,577,821. STABILIZING DEVICE. WILLIAM P. CAMPBELL, Kansas City, Mo., assignor of forty-nine one-hundredths to Harry W. Tully and John H. Lane, and of fifty-one one-hundredths to John H. Lane, all of Kansas City, Mo. Filed Jan. 29, 1923. Serial No. 615,594. 3 Claims. (Cl. 280—89.)

1. In a device of the kind described, the combination with the front axle, the spindle pivoted thereto and having a steering arm, and steering connecting rod having a forked end pivoted to the steering arm, of a spring between the arms of said forked end bearing against the rear end of the steering arm and against the front side of the steering rod and having a sliding bearing against the axle.

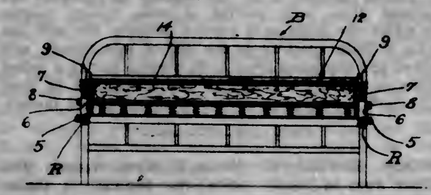


1,577,822. AUTOMOBILE STEERING MECHANISM. WILLIAM P. CAMPBELL, Marceline, Mo., assignor to John H. Lane, Kansas City, Mo. Original application filed Jan. 29, 1923, Serial No. 615,594. Divided and this application filed June 18, 1925. Serial No. 37,897. 1 Claim. (Cl. 280—93.)

In a device of the kind described, the combination with the front axle, a spindle pivoted thereto having a steering arm, and a steering connecting rod having two arms pivoted to said steering arm, of a spring extending between the said arms of the connecting rod and bearing

against the rear sides thereof and bearing against the front side of connecting rod, and having a sliding bearing against said axle.

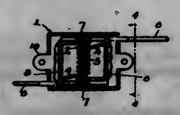
1,577,823. SHIPPING CONTAINER AND DISPLAY DEVICE. ROBERT C. DOLLS, Cincinnati, Ohio. Filed Oct. 31, 1923. Serial No. 672,007. 2 Claims. (Cl. 220—4.)



1. In a combined shipping, storage and display device for water plants the combination of individual containers each capable of independent display use, and each comprising side walls having perforations adjacent their upper edges for providing ventilation and permitting replenishment of the water supply, a stay rod upon the inner edge and extending about the upper edge of each container and over which stay rod the upper edges of the side walls are turned, a peripheral depending flange at its bottom arranged to extend about the upper edge of the container next below, a lid adapted to receive the upper edge of any container, and means for locking a plurality of containers and a lid upon one another.

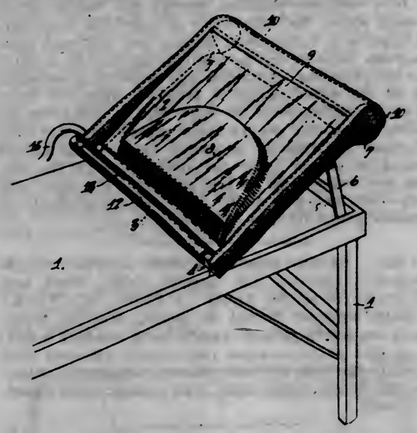
1,577,824. PAINT REMOVER FOR AUTOMOBILES. SHOSAKU ISHIYAMA, Los Angeles, Calif. Filed Aug. 18, 1925. Serial No. 51,041. 1 Claim. (Cl. 87—5.)

A paint remover formed by mixing together water, one and one-eighth gallons; caustic soda, one-half pound; lye, one-half pound; benzine two ounces; ammonia (7% strength), two and one-half ounces; commercial chloroform, one ounce; lemon juice, two ounces; corn starch, four ounces.



1,577,825. BED ATTACHMENT. ALMIS M. JENNESS, Dover, N. H. Filed Feb. 23, 1924. Serial No. 694,735. 1 Claim. (Cl. 5—327.)

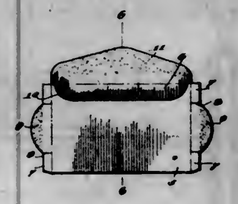
An attachment of the character described for beds, comprising clamps having tubular standards projecting therefrom, opposed columns adjustably supported in the



standards, said columns having serrated portions at their free ends, heads projecting from said columns and having serrated portions engaging those of the columns, means for adjusting said heads on said columns, opposed depressions in the opposite faces of said heads, and a telescopic foot rail having its ends loosely fitting into depressions of the said heads.

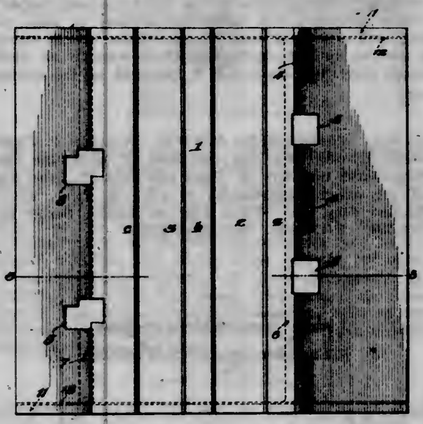
1,577,826. HATRACK FOR AUTOMOBILES. HENRY L. JACOBSON, San Francisco, Calif. Filed Apr. 10, 1924. Serial No. 705,525. 1 Claim. (Cl. 45—13.)

A hat rack comprising a rectangular casing member carrying a spring supporting pin adapted to maintain a coiled spring having oppositely disposed free ends, oppositely disposed arms having offset extensions rotatively supported by said spring supporting pin, slots in said casing member forming guideways for said arms, hat supporting loops borne by said arms and oppositely disposed with relation to each other, said spring ends being adapted to be engaged by the said oppositely disposed offset extensions, wherethrough spring action is exerted upon said arms to maintain hats, or other articles, in said supporting loops.



1,577,827. EMBALMING ACCESSORY. EPHRAIM R. JONES, Corbin, Ky. Filed June 22, 1925. Serial No. 38,841. 2 Claims. (Cl. 27—23.)

1. A device of the class described comprising a frame, a drain pan removably mounted on the frame, said drain pan having flanges to fit the frame, an inclined and depressed drain body portion, a cross trough portion into which the drain body portion delivers, the said pan having a drain aperture at one end of said trough, said inclined and depressed drain body portion having a raised portion to support the back of the corpse and fit close to the back extending to the top of the shoulders thereof.

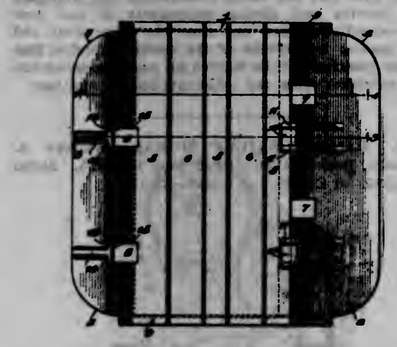


1,577,828. ENVELOPE. MOSES E. KING, Neenah, Wis. Filed Aug. 14, 1924. Serial No. 732,125. 1 Claim. (Cl. 229—74.)

An envelope formed from a single sheet of material folded upon itself to form front and back walls, longitudinal flaps extending along opposite sides of the front wall and contiguous therewith, said flaps being transversely perforated at spaced intervals providing a central and end tabs, said end tabs having cement on their under face and adapted to fold over the adjacent edges of the back wall to secure the front and back walls together,

said central tab being foldable over the back wall and having cement on its upper face whereby the envelope may be secured to an object, and a closing flap formed along the upper edge of the back wall adapted to be folded over and secured to the front wall.

1,577,829. RAILWAY TIE PLATE. JULIUS KRUTTSCHNITT, New Canaan, Conn.; E. Minna Kruttschnitt executrix of said Julius Kruttschnitt, deceased. Filed July 9, 1924. Serial No. 725,053. 2 Claims. (Cl. 238—304.)

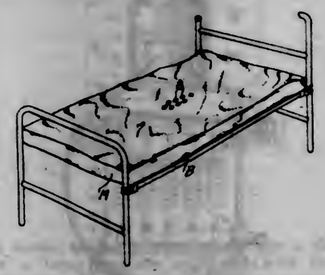


1. A construction for tie plates including a body provided at its upper side with a canted rail seat and at its lower side with a pair of spaced tie-compression ribs which are spaced apart a distance corresponding at least to the width of the rail seat, said body being further provided at its end edges with downward reinforcing girders disposed longitudinally of the tie and formed with inner tie engaging faces.

1,577,830. RAILWAY TIE PLATE. JULIUS KRUTTSCHNITT, New Canaan, Conn.; E. Minna Kruttschnitt executrix of said Julius Kruttschnitt, deceased. Filed Aug. 26, 1924. Serial No. 734,275. 2 Claims. (Cl. 238—299.)

1. A construction for tie plates including a body provided at its upper side with a rail seat and at its lower side with a pair of tie compression ribs of shallow depth

which are spaced apart to a distance corresponding at least to the width of the rail seat, said body being further provided at its end edges with depending outwardly

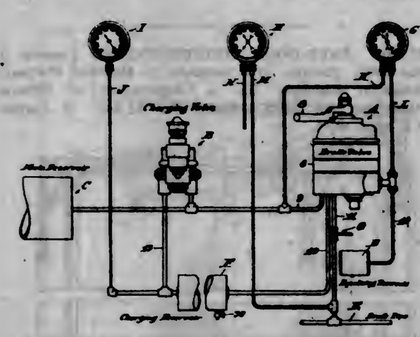


arched girder flanges approximately coextensive in length with the width of said rail seat and adapted to engage over the sides of the tie.

1,577,831. DENTAL CLASP. ALBERT LUKS, Brooklyn, N. Y. Filed Feb. 7, 1924. Serial No. 691,163. 3 Claims. (Cl. 32—12.)

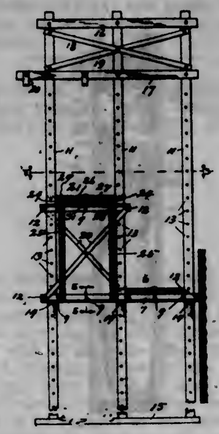
1. In a dental clasp, the combination of a clasp adapted to be carried by dental work, and an interior lining of flexible and frictional material to cover parts of the clasp adjacent a tooth and not be exposed.

1,577,832. SANITARY MATTRESS. CAESAR MAGGI, Kellogg, Idaho. Filed Sept. 21, 1925. Serial No. 57,580. 1 Claim. (Cl. 5—91.)



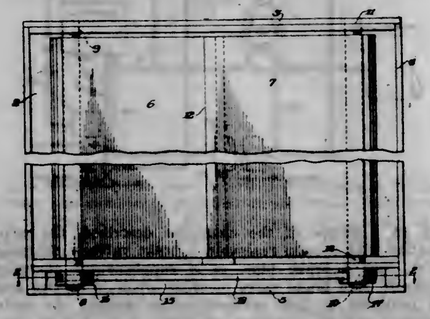
The combination with a mattress having an opening therethrough and a grommet in the opening, of a removable sheet, a receptacle in the opening having an open top and bottom and adapted for withdrawal from said opening, an upper exterior flange on the receptacle secured at the underside of the sheet and adapted to rest upon the grommet, said sheet having a perforated portion forming a top-closure for the receptacle, and a removable closure for the bottom of the receptacle.

1,577,833. GRAB. GEORGE E. MCCRACKEN, Long Beach, Calif. Filed Oct. 20, 1924. Serial No. 744,744. 4 Claims. (Cl. 294—86.)



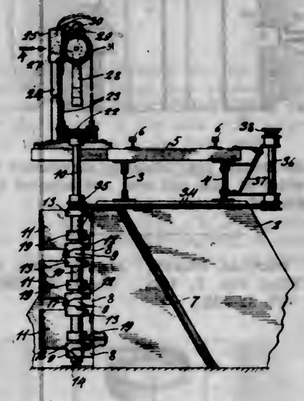
1. A grab comprising a pair of telescoping members, one member having a hooked engagement with the other, means rendered operable by the successive opposite axial movements of one member relative to the other for effecting said hooked engagement, and means rendered operable by the successive opposite axial movements of the one member relative to the other for effecting the disengagement of said hooked members.

1,577,834. AIR-BRAKE EQUIPMENT. GEORGE H. MAIMS, Los Angeles, Calif. Filed Apr. 2, 1924. Serial No. 705,726. 14 Claims. (Cl. 303—57.)



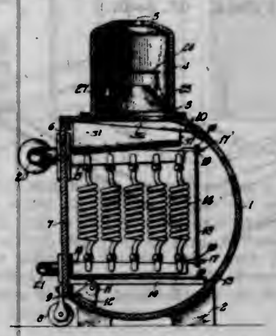
1. In a device of the character described, the combination with a main reservoir, a brake valve, a charging valve, and a brake pipe, of a supplemental charging reservoir, said brake valve operable when in service and lap positions to open communication between the main reservoir and the charging reservoir, and when in running release position to afford communication between the charging reservoir and the brake pipe, and said charging valve being automatically operable to normally close communication between the main reservoir and the charging reservoir when the brake pipe is fully charged to a predetermined pressure, and to automatically open communication between the main reservoir and the charging reservoir and the brake pipe, on reduction of pressure in the brake pipe.

1,577,835. SCAFFOLD. OSCAR F. MANN, Indianapolis, Ind., assignor to Nina C. Mann, Indianapolis, Ind. Filed Apr. 30, 1924. Serial No. 709,969. 3 Claims. (Cl. 304—29.)



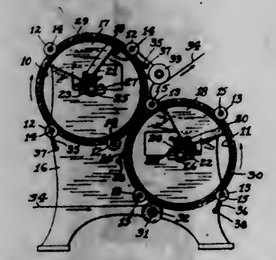
1. A scaffold comprising a platform, a pair of horizontal bars extending transversely of and under the platform and supporting it, spacers between the pair of bars, bolts rigidly uniting the pair of bars, a second like pair of horizontal bars above the first pair, diagonal braces connecting the two pairs, a pair of bars crossing and supported on the second pair, diagonal braces from the ends of the cross bars to the first pair of horizontal bars, a second platform on the second pair of bars and the cross bars, a plurality of vertical supporting members, slidingly assembled between the spaced apart bars of both horizontal pairs of bars, upon which the horizontal pairs are vertically adjustable, and means for obtaining a given adjustment of the horizontal pairs on the vertical members.

1,577,836. SAFE-DOOR CONSTRUCTION. JOSEPH J. MARIOTTI, Chicago, Ill., assignor to Daprato Statuary Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 12, 1925. Serial No. 14,865. 3 Claims. (Cl. 268—9.)



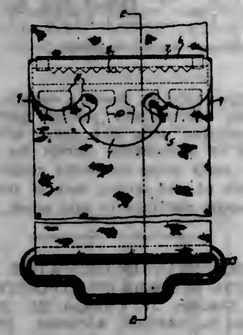
1. In combination, a pair of safe doors cooperatively engageable at one vertical edge when in closed position, upper and lower hinge members connected to said doors adjacent their opposite vertical edges, the lower hinge member of each door having a portion projecting beyond the lower edge of its respective door, a member provided with an abutment shoulder, on and adjustably connected to each of said projecting portions, a pivot pin in each member adjacent the shoulder thereon, and a bar pivoted at its ends to said pivot pins, said pins being so located on said members as to lie on substantially opposite sides of the line of centers of the door hinges when the doors are in one of their two extreme positions and said shoulders, pins and bar being constructed and arranged so that opening and closing movements of one door will correspondingly open and close the other door and so that opening movements of the doors beyond a predetermined position will be limited by engagement of one of said shoulders with the adjacent end of the bar.

1,577,837. RAILWAY-BRIDGE SIGNAL. ANDREW A. MATHESON, Denver, Colo. Filed Aug. 15, 1925. Serial No. 50,385. 6 Claims. (Cl. 246—20.)



1. In a railway bridge signal, in combination, a semaphore located at an approach to the bridge and means for moving said semaphore to different signaling positions as the water rises above predetermined levels.

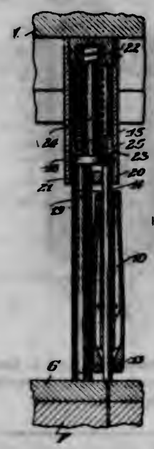
1,577,838. VAPORIZER. JOHN ALDEN MACLEAN, Hampton, N. J. Filed Dec. 16, 1924. Serial No. 756,188. 16 Claims. (Cl. 122—4.)



3. A vaporizer comprising among its members, a shell having an opening therein, a door detachably secured over said opening, a heating element mounted on the door, roller supporting means for the door located outside of the shell, a horizontal track rigidly secured to the inner face of said door and projecting through said opening into the interior of the shell, said track being provided with a vertically disposed flange member and a horizontally disposed flange member adjacent to the upper edge of the vertical flange member, and a supporting roller rigidly secured within the shell adjacent to said opening therein, and engaging the vertical flange member of said track.

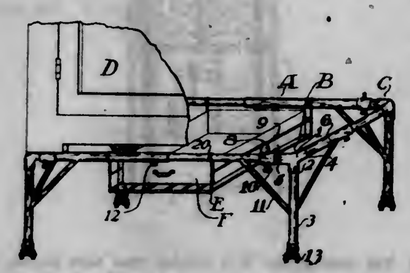
1,577,839. WEB-DRYING DEVICE. ALBERT E. F. MOONS, Chicago, Ill. Filed Mar. 17, 1925. Serial No. 16,100. 33 Claims. (Cl. 34—48.)

1. In a web drying machine, the combination of a tubular drum having perforations through the cylindrical wall, devices rotatably supporting said drum, a stationary vacuum chamber having an open side closed by contact with the inner cylindrical surface of the drum, a delivery pipe extending from said chamber, and devices for feeding a web to be dried around the outer surface of said drum opposite the open side of said chamber.



1,577,840. BUCKLE. ROSWELL A. MOORE and WILLIAM F. MURTHA, Waterbury, Conn., assignors to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed Nov. 4, 1925. Serial No. 66,712. 3 Claims. (Cl. 24—184.)

1. A buckle having a frame comprising a plate and a top-bar, a lever pivotally connected with the top-bar, the plate formed with grippers each comprising a neck and a head struck out from it, the heads being wider than the necks.

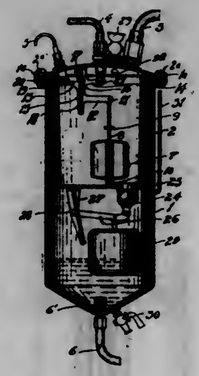


1,577,841. NAILING MACHINE. HENRY W. MORGAN, Rochester, N. Y. Filed Nov. 16, 1922. Serial No. 601,433. 10 Claims. (Cl. 1—10.)

10. In a nailing machine, the combination with a frame and a work holder thereon, a nailing head reciprocably mounted upon the frame, of a support located between the nailing head and the work, a chuck upon the support, a driver operable through the chuck, a stop located adjacent the chuck and adapted to engage the work to limit the movement of the driver, and yieldable

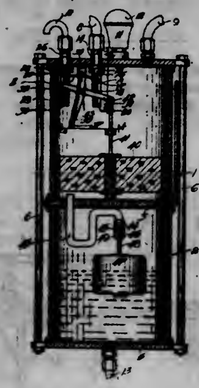
operating means for yieldably actuating the driver during the driving operation adapted to be actuated by the nailing head.

1,577,842. SANITARY REFRIGERATOR SUPPORT. WILLIAM J. MURPHY, St. Paul, Minn. Filed Mar. 21, 1924. Serial No. 700,942. 1 Claim. (Cl. 248—41.)



A refrigerator support comprising upright corner posts, telescopically adjustable frame members connecting the corner posts, and sleeve means slidable on the adjustable members each of said means having a pin integral therewith to penetrate a caster opening in a refrigerator.

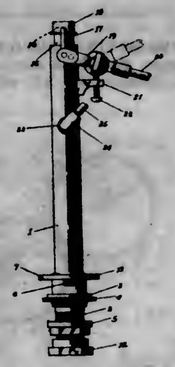
1,577,843. VACUUM TANK. CHARLES S. NELSON, Cocolalla, Idaho, assignor of one-half to William H. Jaeger, Sandpoint, Idaho. Filed Feb. 14, 1925. Serial No. 9,811. 1 Claim. (Cl. 103—236.)



In a vacuum tank provided with spaced suction and vent ports in the top thereof, a bracket depending from the tank top between said ports, a three arm lever pivoted on said bracket, two arms of said lever extending oppositely from one end thereof and having balls formed

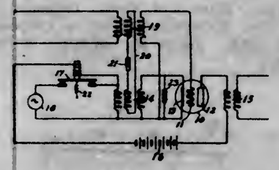
on the ends thereof for closing said ports, a snap throw spring extending between said bracket and the end of the third lever arm, said last named arm having an arm

extending laterally therefrom, and a float carrying stem pivoted on the outer end of said laterally extending arm for control of said lever movement.



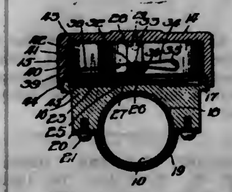
1,577,844. VACUUM TANK. CHARLES S. NELSON, Cocolalla, Idaho. Filed May 23, 1925. Serial No. 32,338. 5 Claims. (Cl. 103—236.)

1. The combination in a vacuum feed tank having an inlet opening and a vent opening and oppositely moving valves for said openings, of slotted stems on said valves, a single lever having a pair of arms disposed in said slotted stems, means for exerting a snap action on said lever, and float controlled means for actuating said lever.



1,577,845. BALL COCK. JOHN C. NEWCOMB and ROMBO A. CASAROTTI, Oakland, Calif., assignors to Rex Manufacturing Company, Oakland, Calif., a Corporation. Filed Aug. 9, 1922. Serial No. 580,622. 1 Claim. (Cl. 137—104.)

In a valve structure for use in liquid tanks, a tubular member having its lower end arranged to project below a tank and having an outlet to discharge into the tank, said tubular member having a straight bore from the outlet downwardly, a sleeve mounted in the straight bore of the tubular member and being bored at its lower end to receive a standard intake pipe, the upper end of the sleeve being formed as a valve-seat, and an outwardly projecting flange on the lower end of the sleeve adapted to extend across and abut against the lower end of the tubular member, whereby to locate the sleeve in

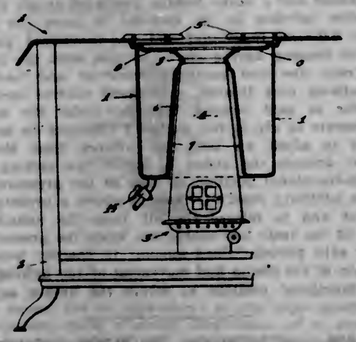


the tubular member, the latter being threaded to receive a flanged nut placed about the pipe, whereby said nut will both hold the sleeve in place in the tubular member and secure the intake pipe thereto.

1,577,846. ELECTRIC SPACE DISCHARGE DEVICE AND METHOD OF OPERATING THE SAME. ALEXANDER MCLEAN NICOLSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1918. Serial No. 268,492. 14 Claims. (Cl. 179—171.)

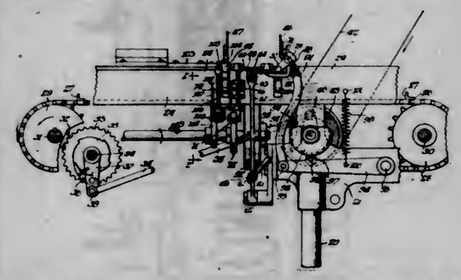
1. In a vacuum tube, an anode, a cathode, said cathode comprising two substantially parallel parts having no electrical connection with each other within the tube and a source of alternating current for heating said cathode, said parts being connected respectively to opposite terminals of said source, each of said parts being effective to supply electrons to said anode.

1,577,847. TEMPERATURE-INDICATOR APPARATUS FOR COOLING SYSTEMS OF EXPLOSIVE ENGINES. CHRISTIAN NIELSEN, Jr., Chicago, Ill. Filed July 14, 1917. Serial No. 180,688. 4 Claims. (Cl. 200—140.)



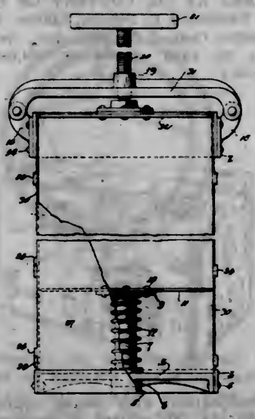
1. A device for the purpose set forth comprising a thermic cell having means to centrally support one wall thereof through which means heat is conducted to the cell, a socketed bearer seated centrally against the other wall of said cell, a fixed guide for said bearer, a pin loosely mounted in the socket of the bearer, and provided with a prolongation, a spring controlled arm having an opening through which said prolongation loosely extends and a series of signal circuit contacts over which said switch arm sweeps.

1,577,848. REFRIGERATOR. JOHN NORRENO, Seattle, Wash. Filed Oct. 3, 1923. Serial No. 666,300. 1 Claim. (Cl. 62—57.)



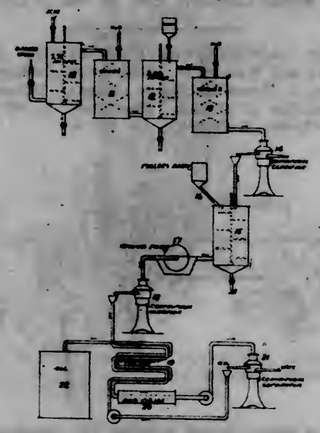
A refrigerator having a flush inner compartment, corrugated side members resting on the bottom of said compartment, end frame members flangedly arranged to form splash-proof connections with said side members, shelves supported by the corrugations of said side members, an ice container within the upper portion of said compartment having a top flange supported by the upper ends of the walls of said compartment, a bottom for said container inclined downwardly from a center ridge towards the sides thereof, narrow horizontal portions between said inclines and sides having perforations therein disposed between the corrugated side members and the sides of the compartment, and the bottom of said ice container supported by the upper ends of said corrugated side members with its four corners positioned in the flanged tops of said end frame members.

1,577,849. WATER-HEATING ATTACHMENT FOR OIL AND GAS STOVES. OTTO PETERMANN, Groton, N. Y. Filed Jan. 11, 1922. Serial No. 528,381. 1 Claim. (Cl. 126—58.)



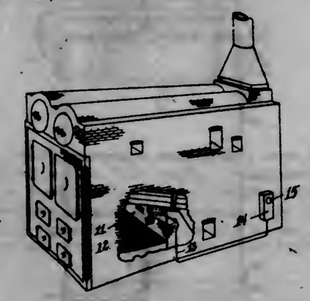
The combination of a stove having a burner including a chimney, an opening in the top of the stove, above and in line with the burner, having a greater diameter than the chimney, a grid extending across such opening, and a water heating attachment, comprising a tank formed with a vertical passage therethrough for the chimney, the tank surrounding the chimney, and having a top located beneath the grid, the wall of said passage being spaced apart from the chimney, and the chimney terminating short of the top of the tank, and the chimney engaging at its top the wall of said passage, and said passage flaring outwardly from the top of the chimney.

1,577,850. CARTON-CLOSING MECHANISM. FRANK M. PETERS and WARREN H. HUNGERFORD, Chicago, Ill., assignors to Peters Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed July 7, 1921. Serial No. 482,882. 6 Claims. (Cl. 93—2.)



1. In a carton closing machine, the combination of a chute, propelling means extending through the chute and intermittently operable to advance a series of cartons step by step through the chute, a folder extending over the chute across the path of movement of the carton as it is propelled through the chute and pivoted to fold downwardly over the carton in the chute, and a similar folder movable to and from an operating position over the chute, said folder being spaced from and operable in a direction opposite to that of the first mentioned folder.

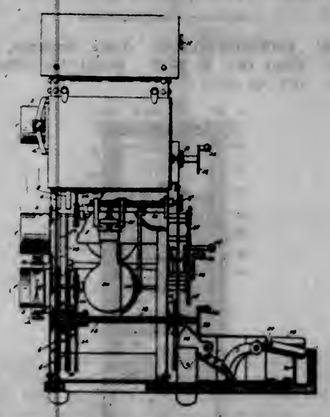
1,577,851. MEAT CONTAINER. CARL H. PESCHKE, Detroit, Mich. Filed Feb. 8, 1924. Serial No. 691,838. 3 Claims. (Cl. 100—57.)



1. A container for boiling meat, comprising a shell, a detachable front wall carried by said shell, a spider in one end of said shell, a slidable centrally located plunger having a limited movement in said shell, a pressure head in said shell supported by said plunger, a bar connected to the opposite end of said shell, an adjustable screw carried by said bar, and a pressure head carried by said screw and adapted to be shifted into said shell to cooperate with the plunger pressure head in subjecting meat to pressure within said shell.

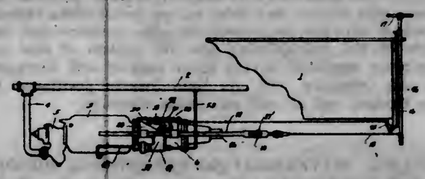
1,577,852. **PROCESS OF SEPARATING WAX FROM LUBRICATING OIL.** EARL PETTY, Winfield, Kans., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 24, 1921. Serial No. 495,078. 5 Claims. (Cl. 196—19.)

4. The process of separating wax from mineral oil lubricating stock which comprises diluting the stock with a light petroleum distillate, then agitating the diluted stock with an acid, separating out acid sludge and agitating the acid treated stock with an alkali, then removing the soap and water from the stock, then mixing a clarifying and decolorizing agent with the stock and removing said agent with coloring matter, then chilling the stock, and then centrifuging the stock to separate the wax, with a proportion of the diluting agent, from the remainder of the diluting agent and the oil.



1,577,853. **APPARATUS FOR DETERMINING TEMPERATURES BY CO_2 CONTENT OF COMBUSTION GASES.** FREDERICK D. POTTER, Linden, N. J., assignor to Combustion Control Company, Inc., New York, N. Y. Filed Mar. 24, 1919. Serial No. 284,886. 3 Claims. (Cl. 73—32.)

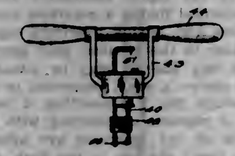
1. The combination with means controlled in accordance with the CO_2 content of combustion gases of a chart cooperating with said means for directly indicating temperatures corresponding to CO_2 content of the gases.



1,577,854. **CHROMOPIANO.** ARTHUR C. VINAGERAS, Lawrence, Mass. Filed Dec. 22, 1921. Serial No. 524,207. 9 Claims. (Cl. 240—1.)

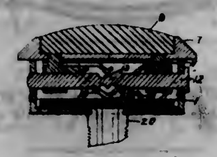
1. In a light projecting apparatus, the combination of light-producing devices, a central outlet surrounded by a row of outlets, a central frame surrounded by a row of frames, for lenses, said frames being provided with means for changing and fixing the relative directions of the optical axes of the lenses without suppressing the coincidence of said optical axes with the luminous centers of the light-producing devices, wheels carrying

interchangeable opaque or transparent sectors of various colors, for shutting, coloring or changing the intensity of color of rays of light, means for controlling the relative areas of colors projected in juxtaposition or superposition within the area of a spot of light, and means for controlling the duration of projection of spots of light.



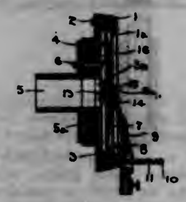
1,577,855. **AIR-BRAKE LOCK.** BERNHARD W. WESTBO, South Prairie, Wash., assignor to Railway Safety Brake Lock Corporation, Tacoma, Wash. Filed Mar. 9, 1925. Serial No. 14,090. 4 Claims. (Cl. 303—89.)

1. The combination with an air brake mechanism including a train pipe, an auxiliary air reservoir, braking mechanism and a brake locking device of an air cylinder, a piston operable in the cylinder to move the locking device between functional and non-functional positions, a valve housing having air connection with the cylinder, the train line and auxiliary reservoir and having an air exhaust port therein, valves and control mechanism therefor in said housing operable under the influence of pressure of air in the auxiliary reservoir to move the valves to admit air into the cylinder from the train line to actuate the piston to retain the locking device in non-functional position so long as the pressure of air in the auxiliary reservoir remains above a predetermined amount and to release the air from the cylinder and close off the train line connection when the pressure falls below said predetermined amount to thereby permit retraction of the piston and movement of the locking device into functional position to retain the brakes set.



1,577,856. **SCRUBBING MACHINE.** SAMUEL A. WISEHART, Des Moines, Iowa. Filed Oct. 24, 1923. Serial No. 670,495. 1 Claim. (Cl. 15—80.)

In a device of the class described, a brush supporting element, a second brush supporting element, said first element spaced therefrom, brushes supported on said elements and conducting and supporting means arranged between said elements, comprising spaced annular walls connected by cross members inclined away from the vertical from their upper ends in a direction opposite the rotation of the device whereby fluid may be caught



under their upper edges in the rotation of the brush supporting elements and guided downwardly without being permitted to splash up and out, means for rotating said brush supporting elements and means for supplying fluid soap or the like between them.

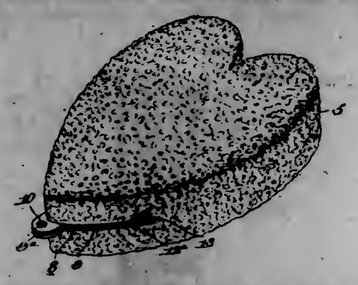
1,577,857. **SWITCH.** LOUIS B. WILLIAMS, Dayton, Ohio. Filed Sept. 14, 1923. Serial No. 662,656. 6 Claims. (Cl. 200—99.)

1. A combined automobile accelerator foot-rest and switch comprising a casing, means of supporting said casing, a plurality of contacts, said contacts being mounted within the casing upon an insulating base, a sliding cover for said casing having operating contacts suspended therefrom, and means to insulate said contacts from said cover.

1,577,858. **SOUND BOX OF SOUND-REPRODUCING MACHINES.** FRANK MILTON WINTER, Wellington, New Zealand. Filed Aug. 2, 1924. Serial No. 729,829. 3 Claims. (Cl. 274—35.)

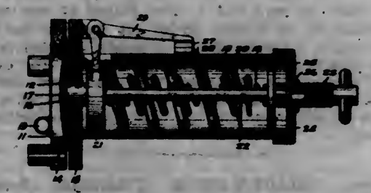
1. In a sound box or reproducer of the type specified the combination with a metal diaphragm, of a stylus bar located on one side of said diaphragm, a hollow non-metallic cup-shaped washer on the opposite side of the diaphragm with the rim of the cup-shaped washer bearing against the diaphragm, and a screw between the cup-shaped washer and the stylus bar securing the parts together.

1,577,859. **DRIER.** JOHN H. WOODARD, Spokane, Wash., assignor to Sanitary Hand Dryer Company, Spokane, Wash., a Corporation. Filed Apr. 20, 1925. Serial No. 24,308. 3 Claims. (Cl. 34—26.)



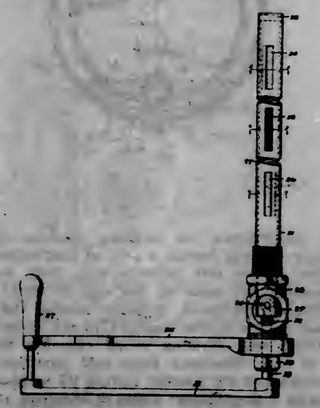
3. In a drier the combination with a flaring sleeve fixed within its wall and a valve hinged at one end of said sleeve, of an axially alined cap fixed to the wall and having a retaining flange, a nozzle swiveled in the cap, a gasket on the nozzle enclosed within the cap, a spring surrounding the nozzle and interposed between said wall and gasket, a link pivoted on the valve, a bell crank lever pivoted to the link, and means for actuating said lever.

1,577,860. **ROTARY-WASHER CYLINDER.** RICHARD W. YATES, Kansas City, Mo. Filed Mar. 17, 1924. Serial No. 699,763. 1 Claim. (Cl. 68—18.)



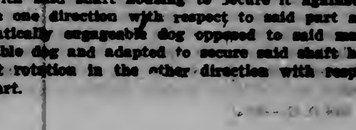
A slat construction for washing machine cylinders, comprising a slat bar having a pair of longitudinal slots, the portion of the slat between said slots projecting slightly outside the plane of the slat to form a longitudinal external partition, a scoop member having its longitudinal middle portion secured to the outer edge of said partition and forming scoop elements projecting laterally in both directions from said partition, and a hollow arch-shaped rib member having its middle portion provided with a longitudinal series of openings, the longitudinal edges of said rib member being secured to the sides of said slot member and the ends of said rib member having flanges for attachment to the washing machine cylinder.

1,577,861. SOAP HOLDER. ENGLAR L. HENRY, New York, N. Y., assignor of one-fourth to Edward B. Twombly, Summit, N. J. Filed Mar. 20, 1923. Serial No. 628,672. 3 Claims. (Cl. 15—122.)



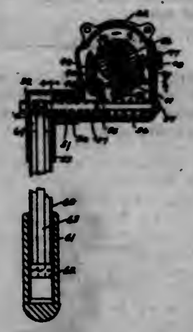
1. A soap-holder formed of cellular material having a central space bounded by the walls of the body, and a mouth opening to said space, flexible strips of impervious rubber secured to the walls of said mouth, and co-acting elements carried by said strips for holding said mouth in closed position.

1,577,862. PRESSURE-CONTROLLING DEVICE. ARTHUR J. KERCHER, Berkeley, Calif. Filed Oct. 9, 1922. Serial No. 593,470. 3 Claims. (Cl. 236—28.)



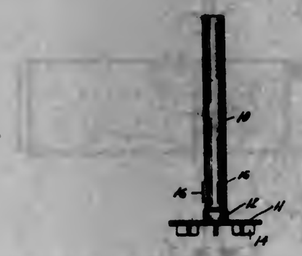
1. In combination, a pressure cell having a diaphragm and means for causing a force to be exerted opposed to the pressure of the cell comprising a plurality of resilient members, and adjustable means for successively bringing these resilient members into operation.

1,577,863. WATER HEATER. ARTHUR J. KERCHER, Berkeley, Calif. Filed Mar. 26, 1923. Serial No. 627,662. 1 Claim. (Cl. 126—362.)



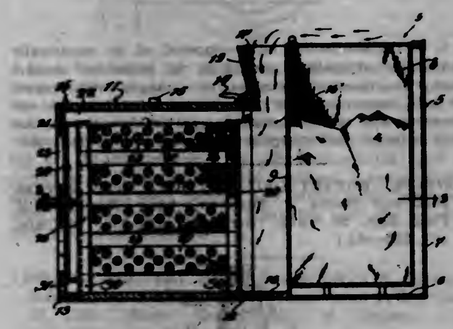
In combination, a tank for holding a liquid, an inlet pipe extending through the top of the tank and nearly to the bottom thereof, an outlet pipe connected to the top of the tank, a heater, a pipe from the top of the tank to the top of the heater, a tubular member extending through the bottom of the tank, up toward the top thereof, said member having a plurality of apertures at different levels communicating with the interior of the tank, a T connection at the bottom of the member, a pipe between the connection and the bottom of the heater, a thermostat associated with the heater to maintain the temperature of the liquid circulating therethrough between predetermined limits, a rotatable sleeve within the tubular member and having apertures capable of alinement with those in the member, said apertures being so arranged that any one set may be alined rotatably by adjusting the sleeve, a shaft connected to the sleeve and extending through the T connection, a handle attached to the shaft, a segment cooperating with the handle to indicate which of the apertures are alined as regards their location below the top of the tank, and means for fastening the segment to the T connection.

1,577,864. AUXILIARY AUTO SPRING. FREDERICK C. LEAVITT, Los Angeles, Calif. Filed Jan. 31, 1925. Serial No. 6,040. 4 Claims. (Cl. 267—60.)



1. A spherical, coil spring having a stirrup clamped on its lower coil, and a depressed saddle clamped on its upper coil.

1,577,865. OUTBOARD MOTOR. JAMES A. MOULD, Milwaukee, Wis., assignor to Evinrude Motor Company, Milwaukee, Wis. Filed Mar. 5, 1923. Serial No. 622,740. 21 Claims. (Cl. 115—18.)



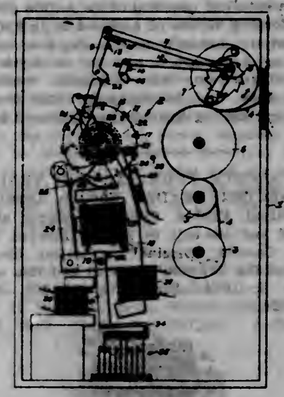
1. In a device of the character described, the combination with a dirigible part and a shaft housing independently rotatable concentrically with said part for reversing purposes, of a manually releasable dog engageable with said shaft housing to secure it against rotation in one direction with respect to said part and an automatically engageable dog opposed to said manually releasable dog and adapted to secure said shaft housing against rotation in the other direction with respect to said part.

1,577,866. BOBBIN. FRANK MOSSBURG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed July 5, 1923. Serial No. 649,502. 3 Claims. (Cl. 242—121.)

1. A yarn package holder having a tubular body portion and a metal disc-shaped head-plate secured to one end thereof, said plate having radially-disposed spaced-apart relatively broad faced teeth cut from the stock of the plate and bent down from the plane thereof into operating position, the outer edges of the teeth being spaced a short distance inwardly from the periphery of said head-plate.

1,577,867. AIR-CONDITIONING MEANS. PAUL S. MOTZ, Chicago, Ill., assignor to The Aridor Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 18, 1922. Serial No. 582,791. 12 Claims. (Cl. 34—1.)

8. Air conditioning means for containers comprising, in combination, means for cooling the air of a container, dehydrating means closely associated therewith; a housing for said dehydrating means; a housing for said cooling means and having means cooperable with said first mentioned housing to form an air duct adjacent said cooling and dehydrating means; and means for controlling the circulation of air currents induced by the relative position of said cooling and dehydrating means.

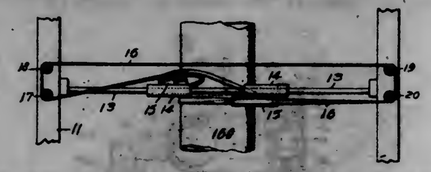


1,577,868. ADJUSTABLE CLAMP. HENRY MÜLLER, Waterbury, Conn. Filed June 20, 1925. Serial No. 38,400. 8 Claims. (Cl. 144—208.)

1. A clamp having a frame, one end of which is bifurcated, a lever mounted between the bifurcations, a screw cooperatively associated with one end of the lever for swinging it about its pivot, the screw and adjacent end of the lever being housed between the bifurcations,

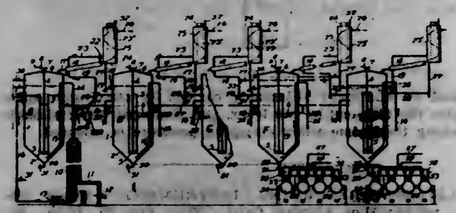
and an abutment adjustably carried by the frame opposite the free end of the lever, the abutment being slidable along the frame when clamping pressure is released.

1,577,869. RECORDING INSTRUMENT. BORIS PODOLSKY, Los Angeles, Calif. Filed Feb. 21, 1920. Serial No. 360,268. 11 Claims. (Cl. 179—18.)



1. In an automatic telephone system in which an impulse wheel is used to secure necessary connections, a substation equipment comprising a number recording device and suitable electric units and circuits cooperating with said impulse wheel and number recording device whereby said number recording device may be operated by the said impulse producing wheel.

1,577,870. SPINDLE DRIVE FOR SPINNING MACHINES. JAMES C. POTTER, Pawtucket, R. I. Filed Aug. 16, 1922. Serial No. 582,269. 6 Claims. (Cl. 118—42.)



1. A spinning frame having traversable, rotatable spinning members arranged in rows, a stationarily supported driving roller situated between such rows of rotatable

members, a driving band passing from opposite sides of said roller, to said rotatable members, a pair of to and fro movable band supports partaking of the traversing

movement of said members, and means normally tending to move such band supports in a direction towards one another.

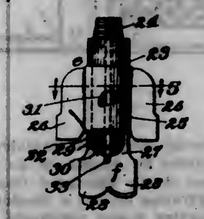
1,577,871. PROCESS OF CONTINUOUS CATALYTIC DISTILLATION. GEORGE L. PRICHARD and HERBERT HENDERSON, Port Arthur, Tex., assignors to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Feb. 14, 1922. Serial No. 536,503. 23 Claims. (Cl. 196—54.)

1. The process of producing lower boiling hydrocarbon from higher boiling hydrocarbons which comprises distilling a body of higher boiling hydrocarbons in the presence of a catalytic chemical of the nature of aluminum chlorid condensing vapors of higher boiling hydrocarbons and the catalytic chemical, maintaining a second body of higher boiling hydrocarbon and the catalytic chemical undergoing distillation, delivering said condensate to said second body, and delivering for final condensation vapors of lower boiling hydrocarbon produced in the first distillation.

1,577,872. SLEEVE TERMINAL FOR TRAIN PIPES IN CONNECTER HEADS. EDWARD ARTHUR ROBINSON, Montreal, Quebec, Canada, assignor of one-half to himself and one-half to Hilson Edward Workman, Montreal, Canada. Original application filed Jan. 7, 1922, Serial No. 527,568. Divided and this application filed Apr. 5, 1924. Serial No. 704,531. 8 Claims. (Cl. 285—24.)

1. In an automatic train pipe connecter, a connecter head, having a bore through the head, a collar threaded into the head bore and extending beyond the bore to abut against another head and a train pipe terminal carried by said collar.

1,577,873. ARTIFICIAL TREE TRUNK. ELMER L. ROOT, Mosier, Oreg. Filed Jan. 26, 1925. Serial No. 4,742. 2 Claims. (Cl. 41—15.)

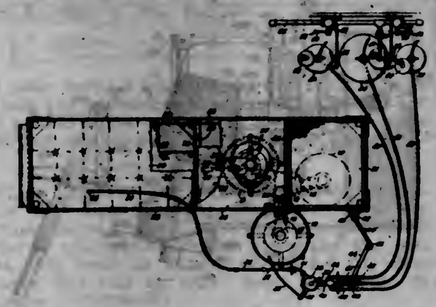


1. In an artificial tree, the combination of a folding base member having a hole formed therein, a shouldered plug fitted into said hole and having its upper end tapering; a tapering tubular shell resembling a tree trunk fitted on to said tapering plug; a plurality of tapering shells whose ends telescope together and unite to form a tapering trunk with said first mentioned shell; and means for attaching natural branches to said trunk.

1,577,874. THERMOELECTRIC UNIT. SAMUEL RUBEN, New York, N. Y. Filed Dec. 1, 1922. Serial No. 604,452. 2 Claims. (Cl. 136—4.)

1. A thermo-electric unit composed of an electrically conductive crystalline compound in molecular contact with two opposing electrodes, so arranged with respect to said compound that the contact area between one electrode and said compound is greater than the contact area between said compound and said other electrode.

1,577,875. ROTARY DRILLING BIT. JOHN RUTHERFORD and HENRY P. SCANLON, Long Beach, Calif. Filed Sept. 28, 1922. Serial No. 590,597. 1 Claim. (Cl. 255—61.)



In a rotary drilling bit, a shank, a tail bit carried on said shank, a second tail bit secured to the shank and adapted to lock the first tail bit on said shank, the relative angularity between the tail-bits being adjustable.

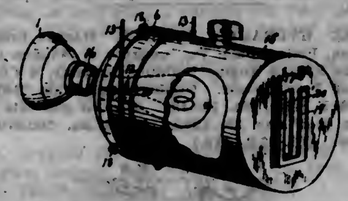
1,577,876. MEDICAL APPARATUS FOR USE IN PROCTOTHERAPY. OSCAR DOTO SCHELLENS, New York, N. Y. Filed May 16, 1925. Serial No. 30,690. 2 Claims. (Cl. 128—213.)

1. A proctotherapeutic apparatus comprising a patient receiving table having an apertured top, a receiving

basin supported beneath the aperture, said basin having a fixed permanent sewer connection, a second receiving basin supported under said table, a sewer connection comprising a pivot for swinging said second basin from

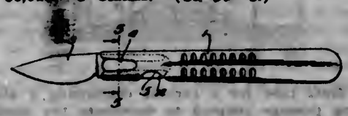
under said table to a lateral position at one side thereof, and valve controlled means for intestinal irrigation, said means being adapted for discharge into either of said basins.

1,577,877. TIMING MECHANISM FOR AUTOMOBILES. ALBERT SCHUMACHER, Wallingford, Conn. Filed Dec. 26, 1924. Serial No. 758,049. 1 Claim. (Cl. 200—26.)



In a distributor for an internal combustion engine, a shell member, a commutator located in said shell member and mounted to rotate with the engine crank shaft, said commutator having a tubular metallic core provided with a plurality of integral staggered terminals extending to the circumference of said commutator, and a plurality of adjustable slotted resilient contact strips secured to said shell member, said strips being insulated from said shell member and extending inwardly to contact with said terminals.

1,577,878. POULTRY DRINKING FOUNTAIN. CHRISTIAN E. STALHEIMER, Garden Home, Oreg. Filed Dec. 17, 1924. Serial No. 756,515. 4 Claims. (Cl. 119—77.)



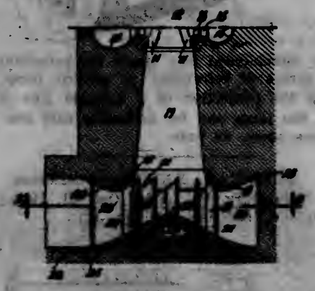
1. A poultry drinking fountain, comprising a pan, upright standards having their lower ends secured to said pan, a circular collar secured to the upper ends of said standards, an invertible reservoir removably disposed within said collar, and a supporting band, having outstanding lugs, adjustably secured about said reservoir.

1,577,879. OPTOMETRICAL-TEST TARGET. CALVIN GAY STEVENS, Osborne, Kans. Filed Dec. 26, 1923. Serial No. 608,994. 5 Claims. (Cl. 88—30.)

1. In an optometrical test target for determining and correcting errors of refraction, an electric lamp, means for causing the projection of a straight line of violet light from the lamp and for adjusting said line to different angles about an axis.

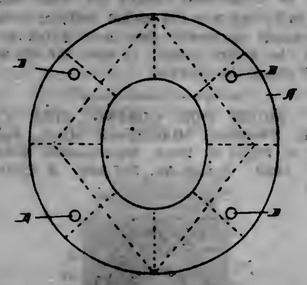
1,577,880. SURGICAL KNIFE. ALEXANDER A. S. STUART, Harrisburg, Pa. Filed Oct. 31, 1925. Serial No. 66,016. 5 Claims. (Cl. 30—3.)

1. A knife comprising a blade formed integrally with a shank longitudinally bifurcated to form two spaced fingers, one of said fingers being resilient and formed at its free end with a locking head; and a handle formed at one end with a socket adapted to snugly receive the blade shank endwise said handle being formed with a notch in one of its outer sides opening into the side of the socket and adapted to receive the said locking head when the shank is inserted into the socket, the said blade fingers being normally spread apart to a greater width than the width of the socket, whereby the flexible finger will be compressed toward the other finger when the shank is forced into the socket and the locking head will be snapped outwardly into said notch by the resiliency of the flexible finger to lock the blade against withdrawal from the handle.



1,577,881. MOLD FOR CURING TIRE CASINGS. OSCAR E. SWANSON, Minneapolis, Minn., assignor of one-half to Floyd G. Bean, Minneapolis, Minn. Filed Mar. 27, 1922. Serial No. 547,209. 4 Claims. (Cl. 18—45.)

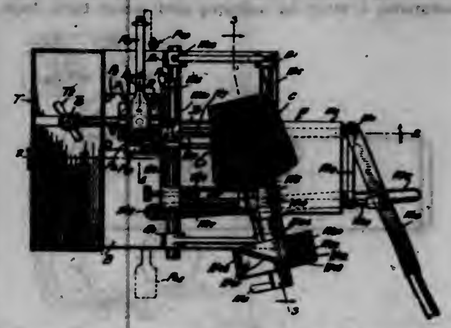
1. In combination, companion mold members forming an annular casing receiving cavity, a composite fluid container comprising an internal annular support for a casing in said cavity, said container consisting of an



annular lining pad of resilient material adapted to be confined wholly within the casing and a ring for bridging the space between the edges of said pad, said ring being adapted to back the edge portions of the pad against the inside of the tire and to press into the material at the inner margins of said portions to seal said container, pressure tight, upon the assembling of said mold members.

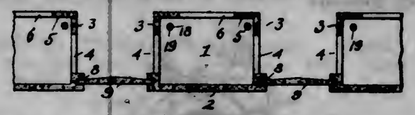
1,577,863. HYDRAULIC TURBINE. HARVEY BISCHARD TAYLOR, Philadelphia, Pa., assignor to William Cramp & Sons Ship & Engine Building Company, a Corporation of Pennsylvania. Original application filed July 24, 1917, Serial No. 182,486. Divided and this application filed May 22, 1922. Serial No. 562,970. 19 Claims. (Cl. 253—118.)

1. A draft tube for a turbine comprising a straight expanding passage adapted to decelerate the discharge, and an annular passage receiving the flow from said straight passage and guiding it toward the radial direction while decelerating both the meridian and whirling components of velocity of flow, said annular passage being contained between outer surfaces of revolution and a central conical member having a convex rounded apex.



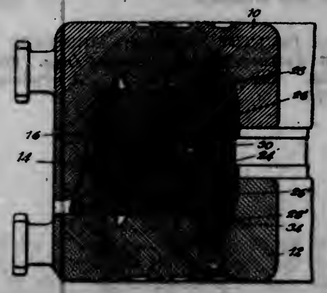
1,577,883. SEAT COVER. ORIN M. THOMAS and HOWARD FISHER, Los Angeles, Calif. Filed Apr. 14, 1925. Serial No. 22,969. 2 Claims. (Cl. 4—248.)

1. As an article of manufacture a body of thin material folded into a compact packet, part of the adjacent folds thereof being perforated and the perforations coinciding to produce a recess on one side and a solid backing over said recess on the other side so that an instrument may be made to engage said packet in said recess to move it and be prevented from projecting through the packet.



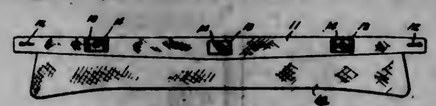
1,577,884. DYEING APPARATUS. HENRY E. VAN NESS, Elmira, N. Y. Filed Apr. 3, 1923. Serial No. 629,632. 52 Claims. (Cl. 8—18.)

4. Apparatus of the class described, comprising a nozzle, a support for an absorbent mass, means for causing a relative approaching movement between said support and the nozzle, means for stopping said approaching movement when the nozzle is pressed firmly against



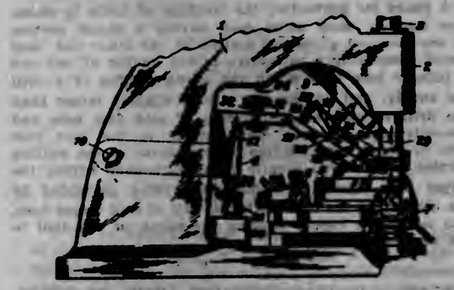
the surface of the mass, and means for forcing under pressure a limited quantity of liquid into the mass through the nozzle.

1,577,885. RETAINING WALL. WILBUR J. WARREN, East Cleveland, Ohio. Filed May 20, 1922. Serial No. 562,291. 5 Claims. (Cl. 61—46.)



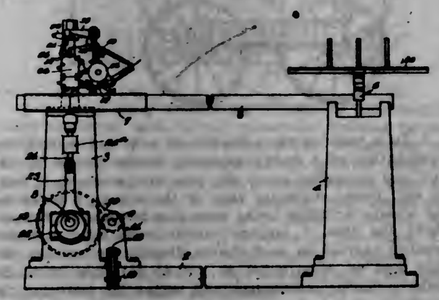
1. A retaining wall having crib like anchoring units projecting rearwardly therefrom, said anchoring units having rearwardly extending side walls with transversely extending openings one above another and a rear wall with transversely extending openings one above another which permit loose material filled in behind the wall to enter and fill said units and serve to firmly anchor said units in the embankment.

1,577,886. METHOD AND APPARATUS FOR MANUFACTURE OF CUSHION TIRES. HARRY WILLSHAW, Buffalo, N. Y., assignor to Dunlop Tire and Rubber Corporation of America, Buffalo, N. Y., a Corporation of New York. Filed May 28, 1924. Serial No. 716,296. 3 Claims. (Cl. 18—55.)



1. In the manufacture of tires, the method which consists in assembling the tire on a rim comprising two parts with a space between them, inserting a semi-solid rubber core to retain the shape of the cavity in the tire during the subsequent steps, vulcanizing the tire with said core in place and stretching the core to alter its cross-sectional area to facilitate its removal from the tire.

1,577,887. COLLAR. HERMAN O. R. WINKELMAN, Baltimore, Md. Filed July 25, 1925. Serial No. 46,000. 1 Claim. (Cl. 2—130.)

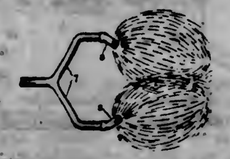


A collar having a band provided with button holes at its ends, and tabs secured to said collar at the rear and side portions of the band and on the outer face of the band, said tabs being provided with button holes.

1,577,888. BUTTON-ATTACHING MACHINE. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Original application filed Feb. 26, 1925, Serial No. 11,664. Divided and this application filed June 23, 1925. Serial No. 39,070. 13 Claims. (Cl. 218—6.)

8. In a button attaching machine, button feeding means, an arm, a pair of spring-pressed jaws mounted at the outer end of said arm and provided with a pocket at their outer extremities for the reception of a fed button, and a pair of superimposed supplemental spring pressed jaws having two lips normally extending over the pocket in the first mentioned jaws to thereby prevent a button from flying upwardly from said pocket when a button is fed thereto.

1,577,889. MACHINE FOR FASTENING TUBULAR LENGTHS. FRANK HENRY ANSON, Jr., Iroquois Falls, Ontario, Canada. Filed Jan. 8, 1922. Serial No. 526,635. 21 Claims. (Cl. 1—2.)



1. In a machine for fastening tubular lengths, the combination with fastener inserting mechanism of a support encircled by and upholding a tubular length adjacent the fastening mechanism and positively actuated mechanism for engaging and turning the length with respect to the support and while upon the latter whereby a new location for succeeding fasteners is presented circumferentially of the tubular length.

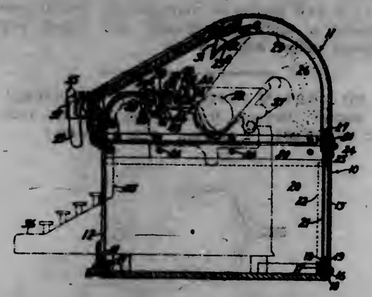
1,577,890. BRATTICE SHEETING. CLINTON D. ABRAHAM, deceased, late of Wilmington, Del.; by Chester H. Ross, administrator, Wilmington, Del., assignor to E. I. Du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 25, 1921. Serial No. 480,480. 7 Claims. (Cl. 91—68.)

5. As a new article of manufacture, brattice sheeting consisting of a fabric whose fibers are impregnated with an ammonium phosphate to render them fireproof, said fabric having on both sides a strongly adherent coating comprising a high grade rubber, coal tar and natural bitumen.

7. As a new article of manufacture, brattice sheeting comprising a fabric impregnated and coated with unvulcanized rubber and coal tar.

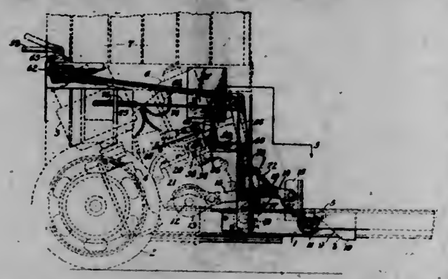
1,577,891. STEAM INJECTOR FOR FURNACES. NON H. BROWN, Detroit, Mich. Filed May 22, 1925. Serial No. 32,234. 2 Claims. (Cl. 110—30.)

1. A steam injector for furnaces comprising a pair of discharge pipes branching in a horizontal plane, and a pair of jet nozzles terminating each of said discharge pipes and diverging in a substantially vertical plane, and having outlets, the directions of which are convergent.



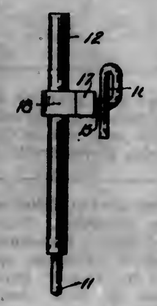
1,577,892. THERMOSTATIC FIRE ALARM. JAMES H. BUCHANAN, Pawtucket, R. I. Filed Oct. 26, 1925. Serial No. 64,764. 1 Claim. (Cl. 116—106.)

In a thermostatic fire alarm, a back provided with a vertical guideway, a hook in the back in the upper portion of the guideway, a fusible member, a wire embedded in the upper portion of the fusible member detachably engaging the hook, a second wire embedded in the lower portion of the fusible member, a weight slidably mounted in the guideway below the fuse detachably supported by the second wire, and provided with a beveled lower end, a transverse base plate fixed to the back below the weight and spaced from the rear of the guideway, a shaft in the plate, a gong on the shaft, a vibratory hammer carried by the plate and adapted to contact with the gong, a gear train operable to actuate the hammer, a resilient plate fastened near one end to the base plate, a projection on the resilient plate normally engaging the gear



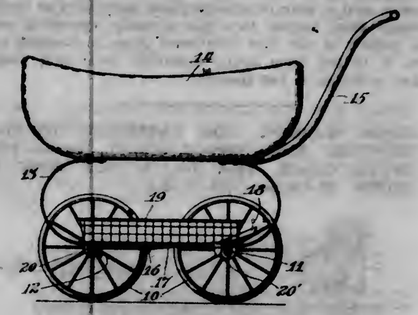
train, a pin slidably supported in the base plate at right angles to the back projecting into the path of the weight and in contact with the resilient plate whereby the latter will be moved to release the train when the weight descends.

1,577,893. TYPEWRITING MACHINE. GEORGE W. CAMPBELL, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 11, 1922. Serial No. 587,801. 15 Claims. (Cl. 197—186.)



1. In a sound-deadening casing for typewriting machines, a body-portion consisting of a single casting having a channel formed adjacent its lower extremity, a plate having its lower edge received in said channel, vibration-dampening material positioned in the channel on both sides of the plate and completely filling the spaces between the plate and the walls of the channel, vibration-dampening material spacing the upper end of the plate from the casing, and means for attaching the plate to the casing at its upper end.

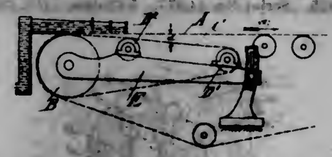
1,577,894. INDUSTRIAL TRUCK. WILLIAM C. CARR, Buffalo, N. Y., assignor to The Automatic Transportation Company, Buffalo, N. Y., a Corporation of Arizona. Filed Feb. 9, 1922. Serial No. 535,246. 3 Claims. (Cl. 254—5.)



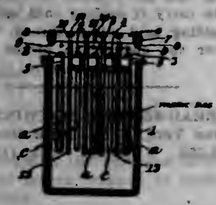
1. In an industrial truck of the type having a lifting platform, a supporting frame therefor, operating means for said platform, and an electric motor for actuating said operating means and a switch controlling the circuit of said motor, automatic control mechanism for said switch including a rockably mounted actuating arm located behind the rear end of said platform and above said supporting frame and provided with a tappet for engagement directly by said platform at its rear end at a period of its movement in one direction and also with a hook co-operative with said operating means to function as a link connection to the same during a period of the movement of said platform in the opposite direction, said actuating arm being thereby operated by said platform and operating means to open said switch.

1,577,895. DRILL ATTACHMENT. JAMES A. CONARD, New York, N. Y. Filed July 30, 1921. Serial No. 488,726. 1 Claim. (Cl. 77—55.)

A guard for preventing the breaking of drills by excessive bending, such drills each having a shank portion at one end and a cutting portion at the other end, said guard comprising a protective casing having at one end a tubular bore into which the shank portion of a drill fits snugly, and having also a bore slightly larger than the drill forming a continuation of said first bore and concentrically disposed with respect to the said first bore to permit slight lateral displacement of the cutting portion of the drill equally in all directions within the larger bore, excessive displacement being prevented by the contact of the drill with the wall of said larger bore, and means for rigidly holding the shank of the drill in the smaller bore.



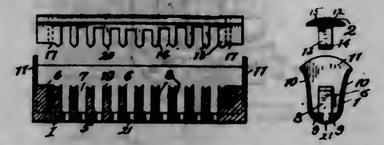
1,577,896. LUGGAGE CARRIER FOR VEHICLES. JAMES A. CVRCEK and ANNA H. CVRCEK, Chicago, Ill. Filed Jan. 12, 1925. Serial No. 1,743. 6 Claims. (Cl. 224—29.)



1. In a baby carriage having an axle and wheels, the combination of a body supporting frame carried by the axle and extending above the tops of the wheels, a body on said frame above the tops of the wheels, a brake for the wheels including brake actuating mechanism disposed above the axle, a luggage carrier comprising a basket member carried on said frame directly underneath the body and so constructed as not to interfere with the brake actuating mechanism, and means for fastening the carrier to the frame.

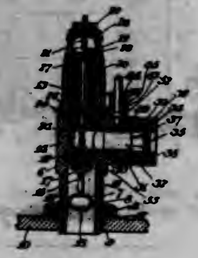
1,577,897. PAPER-MAKING MACHINE. ALOIS DANNINGER, Steyrermuhl, Upper Austria. Filed Dec. 12, 1924. Serial No. 755,891. 6 Claims. (Cl. 92—44.)

1. In a Fourdrinier machine, the combination of a wire travelling round a breast roll, an endless perforated web through which water may pass inside of the wire travelling likewise round the breast roll and accompanying the upper portion of the wire underneath in contact with same on a part of its way toward the suction boxes.

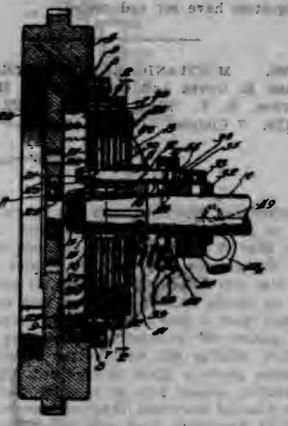


1,577,898. ELECTROLYTIC SEPARATION APPARATUS. AUGUST DASSBACH, Hanau-on-the-Main, Germany, assignor to Irvington Smelting & Refining Works, Irvington, N. J., a Corporation of New Jersey. Filed July 11, 1924. Serial No. 725,320. 7 Claims. (Cl. 204—5.)

1. In an apparatus for separating metals, a plurality of dissolving vats, means for supporting the anodes and cathodes within the vats, scraper elements interposed between the anodes and cathodes and supporting means for the scraper elements consisting of separate movable carriages associated with each of the vats, scraper supporting bars detachably mounted upon the carriages, operating means and detachable connections between the carriages and the operating means adapted to permit the removal of each of the carriages as a unit.



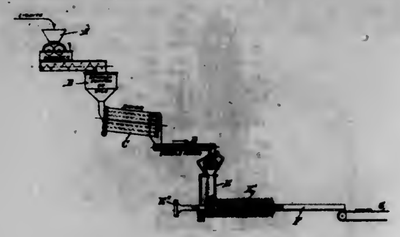
1,577,899. HARMONICA. GEORGE B. DUSINBERRE, Elmira, N. Y. Filed May 31, 1922. Serial No. 564,879. 11 Claims. (Cl. 84—377.)



6. A harmonica, comprising a pair of cell forming body members, each having transverse grooves forming teeth between them and having lateral projections, the teeth of one of said members having grooved ends and the teeth of the other of said members having their end portions formed to fit in said grooves, reed plates positioned between the lateral projections of one of said members and the lateral projections of the other, and means for clamping said body members together with their teeth abutting end to end and with said reed plates clamped between said projections.

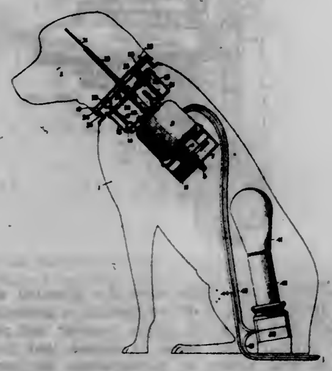
1,577,900. SPARK PLUG. MICHAEL EVANS, Philadelphia, Pa. Filed Sept. 14, 1923. Serial No. 662,601. 7 Claims. (Cl. 123—169.)

1. A spark plug comprising a housing adapted to be mounted in the cylinder of an automotive engine, conducting members, and means for insulating said conducting members from said housing, the structure having an internal spark gap chamber, in communication with the interior of the engine cylinder, said conducting members having ends terminating in said chamber in proximity to each other to form an auxiliary spark gap therebetween, a transparent window member mounted in a portion of said housing, opposite said internal spark gap chamber, a valve member enclosedly mounted in said housing and interposed between the window member and the spark gap chamber, adapted to be mounted in the cylinder of an automotive engine and externally extending manually operable means for rotating said valve member between the open and closed positions.



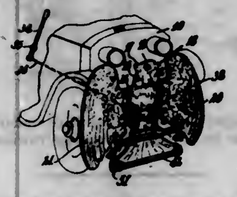
1,577,901. FRICTION CLUTCH. THOMAS L. FAWICK, Racine, Wis., assignor to Twin Disc Clutch Company, Racine, Wis., a Corporation of Wisconsin. Filed Dec. 22, 1921. Serial No. 524,183. 21 Claims. (Cl. 192—69.)

1. In a clutch, the combination of a plurality of driving and driven plates, a driven member, a pressure disc, and means connecting the driven member and pressure disc, the pressure disc being so shaped that it is reversible on said means to accommodate the use of a variable number of driving and driven plates.



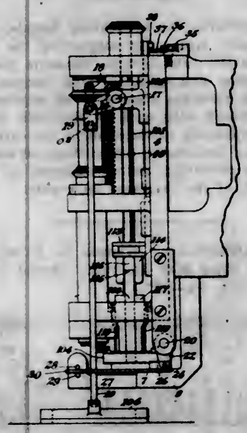
6. In a clutch, the combination of a plurality of alternating driving plates and driven plates, a driven shaft, a member fast on said shaft, rods projecting through said member, a pressure disc on one end of the rods, a device adapted to be adjusted on the other end of the rods, spring means cooperating with said device, and a sleeve on said shaft having recesses into which one end of each of the rods projects.

1,577,902. BLOCK OR BRIQUETTE OF LIGNITE AND METHOD OF MAKING THE SAME. EMIL FERNHOLZ, Los Angeles, Calif., assignor to Fernholz Machinery Company, Los Angeles, Calif., a Corporation of California. Filed Dec. 22, 1924. Serial No. 757,473. 5 Claims. (Cl. 44—10.)



1. The process of making blocks or briquettes of lignite which consists in crushing the lignite into comparatively small particles, tempering the crushed lignite by storage of limited duration, treating the tempered lignite for moisture removal by exposure to indirect heat derived from steam, cooling and simultaneously mixing and feeding the dry material in such a manner that the same arrives in uniform condition and mass at a mold of the extrusion type, forcing the material through such constricted mold under high pressure until bitumen contained in the material is melted and a strong waterproof binder is formed in the material as it leaves the mold, depositing the extruded briquettes from the mold orifice into a channel under conditions which avoid shocks in the freshly briquetted material and then gently feeding the briquettes forward along said channel until the briquettes have set and cooled.

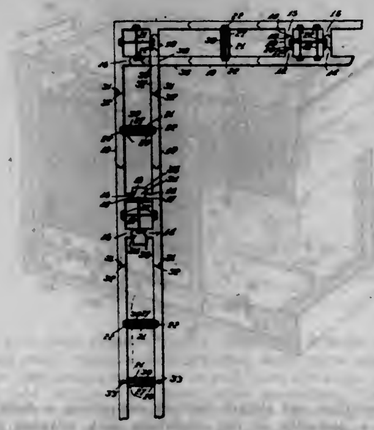
1,577,903. MECHANICALLY-OPERATED FIGURE. ALFRED E. GOVER and CHRISTIAN H. HARTMAN, Port Jefferson, N. Y. Filed Apr. 6, 1922. Serial No. 550,179. 7 Claims. (Cl. 46—40.)



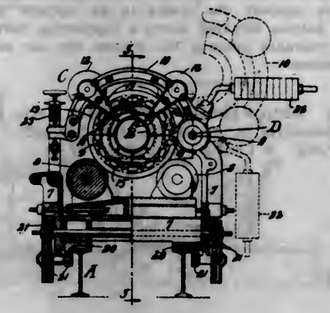
1. A hollow mechanically operated figure comprising fixed and movable figure members, means located within the fixed figure member for operating the movable figure member, said means including an electric motor, means including a thermal switch associated with said electric motor for moving the movable member indeterminately with respect to the fixed member.

1,577,904. LIFE-SAVING AUTOMOBILE FENDER. IGNATIUS B. GRIMALDI, Brooklyn, N. Y. Filed July 21, 1925. Serial No. 44,977. 5 Claims. (Cl. 293—16.)

1. A fender comprising a representation of an eagle, means for normally holding the wings of the eagle spread, a movable tail piece, means for trundling the tail piece over the ground, means for allowing an elevation of said tail piece when meeting an obstruction in the road to carry it against said wings for releasing the means holding said wings spread, for a closing of the wings over the obstruction picked up by the said tail piece.



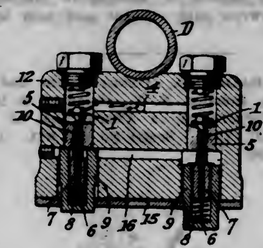
1,577,905. BEAD-SEWING MACHINE. JOSEPH A. GROSSLI, New York, N. Y. Filed Mar. 26, 1925. Serial No. 18,355. 8 Claims. (Cl. 112—102.)



8. In a sewing machine, the combination with stitch forming mechanism of universal feeding mechanism embodying a feeder foot and a plurality of shifting means connected to said feeder foot at various points, of common means for actuating all of the plurality of shifting means alike to shift the feeder-foot in its own plane.

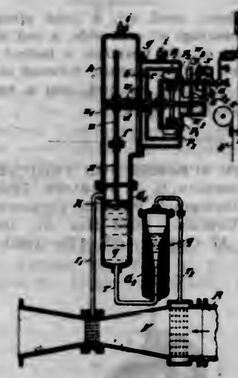
1,577,906. BUILDING CONSTRUCTION. FRANK B. HAHN, Decatur, Ill. Filed Mar. 13, 1919, Serial No. 282,460. Renewed Aug. 26, 1925. 11 Claims. (Cl. 72—30.)

1. A construction of the character described, including in combination, a plurality of slabs or units arranged to form a double wall construction, certain of said slabs or units in each part of said double wall having laterally extending flanges adapted to interfit with the opposed flanges whereby hollow columns or posts are provided at intervals thruout the length of the wall, and filler blocks interposed between said laterally extending flange members whereby hollow columns or posts are provided thruout the length of the wall, and securing means extending across said hollow columns or posts for holding said parts together.



1,577,907. POLE-MAKING MACHINE. DAVID B. HANNA, Chicago, Ill. Filed July 17, 1925. Serial No. 44,161. 18 Claims. (Cl. 25—30.)

1. A pole making machine comprising in combination, a mold, a sectional tire therefor, lower supporting means, and upper supporting means, one of said means being movable and adapted to carry a section of the tire therewith to expose parts lying therewithin, and the supporting means being arranged to co-operate to hold the sections of the tire in tire form when the parts are in operative position.



1,577,908. DOOR-MOTOR CONTROL. LEE P. HYNDS, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed July 2, 1919. Serial No. 306,153. 13 Claims. (Cl. 137—139.)

1. The combination with a valve-operating cylinder and piston of a service pipe leading therefrom to a distant point of control, a push-button and pressure supply pipe at said point, and also at said point exhaust

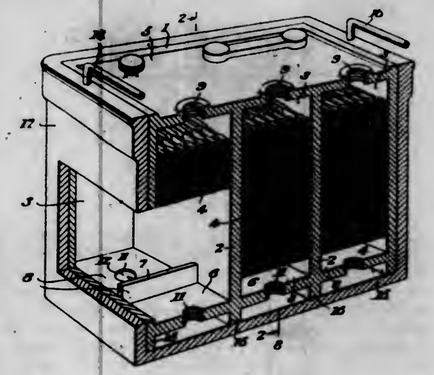
and supply valves for said service pipe, both operated by said push-button in the same stroke but separately and in sequence.

1,577,909. RECORDING VENTURI METER. WILLY KATH, Berlin-Friedenau, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Aug. 24, 1921. Serial No. 494,985. 6 Claims. (Cl. 284—34.)

6. Venturi meter of the type described comprising a pressure chamber containing a float supported by the liquid in said chamber, a casing attached to said pressure chamber, a spindle journalled at one end in said chamber and having its outer end extending into said casing, a rack-bar on said float and a small pinion on said spindle and in mesh with said rack-bar, a long bushing mounted in the partition wall between the casing and the pressure chamber surrounding the spindle without direct contact with the bushing wall, a drum mounted on said spindle and disposed in said casing, permanent magnets on said drum, the path traversed by said magnets being a multiple of the path traversed by said float, a second spindle revolvably mounted at the outside of said casing, permanent magnets on said second spindle magnetically coupled with the first mentioned magnets, a recording element and a third spindle operatively connected therewith, gearing between the second and the third spindle, the ratio between said float path and said coupling path being increased and the gearing ratio between said third and second spindle being decreased to increase the circumferential path of said coupling to a multiple of the float path for the purpose of reducing the torque required to be transmitted by said coupling, the gearing between said second and third spindle being reduced sufficiently to render the path of said recording element approximately equal to the float path, and a yielding coupling inserted between said re-

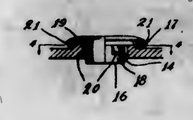
carding element and said third spindle for transmitting the rotary motion of said spindle to said element, said coupling being capable of yielding to forcible relative movement between said element and said spindle by outside forces.

1,577,910. HEADBAND. HENRY KOCH and ADOLPH SCHÖNMANN, Jamaica, N. Y., assignors to Dictograph Products Corporation, a Corporation of Virginia. Filed Mar. 27, 1922. Serial No. 546,971. 10 Claims. (Cl. 179—156.)



1. In a telephone head set, a head strap having a pair of spaced bearings at each side, a rod slidable endwise in each pair of said bearings, a helical spring surrounding each rod and compressed between said bearings and frictionally engaging the rod, and a receiving ear piece attached to each rod.

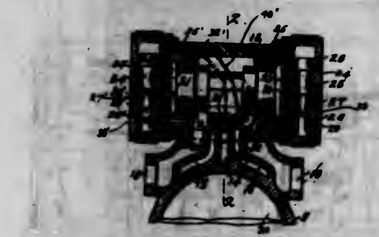
1,577,911. LOUD SPEAKER FOR VEHICLES. HENRY KOCH and FRIEDRICH H. N. WOHLERS, Jamaica, N. Y., assignors to Dictograph Products Corporation, a Corporation of Virginia. Filed Mar. 27, 1922. Serial No. 547,118. 17 Claims. (Cl. 179—146.)



4. In a loud speaking telephone receiver for concealment in walls, an amplifier to be concealed behind a wall with its ends aligned with openings in the wall, and a telephone receiver detachably connected to the sound entrance end of said amplifier, and adapted to be disposed upon the exterior of the wall.

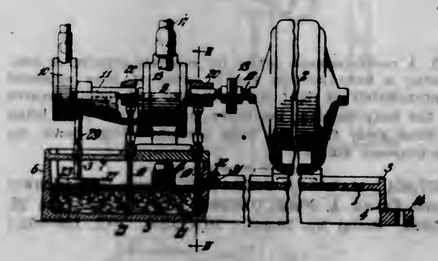
1,577,912. STORAGE-BATTERY JAR. JOHN LOUIS LANGE, Dumont, N. J. Filed Aug. 28, 1925. Serial No. 53,141. 4 Claims. (Cl. 136—166.)

1. A multiple cell electric battery comprising a casing forming a plurality of cell chambers each adapted to hold battery plates; upstanding ribs located in the lower ends of the cell chambers and adapted to support the battery plates, said ribs being integrally formed with the bottom of the casing and the side walls of the cell chambers and dividing the lower end of each cell chamber into a plurality of pockets, the bottom of the casing being formed with a plurality of drain openings each leading from one of the said pockets; threaded closure members adapted to be applied at the under side of the bottom of the casing to close the drain openings; and supporting flanges integrally formed with the bottom of the casing and depending therefrom; said flanges being formed to support the casing in an upright position with its bottom elevated above a supporting surface to provide clearance beneath the bottom for the said closure members.



1,577,913. REMOVABLE VALVE SEAT. OTTO C. LARSON, Brooklyn, N. Y. Filed Mar. 24, 1925. Serial No. 17,859. 6 Claims. (Cl. 251—167.)

1. A removable valve seat of the class described comprising a tubular body, one end portion of which is enlarged radially, a gasket adapted to be mounted on said body and adjacent the enlarged portion thereof, said tubular body being provided intermediate the ends thereof with a plurality of outwardly pressed knob members adapted to engage the walls of the port of a valve to frictionally retain said seat in connection therewith, and said knob members being adapted to be compressed inwardly and radially to compensate said valve seat to ports of different sizes.

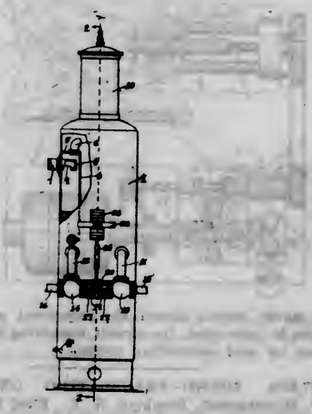


6. A removable valve seat of the class described comprising a tubular body provided with projecting yieldable means adapted to extend into the port of a valve device and to frictionally engage the walls of said port to retain said seat in connection with said valve device, and means including said yieldable means for retaining a gasket in connection with said body when the valve seat is not in use.

1,577,914. STEAM-ENGINE VALVE GEAR. JOHN A. LE CAIN, Malden, Mass. Filed Nov. 8, 1921. Serial No. 513,754. 8 Claims. (Cl. 121—158.)

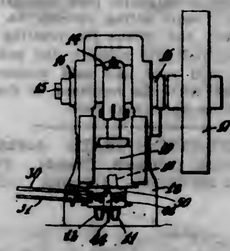
1. A fluid pressure engine comprising a main cylinder and steam chest, a fluid actuated main valve controlling the distribution of steam to and from the main cylinder, a fluid actuated auxiliary valve controlling the movement of the main valve, and means operating when the main valve is stopped in dead center position to move the auxiliary valve by applying unbalanced pressures thereon whereby the auxiliary valve will be moved when steam is admitted to the steam chest.

1,577,915. PUMP AND MOTOR MOUNTING. EDWARD C. LEIMAN, Nutley, N. J., assignor to Leiman Bros., New York, N. Y., a Copartnership composed of William H. Leiman, George W. Leiman, Gustave A. Leiman, Edward C. Leiman, and John Leiman. Filed Feb. 24, 1923. Serial No. 620,885. 4 Claims. (Cl. 230—30.)



1. A pump and motor mounting having a base for the motor, an oil reservoir adjacent said base and provided with walls extending upwardly above the base, a cover removably secured to said walls, a pump mounted on the cover and provided with means connected with the reservoir through the cover for applying pressure thereto, and an oil supplying means connecting the reservoir and pump through the cover.

1,577,916. INSECTICIDES STICKER MIXTURE. SAMUEL LOMANITZ, Houston, Tex. Filed Dec. 27, 1924. Serial No. 758,206. 4 Claims. (Cl. 167—6.)

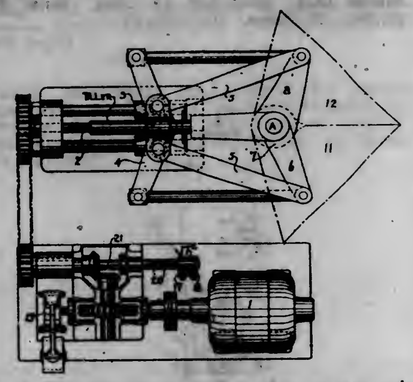


1. A sticker mixture for insecticides and fungicides formed by a homogeneous fused mass of soap and sulphur.

1,577,917. METHOD AND APPARATUS FOR SEPARATING GAS AND OIL. DAVID G. LORRAINE, Los Angeles, Calif. Filed Sept. 11, 1923. Serial No. 662,072. 15 Claims. (Cl. 183—2.7.)

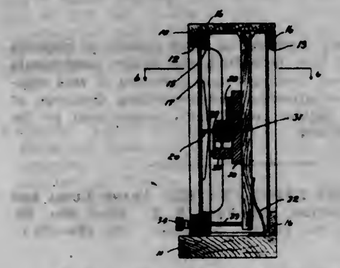
1. The method of separation which consists of trapping a volume of a flow, permitting the lighter constituents to rise therefrom, causing rotary agitation of said separated lighter constituents, and controlling discharge of said separated lighter constituents proportional to the volume of said flow.

1,577,918. TWIN LABEL CUTTER. FRANK LUISA and JAMES DI MATTEO, New York, N. Y. Filed Mar. 30, 1925. Serial No. 19,233. 5 Claims. (Cl. 164—29.)



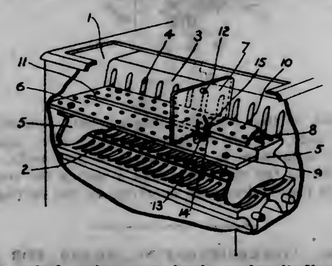
1. Label cutting and punching machine, comprising a grooved body, a pair of hollow cutting dies, shoes for said dies adjustable in the grooves of said body, means for delivering the cut labels, and a means for removing the waste paper after each operation of the cutting dies.

1,577,919. POWER-OPERATING MEANS FOR RUDDERS. ALEXANDER MCNAB, Bridgeport, Conn. Filed May 9, 1924. Serial No. 712,075. 9 Claims. (Cl. 114—145.)



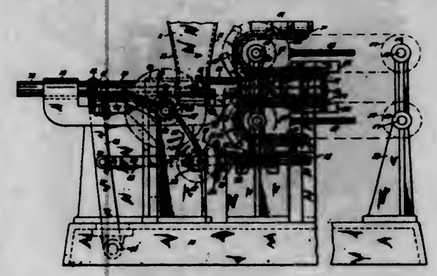
3. In ship or boat maneuvering gear of the kind described, rudder blades movable toward or from each other,

an electric motor, means for controlling the circuit of said motor and an overload switch acting to interrupt



the motor circuit should the movement of said rudder blades be prevented, the circuit remaining open till again closed by said controlling means.

1,577,920. SOUND-TRANSLATING DEVICE. FRITZ P. MANSBENDEL, Brooklyn, N. Y. Filed Sept. 30, 1922. Serial No. 591,443. 21 Claims. (Cl. 179—108.)

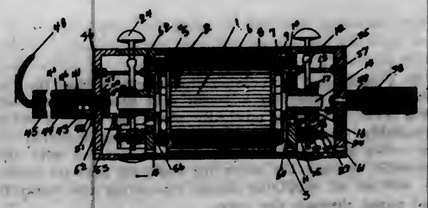


1. In an acoustic apparatus, the combination of a sounding member, a magnetic reed associated therewith, electro-magnetic means acting directly on said reed to vibrate the same, and means for creating a strain between said reed and said member, the point of engagement between said reed and said member being substantially in line with the resultant of the electro-magnetic forces acting upon said reed.

1,577,921. FUEL-SAVING GRATE. ALFRED MANSFIELD, Victoria, British Columbia, Canada. Filed Apr. 10, 1925. Serial No. 22,166. 3 Claims. (Cl. 126—145.)

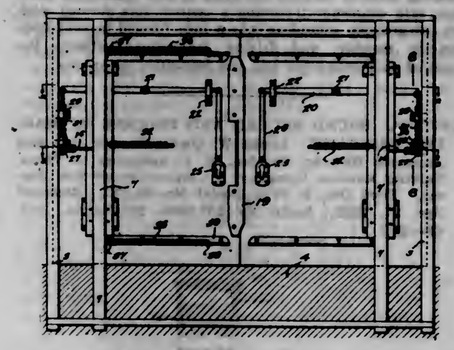
1. In a fuel saving grate having a longitudinally slotted grate member, a pair of supports and a dividing plate, said plate having a downwardly extending pin adapted to extend into the slot of the grate to hold the plate against transverse movement.

1,577,922. PROCESS OF AND APPARATUS FOR MAKING CORK ARTICLES. MELCHOR MASSA and WILLIAM JACKSON, Brooklyn, N. Y., assignors, by mesne assignments, to New Process Cork Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed July 19, 1924. Serial No. 727,003. 15 Claims. (Cl. 25—15.)



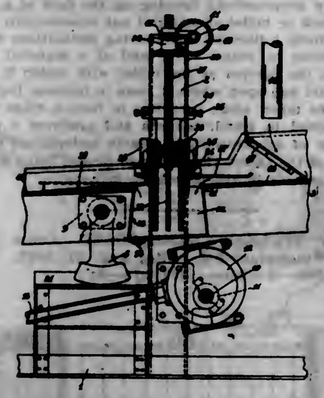
1. In an apparatus for extruding cork, the combination with two sets of mold sections, of means for continuously bringing said two sets of mold sections into abutting mold-forming relation so as to obtain a continuous mold through which the cork is extruded, and a reciprocable plunger for feeding comminuted cork to said mold.

1,577,923. CONCRETE-CONDUIT REINFORCEMENT. ANSON MARSTON, Ames, Iowa, assignor to Iowa State College of Agriculture and Mechanic Arts, Ames, Iowa, a Corporation of Iowa. Filed Sept. 12, 1924. Serial No. 737,372. 5 Claims. (Cl. 72—53.)



5. A reenforcement device for concrete structures comprising a body portion and a series of jaws extended approximately at right angles thereto and rigidly secured to the body portion, the outer ends of said jaws being inclined away from the body portions of the jaws, for the purposes stated.

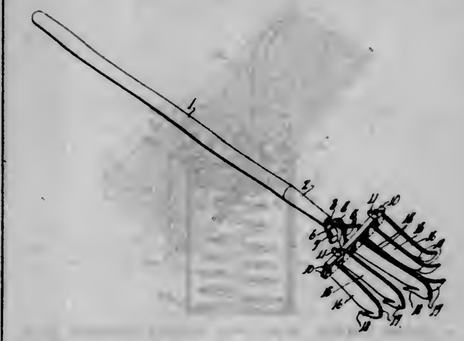
1,577,924. MASSAGE VIBRATOR. JOHN H. MATCHETT and FRANK A. NEFF, Oakland, Calif. Filed June 25, 1925. Serial No. 39,446. 10 Claims. (Cl. 128—52.)



4. A massage vibrator comprising in combination an electric motor, a cylindrical casing fixedly secured to the end thereof, an eccentric fixed to the shaft of the electric motor, a spider fitted on said eccentric and having a series of radial arms extending through slots in the casing, massage buttons secured to the ends of the arms and electric leads to and from the motor.

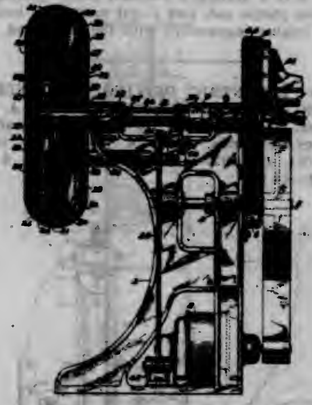
1,577,925. DOOR CONSTRUCTION. RICHARD MOONEY, Henryetta, Okla. Filed Nov. 15, 1924. Serial No. 750,209. 5 Claims. (Cl. 292—167.)

1. A device of the character described comprising a door frame, a door pivoted at a point spaced from one edge thereof to said frame, the opposite edge of said door being adapted to swing toward and away from said frame, a lever pivoted intermediate its ends to said door, one end of said lever being arranged adjacent the first named edge of said door, a latch arranged adjacent the first named edge of said door and connected to the adjacent end of said lever to be operated thereby, and a latch plate carried by said frame, said plate being provided with an opening to receive said latch.



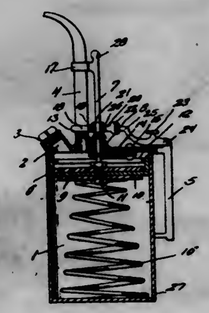
1,577,926. CONCENTRATOR OR SLUICE BOX. FRANK S. MORGAN, Berkeley, Calif. Filed Jan. 17, 1923. Serial No. 613,138. 10 Claims. (Cl. 209—440.)

1. A concentrator or sluice box comprising a trough, substantially deep depressions in said trough, and a movable cover over each of said depressions and extending for a substantial distance over the floor of the trough.



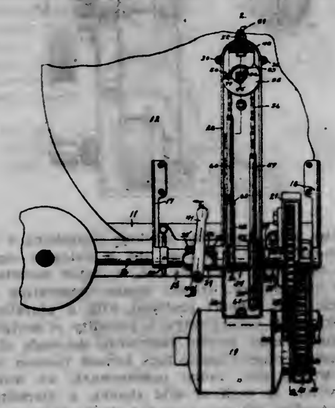
1,577,927. WEEDER. FRANK W. MORSE, San Fernando, Calif. Filed Nov. 27, 1923. Serial No. 677,296. 8 Claims. (Cl. 97—63.)

1. A device of the class described comprising a handle, a blades supporting head adjustably carried by said handle, the said supporting head comprising a pair of opposing U bars each provided with clamping notches, means for forcing the said U bars toward each other



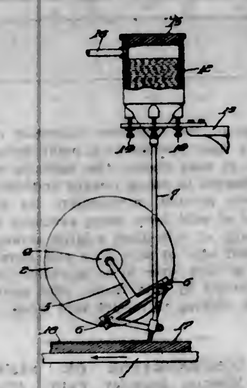
in clamping relation, blades carried by said supporting head including notches for cooperating with the notches of the supporting head.

1,577,928. TIRE-BAND-EXPANDING MACHINE. HARLEY P. MURRAY, Conshohocken, Pa., assignor of one-half to Lee Tire & Rubber Company, Conshohocken, Pa., a Corporation of Pennsylvania. Filed Nov. 19, 1923. Serial No. 675,610. 20 Claims. (Cl. 154—9.)



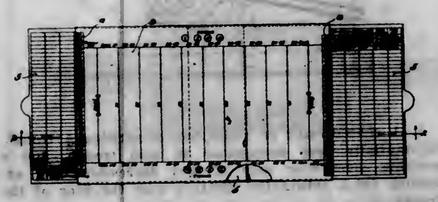
12. A tire band expanding machine comprising a base, a shaft mounted in said base and a guidable support locked to said shaft near one end, a clutch mounted at the other end thereof, driving means cooperating with said clutch, said support provided with a plurality of radially extending passageways, a plurality of peripheral shoes having shanks formed therewith, the ends of the shanks having integral guide lugs formed thereon to fit slidingly within said radial passageways, an internal threaded collar in each of said shanks, a plurality of radially extending external threaded shafts fitting respectively within the collar in said shanks, a beveled gear secured to said shaft, each of the threaded shafts having a pinion thereon meshing with said beveled gear, means for disengaging the clutch from the driving mechanism, so that said support and shoes may be manually rotated, and means for limiting the amount of radial travel of the shoes in an outward direction.

1,577,929. FORCE-FEED OIL CAN. GRANT W. OAKES, Ottawa, Kans. Filed Jan. 17, 1925. Serial No. 3,153. 3 Claims. (Cl. 221—47.)



1. A force feed oil can comprising a receptacle having a filling opening in the top thereof, a discharge spout extending upwardly from the top of the receptacle, a piston operable in said receptacle, a piston rod secured at its lower end to said piston and extending upwardly through the top of the receptacle, a coil spring in the receptacle and adapted to force the piston upwardly to discharge the oil from the receptacle outwardly through the spout, means for locking the piston rod against vertical movement, said locking means comprising a catch having one end pivotally supported on the lower portion of the spout, the intermediate portion of said catch being provided with a vertically disposed offset opening for receiving the piston rod, and a coil spring for holding the catch in locking engagement with the piston rod.

1,577,930. ECCENTRIC DRIVING MECHANISM FOR POWER WASHING MACHINES. CARL A. OLSON, Clarinda, Iowa, assignor to Clarinda Manufacturing Company, Clarinda, Iowa, a Corporation of Iowa. Filed Oct. 15, 1923. Serial No. 668,695. 4 Claims. (Cl. 74—14.)

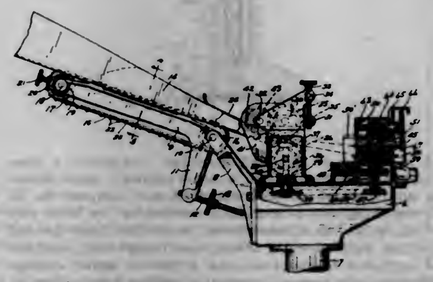


1. A driving mechanism, comprising a support, a driving member journaled on said support and formed with oppositely arranged eccentrics, a housing enclosing said eccentrics and extending at right angles to said driving member, a bifurcated bearing mounted in said housing, a slide bearing member arranged for rotary oscillation in said bifurcated bearing, a follower device mounted for sliding movement in and oscillation with said slide bearing member, a flexible connector embracing said slide bearing member between the arms of said bifurcated bearing, said connector including a central link formed with an integral pin extending into a hole formed in said slide bearing member, and driving connections between the ends of said connector and the respective eccentrics.

1,577,931. SOUND RECORD AND PROCESS OF MAKING THE SAME. JAMES W. OWEN, Secane, Pa., and ALBERTIS HEWITT, Camden, N. J., assignors to Victor Talking Machine Company, a Corporation of New Jersey. Filed Oct. 2, 1915, Serial No. 53,720. Renewed Apr. 21, 1922. Serial No. 557,030. 22 Claims. (Cl. 41—25.)

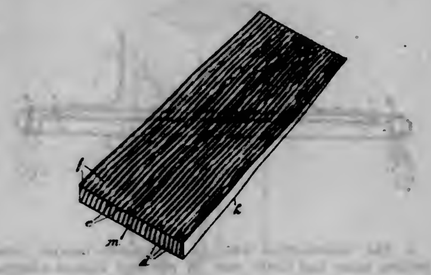
21. The method of making a record of sound, which consists in progressively forming on the face of a sound record blank or tablet of material not substantially softer than celluloid, a line-like ridge having undulations therein corresponding to sound waves and of a material which acts upon the portion of the tablet with which it comes into contact and upon which it rests to increase the thickness of the tablet along such line to form a ridge which, when allowed to stand, hardens and produces a permanent ridge of substantially the same material as that of the body of the tablet, the patrix so formed being adapted to press records in thermo-plastic material.

1,577,932. FOOTBALL GAME BOARD. LOUIS J. PALEEN, Wilmington, Del. Filed Aug. 21, 1925. Serial No. 51,599. 5 Claims. (Cl. 273—94.)



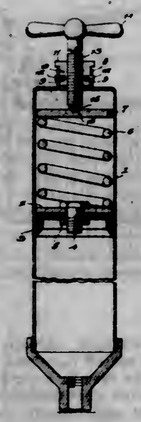
1. A game apparatus comprising a box having a surface thereon representing a field for playing a game between two teams, and end portion of said box being provided with graduations, a chart slidably mounted in one end of said box and having graduations thereon adapted to align with the first mentioned graduations, said chart containing data therein relative to various plays of both teams, and means for selecting a graduation on said box thereby to indicate a particular play for a team on said chart.

1,577,933. HINGE. STUART W. PARSONS, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Original application filed Mar. 24, 1922, Serial No. 546,232. Divided and this application filed May 21, 1924. Serial No. 714,848. 2 Claims. (Cl. 16—191.)



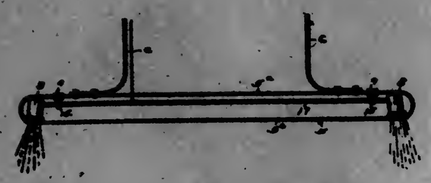
1. A hinge of the character described comprising a pair of leaves constructed of sheet metal, one of said leaves having a knuckle above the plane of this leaf and formed by rolling one end of the leaf onto itself, and a longitudinally extending corrugation merging into the wall of said knuckle adjacent the top thereof; the other of said leaves having an up-turned flange at one end integral therewith, projections constituting knuckles integral with the side edges of said flange and disposed at right angles thereto, and a longitudinally extending corrugation alined with said first corrugation and merging into and rising substantially to the top of said flange.

1,577,934. CANDY-RIBBON-FORMING MACHINE. SIDNEY PEARCE, Minneapolis, Minn., assignor to J. N. Collins Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Nov. 22, 1922. Serial No. 602,589. 7 Claims. (Cl. 107—12.)



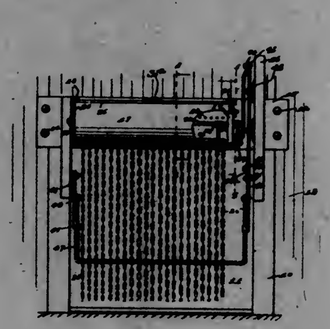
7. In a machine of the kind described, the combination with ribbon-forming rollers, of a trough-like hopper for delivering plastic material to said rollers, said hopper being mounted on a horizontal pivot for vertical angular adjustments, a feed belt working through the bottom of said hopper and constituting a part of said bottom, driving and guiding wheels for said belt, one of which is journaled coincident with the axis of said hopper pivot, and a belt drive connecting one of said ribbon-forming rollers to said belt-driving wheel, and serving to drive said belt while permitting angular adjustments of said hopper.

1,577,935. SPLIT WOOD SHINGLE. JOHN C. RUNKLE, Cambridge, Mass. Filed Jan. 4, 1926. Serial No. 79,060. 3 Claims. (Cl. 108—8.)



1. A uniformly-tapered split wood shingle having a smooth and plane bottom face and an upper face which presents a split or rough appearance throughout its entire extent.

1,577,936. AUTOMATIC LUBRICANT-SUPPLY MAGAZINE. BERNARD H. SKELLY, Bridgeport, Conn., assignor to Bowen Products Corporation, Auburn, N. Y., a Corporation of New York. Filed Oct. 15, 1921. Serial No. 507,967. 3 Claims. (Cl. 221—47.3.)

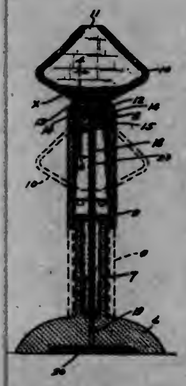


3. An oil-gun comprising a cylinder having a piston movable therein, a spring for moving the piston, a compression follower disk seated on the rear end of the spring, an operating screw having its lower end normally positioned within the cylinder and adapted to be in connection with but unconnected to said disk and capable of being driven toward the latter or withdrawn therefrom to effect or relax the tension on the spring, and a nut having a bayonet lock connection with said cylinder, and mounted on said screw whereby the screw is removable from the cylinder either independent of or in conjunction with said nut, and the bayonet lock is normally maintained by the pressure of the spring against the follower disk and the operating screw.

1,577,867. ILLUMINATED SAFETY BUMPER FOR AUTOMOBILES. EUGENE SLUSSER, Santa Rosa, Calif. Filed Feb. 1, 1924, Serial No. 689,906. Renewed Feb. 18, 1926. 2 Claims. (Cl. 240—7.)

1. The combination with an automobile bumper comprising inner and outer runs, of two-part clamps adapted to embrace the inner run, screws for drawing the two parts of the clamp together that portion of the two-part clamp lying inwardly of the inner run having an inwardly projected ear and a pivoted jaw, means for binding said pivoted jaw to the ear, a hollow rod supported horizontally by said clamps and electric lamps carried by said hollow rod and located adjacent the ends of the bumper, the wires of said lamp passing through said horizontal rod.

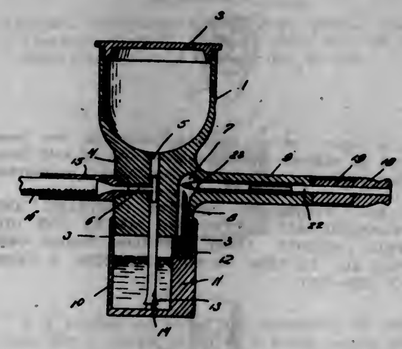
1,577,938. ANIMAL OILER. CHARLES R. STANTON, Stuart, Iowa. Filed May 22, 1923. Serial No. 640,635. 6 Claims. (Cl. 119—157.)



4. A horizontally arranged support, a tank parallel with said support and spaced therefrom a slight distance, means for mounting the tank in a rigid position relative to said support, a grooved block designed to act as a filler between said tank and said support, the groove of said block being provided with a series of vertical openings, means for supporting a chain to hang through each of said openings, said tank being provided with a series of openings slightly above the said grooved block, a shaft extending longitudinally through said tank provided with radial arms, a bar for connecting the free ends of said radial arms, said bar being provided with a flexible member designed to engage the inner face of the tank in such a manner that as the shaft is rotated the flexible member will be moved upwardly along the side of the container and carry oil to the said openings, means for mounting the said support in an elevated position so animals may pass beneath it, a lever mechanism actuated by the animals as they pass beneath said support for actuating said shaft, the last said mechanism being provided with means for adjusting it for animals of different sizes.

1,577,939. PADLOCK. HAROLD L. TUNISON, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed June 23, 1924. Serial No. 721,783. 3 Claims. (Cl. 70—108.)

1. In a padlock, the combination with a casing and a shackle, the latter having heel and toe portions, of a key controlled transversely disposed bolt cooperative with the heel portions of the shackle, a diagonal disposed sliding bolt cooperative with the toe portion of the shackle, both of said bolts normally engaging the shackle simultaneously, and means operatively connecting said bolts.



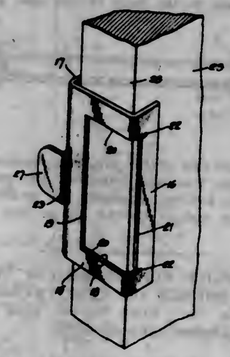
1,577,940. HOLDER FOR MATCHES, TOOTHPICKS, STRAWS, AND THE LIKE. NORMAN R. WALKER, Austin, Minn. Filed Nov. 21, 1924. Serial No. 751,261. 2 Claims. (Cl. 206—23.)

1. A holder of the kind described comprising a base having a hollow standard, a head having a skirt forming an extension of said standard and adapted to be telescoped thereon, a receptacle carried by the head and having in its top a passageway, an ejector blade having a pair of legs extending through said skirt and standard and anchored to the base, and a pair of coiled springs encircling said legs and normally holding the receptacle raised, said ejector blade being arranged to move through the receptacle and its passageway when the receptacle is depressed against the tension of said springs, said hollow standard and skirt forming a constantly closed compartment for the legs and springs.

1,577,941. SMOKING PIPE. WILLIAM WALKER, Sawtelle, Calif., assignor of one-half to Edgar W. Koch, Santa Monica, Calif. Filed May 23, 1925. Serial No. 32,372. 2 Claims. (Cl. 131—12.)

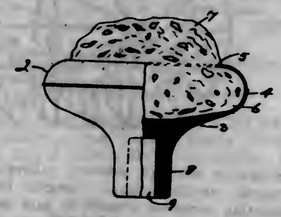
2. A smoking pipe comprising a bowl having a depending body on its bottom, a fluid receiving cup detachably connected with the bottom of said body, a smoke conducting tube leading from said bowl through said body and into said cup, said cup being provided with an internal shoulder, said body having a smoke discharge passage

and means supported on said shoulder adapted to be moved over the intake end of said discharge passage for closing the latter.



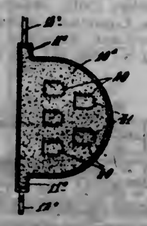
1,577,942. SHORE. OSCAR L. WALLACE, Pittsburgh, Pa. Filed May 19, 1923. Serial No. 640,252. 1 Claim. (Cl. 248—2.)

In a shore, an upright, a post slidably mounted on the upright, means at the upper end of the upright for preventing outward movement of the post away from the upright, a block extending across the rearward face of the upright and provided with an inwardly projecting stud, the upright having a vertical series of openings for reception of said stud whereby the block is adjustably mounted on said upright and positively secured in adjustment thereon, the lower end portion of the post being beveled downwardly and inwardly of the upright, a keeper pivoted to the ends of the block and extending across and in front of the beveled portion of the post, and a wedge driven between the bight portion of the keeper and the beveled portion of the post and coacting with the keeper for effecting upward adjustment of the post and for securing the post in adjustment.



1,577,943. BUTTING GAUGE. CLARK E. WOODLEY, Los Angeles, Calif. Filed Dec. 20, 1923. Serial No. 681,877. 8 Claims. (Cl. 33—197.)

1. A butting gauge comprising a member, U-shaped in cross section and provided with an opening, and a wedge movable through the member and cooperating with the member for securing the latter to the edge of a



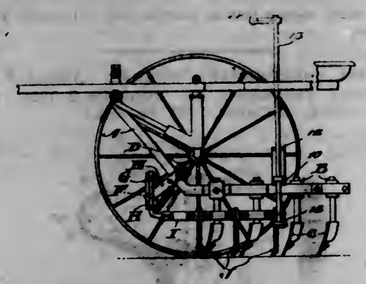
door, said wedge being permanently attached to the member.

1,577,944. BLACKBOARD WASHER. ALBERT P. BENNINGTON, Philadelphia, Pa. Filed May 2, 1925. Serial No. 27,346. 2 Claims. (Cl. 15—244.)

1. As an article of manufacture, a sponge-holder of rubber including a back wall, side walls thinner than said back wall and having their free ends converging to produce a restricted mouth and with the back wall forming a chamber to receive a portion of a sponge, and a hand-hold projecting from said back wall.

1,577,945. CAP TOWEL. ELLA BLUMENTHAL, New York, N. Y. Filed Apr. 10, 1924. Serial No. 705,500. 1 Claim. (Cl. 2—174.)

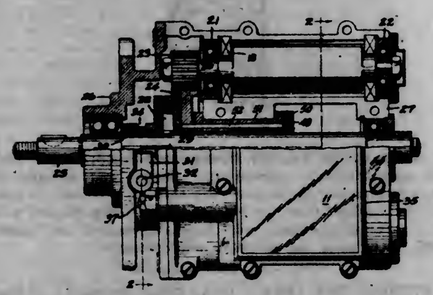
A head cloth for hairdressing use comprising a body of approximately semicircular shape, and strings attached to said body at the sides thereof adjacent the ends of the straight edge thereof, said body being formed with a number of openings, and flaps attached to the underside of the body and covering said openings.



1,577,946. NUT LOCK. ISAAC CHAP BOUTWELL, Grady, Ala. Filed Jan. 27, 1925. Serial No. 5,167. 2 Claims. (Cl. 151—2.)

1. A nut lock comprising an elongated cylindrical member, a bolt extending through said cylindrical member, a head carried by said bolt and engaging one end of the

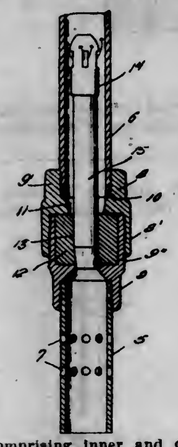
cylindrical member, oppositely disposed fingers carried by one end of the cylindrical member and extending through apertures in the head of the bolt, a flange carried by the other end of the cylindrical member, a washer disposed on the bolt and engaging the flange, a nut threaded on the bolt and engaging the washer and interengaging means carried by the flange, the washer and the nut.



1,577,947. DEVICE FOR OPERATING THE PLANT-HOEING MEMBERS OF CULTIVATORS. ROY H. BURKEY, Gap, Pa. Filed Oct. 3, 1924. Serial No. 741,359. 4 Claims. (Cl. 97—160.)

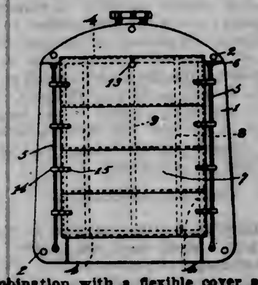
1. In combination with an ordinary cultivator including main beams carrying ground engaging implements, a rigid supporting structure secured to said beams, auxiliary beams pivoted at their forward ends upon said main beams and located therebetween, ground engaging implements carried by the auxiliary beams, and a rock shaft journaled through said rigid supporting structure and operatively connected with said auxiliary beams to move the latter and bring the implements thereon substantially into engagement for cultivating between the plants in a row.

1,577,948. DYNAMO-ELECTRIC MACHINE. JOHN B. BUSHNELL, Berkeley, Calif., assignor to N. R. Harris and M. C. Harris, Copartners, doing business as Harris Electric Company, San Francisco, Calif. Filed Feb. 27, 1922. Serial No. 539,387. 5 Claims. (Cl. 171—252.)



1. In an inductor alternator, a pair of magnets having their unlike poles arranged opposite each other, means forming poles near the extremities of the magnets so as to form two gaps in series, a magnetic rotor in each gap, and windings associated with the magnetic structure.

1,577,949. PAPER CLIP OR FASTENER. HENRY M. BUTLER, Schenectady, N. Y., assignor of one-half to Dudley M. Diggs, Schenectady, N. Y. Filed Apr. 26, 1924. Serial No. 709,311. 5 Claims. (Cl. 24—261.)



2. A paper clip or fastener comprising two loops located in adjacent parallel planes, one of said loops having within its confines means forming a monogram.

1,577,950. COMBINED SECTION COUPLING AND STANDING-VALVE-ATTACHING MEANS FOR OIL-WELL CASINGS. JESSIE J. BUTLER, Hominy, Okla. Filed Apr. 22, 1924. Serial No. 708,226. 1 Claim. (Cl. 285—22.)

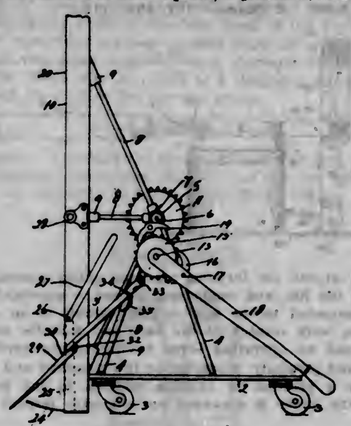
A coupling comprising inner and outer socket members having screw thread engagement with each other, a block of resilient material located in the socket of the inner member and clamped therein by an inner wall surface of the outer member, a pipe passing through the block and fixed at one end in an inner wall of the inner member, the outer member having an opening through which the said pipe passes and the surface of the pipe being spaced from the surface of the said opening.

1,577,951. RADIATOR PROTECTOR. MILTON D. CAMPBELL, Cincinnati, Ohio, assignor to The Perkins-Campbell Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 15, 1924. Serial No. 713,613. 2 Claims. (Cl. 257—182.)

1. In combination with a flexible cover secured over a radiator front, and having an opening to expose the radiator core, rigid members extending lengthwise of the core and secured along the sides of the said opening, and a curtain having panels, straps connecting the tops of the panels to each other, and sliders on the panels engaging the rigid members, and means for holding the panels in relation extended over the opening in the cover.

1,577,952. TURNING AND BORING TOOL. WILLIAM CARNEGIE, Sheffield, England. Filed May. 25, 1925. Serial No. 32,777. 5 Claims. (Cl. 29—100.)

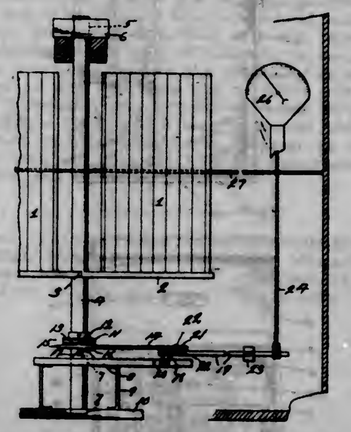
1. A turning and boring tool comprising the combination with a conical cutter of a holder having parallel clamping surfaces adapted to be secured in the usual slide rest or tool carrier, the holder being formed with a conical recess corresponding in taper and smaller diameter to the cutter but having a gap in its side wall near the end of the holder for a distance less than half the circumference through which the cutter projects for its full height, substantially as and for the purpose specified.



1,577,953. COCONUT SPLITTER. ROBERT JOSEPH CARTER, Apia, Western Samoa. Filed Apr. 4, 1925. Serial No. 21,420. 1 Claim. (Cl. 146—10.)

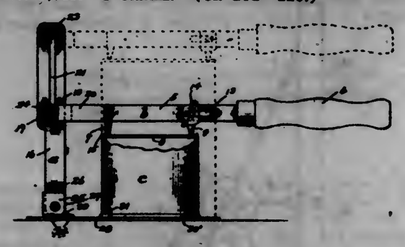
Apparatus for splitting coconuts consisting of a javelin-shaped knife or splitter and a block or receiver with a cup-shaped hollow to hold the coconut and having slots for the passage of the blades of the knife substantially as described and shown on the annexed drawings.

1,577,954. HAND TRUCK. JOSEPH CHVOJKA, Philadelphia, Pa. Filed May 23, 1925. Serial No. 32,296. 5 Claims. (Cl. 254—8.)



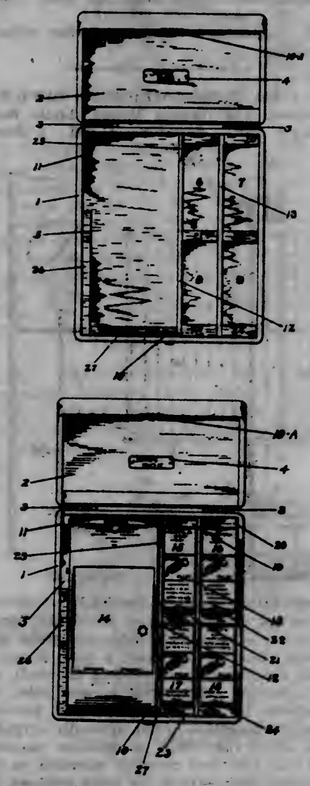
1. A hand truck including a wheel supported body, frame members on said body, bearings at the upper ends of said frame members, a shaft journalled in said bearings, a countershaft also journalled in bearings on said frame members, a gear on the first mentioned shaft, a pinion on the countershaft meshing with said gear, a ratchet wheel on the countershaft, an operating handle journalled on the countershaft, a two pointed pawl pivoted to said handle and cooperating with the ratchet wheel whereby the parts may be actuated to transmit motion to the first mentioned shaft, means to prevent retrograde movement of the parts, a platform, and means to support said platform from said first mentioned shaft so as to move with the latter.

1,577,955. HAIR FELT AND METHOD OF MAKING. ALBERT L. CLAFF, Danvers, Mass., assignor to Beckwith Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 12, 1923. Serial No. 662,222. 10 Claims. (Cl. 92—21.)



1. A felt comprising hair and a leather solution precipitated thereon.

1,577,956. COTTON-BALE-WEIGHING DEVICE. BUSH H. CRAWFORD and GEORGE MOBBS, Little Rock, Ark. Filed July 2, 1925. Serial No. 41,091. 1 Claim. (Cl. 265—27.)



The combination with a vertically movable cotton baling press supporting shaft, of a weighing device, said weighing device comprising a balancing beam, said beam being formed from two sections, a yoke carried by one of the beam sections and surrounding the shaft, upwardly extending balancing lugs carried by said yoke, a flanged member carried by the press shaft and provided with recesses for the reception of the upwardly extending lugs, a base in which the shaft is slidably mounted, lugs carried by the yoke and rockably mounted on the base, rockable connections between the beam sections, the outer beam sections being pivotally connected to the base, a counterweight on said last named beam section, a weight indicating device and connections between the last named beam section and the weight indicating device.

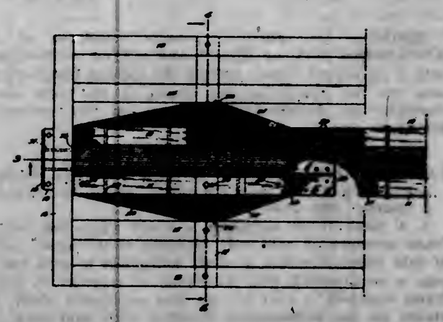
1,577,957. CAN-PERFORATING DEVICE. DANIEL P. DALMAS, Vallejo, Calif. Filed Feb. 16, 1925. Serial No. 9,569. 3 Claims. (Cl. 164—119.)

1. A utensil for forming vent and outlet openings in a can or the like and comprising a base, a standard pivotally connected to the base and adjustable to an upright position with respect to the base and foldable over the base, and an operating lever having spaced perforating teeth and pivotally connected to the standard and adjustable to a position in angular relation to the standard when the latter is arranged upright with respect to the base.

1,577,958. CAMERA AND FILM KIT. HORACE W. DAVIS, Cedarhurst, N. Y., assignor, by mesne assignments, to Ansco Photoproducts, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 28, 1922. Serial No. 591,140. 1 Claim. (Cl. 206—1.)

In an article of manufacture, a receptacle of the character described, a partition in said receptacle forming a camera compartment therein provided with spacing blocks; the upper edge of said partition being partially beveled, a second partition parallel to said first mentioned partition, blocks between said partitions forming film compartments, and a hinged cover for said receptacle.

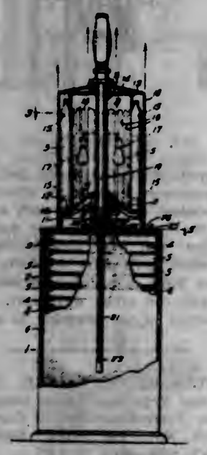
1,577,959. GAME APPARATUS. TIMOTHY J. DUNNE, New York, N. Y. Filed May 21, 1923. Serial No. 640,301. 5 Claims. (Cl. 273—103.)



1. In a game apparatus, a frame, a ball receiving device thereon, a ball chute comprising a bottom member hinged to the frame and a side member hinged to said bottom member, and a net located under the said ball receiving device and hinged at one side to the said side member of the chute.

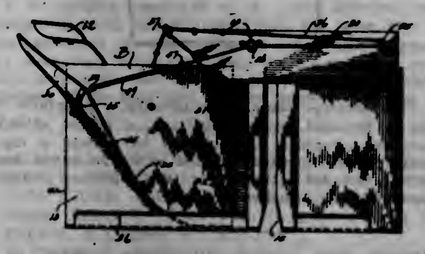
1,577,960. VENEER JOINER. CHARLES A. FORSBERG, Rockford, Ill.; Truman Johnson administrator of said Charles A. Forsberg, deceased, said Johnson assignor to Merritt Sales & Engineering Company, Inc., Lockport, N. Y., a Corporation of New York. Filed Nov. 27, 1922. Serial No. 603,400. 3 Claims. (Cl. 144—114.)

1. In a veneer joiner, the combination of a bed, a table reciprocable thereon, means for holding a stack of veneer on the table, means for finishing one edge of the veneer, a gage guide for aligning the veneer with respect to said cutting means and for limiting the depth of cut, a lever connected with said gage guide for adjusting the same to vary the depth of cut, a rod connected with said lever and extending forwardly through said bed, and a hand-operable member at the front of the bed connected with said rod for moving the same axially for making said adjustment.



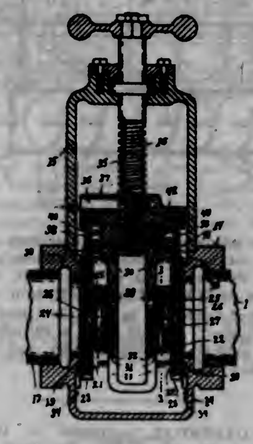
1,577,961. COMBINED DRAFT ARM AND CENTER SILL REENFORCEMENT. JOHN P. GALLAGHER, Jersey City, N. J., assignor to Magor Car Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 18, 1922. Serial No. 595,461. 25 Claims. (Cl. 105—420.)

1. In a car underframe, the combination with an end sill, a bolster and a pair of center sills to be reenforced, of a pressing extending from the end sill past the bolster,



a part of said pressing fitted between the center sills to form a thrust beam reenforcing the same, said pressing including on each side outwardly extending flanges integral with the beam and overlapping the bolster, the parts of said flanges between the bolster and center sills constituting gusset plates and the parts of the pressing between the end sill and bolster constituting diagonal strain braces.

1,577,962. LOCKER AND DISPLAY RACK FOR OIL IN SEALED CONTAINERS. FREDERICK D. GATCHELL, New York, N. Y. Filed May 2, 1925. Serial No. 27,568. 4 Claims. (Cl. 211—7.)

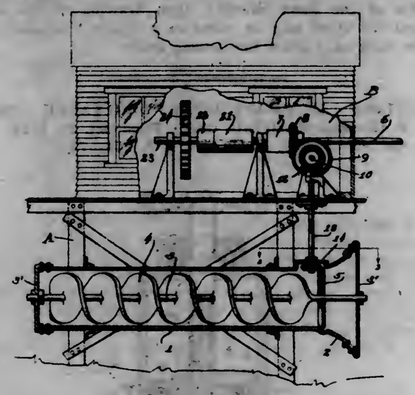


4. A display stand comprising a compartment forming base, a hollow post rising therefrom, a display rack revolubly mounted on the hollow post above the base, means on the display rack to support an annular row of containers, a cover for the display rack, a rod depending from the cover and sliding in the hollow post, a locking plate movable on the base, and kerfs formed in the rod to cooperate with the locking plate to thereby hold the cover in a position to enclose or in a position to expose the containers on the display rack.

1,577,963. ADJUSTABLE STRAW GUIDE FOR BINDERS. PAUL GERLACH, Saskatoon, Saskatchewan, Canada; Agnes M. Gerlach executrix of said Paul Gerlach, deceased. Filed Dec. 21, 1923. Serial No. 682,035. 5 Claims. (Cl. 56—466.)

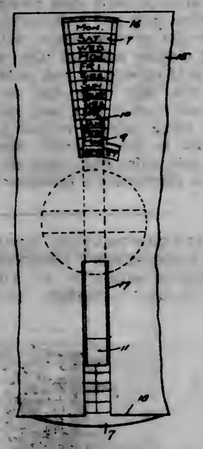
1. In a straw gulding attachment the combination with a binder including a deck, deck hood, and packer mechanism, of a sheet of flexible material with an inherent tendency to assume a flat relation, means securing said sheet of material to the binder deck adjacent the packer mechanism thereof so that the rear portion thereof is free to be rolled over the deck, a flexible cable, means connecting the cable to the deck hood of the binder, and means connecting an end of said cable to a lower portion of the sheet whereby upon drawing of the cable taut the sheet may be rolled in a diagonal manner over the deck as a guide for flowing grain.

1,577,964. AUTOMATIC REGRINDING VALVE. ISRAEL B. GILBERT, Cincinnati, Ohio. Filed Oct. 19, 1922. Serial No. 595,523. 9 Claims. (Cl. 251—71.)



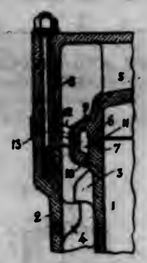
9. A valve comprising a valve casing having a valve seat, a valve stem, a valve disk rotatably mounted relative to said valve stem and adjustable through said valve stem into and out of engagement with said valve seat, and a driving member mounted upon and having splined relation with said valve stem and yieldingly held in driving relation with said valve disk to rotate said valve disk in frictional contact with said valve seat, when said valve disk is being applied to and removed from said valve seat, and to automatically disengage its driving relation with said valve disk when the closing strain on said valve disk approaches a maximum.

1,577,965. VALVE-OPERATING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. WILLIAM M. GOODWIN, Central Square, N. Y. Filed Sept. 16, 1924. Serial No. 738,019. 7 Claims. (Cl. 123—90.)



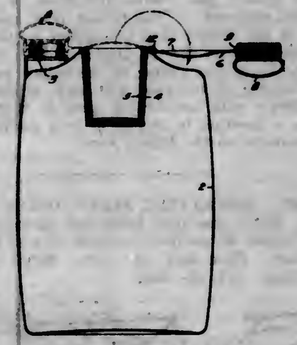
1. The combination with a self-closing poppet valve for internal combustion engines and a rotary cam, of means including a wedge rotatable about an axis parallel with and at one side of the axis of the valve for transmitting motion from the cams to the valve and for taking up lost motion between said cam and valve.

1,577,966. WAVE MOTOR. HENRY HANSEN, Bisbee, Ariz. Filed Jan. 22, 1924. Serial No. 687,743. 4 Claims. (Cl. 185—30.)



1. A wave motor of the class described comprising a driven shaft, means for actuating the same, a plug loosely mounted on the outer end of said shaft, a coil spring encircling the outer end of said shaft, said spring having one end thereof connected to said shaft and the opposite end being connected to said plug, a cylinder, means for locking said plug within said cylinder, and a gear wheel carried by said cylinder.

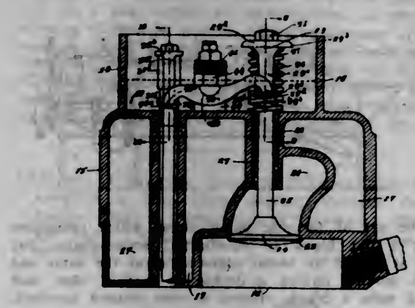
1,577,967. CALENDAR. GEORGE F. HAWLEY, San Francisco, Calif. Filed Nov. 14, 1925. Serial No. 69,158. 3 Claims. (Cl. 40—115.)



3. A calendar comprising a back, a disk rotatably mounted on said back, said disk having marked thereon the numerals from 1 to 31 inclusive, said numerals being circularly arranged and concentric with the circles in which the days of the week are arranged, an indicator movable longitudinally across said disk, said indicator having marked thereon the months of the year, a cover over said disk secured to said back, and a cover over said disk, said cover having an opening therein to expose to view a radial section of said disk bearing the days of the week and a part of said indicator bearing the months of the year, said cover also having an opening giving access to the lower part of said indicator so that the latter may be manually moved.

1,577,968. JOINT BETWEEN WALLS SEPARATING TWO GASEOUS OR LIQUID FLUIDS UNDER PRESSURE. TORKILD VALDEMAR HEMMINGSEN, Copenhagen, Denmark. Filed Oct. 19, 1925. Serial No. 63,566. 2 Claims. (Cl. 285—22.)

1. An improved joint for walls for separating two fluids under pressure from each other and from atmosphere comprising, a two part wall, a first connection joint between the two parts of the wall, a flange projecting from one wall part and having its free edge adjacent the other wall part to form a chamber enclosing the first joint, a packing between the free edge of the flange and the other wall part, and means connecting the interior of the chamber to atmosphere.



1,577,969. BEVERAGE CONTAINER. JOSEPH C. HICKINGBOTHAM, San Francisco, Calif., assignor to Shreve & Company, San Francisco, Calif., a Corporation of California. Filed Nov. 19, 1924. Serial No. 750,754. 6 Claims. (Cl. 220—20.)

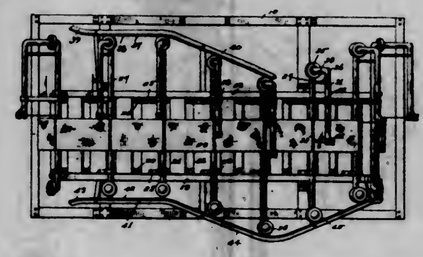
1. A beverage container comprising a receptacle having a threaded pouring aperture, a pocket extending into the receptacle and adapted to contain a cup, a pocket closure member attached to the receptacle and a screw threaded stopple for the aperture rotatably mounted in said closure member.

1,577,970. INTERNAL-COMBUSTION ENGINE. HARRY L. HOSTERMAN, Akron, Ohio, assignor to the Akron Motor & Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 2, 1923. Serial No. 610,128. 11 Claims. (Cl. 123—90.)

3. In an engine having overhead valves, a valve rod projecting upwardly from said engine, a rocker arm saddle secured to the upper end of said rod, said saddle including a top portion having arms leading downwardly from diametrically opposite sides thereof, a

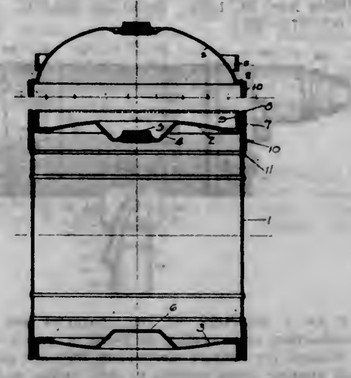
spring mounted around said rods and compressed between said top portion and the engine and a rocker arm seat on the downwardly projecting end of each arm.

1,577,971. PUMPING MECHANISM. IRA B. HUMPHREYS, Denver, Colo. Filed Feb. 24, 1923. Serial No. 620,913. 56 Claims. (Cl. 103—46.)



1. A pumping apparatus of the class described comprising an inner and an outer pipe, the inner pipe an inlet pipe and the outer pipe an outlet pipe, a pumping mechanism embraced within the pipes, and a pressure mechanism for constantly supplying fluid under pressure to the inlet pipe, for the purpose described.

1,577,972. PROCESS FOR PRODUCTION OF ORNAMENTS, LETTERING, OR THE LIKE ON ARTIFICIAL STONE. ARNOLD NIELS PETER JACOBS, Copenhagen, Denmark. Filed Feb. 21, 1924. Serial No. 694,439. 3 Claims. (Cl. 41—17.)

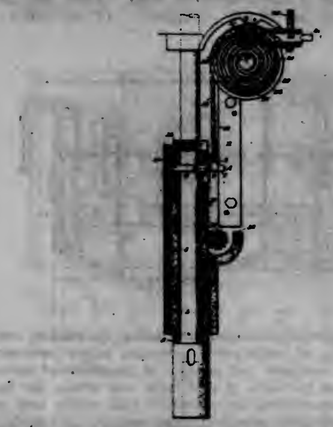


1. Process of ornamenting artificial stone consisting in impregnating the same with an insoluble compound of a heavy metal, coating with gum the surface which is to be ornamented, and simultaneously imprinting in said coated surface the ornamentation and moistening with a solution of sulphuretted hydrogen the surface so imprinted.

1,577,973. TILE CUTTER. GARLAND F. JOHNSTON, Fort Dodge, Iowa, assignor to Johnston Clay Works, Clayworks, Iowa, a Corporation of Iowa. Filed Dec. 29, 1925. Serial No. 78,159. 7 Claims. (Cl. 25—105.)

1. A tile cutter comprising a support, an endless conveyor, a series of transversely arranged cutter bars carried by said conveyor and capable of longitudinal movement, a cutter for each of said bars, and means for imparting a reciprocating movement to said cutter bars as the said conveyor is advanced, substantially as described and for the purposes stated.

1,577,974. TANK. JOHN M. KELLEY, Rochester, N. Y., assignor to Protane Corporation, Erie, Pa. Filed Sept. 5, 1924. Serial No. 736,059. 8 Claims. Cl. 220—67.)



1 In a tank, the combination of a side wall; and an end having an outwardly turned flange at its periphery, said flange connected at its extreme edge with the side wall and lying freely against and disconnected from the inner surface of the side wall back of the edge whereby the end will be retained under pressure in its original shape and under greater pressure will be expanded outwardly to a dome shape rolling the flange outwardly in the ontward expansion movement of the end.

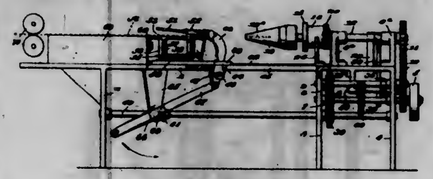
1,577,975. SAFETY SPINDLE COUNTERBALANCE. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to the Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 4, 1923. Serial No. 629,852. 3 Claims. (Cl. 77—36.)

1. A drilling-machine combining a vertically-movable spindle; quick-traverse means therefor; a fusee connected to carry the weight of said spindle; a coiled spring

exercising a counter-pull on said fusee; and a safety-latch means for said spindle normally held inoperative

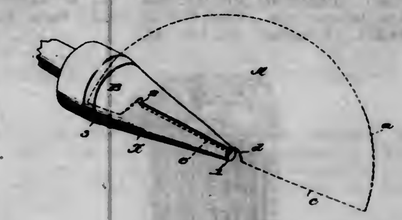
by the connection between the fusee and spindle and adapted automatically to arrest the descent of said spindle in case said counter-pull should cease.

1,577,976. POWER-DRIVEN TOOL-OPERATING DEVICE. JAMES S. KNOWLSON, Oak Park, and ROBERT S. MCKEAGE, Chicago, Ill., assignors to Electro-Magnetic Tool Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 24, 1922. Serial No. 556,176. 10 Claims. (Cl. 172—36.)



1. In a structure of the character set forth, the combination of a casing to house a power device, and a housing for control mechanism for said power device, said housing being carried by said casing and formed of sheet-metal, portions thereof extending angularly relative to the side-walls thereof and flatwise-opposing said casing and united to said casing.

1,577,977. PADLOCK. CHARLES LEDIN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed June 23, 1924. Serial No. 721,805. 3 Claims. (Cl. 70—108.)



1. The combination with the casing of a padlock, of means to prevent rupture or drilling of said casing to disturb the lock means therein, said first mentioned means consisting of a hardened steel armor on said casing and covering a side thereof, and means securing the edge portion of said armor to an outwardly projecting portion of the casing.

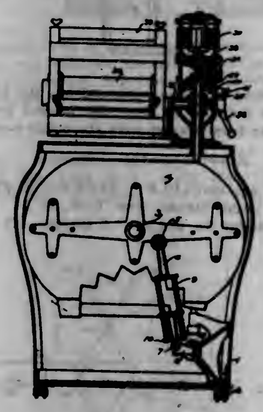
1,577,978. METHOD OF AND APPARATUS FOR MAKING PAPER CONES. PETER LE ROY MCCALL, Rockingham, N. C. Filed Oct. 6, 1925. Serial No. 60,794. 14 Claims. (Cl. 93—79.)

1. The art of forming paper cones which comprises cutting a flat blank to substantial sector-shape, but having at one of its radial edges adjacent the outer end only, a portion having a deckle or feather edge, and winding such a blank around a cone shaped mandrel, with such deckle edge portion inside.

1,577,979. PAPER CONE AND ART OF MAKING SAME. PETER LE ROY MCCALL, Rockingham, N. C. Filed Oct. 17, 1925. Serial No. 63,096. 6 Claims. (Cl. 242—122.)

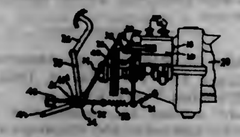
1. A paper cone having on the inside the usual longitudinal joint extending from the small end toward the large end, but terminating short thereof, the interior surface beyond said joint and adjacent the large end being substantially smooth throughout its circumference, and unbroken by any discernible joint.

1,577,980. GOGGLES. ROBERT MALCOM, Chicago, Ill. Filed Aug. 8, 1921. Serial No. 490,538. 1 Claim. (Cl. 2—14.)



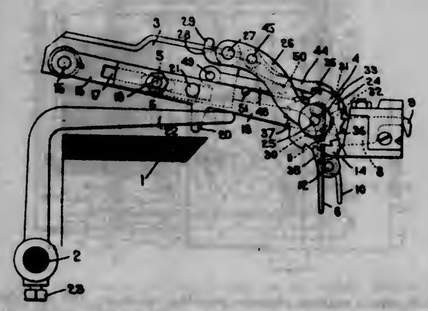
In a pair of goggles, the combination of eye-cups formed of fabric material mounted on flexible resilient frames to hold same in distended position, lens-holding rims, each having a circumferential groove therein adapted to receive the edge of the eye-cups, a lens seated in each groove, the edges of said rims being bent to retain said lenses and eye-cups in frictional engagement, said lens-holding rims having openings in one side thereof, a wire secured at the circular edge of each fabric eye-cup for holding the same in distended position, and thus permitting the circular edges of the eye-cups to be sprung into and removed from the circumferential grooves of the rims, said spring wire in each instance extending through the openings in the rims in the form of a loop upon the outside of each rim, and a flexible nosepiece having the opposite ends thereof connected to the wire loops extended from a pair of said rims.

1,577,981. RESISTANCE ELEMENT. WOLFGANG OTTO, Neumühlen, near Kiel, Germany, assignor to The Nederlandsche Technische Handel Maatschappij "Giro," S'Gravenhage, Netherlands. Filed Feb. 14, 1924. Serial No. 692,880. 17 Claims. (Cl. 201—66.)



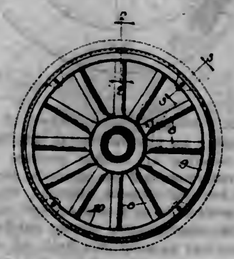
2. As a new article of manufacture, an electric resistance element, a portion of which consists of a mixture of finely divided graphite and at least partially vulcanized rubber in certain proportions and a portion of which consists of a mixture of finely divided graphite and rubber in different proportions, the graphite in at least one of said portions being embedded in the rubber.

1,577,982. GEARING. JOHN W. PEARSON, Dayton, Ohio, assignor to The Davis Sewing Machine Company, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 12, 1921. Serial No. 521,680. 14 Claims. (Cl. 74—14.)



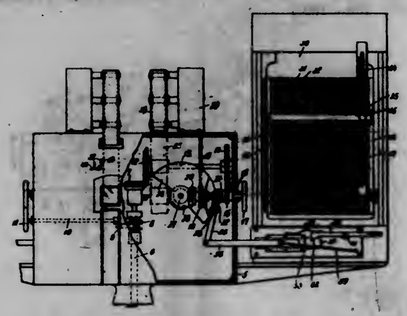
14. Apparatus of the character described comprising, in combination, a driven member, a driving member, means for operating said driving member in opposite directions, means operably connecting said driving and driven members comprising a variable length crank arm and means for varying the effective length of the crank arm while the apparatus is in motion to increase or decrease the movement of the driven member.

1,577,983. BRAKE. HENRY G. RAIRDAN, Larned, Kans. Filed Dec. 5, 1924. Serial No. 754,059. 6 Claims. (Cl. 188—91.)



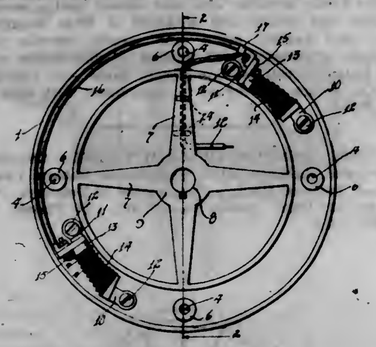
1. The combination with a motor drive shaft, of a brake mechanism comprising a fluid braking device having a valve for controlling the braking power thereof and including a crank shaft, and control means adapted for movement by the operation of the motor for operatively connecting said crank shaft with said drive shaft and means for controlling said valve also operable by said control means.

1,577,984. INTERMITTENT THREAD-CUTTING TEMPLE. ALONZO H. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 9, 1925. Serial No. 1,499. 8 Claims. (Cl. 139—266.)



1. In a loom comprising automatic filling replenishing mechanism, a temple stand, a temple having a movable thread parting device operable by or through the movement of the lay, resilient means tending to hold said parting device in operative position, a detent mounted on said temple stand normally positioned to engage said parting device upon the beat-up of the lay and thereafter to retain said parting device in inoperative position, means operable by the changing mechanism of the loom upon call for transfer to release said detent from engagement with said parting device, a timing device bodily movable with said detent having means to engage said detent and withhold it from engagement with said parting device and means operable by or through a predetermined number of movements of the lay following call for transfer to cause said timing device to restore said detent to engagement with said parting device.

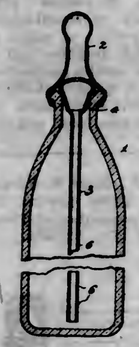
1,577,985. DEMOUNTABLE-RIM WHEEL. CHARLES F. RUBSAM, Jackson, Mich., assignor to Rubsam Corporation, Jackson, Mich., a Corporation of Delaware. Filed Apr. 25, 1923. Serial No. 634,422. 10 Claims. (Cl. 301—19.)



1. In a demountable rim wheel, the combination of a wheel body provided with a fixed channelled metal rim having a base, and integral flanges at the sides of the base respectively, one flange having a flared seat for one side of a demountable tire rim, centering devices adjacent the flange having the flared seat, spaced apart longitudinally on the fixed rim with longitudinal clearances between them, to position the demountable rim around said flange, and devices for clamping the demountable rim on said flange.

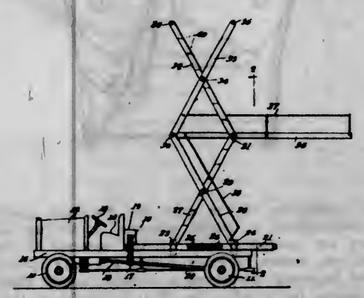
1,577,986. MOTION-PICTURE-PRINTING MACHINE. MORRIS SAX, Weehawken, N. J. Filed Apr. 22, 1922. Serial No. 555,943. 10 Claims. (Cl. 95—75.)

1. In a motion picture printing machine, the combination of means for advancing positive and negative film through the machine, illuminating means for exposing the positive film, means for automatically stopping the film-advancing means when the film is exhausted and electrically controlled means progressively advancing as the film passes through the machine to vary the intensity of the illuminating means and to release the stopping means.



1,577,987. ELECTRICALLY-HEATED STEERING WHEEL. WILLIAM D. SCHWENK, Ferndale, Mich. Filed Sept. 29, 1924. Serial No. 740,613. 1 Claim. (Cl. 219—19.)

An electrically heated steering wheel of the type described comprising an annular metal rim, said rim being hollow, thus forming an endless passage therethrough, a spider for supporting said rim upon the steering column, a replaceable heating element disposed within said hollow rim and secured to each end against movement relative to the rim, whereby the current conducting portion of said element may be positively held out of engagement with the interior side walls of the rim, and means for conducting current to said heating element, whereby said element when in operation may heat the entire space within said rim, and thereby conduct heat through the metal walls of the rim to the hands of the person holding the rim.

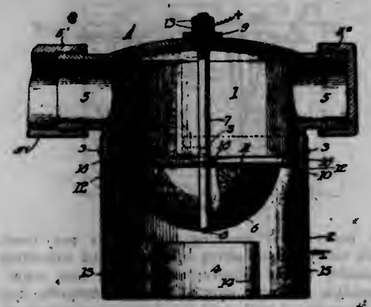


1,577,988. NURSING BOTTLE. LESTER SBJARTO, Linden, N. J. Filed Aug. 18, 1923. Serial No. 658,013. 2 Claims. (Cl. 215—11.)

1. A nursing bottle which comprises a body-portion, a neck, a nipple, and a headed tube freely suspended by said head from the bottle neck, thereby permitting the tube to rock freely in response to the varying movements of the bottle when in an upright position, said tube be-

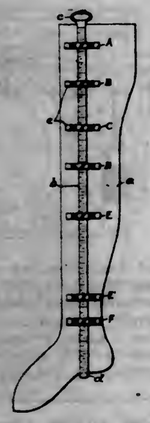
ing also adapted to move axially within the bottle when the latter is inverted so that the headed portion will then fall away from contact with the bottle neck.

1,577,989. ADJUSTABLE ELEVATING-PLATFORM TRUCK. LOUIS SIBBER, New York, N. Y. Filed Dec. 5, 1923. Serial No. 678,593. 1 Claim. (Cl. 227—17.)



The combination with a motor driven truck having an inclined shaft leading from the motor to the rear axle drive, a platform on said truck, a second platform and lazy-tong elements connecting between said platforms, of a screw mounted longitudinally in the first named platform, means on said screw for actuating said lazy-tong elements, a gear to drive said screw, and a pinion meshing with said gear, said pinion being fixed on said inclined shaft.

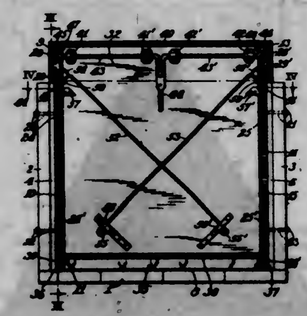
1,577,990. AIR CLARIFIER. CHRISTOPHER VAN DEVENTER, Chicago, Ill. Filed Nov. 8, 1922. Serial No. 599,658. 13 Claims. (Cl. 183—7.)



1. In an air clarifier the combination of a casing provided with air admission and discharge openings, said casing comprising a metallic section in the end of which the air admission opening is formed, an electrode supported within said metallic casing section in line with the air admission opening and in spaced relation to the side walls of said metallic casing section, said electrode consisting of a metallic body the surface of which adjacent to the air admission opening is upwardly and outwardly flared, and the means supporting which is constructed and arranged to insulate said electrode from the metallic casing section which surrounds it, said electrode being

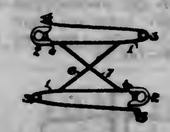
designed to be electrically connected to the positive terminal of the ignition or high potential side of a magneto or other electric generator, and the metallic casing section surrounding said electrode being grounded, whereby a

static electric field of high intensity will be produced surrounding said electrode through which the current of air entering said casing, together with particles of dust and dirt entrained thereby will pass.



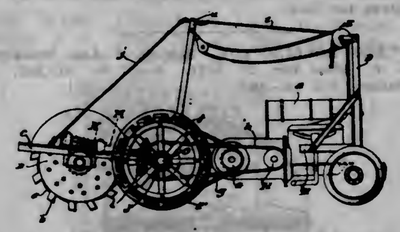
1,577,991. HOSIERY-SIZING DEVICE. MYER L. VICTORIUS, New York, N. Y. Filed Mar. 21, 1924. Serial No. 700,790. 2 Claims. (Cl. 33—169.)

1. A hosiery measuring device comprising a gage bar, an adjustable gaging member slidably engaging and extending laterally from the bar, means for securing the member to the bar at the desired point on the bar and means on the bar for engaging a hosiery support with a stocking thereon to be gaged.



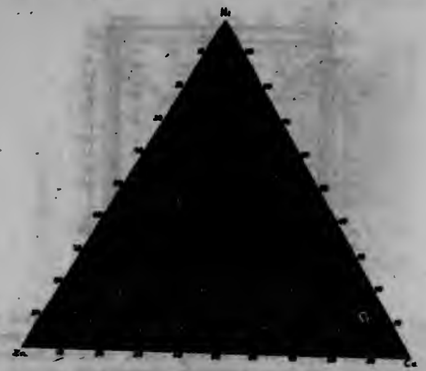
1,577,992. ADJUSTABLE WAGON-BODY END GATE. HENRY E. WARMOTH, Stillesville, Ind., assignor of one-third to John B. Justice, Stillesville, Ind., and one-third to Robert T. Hollowell, Danville, Ind. Filed Aug. 21, 1923. Serial No. 658,628. 2 Claims. (Cl. 296—58.)

2. In an adjustable vehicle body end gate, the combination of two upright posts having each an open-top journal-bearing on the upper portion thereof and a bearing member secured to the lower portion of the post, each bearing member having a slot in the top thereof, an end gate having a hinge bar secured to the lower portion thereof, said bar having journals to be removably supported in said slots respectively, the gate having also side members to co-operate in connection with the posts, a bar secured to the upper portion of the gate and having relatively angular fingers thereon to engage the posts,



and a shaft rotatively supported on the upper portion of the gate and having two crank arms and also a lever fixed thereto, the crank arms having crank pins to be connected with said journal-bearings respectively.

1,577,993. LINGERIE FASTENER. ELLEN WEINSTEIN, San Francisco, Calif. Filed Sept. 28, 1925. Serial No. 58,961. 2 Claims. (Cl. 24—87.)

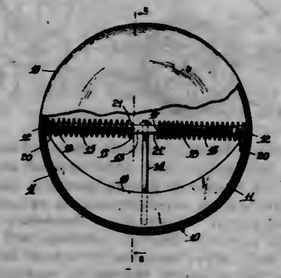


1. A device of the class described comprising a pair of safety pins having their body portions joined together by means of a plurality of crossed members.

1,577,994. TRENCH-DIGGING MACHINE. CLARENCE WEAZ, Wooster, Ohio, assignor to M. M. Herron, Millersburg, Ohio. Filed Apr. 11, 1924. Serial No. 706,084. 2 Claims. (Cl. 37—94.)

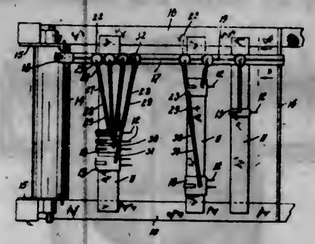
1. In a trench digging machine, the combination with the engine, side pulley and drive axle of an ordinary auto-tractor, of a pair of pinions mounted on said axle in lieu of drive wheels, a frame mounted on said axle and extended rearwardly therefrom, a secondary axle and drive wheels mounted thereon carrying said frame, a gear wheel with sleeve mounted to rotate on said secondary axle independently thereof, a vertically adjustable frame hinged to said secondary axle and projecting therefrom, a rotary toothed disk mounted to rotate on said frame in one direction, means in connection with said sleeve gear wheel for rotating said disk, means in connection with said side pulley for actuating said gear wheel on said secondary axle, and means in connection with the pinions on the tractor axle for actuating said drive wheels on said secondary axle, substantially as set forth.

1,577,995. WHITE-GOLD ALLOY. EDMUND MERRIMAN WISE, Dayton, Ky., assignor to The Wadsworth Watch Case Co., Dayton, Ky., a Corporation of Kentucky. Filed Oct. 28, 1925. Serial No. 65,508. 8 Claims. (Cl. 75—1.)



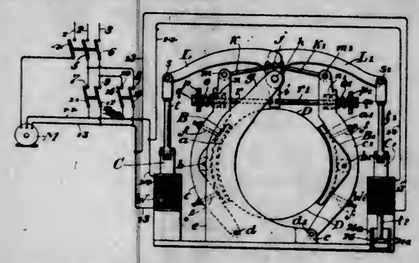
1. A gold alloy containing from 30% to 80% gold and containing nickel, copper and zinc in the relative proportions of 33.0 to 53.1 parts nickel, 26.4 to 46.5 parts copper and 10.6 to 30.7 parts zinc.

1,577,996. METHOD OF PRODUCING PROPELLERS. RALPH WISHON, San Francisco, Calif. Filed Jan. 6, 1921, Serial No. 435,376. Renewed Oct. 17, 1925. 4 Claims. (Cl. 29—148.2.)



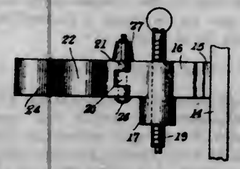
1. The art of producing a propeller blade, which consists in spinning the metal of a tube to close the end thereof at approximately the end of the blade to be formed, varying the perimetrical dimensions of the tube to correspond with those of the blade to be formed, and pressing the resultant work-piece into the shape to be given the blade.

1,577,997. ROLLING TOY. SAMUEL M. ALK, Brooklyn, N. Y. Filed Oct. 25, 1921. Serial No. 510,307. 4 Claims. (Cl. 46—48.)



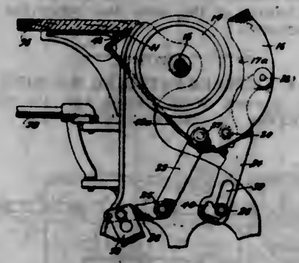
1. In a toy of the character described, the combination with a revolving casing having a loosely disposed axial rod, of oppositely actuated coiled springs carried by the rod, a weighted member connected to said rod and adjustable means mounted in longitudinally disposed slots in said rod and comprising slotted members loosely embracing the coils of the springs, the inner coils of the springs being provided with enlarged tips to prevent further relative movement of the members in one direction.

1,577,998. RULING MACHINE. FRANK ARNOLD, New York, N. Y. Filed June 1, 1925. Serial No. 34,052. 6 Claims. (Cl. 33—34.)



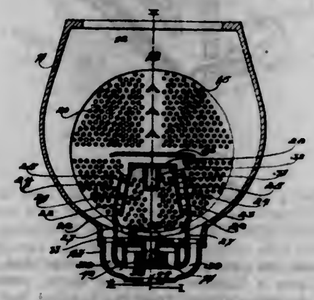
1. A paper-ruling machine including a pen beam, a fountain bar disposed above said beam and extending at right angles to the longitudinal axis of said beam, an ink fountain shiftably carried by said fountain bar, a support associated with said ink fountain, a tubular body fitted into said support inclined toward and leading to said beam, and a fibrous element dipped into the fluid in said fountain and extending into said tubular body.

1,577,999. ELEVATOR BRAKING SYSTEM. WILLARD S. ATKINSON, Ashland, N. J., assignor to Atlantic Elevator Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 17, 1924. Serial No. 744,109. 23 Claims. (Cl. 188—171.)



1. The method of controlling the acceleration of elevator mechanism provided with driving mechanism and a plurality of brake mechanisms, which comprises operating one of said brake mechanisms with respect to a brake drum and after a period of time operating another of said brake mechanisms with respect to the same drum to graduate and prolong the acceleration.

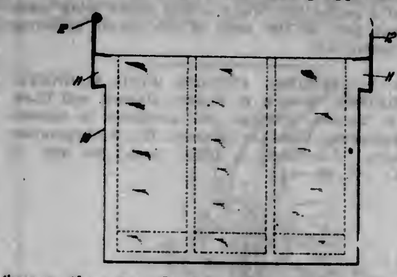
1,578,000. WINDOW SHADE AND CURTAIN SUPPORT. MACIEJ BABIARZ, Bayonne, N. J. Filed Apr. 24, 1923. Serial No. 634,207. 1 Claim. (Cl. 156—24.)



A combined window shade and curtain support bracket comprising a cast metal base having a central horizontal outstanding integral lug and a tenon projecting transversely therefrom, a curtain pole carrying member hingedly engaged with said tenon to swing in a vertical plane, means for clamping said members in adjustment, and a thumb screw adjustable in said lug to directly engage the end of a window shade roller upon its axis.

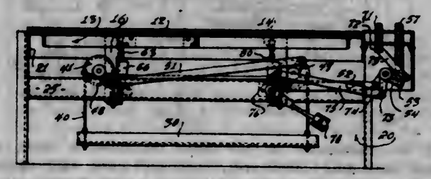
1,578,001. IRONING MACHINE. THOMAS W. BERAN, Binghamton, N. Y., assignor to The Nineteen Hundred Washer Company, Binghamton, N. Y., a Corporation of New York. Filed Mar. 26, 1921. Serial No. 455,708. 6 Claims. (Cl. 68—9.)

1. In an ironing machine, a frame, a rotor, a shoe, means for imparting to the shoe a translational movement toward and away from the rotor, said means including at each end of the shoe a pair of substantially parallel links pivotally connected to the frame and to the shoe, and means under the control of the operator for disengaging the pivotal connection between one of said links and the frame, thereby permitting pivotal movement of the shoe away from the rotor about the pivotal connection between the shoe and the other of said links.



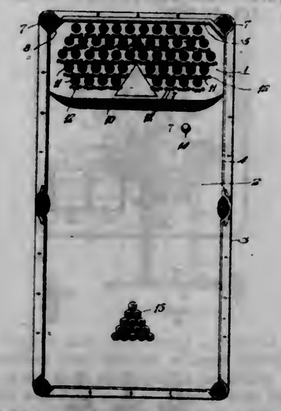
1,578,002. CONDENSER. GEORGE BELL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 28, 1923, Serial No. 665,426. Renewed Feb. 2, 1926. 3 Claims. (Cl. 257—43.)

1. In a condenser, the combination with a shell having a fluid inlet port, of a nest of air cooling tubes contiguous to the bottom of the condenser, a nest of condensing tubes at the sides of and above said air cooling tubes, partition means defining air passages between said groups of tubes, means for removing condensed fluid from the condensing tubes, and means including a fluid seal for removing condensed fluid from the air cooling tubes.



1,578,003. HANDLE FOR BATTERY BOXES. ELLIS H. BRIDGE, Akron, Ohio, assignor, by direct and mesne assignments, to The Electric Storage Battery Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Oct. 7, 1925. Serial No. 60,994. 10 Claims. (Cl. 16—114.)

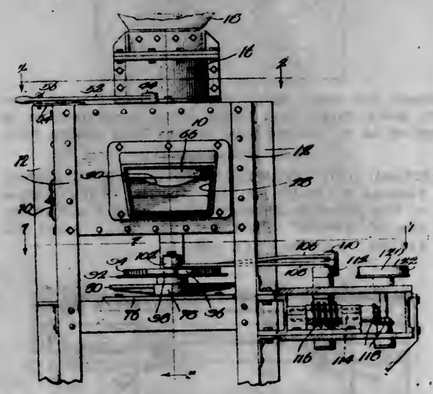
1. A battery box construction, comprising a box formed with a dovetail rib extending transversely across a wall thereof, and a handle formed with a dovetail channel portion force-fitted onto said rib by a transverse sliding action, said channel portion including upper and lower



flanges, the upper flanges being of greater width than the lower flange, said handle being constructed to be applied on or removed from the box by a driving blow.

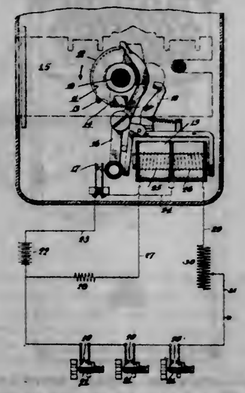
1,578,004. COUNTERWEIGHTED LOWERING FLOOR. THOMAS M. BRINTNALL, Los Angeles, Calif., assignor to The Brintnall Manufacturing Company, a Corporation of Nevada. Filed Oct. 29, 1924. Serial No. 746,583. 4 Claims. (Cl. 109—1.)

1. In combination with a vault having a door, a pit in front of said vault and door, through a part of which said door moves to be opened or closed, a floor arranged to move vertically in said pit, a counter-weight for said floor, means operable from a point immediately adjacent said pit for imparting upward movement to said floor, rigid means arranged to automatically move under said floor as it reaches uppermost position; said means adapted to uphold any normal weight subsequently imposed on said floor, and means operable to release said rigid means from engagement with said floor.



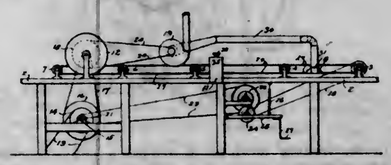
1,578,005. GAME APPARATUS. MAX L. BROOKS, Brooklyn, N. Y. Filed Jan. 25, 1923. Serial No. 614,779. 6 Claims. (Cl. 273—14.)

1. In a game apparatus, a game board having in its surface a plurality of spaced pockets, each having designations in poker terminology of a number of cards used



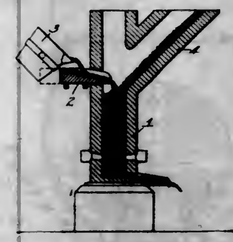
in a poker game, and balls adapted to be operated over the surface of the board into the pockets, the designations of a pocket into which a ball enters being taken as at least part of the hand of the player operating that particular ball.

1,578,006. PULVERIZER FEEDER WITH MAGNETIC SEPARATOR. JOSEPH E. BROWN, Harvey, and CLARENCE R. TAYLOR, Chicago, Ill., assignors to Grindle Fuel Equipment Company, Harvey, Ill., a Corporation of Illinois. Filed Jan. 5, 1925. Serial No. 497. 2 Claims. (Cl. 83—44.)



1. In mechanism of the class described, a case, a chute extending downwardly into said case, said chute having a discharge port of limited width in the side thereof, a rotatable plate closing the lower end of said chute, and a deflector of substantially the same length as the width of said part pivoted at one end adjacent to one side of said port and swingable across said plate from a position in which it completely closes said port to other positions in which it varies the effective area of said port and deflects therethrough material deposited in said chute and traveling with said plate on the top thereof.

1,578,007. INTERLOCKING SYSTEM FOR DOOR LOCKS AND THE LIKE. JAMES W. BRYCE, Bloomfield, N. J., assignor to International Time Recording Company of New York, Endicott, N. Y., a Corporation of New York. Filed Aug. 27, 1924. Serial No. 734,385. 9 Claims. (Cl. 70—79.)

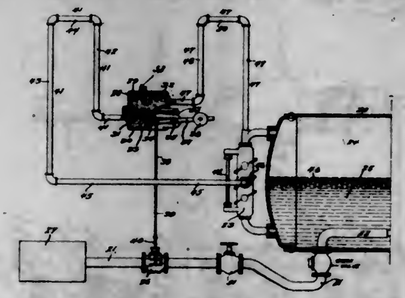


1. In an interlocking door system wherein a main lock is prevented from being locked when one or more supplementary locks are unlocked, in combination with a controlling magnet and an interlocking device controlled thereby adapted to prevent the locking of the main door, controlling circuits therefor including one or more contacts normally open when the supplementary locks are unlocked, a source of current for said circuits, said magnet and interlocking device having provisions for permitting the locking of the main door when the current source is ineffective.

1,578,008. LUMBER-PATCHING MACHINE. JOHN BUFFELEN, Tacoma, Wash. Filed Apr. 10, 1924. Serial No. 705,624. 7 Claims. (Cl. 144—2.)

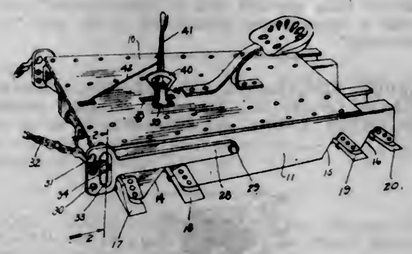
1. A machine for patching wood comprising a continuously acting feed mechanism whereby the wood to be patched is passed through the machine; a continuously driven suction mechanism whereby the patch cuts are freed of saw-dust as they pass into the machine; a continuously reciprocating hammer adapted to force the patch pieces into the cuts; and a continuously rotating sanding drum whereby the surface of the patch piece is abraded down to the surface of the wood being patched.

1,578,009. PROCESS OF TREATING AND REFINING CRUDE IRON. FRANZ BURGERS, Gelsenkirchen, Germany. Filed Mar. 12, 1925. Serial No. 14,969. 2 Claims. (Cl. 266—34.)



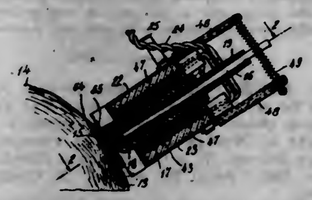
1. A process for refining crude iron comprising, introducing fuel into a furnace through a chute, preheating the fuel by the gases arising from the burning fuel, melting the crude iron in a separate furnace conveying the molten metal to the refining furnace and introducing the molten iron at a point near the vertical axis of said furnace and below the upper limit of incandescence.

1,578,010. FEED-CONTROLLING APPARATUS FOR FLUIDS. ROBERT F. BURKE, Phoenixville, Pa. Filed Aug. 15, 1921. Serial No. 492,256. 1 Claim. (Cl. 137—101.)



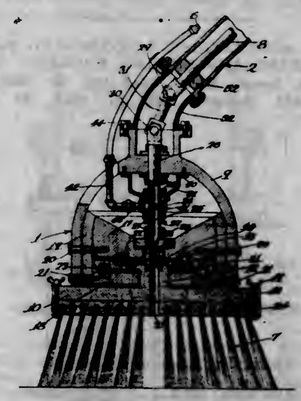
A feed water regulator consisting of a feed water conduit provided with a balanced valve directly mounted therein; a diaphragm case mounted above said valve and separated therefrom; a diaphragm dividing the case into two compartments; a shaft extending from said case; a lever fastened to said shaft within said case and connected to said diaphragm; a second lever fastened to the shaft on the outside of said case and provided with an adjustable weight; a rod extending from said second lever to said balanced valve; a conduit of substantially uniform inner cross section connecting the steam space of the boiler with one of said compartments and arranged

to provide a water trap; and a conduit of substantially uniform cross section which provides a motor column and has one end opening into the other of said compartments



and has its other end extending to a point below the high water level of the boiler to be sealed thereby and unsealed when the water level falls, substantially as described.

1,578,011. DIRT DISTRIBUTOR AND PACKER FOR ROADS. GEORGE R. CALKINS, Montebello, Calif. Filed Apr. 23, 1925. Serial No. 25,306. 10 Claims. (Cl. 37—175.)



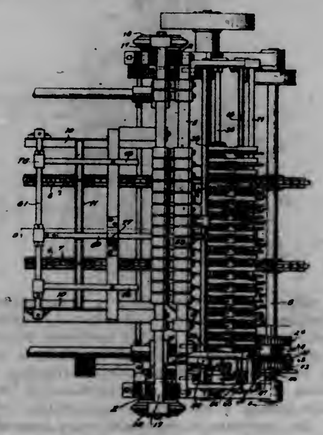
1. In a road drag, a blade having a body presenting a front face which is upwardly and forwardly inclined, and a rearwardly extending comparatively thick foot arranged adjacent the bottom of the blade, said foot presenting a smooth horizontal road engaging surface.

1,578,012. METHOD AND APPARATUS FOR TREATING HAIR. FRANK CAPDEVILA, New York, N. Y. Filed Nov. 28, 1922. Serial No. 603,736. 22 Claims. (Cl. 132—86.)

1. A hair treating device comprising a treatment casing in which a plurality of curls are held in a single plane, the casing having a face substantially conforming to the shape of the head, and means for heating the casing.

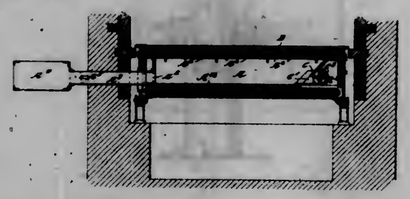
1,578,013. PORTABLE ELECTRIC BRUSH. PAUL CASE, San Quentin, Calif. Filed Nov. 8, 1923. Serial No. 673,619. 3 Claims. (Cl. 15—29.)

1. A rotary brush comprising a dome-shaped shell having an opening, a brush head rotatably supported by said shell, a hollow shaft having apertures therethrough adapted to rotate said brush and to convey a liquid to the said brush head, a fluid conduit extending through the opening of the shell, a sleeve surrounding the hollow shaft and having a chamber communicating with said conduit, the apertures in the shaft being located within said chamber, a head mounted on the shell and curved at an angle thereto, a hollow handle secured to the head, a shaft adapted to operate within said hollow handle and universal joints for coupling the shaft with the hollow shaft.



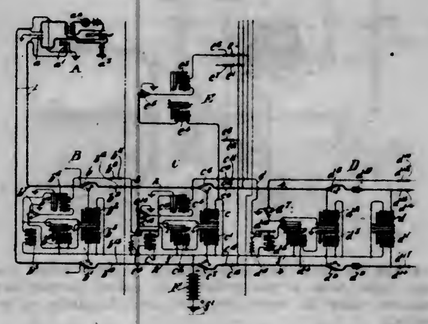
1,578,014. VEHICLE JACK. GUY ALVERTICH COUNTRYMAN, Ashland, Ohio. Filed July 3, 1924. Serial No. 724,007. 8 Claims. (Cl. 254—102.)

4. A vehicle jack, comprising a tubular standard having a vertical side channel, a main screw in screw-connection with said standard, a rotatable gear mounted upon said standard and connected with said main screw adapted to permit said screw to be elevated, a second screw in telescopic screw connection with said main screw, a bar suspended from said second screw having a cross piece adapted to travel in said side channel, said



gear having a stop shoulder and said cross piece having an upwardly-extending part adapted to be elevated at one side of the lower portion of said main screw into stop relation with said shoulder.

1,578,015. AUTOMATICALLY-CONTROLLED FASTENER FORMING AND DRIVING MACHINE. EDWARD CRAIG, St. Joseph, Mich. Filed Aug. 23, 1920, Serial No. 405,474. Renewed Aug. 21, 1925. 34 Claims. (Cl. 1—2.)



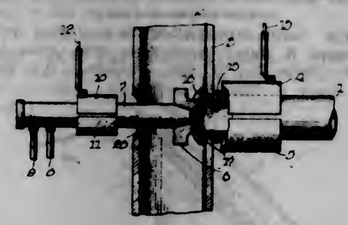
1. In a machine for securing materials together, the combination of mechanism for performing successive operations on the materials to fasten them together, instrumentalities for maintaining the materials in properly assembled relation and for feeding the same relatively to said mechanism, so that said materials are presented to said mechanism for the necessary operations thereon, devices for causing said mechanism to first drive a transverse row of fasteners and to then drive two longitudinal rows and finally a transverse row of fasteners in the assembled materials, the four rows forming a rectangle, and a controller actuated in accordance with the forward feeding motion of the materials to automatically govern the action of said devices.

1,578,016. MECHANICAL STOKER. CHRISTOPHER SAMUEL DAVY, Dulwich, and ARTHUR SPYER, London, England, assignors to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed July 6, 1921. Serial No. 482,718. 8 Claims. (Cl. 110—40.)

1. In combination, a chain grate stoker, a compartment associated therewith communicating with the under side of the upper run of said chain grate, means for supplying air under pressure to said compartment, and a discharge member associated with said compartment constructed and arranged to discharge riddlings therefrom and maintain the compartment sealed during operation.

1,578,017. RELEASE FOR AUTOMATIC TELEPHONE SYSTEMS. ALEXANDER E. KEITH, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 13, 1905. Serial No. 240,960. 109 Claims. (Cl. 179—18.)

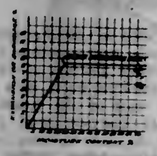
1. An automatic telephone system comprising a first "selector", a second "selector" and a "connector", a "release-circuit" for the first "selector", together with means for supplying all necessary current, said second "selector" being provided with a "release-magnet" controlling a normally-open switchpoint in the said "release-circuit".



1,578,018. ELECTRIC-CIRCUIT BREAKER. CHARLES ELEMAN, Chicago, Ill. Filed Apr. 28, 1923. Serial No. 635,218. 1 Claim. (Cl. 200—128.)

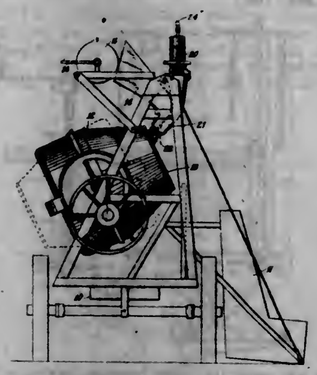
In a fuse plug having a body for connection to a socket in an electric circuit, a threaded electrically-conductive exterior sleeve, a removably mounted fuse, a screw mounted cap member having a contact with said fuse, an annular conductive member mounted within the plug and having connection with said sleeve through a pair of oppositely disposed strips extending through the body of the plug, and a coil spring conductively connecting said annular member with said cap member.

1,578,019. METHOD OF AND MEANS FOR JOINING TUBES TO WALLS. LEWIS M. ELLIS and FREELAND H. LESLIE, Chicago, Ill.; said Ellis assignor of his entire right to Winslow Safety High Pressure Boiler Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 13, 1920. Serial No. 430,573. 21 Claims. (Cl. 210—10.)



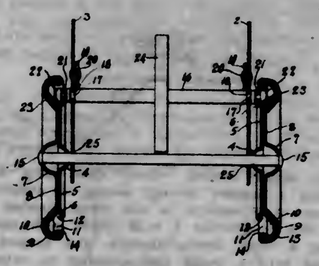
6. The method of joining a tube into an aperture in a wall which comprises projecting the tube through the wall with its free end adjacent one side of the wall, heating the tube locally from its end to a point beyond the opposite side of the wall, compressing the heated

end axially to form the wall of the tube immediately outside the edge of the aperture into a head lying against the edge of the aperture, flaring out the free



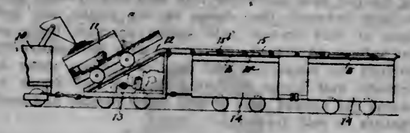
end of the tube against the adjacent surface of the wall about the aperture and expanding the tube radially to fill the aperture.

1,578,020. METHOD OF DRYING AND HANDLING WOOD VENEER. ARMIN ELMENDORF, Chicago, Ill. Filed Nov. 21, 1921. Serial No. 516,528. 13 Claims. (Cl. 361—24.)



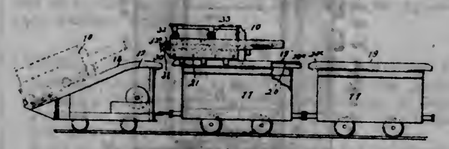
10. The method of drying veneer which consists in passing it over a series of rolls arranged to cause the veneer to assume a sinuous shape along lines transverse to the fibers in the veneer, while in contact with the rolls and applying heat to the veneer during its passage over the rolls.

1,578,021. HEATED CONCRETE MIXER. WALTER C. ELES, Forest Hills, N. Y., assignor to Hauck Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 1, 1925. Serial No. 72,439. 7 Claims. (Cl. 88—73.)



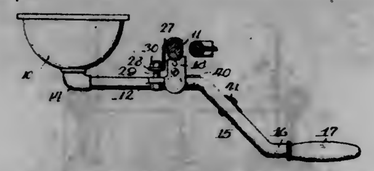
1. The combination with concrete mixer apparatus having a rotatable and tilting drum with single opening, and a movable hopper for supplying aggregate into the said opening; of a burner member carried by said apparatus for combustion external thereto and adapted to project a jet of flame to said drum in all of its positions.

1,578,022. TOY POWER DRIVE. CLARENCE E. FLORKEY, Dayton, Ohio, assignor to the Schieble Toy and Novelty Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 8, 1923. Serial No. 611,548. 4 Claims. (Cl. 46—58.)



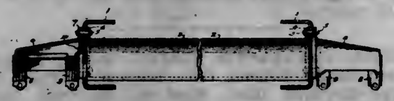
1. In a toy, a frame, ground engaging wheels carried thereby, opposed transversely curved rims carried by the wheels, a power shaft mounted for vertical movement in the frame, beveled friction drive elements carried by the power shaft and accommodated in the transversely curved rims, a disk of smaller diameter than the wheels carried by the inner face of each of the latter, a circumferential flange carried by each of the disks and diverging from the inner edge of the rims with the latter defining V-shaped grooves which receive the beveled friction drive elements when the toy is in operative position.

1,578,023. CAR-LOADING SYSTEM. ROBERT P. GREENLEAF, Shaker Heights, Ohio, assignor to Frank Billings, Cleveland, Ohio. Filed Jan. 26, 1924. Serial No. 688,678. 10 Claims. (Cl. 214—41.)



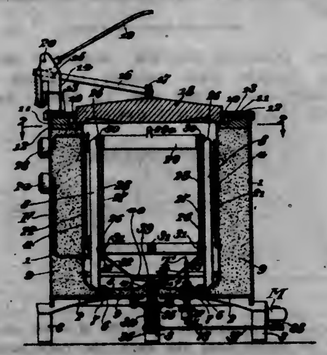
1. In combination with a loading machine and a series of cars to be loaded, a skip for transferring material from the loading machine to the different cars, and a trackway for the skip supported on the cars and composed of sections pivotally connected for relative lateral movement.

1,578,024. LOADING SYSTEM. ROBERT P. GREENLEAF, Shaker Heights, Ohio, assignor to Frank Billings, Cleveland, Ohio. Filed Mar. 12, 1924. Serial No. 698,632. 11 Claims. (Cl. 214—41.)



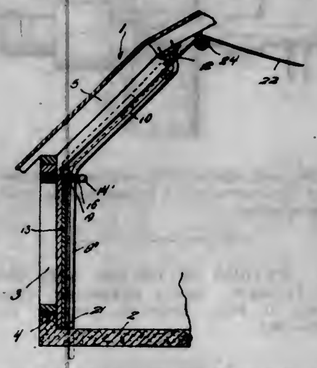
1. In a loading system, a series of cars, and a skip adapted to travel over the cars, the cars having skip supporting members individual to the different cars and arranged to permit the cars to swing relatively in passing a curve and to permit a skip to pass from car to car while said cars are on a curve.

1,578,025. INSIDE CONTROLLED VEHICLE SEARCHLIGHT. BERTRAM J. GREGSBY, Park Ridge, Ill., assignor, by mesne assignments, to Appleton Electric Co., Chicago, Ill., a Corporation of Illinois. Filed May 17, 1921. Serial No. 470,251. 11 Claims. (Cl. 240—61.)



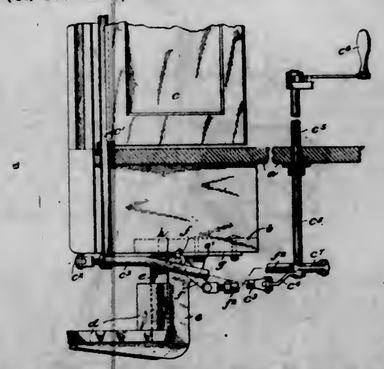
11. An inside control vehicle spot lamp mounting comprising a bracket having means of support to a fixed part of a vehicle, a one piece member formed at one end to provide a rock shaft with means for attaching a lamp casing thereto, and formed at its other end into a crank arm adapted to extend into the vehicle, a bearing member engaged with said rock shaft and permitting the latter to rotate about its long axis, and means on said bracket for supporting said bearing member to permit it to swing only in a plane containing said axis.

1,578,026. VEHICLE CHASSIS. JOHN C. HAGGART, Jr., Alma, Mich., assignor, by mesne assignments, to Detroit Patents Holding Company, Detroit, Mich., a Corporation of Michigan. Filed May 19, 1924. Serial No. 714,248. 1 Claim. (Cl. 267—54.)



In a vehicle chassis, side frames, a cross member having flanged ends extending into said side frames, spring brackets between the planes of the upper and lower edges of said frames, said spring brackets being substantially hood shaped and formed with split contractible bearings for supporting the ends of springs under said brackets, and means extending through said frame connecting the flanged ends of said cross member and spring brackets to said frames.

1,578,027. ELECTRIC-FURNACE SYSTEM. JOHN W. HARSCH, Philadelphia, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 20, 1925. Serial No. 10,486. 29 Claims. (Cl. 148—13.)



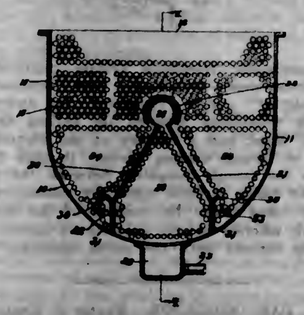
6. The method of operating a heating chamber containing material to be heated, which comprises increasing the temperature of the chamber toward desired magnitude by a high rate of application of heating agent, simultaneously circulating the air within the chamber, and reversing the circulation at intervals short as compared with the time required for the heating chamber to reach a temperature of the desired magnitude.

1,578,028. DOOR CONSTRUCTION FOR HOG HOUSES. KENNETH N. HEALY, River Falls, Wis. Filed June 4, 1924. Serial No. 717,860. 1 Claim. (Cl. 20—19.)

In combination with a building structure provided at its side wall with a door opening and having a roof disposed in an inclined position above the door opening, a door structure including guide rails extending vertically along the side wall of the building and being disposed parallel with the side wall from points below the lower edge of the door opening to points above the upper edge thereof, the upper portion of the guide rails being extended under the roof and approximately parallel with the same, bracing members for the guide rails adjacent the juncture of the upper portions thereof with the lower portions, a door panel having at its lower edge guides which engage the rails, rollers journaled on the upper edge of the door panel for engaging the rails, and means for raising the door to an open position at which time the guides engage the bracing members.

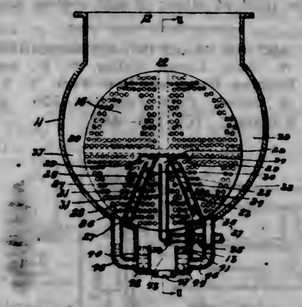
1,578,029. STEP FOR VEHICLE BODIES. JOHN W. HEINEY, Allentown, Pa., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 24, 1923. Serial No. 627,264. 1 Claim. (Cl. 280—166.)

In a bus body for motor vehicles having a fixed step associated with the platform, an additional single step, a vertical door disposed above said additional step, L-shaped risers carrying said additional step by one of their legs respectively, means to hinge said additional step to the part of said first-named step at the upper end of the other leg of the L-shaped risers respectively



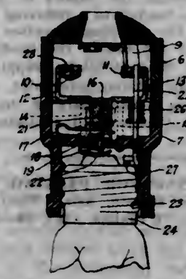
vertical means to swing said additional step upwardly about the axis of the hinging means into a vertical position of alignment with the door, and to position the riser of the step so as to form a continuation of the fixed step, means to translate motion from the vertical door to the vertical operating means.

1,578,030. VENT CAP FOR HEATERS AND THE LIKE. PAUL WILLIAM HIRSCHBERG, Los Angeles, Calif. Filed Nov. 6, 1924. Serial No. 748,181. 1 Claim. (Cl. 98—30.)



A vent cap for heaters and the like comprising a pipe adapted to project through a roof and adapted to be connected to a vent pipe from a heater, a cylindrical sleeve disposed about the pipe at the location of the roof defining an annular chamber thereabout having an open bottom disposed below the roof, a plate secured to said pipe to which the upper end of the sleeve is secured, thus forming a closure for the upper end of said chamber, there being apertures formed in said pipe immediately below said plate by striking out portions of the pipe and bending them upwardly against the under side of said plate so as to additionally support it, said apertures permitting air from below the roof to pass upwardly through said chamber and into the pipe.

1,578,031. CONDENSER. FRANCIS HODGKINSON, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 4, 1921, Serial No. 489,892. Renewed Feb. 2, 1926. 8 Claims. (Cl. 257—43.)



1. In a surface condenser, the combination with a shell enclosing a condensing space and having a steam inlet at the upper portion thereof, and approximately horizontal condensing tubes traversing the said space, of means providing two passages of decreasing cross-sectional area at either side of the condensing space and extending from the top to adjacent the bottom thereof, and providing a third passage of decreasing cross-sectional area between the said two passages and extending from the bottom of the space upwardly, and a non-condensable fluid off-take means communicating only with the converging portion of the said third passage, whereby the vapors and non-condensible fluids pass downwardly through the said two passages and then upwardly through the third passage to the off-take.

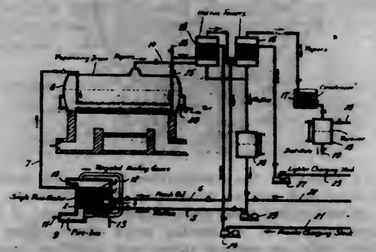
1,578,032. CONDENSER. FRANCIS HODGKINSON, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 4, 1921, Serial No. 489,893. Renewed Jan. 22, 1926. 20 Claims. (Cl. 257—43.)

1. In a condenser, the combination with a shell having a fluid inlet port and an outlet port for condensate, of a nest of air cooling tubes rising from the bottom of the condenser, a nest of condensing tubes at the sides of and above said air cooling tubes, and partition means defining air passages between said groups of tubes.

1,578,033. ELECTRIC SOCKET. JOHN HOHL, Newark, N. J. Filed Mar. 27, 1923. Serial No. 627,947. 11 Claims. (Cl. 173—350.)

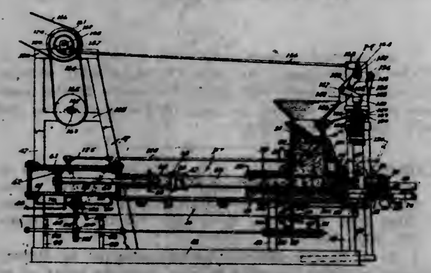
1. An electric socket comprising a body adapted to receive a lamp base, a cap, means for detachably securing the cap to the body, and means responsive to the insertion of a lamp base in the body for locking the cap and body against separation.

1,578,034. SEPARATOR FOR DIGGERS. ARTHUR L. HOOVER, Avery, Ohio, assignor to The Hoover Manufacturing Company, Avery, Ohio, a Corporation of Ohio. Filed Nov. 28, 1924. Serial No. 752,611. 3 Claims. (Cl. 209—324.)



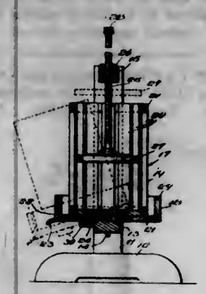
1. In a digger: slideway means arranged to directly support material conveyed thereon from its point of reception to the delivery end of said slideway means; means to oscillate said slideway means vertically; and endless means ineffective to support said material, comprising cross members arranged to pass along the upper face of said slideway means over said delivery end and and

return below said slideway means, and effective to move said material along said slideway means to said delivery end and discharge said material from said delivery end; said slideway means being formed at said delivery end closely conforming to the downward curvature of the



path of movement of said endless means at said delivery end, and means to hold said slideway means in close proximity to said endless means at said delivery end so that said slideway means extends and supports said material to the limit of extent of said endless means.

1,578,035. ART OF CRACKING HYDROCARBON OILS. EDWARD W. ISOM, Locust Valley, N. Y., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed June 19, 1925. Serial No. 38,128. 9 Claims. (Cl. 196—48.)



2. An improved method of cracking hydrocarbon oils, which comprises circulating oil in a single pass through a heating conduit, heating the oil circulating through the conduit to a cracking temperature by circulating heating gases thereover in generally concurrent relation with the oil flow, subjecting the vapors of the cracked oil discharged from the conduit to a refluxing operation, supplying reflux from the refluxing operation to the conduit at a point adjacent the end of the conduit over which the heating gases first circulate, supplying fresh oil to the conduit at an intermediate point, and recirculating over the heating conduit part of the heating gases which have passed thereover in admixture, with fresh heating gases.

1,578,036. MACHINE FOR PACKING EXPLOSIVES. GUSTAF JOHNSON, Benson, Ariz. Filed Sept. 8, 1925. Serial No. 54,981. 6 Claims. (Cl. 86—23.)

2. A machine for packing explosives comprising a chamber adapted to hold gelatine, a plunger within said chamber for feeding the gelatine from the chamber into empty cartridges, and means for controlling the movement of said plunger by the movement of said cartridges.

1,578,037. FRUIT PRESS. JOHN P. JOURDAN, Chicago, Ill. Filed Apr. 13, 1925. Serial No. 22,683. 4 Claims. (Cl. 100—44.)

1. In a fruit press, an open frame having a support above its lower end, a container pan or base loosely mounted on the support, an open topped fruit container on the base, a pressure screw and head carried by the frame above the normal operative position of the fruit container, the base and container being freely movable forward on the support from beneath the screw and head to afford free access to the container, the base being free to be tilted down in its forward position, and means for retaining the base against removal from the frame and for limiting the tilting thereof.

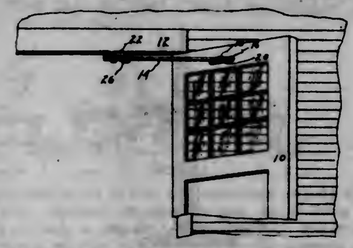
1,578,038. TELEPHONE SYSTEM. ALFRED H. DYSON, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 5, 1905. Serial No. 239,730. 175 Claims. (Cl. 179—18.)

1. An automatic telephone system comprising subscribers' lines, means including a first "selector" and a second "selector" and a "connector" for automatically establishing connection between the calling and called subscribers' lines, and a battery at the central station connected to furnish talking current through the "connector" to the circuit completed between the two subscribers, the means for thus supplying talking current to the circuit being under the control of the called subscriber only, whereby neither subscriber's station receives any talking current until the called subscriber answers the call.

1,578,039. CAR INDICATOR. FRANK J. KELLY, Brooklyn, N. Y. Filed Jan. 26, 1925. Serial No. 4,802. 4 Claims. (Cl. 40—31.)

1. In a car indicator, the combination of a web having the stations printed on both of its sides, a pair of reels for the web, a casing having at each end a compartment containing one reel and a motor, the casing between the compartments being of shallow elongated form with a window on each of the opposite sides ar-

ranged to each expose one of the opposite printed sides of the web as drawn from one reel to the other alternately in the opposite directions by one of the said motors.



1,578,040. HIGH CHAIR. ELMER A. KILMER, Hiram, Ohio. Filed May 27, 1925. Serial No. 33,200. 1 Claim. (Cl. 155—187.)

In a structure of the character described, a chair including a frame having side bars and a rear bar, a seat formed of flexible material and shaped as a pocket and having side and rear walls provided with a marginal pocket along their upper edges and open at its ends, a U-shaped reinforcing yoke disposed in said marginal pocket and adapted to be slipped into and out of place through one end thereof, and means carried by said side and rear bars adapted to engage beneath the reinforced upper edge portions of the walls of said seat and suspend the seat within the frame.

1,578,041. DOOR-FASTENING MECHANISM. FREDERICK KNOWLSON and JOHN HUBER STEVENSON, Ann Arbor, Mich. Filed Apr. 18, 1925. Serial No. 22,736. 2 Claims. (Cl. 292—278.)

1. In a door fastening device, in combination with a door frame and a door hinged therein, a catch secured to the door frame, a channel bar pivoted at one end to the door, said bar mounted to travel over said catch in the opening and closing of the door, a dog pivoted within the channel of said bar to hang normally downwardly to be engaged by the catch as the door travels thereover and adapted to be raised up within the channel of the bar to permit the bar to travel over the catch, said dog having a projecting part adapted to engage said catch to prevent the closing of the door, a coil spring encircling the free end of the bar beyond the catch, a stop plate surrounding the bar beyond the spring, said bar having portions struck up from the side walls thereof beyond the stop plate and portions struck up from the side walls

of the bar on the opposite sides of the stop plate to hold the plate in place, said coil spring engaged over said last-named portions so as to be held against the stop plate.

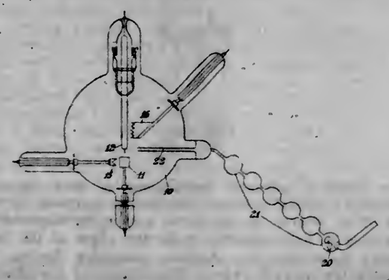
1,578,042. APPAREL GARMENT. WALDEMAR KOPS, New York, N. Y., assignor to Kops Bros. Inc., a Corporation of New York. Filed Dec. 4, 1923. Serial No. 678,382. 1 Claim. (Cl. 2—26.)

An apparel garment comprising a back member adapted to extend between the axillar portions of the body of the wearer, an abdominal member having sections connected to and extending from the edges of the back member to overlie the abdomen, fastening devices for securing the forward ends of the sections of the abdominal member in position over the abdomen of the wearer, a diaphragm member having sections connected to the edges of the back member along the same lines by which the sections of the abdominal member are connected thereto, and fastening devices for connecting the free ends of the diaphragm member at one side of the devices for connecting the free ends of the sections of the abdominal member, the lower edges of the sections of the diaphragm member being tapered upwardly so that the lower portions of the diaphragm member appreciably overlie the upper portions of the abdominal member, the said diaphragm member being adjustable to position relatively to the abdominal member longitudinally of the body and having its upper edge lying entirely below the bust line of the wearer.

1,578,043. CHAPLET FOR FOUNDRY USE. JOSEPH KOVANDA, West Allis, Wis. Filed Jan. 31, 1925. Serial No. 5,969. 2 Claims. (Cl. 22—184.)

1. A chaplet comprising an intermediate portion of round cross section having substantially rectangular beads integral with the ends thereof, and a conical stem

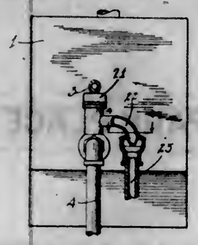
integral with one of said heads and in alignment with said intermediate portion, the corners of said heads being cut at an angle to the edges thereof and formed



with integral depending or inwardly disposed extensions, whereby said extensions will afford a locking engagement of said heads with the wall of the casting to prevent disengagement therefrom.

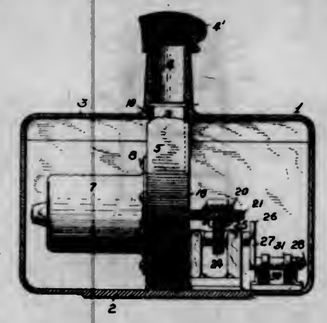
1,578,044. METHOD OF PURIFYING MOLTEN METALS. HOWARD G. LAPSLEY, Plainfield, N. J., assignor to Metals Refining Corporation, a Corporation of New York. Filed Aug. 4, 1925. Serial No. 48,055. 7 Claims. (Cl. 75—1.)

1. The method of treating molten metal which comprises adding thereto a chemical compound of aluminum and boron.



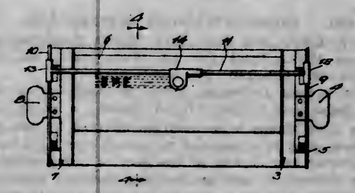
1,578,045. AUTOELECTRONIC DEVICE. JULIUS EDGAR LILIENFELD, Waterbury, Conn., assignor of one-half to William H. Bristol, Waterbury, Conn. Filed Jan. 28, 1922. Serial No. 532,353. 10 Claims. Cl. 250—35.)

10. An autoelectronic device, comprising a sealed envelope evacuated to such a high degree that ionization is substantially prevented, and unheated electrodes therein, one of which consists of a superfine support coated with an alloy of cæsium, potassium and sodium, said electrodes being separated by a gap sufficiently short to permit of starting the discharge therebetween upon the application of a suitable potential.



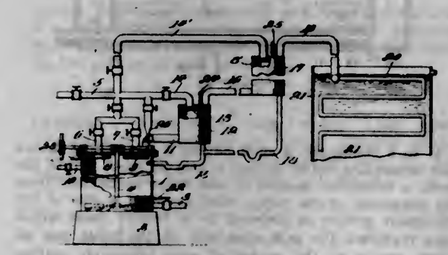
1,578,046. SAFETY VALVE FOR HOT-WATER HEATERS. HENRY HAVELOCK LOGAN, Chicago, Ill. Filed Feb. 16, 1924. Serial No. 693,322. 1 Claim. (Cl. 137—53.)

A safety valve of the character described comprising a valve chamber arranged for connection with a hot water system said valve chamber having an outlet port for delivering water, a valve disposed in the upper wall of said chamber, and adjustable spring means for holding said valve closed against the normal pressure in said water system, a drain pipe having the upper end thereof open and disposed adjacent to said valve chamber, and a conducting tube communicating with the exhaust port of said valve at one end and having its opposite end tapered inwardly and disposed over the



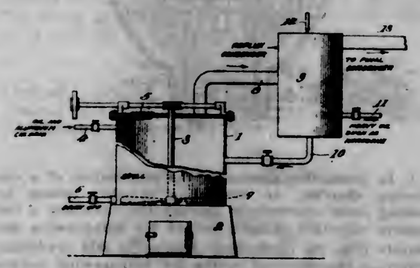
upper open end of said drain pipe, whereby liquid and steam exhausted from said valve when opened may be deposited over the open end of said drain pipe and the water carried away.

1,578,047. DRYING DEVICE FOR THE LAVATORY. WALTER O. LUM, Brooklyn, N. Y., assignor to Bio-Dry Incorporated, Syracuse, N. Y., a Corporation of New York. Filed July 28, 1921. Serial No. 488,261. 8 Claims. (Cl. 34—26.)



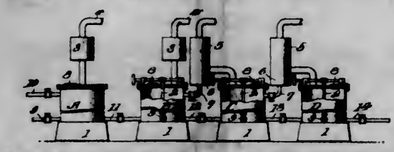
2. In a drying device for the hands and face, a housing having an outlet, a motor driven blower within said housing, a heating coil located within said housing, adjacent this outlet, a manually operated switch also on said housing for energizing said coil and starting said blower, and means operable by said motor for stopping said blower and deenergizing said coil after a predetermined interval of time.

1,578,048. CHECK WRITER AND PROTECTOR. ALEXANDER C. MABEE, Villa Park, Ill. Filed July 7, 1923. Serial No. 650,106. 1 Claim. (Cl. 197—6.)



In combination, a resilient platen having paper holding means cooperating therewith to hold the paper definitely in register thereupon, writing means comprising movable type, suitable guiding means for guiding the type successively into registration on the paper held on the platen and produce a written line, paper shredding means comprising a rotary cutter having a face wide enough to shred the paper over a width substantially the width of the written line, and guiding means for guiding the cutter in register longitudinally along the written line.

1,578,049. PROCESS OF DISTILLING OILS WITH VOLATILE CATALYSTS. ALMER MCDUFFIE MCAFEE, Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Jan. 20, 1922. Serial No. 530,580. 15 Claims. (Cl. 196—54.)

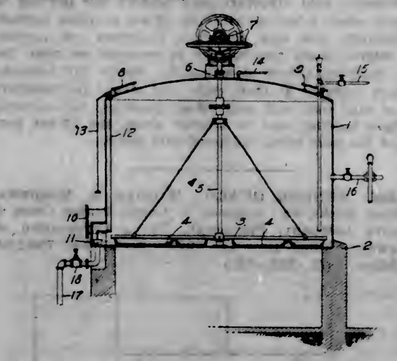


1. The process of distilling higher boiling oils with metallic halides which comprises heating a mixture of a metallic halide and higher boiling oil to distil the same, conducting away vapors of lower boiling oils formed, condensing the vapors of lower boiling oils and intimately contacting the said vapors prior to their condensation with added petroleum hydrocarbon.

1,578,050. PROCESS OF DISTILLING WITH ALUMINUM CHLORIDE. ALMER MCDUFFIE MCAFEE, Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Jan. 20, 1922. Serial No. 530,581. 7 Claims. (Cl. 196—54.)

1. In the lowering of the boiling point of petroleum oils by distilling the same in the presence of aluminum chloride, the process which comprises partially cooling the vapors to condense out aluminum chloride and kerosene, separately condensing and collecting vapors of petroleum oils having boiling points below that of kerosene, separating the aluminum chloride from the kerosene by settling, simultaneously returning the aluminum chloride to the still and separately removing the collected kerosene.

1,578,051. PROCESS OF IMPROVING OILS. ALMER MCDUFFIE MCAFEE, Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Jan. 20, 1922. Serial No. 530,582. 4 Claims. (Cl. 196—54.)



3. In the distillation of oils wih aluminum chlorid the process which comprises establishing and maintaining a flow of oil through a plurality of successively operating distilling means wherein it is distilled in the presence of aluminum chlorid and returning volatilized and condensed chlorid towards the first still in series.

1,578,052. METHOD OF MAKING ALUMINUM CHLORIDE. ALMER M. MCAFEE, Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Mar. 1, 1923. Serial No. 622,213. 6 Claims. (Cl. 23—95.)

4. In the manufacture of aluminum chloride from solid carbon and oxidized forms of aluminum with the aid of a flow of chlorin passing thereover, the process which comprises shortening the period of induction in the production of aluminum chloride by first contacting with the solid materials a mixture of chlorin and gas containing an oxid of carbon and thereafter continuing the operation with gas containing an increased proportion of chlorin.

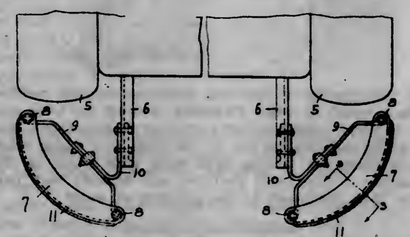
1,578,053. PROCESS OF REMOVING ALUMINUM CHLORIDE RESIDUES FROM STILLS. ALMER MCDUFFIE MCAFEE, Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Dec. 13, 1923. Serial No. 680,512. 13 Claims. (Cl. 196—1.)

3. The process of removing aluminum chloride residues from a vessel in which aluminum chloride has been used for catalytic treatment of petroleum hydrocarbons, and in which the residues are in the form of a caked mass, which comprises wetting such mass with water to disintegrate it into small particles and flushing such particles from the vessel in the presence of water.

1,578,054. PICKER STICK. EDWARD MCCRAW, North Adams, Mass. Filed Sept. 20, 1922. Serial No. 589,339. 10 Claims. (Cl. 139—157.)

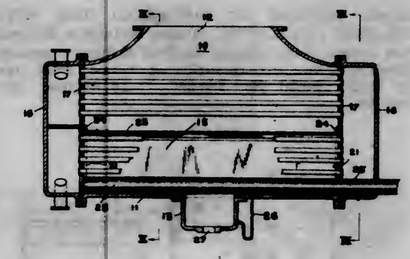
1. In a loom, a holder having a bearing adjacent one end by which it can be pivotally mounted, and a guide

device at the other end, a picker stick slidably mounted in said guide device for movement lengthwise of the



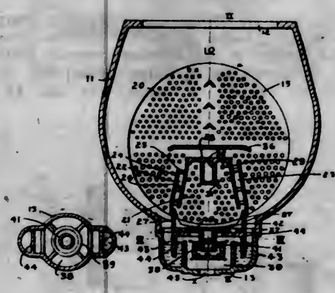
holder, and means comprising a block slidably adjustable along the holder for limiting movement of the picker stick in said holder.

1,578,055. VEHICLE BUMPER. WILLIAM R. McGOWEN, Chicago, Ill., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Aug. 13, 1924. Serial No. 731,844. 1 Claim. (Cl. 293—55.)



A vehicle bumper comprising a plurality of vertically spaced parallel impact bars, each vertically off-set at its mid-portion and unobstructed at points therebeneath or above said off-set portion except by the adjacent parallel bar, whereby said structure may protect one portion of a vehicle when mounted with the off-set portions extending upwardly and may protect a relatively low portion of a vehicle when the bumper is reversed so that the off-set portions extend downwardly, means for securing said bars together at their ends, and means intermediate each of said ends and said off-set portions, for securing said bars together and to bracket arms, the off-set portions of the bars being independently flexible.

1,578,056. FENDER GUARD. WILLIAM R. McGOWEN, McKees Rocks, Pa., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 11, 1924. Serial No. 755,252. 3 Claims. (Cl. 293—55.)

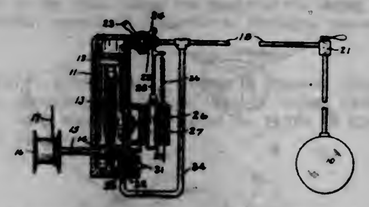


1. An impact member comprising a channel bar of arcuate form, a flexible strap member having its opposite ends pivotally connected to the said bar adjacent to the ends thereof, and means for securing said strap member to a frame.

1,578,057. SURFACE CONDENSER. DAVID W. R. MORGAN, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 3, 1921, Serial No. 474,854. Renewed Feb. 4, 1926. 16 Claims. (Cl. 257—43.)

1. In a condenser, a shell having a steam inlet means and condensate outlet means, a nest of tubes within the shell, a triangular section of said tubes partitioned from the remainder of the tubes, inlet means at a side of the triangular section so disposed as to receive fluids which have traversed the said remainder of the tubes and an outlet means at the vertex of said triangular section opposite to said side, whereby the fluids traversing the triangular section of tubes travel in a path of decreasing flow area transverse to the tubes of the triangular section.

1,578,058. CONDENSER. DAVID W. R. MORGAN, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 28, 1923. Serial No. 665,418. 13 Claims. (Cl. 257—43.)

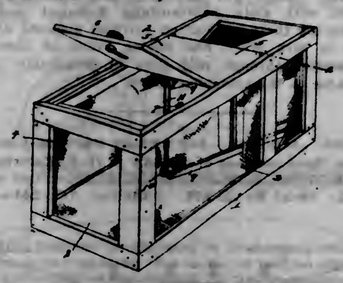


1. In condensing apparatus, the combination of a condensing chamber, an air-cooling chamber, means for passing steam successively through the chambers, a condensate collection chamber, means for withdrawing condensate from the condensing chamber to said condensate collecting chamber and means for withdrawing condensate from the air-cooling chamber to said condensate collection chamber each of said condensate withdrawal means including water sealing means to prevent the passage of non-condensable gases therethrough.

1,578,059. TROLLEY-POLE SAFETY DEVICE. FRANK P. MYER, Everett, Wash. Filed Mar. 13, 1925. Serial No. 15,188. 1 Claim. (Cl. 191—90.)

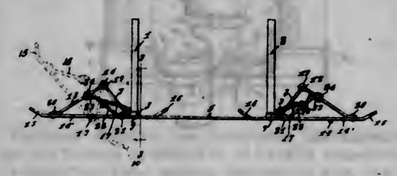
The combination with a trolley car having a trolley pole provided with a trolley wheel arranged to make electrical contact with a trolley wire, of a cable connected with said trolley pole, a drum on which said cable is

wound, means operated by compressed air for rotating said drum to wind said cable thereon and a solenoid energized by current from said trolley wire for rendering said com-



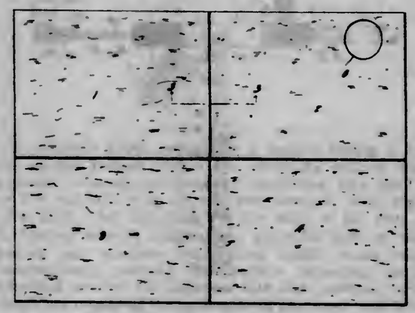
pressed air means inoperative when said trolley wheel is in electrical contact with said trolley wire, and means operated by said compressed air for locking and unlocking the plunger of said solenoid.

1,578,060. COMBINED CAR SEAL AND LOCK. CHARLES A. NASH, Astoria, Oreg., assignor of two-thirds to Richard B. Hynes. Filed July 23, 1924. Serial No. 727,779. 3 Claims. (Cl. 70—6.)



1. In a device of the character described a casing, a guide arranged in longitudinal alignment with the casing, a lock bolt slidably mounted within the guide for movement into and out of the lock casing, the inner end of the bolt having a notch formed therein, a dove-tail guide in the casing disposed at right angles to the path of travel of the bolt, a dove-tail locking tumbler slidably mounted within the dove tail guide, the lower end of the tumbler being inclined upwardly toward the free end of the bolt, spring means normally urging the tumbler in engagement with the bolt and into said notch, the casing having a key hole therein, and said tumbler being provided with a key bit receiving notch.

1,578,061. ROACH TRAP. JACQUES ABADIE, New Orleans, La. Filed Sept. 18, 1924. Serial No. 738,485. 2 Claims. (Cl. 43—121.)

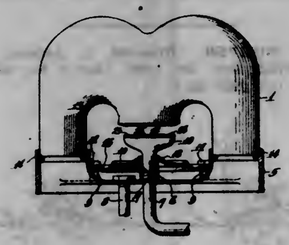


1. A roach trap comprising a cage, an entrance thereto including inwardly convergent side walls the inner edges of which are so relatively arranged as to form a V-shaped slot sufficiently narrow at its lower portion to prevent the passage of roaches therethrough and wide enough adjacent its upper portion to admit roaches of the largest size, means for constricting said entrance in front of said slot, forming an ante-chamber having a slot sufficiently wide to admit roaches of all sizes.

1,578,062. BUMPER. RUDOLPH C. AMBERG, Chokio, Minn. Filed Sept. 29, 1925. Serial No. 59,289. 6 Claims. (Cl. 293—55.)

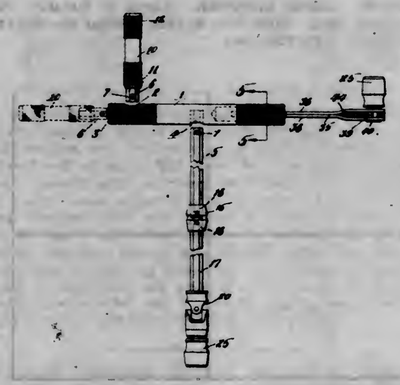
1. A bumper comprising a pair of superposed bumper members having rearwardly extending end portions, a pair of pivot bolts carried by said end portions, two sets of superposed spring controlled wing members, the wing members of each set being alternately disposed with respect to said bumper members and projecting laterally therefrom, and means carried by the wing members of each set for pivotally connecting them with a pivot bolt.

1,578,063. DESK BLOTTER. LOUIS C. BAUMAN, Cincinnati, Ohio. Filed Nov. 6, 1923. Serial No. 673,118. 1 Claim. (Cl. 120—24.)



A folding desk blotter comprising four sections, a binding strip connecting inner adjacent ends of the four sections, and other binding strips connecting the inner ends of the sections upon opposite sides of the first mentioned binding strips without crossing the latter, said strips being exposed at the lower surface of the blotter for engagement with the desk and one of the sections having an opening therethrough to accommodate an ink bottle.

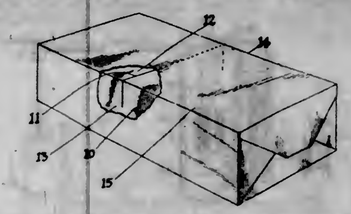
1,578,064. OIL BURNER. ALFRED BITTNER, Philadelphia, Pa. Filed Nov. 27, 1925. Serial No. 71,748. 4 Claims. (Cl. 158—91.)



4. An oil burner comprising a base having a cupped recess centrally formed therein, an oil inlet and an overflow outlet in said recess, a plurality of spaced lugs formed on the sides of said recess, a burner cone adjustably secured to said lugs, a pair of oil retaining grooves formed in the upper face of said cone, a spray nozzle detachably and centrally positioned in said cone, said nozzle adapted to project the fuel oil for forming

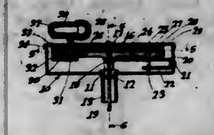
concentric flame, an air inlet opening formed in each end of said base, a manifold bridging said burner cone and nozzle, and the two outer ends thereof positioned in the

said openings, and a wall formed integrally in said manifold on the longitudinal center line thereof for providing a greater contact area for preheating the air supply.



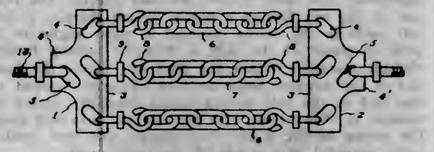
1,578,065. WRENCH SET. THOMAS A. BEMUS, North East, Pa., and EUGENE F. BICKFORD and FRANK T. COFFIN, Boston, Mass. Filed Sept. 8, 1922. Serial No. 586,955. 1 Claim. (Cl. 81—177.)

In combination, a ratchet member comprising strips spaced apart at one end and close together at their opposite end to form a shank, a ratchet wheel between said spaced ends and having hubs journaled in alined openings therein, a pawl for preventing rotation in one direction of said ratchet wheel, said ratchet wheel having a polygonal opening therethrough for engagement with a tool carrying bar projectable at will in opposite directions therefrom to reverse the positive direction of rotation of a tool carried by said bar, and a handle having a slot to receive the shank of said member.



1,578,066. CONTAINER. CHARLES W. H. BOLINGBROKE, Los Angeles, Calif., assignor to E. L. Thomson Co. Inc., Los Angeles, Calif., a Corporation of California. Filed Sept. 24, 1924. Serial No. 739,571. 1 Claim. (Cl. 206—46.)

A package comprising a rectangular container, a plurality of rectangular articles disposed within said container presenting rectangular abutting faces therein, a continuous cut formed transversely across the top of the container registering with said abutting faces, said cut extending vertically and at least partially down



the sides of said container, and a paper wrapper disposed about said container constituting the sole closure for said cut.

1,578,067. DENTAL AMALGAMATOR. HARRY A. BONOFF, Los Angeles, Calif. Filed Jan. 15, 1925. Serial No. 2,567. 9 Claims. (Cl. 259—72.)

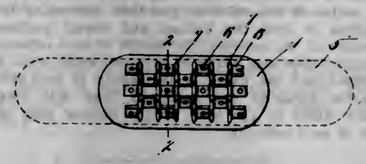
4. A mixing device of the class described, comprising a container, and gear means associated with said container for rotating it and oscillating it upon a predetermined path, said means being so arranged that rotation of said container when moving in one direction upon said path is practically zero.

1,578,068. ANTISKID DEVICE. CHARLES M. BRANDT, Lianerch, Pa. Filed Apr. 17, 1925. Serial No. 23,954. 1 Claim. (Cl. 152—2.)

In an anti-skid device for motor vehicle wheels, attaching plates, a plurality of chains connected to said attaching plates, the outer of said chains being longer than the intermediate chain whereby the intermediate chain will be held taut across the tread of a vehicle tire while the outer chains will be slack, said attaching plates provided with slots, substantially S-shaped connecting links having their end curved portions disposed at right angles to each other, and having heads on their ends for insertion through said slots to detachably connect the chains to the attaching plates.

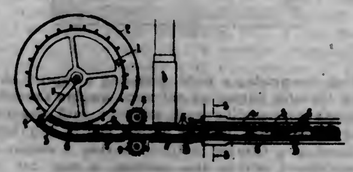
1,578,069. AIRSHIP. JOHN ENLOE BROYLES, Coco Solo, Canal Zone, assignor of one-half to H. E. Robertson and T. H. Weller, both of Russellville, Mo. Filed Apr. 9, 1925. Serial No. 21,878. 7 Claims. (Cl. 244—6.)

1. In combination, a base, a hub extending from the base, a sleeve rotatable in the hub, arms projecting upwardly from the sleeve, a prime mover rotatable between



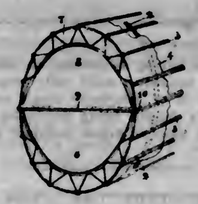
the arms, a pair of guides, an extension disposed on the prime mover between the guides, said guides being attached to said sleeve, means for revolving the prime mover in the arms, means for revolving the sleeve, and a propeller operatively connected to the prime mover.

1,578,070. FISH LURE. GEORGE T. BUDDLE, Chicago, Ill., assignor of one-half to Julius J. Sturm, Chicago, Ill. Filed Mar. 9, 1925. Serial No. 14,184. 3 Claims. (Cl. 43—42.)



1. An artificial bait comprising a body portion, a hook member pivotally supported under the body portion, a weight connected with the hook member for normally holding the hook member in its active position, and said weight having an opening to receive bait.

1,578,071. NONSKID TRACTION SHOE. MARIE L. CADIEUX, Charlestown, Mass. Filed Jan. 14, 1925. Serial No. 2,432. 1 Claim. (Cl. 152—14.)



A metallic non-skid and traction shoe for automobile tires, constructed and arranged to be positioned over a portion only of said tire, and having thereon a plurality of removable and renewable rectangular metallic plates, the ends of these plates being upturned to form ground gripping calks, said plates being arranged in staggered relation with the upturned calks on alternate plates substantially abutting to form a continuous line of contact with the ground, and adjustable means to connect said shoe to a vehicle tire.

1,578,072. MACHINE FOR CHARGING AND DISCHARGING GAS RETORTS. THOMAS FRANCIS CANNING and RICHARD GEORGE CLARK, Southend-on-Sea, England. Filed Aug. 3, 1925. Serial No. 47,934. 8 Claims. (Cl. 214—34.)

8. In a machine for charging or discharging retorts and the like, a bar made up of a series of pivoted rigid members, an endless chain adapted for travel lengthwise the bar above and below the same, pushers carried by the chain, and means whereby the chain and bar may be moved together or the chain permitted to move relative to the bar.

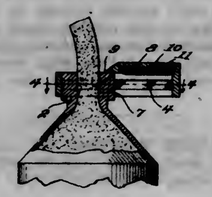
1,578,073. STRUCTURE AND COMPOSITION OF THE FUSELAGES, AND PARTS DEPENDING THEREON FOR AEROPLANES. GIANNI CAPRONI, UMBERTO NOBILE, and RODOLFO VERDUZIO, Rome, Italy. Filed Aug. 4, 1923. Serial No. 655,762. 1 Claim. (Cl. 244—30.)

Improved structure for aeroplanes, characterized in that the fuselage is formed of two halves symmetrical to a longitudinal plane passing through its axis, the cross girders consisting of half rings executed in lattice work whereon are fastened the longitudinal ribs and the outer covering, the said two halves being joined together by means of riveted joints upon having been built up separately.

1,578,074. RUBBER TOOTHBRUSH. JERMAIN CHANDLER, Toledo, Ohio. Filed July 28, 1925. Serial No. 46,647. 4 Claims. (Cl. 15—188.)

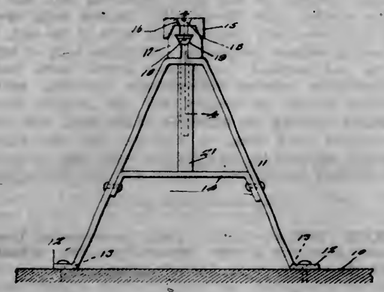
1. A tooth brush comprising a handle having a head at one end formed with a slot extending entirely therethrough, tongues on the head projecting into the slot at the opposite ends thereof, said tongues being spaced from each other and from the side walls of the slot, and a cleaning element comprising a plate-like body of rubber having end portions constituting bristle backs and a longitudinally reduced intermediate mounting portion extended around the tongues, said end portions having shoulders engaging the underside of the head, said cleaning element being flexed to V-shaped form and slightly stretched whereby its inherent resiliency aids in holding it in position, and bristles integral with the bristle backs.

1,578,075. METAL LATH. FRED CHRISTOPHER, Lowell, Ariz. Filed July 6, 1925. Serial No. 41,633. 2 Claims. (Cl. 72—116.)



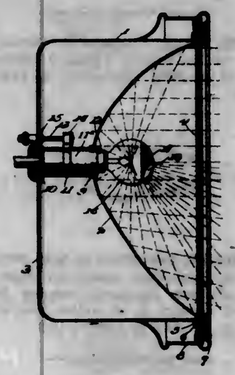
1. A metal lath comprising a rigid metal backing plate provided with vertical longitudinally extending channels at spaced points, such channels having spaced openings formed therein, retaining wires seated in said channels, and having portions exposed by said openings, and an open work wire structure placed against the face of the backing plate and connected in position by said retaining wires.

1,578,076. WIRE SPOKE. HARMON J. COOK, Torrington, Conn., assignor to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed July 6, 1922. Serial No. 573,196. 5 Claims. (Cl. 301—104.)



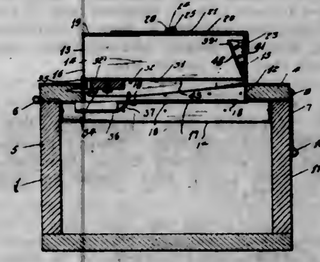
2. A wire spoke having at one end an enlarged terminal portion which is headed, a main body length, the central section of which is of relatively small and uniform diameter, said body length being gradually tapered from its juncture with said enlarged terminal portion toward the midlength.

1,578,077. PASTE-TUBE CAP. EARL C. COURNEY, Oakland, Calif. Filed June 20, 1925. Serial No. 38,533. 1 Claim. (Cl. 221—60.)



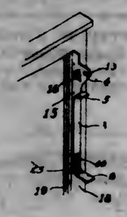
A tube cap of the character described comprising a body portion having grooved side walls and an opening formed therein, a top for the body portion having its underside recessed and its inner edge inclined to provide a cutting edge, ribs formed on the tube top and being received in the grooves whereby the body portion is slidably mounted thereon, and a washer arranged in the recess to provide a leak proof connection between the body portion and tube top when the former is arranged to closed position.

1,578,078. SCREED. GERALD F. CREAGHAN, Bangor, Me. Filed Feb. 18, 1924. Serial No. 693,708. 1 Claim. (Cl. 72—101.)



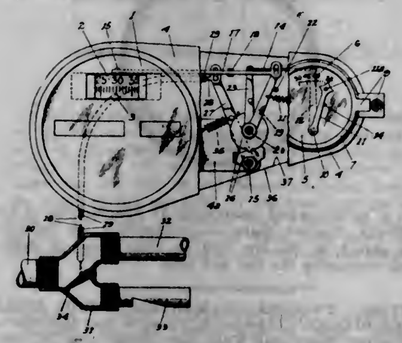
In a screed, spaced inverted substantially U-shaped supports, channel shaped beams above the supports longitudinal openings, connecting blocks mounted upon the supports, screws carried by the connecting blocks with their heads movably disposed in the longitudinal openings and the said blocks having horizontal grooves with recesses communicating with the grooves, screw members having adjustable connection with the supports, said screw members having their heads disposed within the grooves of the blocks, whereby the latter may be vertically adjusted and the connection between the channel shaped beams and the supports permitting longitudinal adjustment.

1,578,079. REFLECTOR. JOSEPH GEORGE DAVIS, Dallas, Tex., assignor of one-half to Louie L. Thalheimer, Dallas, Tex. Filed Oct. 7, 1924. Serial No. 742,188. 1 Claim. (Cl. 240—41.)



A reflector having the shape of an irregular parabola, the width of the mouth of said reflector being greatest in a plane which is located entirely below the level of the focal center of the reflector and then decreasing toward the levels of both the highest and lowest portions of the mouth of the reflector, the mouth of said reflector being wider below said plane of greatest width than above said plane and the width of the mouth of said reflector decreasing regularly and gradually from said plane of greatest width to the level of the highest part of the mouth of said reflector.

1,578,080. MOUSE AND RAT TRAP. SAMUEL DEWEY, Wolcott, Ind., assignor to James Millard, Wolcott, Ind. Filed Feb. 14, 1924. Serial No. 692,822. 1 Claim. (Cl. 43—69.)



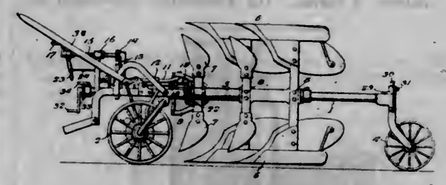
A trap comprising a body providing a captive chamber, a cover therefor having an entrance opening therethrough, a housing surrounding and set into said opening and having an entrance opening at one end, a bait holder in said housing, a tiltable platform having a weight at one end positioned within the housing, a stop pin on the cover engageable by said weight, said platform having depending flanges at the sides thereof, a removable cover for the housing to permit access to the bait holder, means to fasten the cover in bait-concealing position, and a guard member on the cover positioned below said weight and pin having its free end deflected toward the platform and disposed between said flanges and preventing escape of a captive at the weight end of the platform.

1,578,081. WINDOW-AWNING FIXTURE. FRANK D. FRAZER, Springfield, Ill. Filed Feb. 6, 1925. Serial No. 7,363. 1 Claim. (Cl. 156—44.)

In a window awning having a roller for the awning, a fixed guide bar rollable with the awning, and a frame member; a fixture comprising a bracket mounting for the roller, an integral stop member at the top end of the fixture for registering the fixture in operating position on a window, a longitudinal guide flange throughout the length of the fixture adapted to slidably guide and limit the movement of said fixed guide bar in the awning, a fixed pivot mounting for said frame member, integral with and positioned near the lower end of the fixture on the front surface thereof; said fixture provided at its lower end with two integral stop members, one for limiting the downward movement of said guide bar of the awning and the other projecting outwardly and tilting upward providing a suitable stop and support member for said frame member as described.

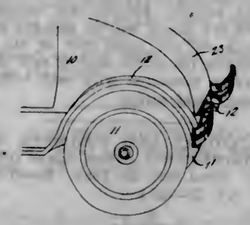
1,578,082. SPEED WARNING AND INDICATING DEVICE. EDWIN H. HANEY, San Bernardino, Calif. Filed Feb. 25, 1924. Serial No. 694,834. 5 Claims. (Cl. 234—29.)

2. A speed recording device for motor vehicles comprising a recording device, a speedometer having a circular and rotatable speed indicating dial, a pin fixed on and projecting from said dial, a member engageable by said pin and moved thereby with the rotation of the dial when the vehicle is moving at a speed in excess of a predetermined limit, and means controlled by the moving of said member for causing a record of the speed attained to be made by the recording device.



1,578,083. MEANS FOR SUPPORTING CORE BARS IN FLASKS. JAMES R. MCWANE, Birmingham, Ala. Filed Dec. 12, 1924. Serial No. 755,512. 18 Claims. (Cl. 22—184.)

1. In means for supporting a core bar in a pipe flask without the use of chaplets, outer supports bearing beneath the bar at the ends thereof, inner abutments bearing on top of the bar adjacent to and spaced from said supports, and wedges adapted to be inserted between the ends of the bar and the supports to insure close con-

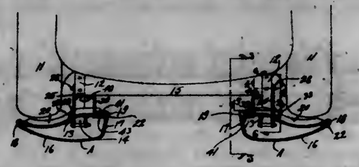


tact with the abutments and prevent any upward movement of the intermediate portion of the bar and consequent downward movement of the ends thereof.

1,578,084. REVERSIBLE PLOW. HENRY J. NEUFANG, Atlanta, N. Y. Filed Nov. 13, 1924. Serial No. 749,755. 7 Claims. (Cl. 97—26.)

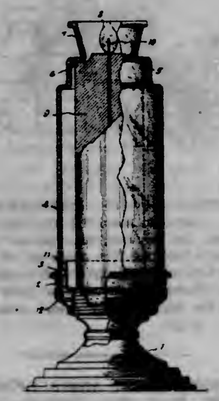
1. In a reversible plow the combination of a tubular bar, a sleeve rotatably mounted thereon, and a shaft rotatable within the tubular bar, plows carried by the sleeve, a caster-wheel for the support of the rear end of the tubular bar, and separate and independent means located at the forward end of the plow for reversing the plows and for steering the caster-wheel through the medium of the shaft.

1,578,085. FENDER GUARD AND SUPPORT. ALGOT W. NORDGREN, St. Paul, Minn., assignor to Marquette Manufacturing Company, St. Paul, Minn. Filed Dec. 4, 1925. Serial No. 73,127. 9 Claims. (Cl. 293—53.)



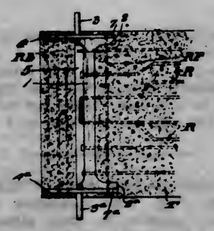
1. In a device of the class described, a fender guard support comprising a member adapted to support a fender guard, and to be secured to a vehicle frame, and a supporting element adapted to have its intermediate portion secured to a vehicle frame and its ends secured respectively to the said member and to a fender guard.

1,578,086. FENDER-GUARD STRUCTURE. ALGOT W. NORDGREN, St. Paul, Minn., assignor to Marquette Manufacturing Company, St. Paul, Minn. Filed Jan. 7, 1926. Serial No. 79,780. 7 Claims. (Cl. 293—55.)



5. In a device of the class described, a bumper member, a supporting member secured thereto between the ends of the bumper member, a car frame member having a down-

wardly inclined horn at one end and comprising a channel, means for fastening said supporting member to said channel-shaped frame member, and a brace element con-

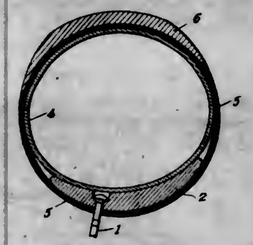


nected to the bumper and extending forwardly therefrom and fixed to the car frame at a point spaced from the supporting member.

1,578,087. SANCTUARY LAMP. ROBERT C. NORTON, Jersey City, N. J., assignor to Muench-Baumer-Kreuzer Candle Co., Inc., Syracuse, N. Y., a Corporation of New York. Filed Aug. 8, 1925. Serial No. 49,039. 3 Claims. (Cl. 67—23.)

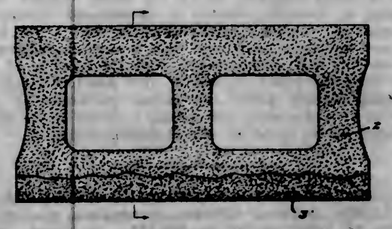
1. A sanctuary lamp, comprising a body formed with a shoulder near the upper end and a glass chimney adjacent said shoulder, a candle arranged in the body with the upper end pressing against said shoulder so that the flame from the candle will be opposite the chimney, a spring acting on the lower end of the candle for continually holding the candle against said shoulder, and a base removably connected with said body, said base acting to support said spring.

1,578,088. MASONRY AND CONCRETE WALL AND BEAM CONSTRUCTION. JOHN JAMES O'REILLY, New York, N. Y. Filed May 22, 1923. Serial No. 640,800. 4 Claims. (Cl. 72—40.)



1. A building construction panel unit, comprising a frame structure, layers of reinforcing material carried thereby spaced from the inner and outer faces of the frame and from each other, concrete molded in said frame between and on the outer sides of said reinforcing members, and means on the frame for securing a unit in the building wall.

1,578,089. DEMOUNTABLE WHEEL RIM. ARTHUR FRANKLIN PARKER, EDGAR HARRY HEWITT, and SAMUEL EDWARD WATKINS, Philipsburg, Pa. Filed Nov. 25, 1924. Serial No. 752,187. 1 Claim. (Cl. 301—15.)



In a device of the character set forth, a split demountable wheel rim having a recess formed in one of the abutting ends thereof, a gear rack secured to the central underside of said rim longitudinally thereof and having one end rounded and extending beyond the other abutting end gear teeth formed upon said rounded end, a pinion gear pivotally mounted beneath said recessed portion and normally engaging said teeth and acting when revolved to break said rim, said pinion passing along the underside of said rack causing the rim ends to overlap, and means connected with said pinion whereby the same may be caused to revolve.

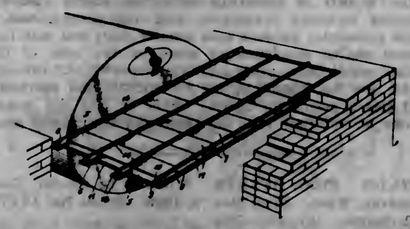
1,578,090. TIRE AND RIM. WALLACE HENRY PAULL, Birmingham, England, assignor to Dunlop Tire and Rubber Corporation of America, Buffalo, N. Y., a Corporation of New York. Filed Sept. 5, 1925. Serial No. 54,602. 5 Claims. (Cl. 152—20.)

1. A vehicle wheel comprising an annular rim of substantially crescent shape in cross-section, an inflatable tube seated on the rim and an outer cover of flexible fabric embracing the rim and tube.

1,578,091. PROCESS OF MANUFACTURING BUILDING BLOCKS. CLIFTON A. PERKINS and HERBERT A. PERKINS, Holly Oak Villa, Del. Filed Aug. 28, 1924. Serial No. 734,768. 1 Claim. (Cl. 25—155.)

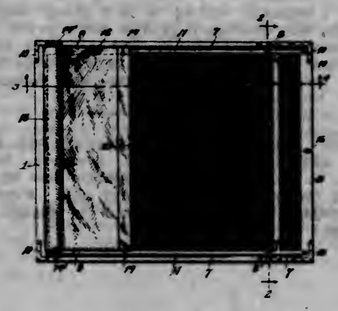
The process of moulding a building block with a natural stone appearance on its front face which consists of placing a layer of a mixture of granite dust, ground mica, black slag and white cement in a mould, completing the major block formation in the mould by the addition to the layer of a relatively coarse cementitious material, removing the block from the mould while in a green condition and subjecting the outer face of the block which consists of the said layer, to a spray wash for removing from the face thereof, the coarse cementitious sediment which has penetrated through the said layer during the initial setting period, for effecting a natural stone simulation on the other face of the said layer and then completely drying the block.

1,578,092. HYDRAULIC JET-DISPERSAL NOZZLE. OWEN ALFRED PRICE, Kilmarnock, Scotland. Filed Aug. 28, 1923. Serial No. 659,807. 8 Claims. (Cl. 299—114.)



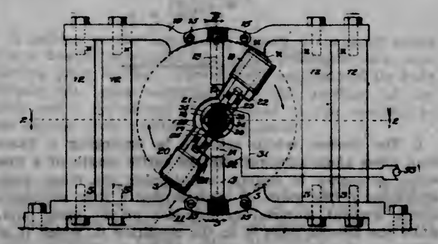
4. A jet-dispersal nozzle having in combination and coaxially a blade element having means adapted to impart a greater tangential velocity to the central liquid than to the liquid nearer the circumference, and an outlet portion adapted to form a free spiral vortex.

1,578,093. RAILWAY RAIL JOINT. MAURIE T. PRILLAMAN, Bluefield, W. Va. Filed June 4, 1925. Serial No. 34,983. 1 Claim. (Cl. 238—234.)



A pair of railway rails of which one is provided with an upper groove and a lower projection and the other with an upper projection and a lower groove, the projection of one rail snugly fitting in the groove of the other, the top side of one projection being located in the plane of the top sides of the rails and the bottom side of the other projection being located in the plane of the bottom sides of the rails, and bolts passing through the webs of the rails and through the projections.

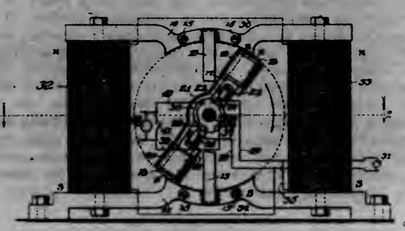
1,578,094. ARCH CONSTRUCTION. GUSTAV RAU, Kansas City, Mo. Filed Mar. 18, 1925. Serial No. 16,447. 1 Claim. (Cl. 110—99.)



A combustion arch of the class specified, comprising metal supporting components of inverted T-form with the lower horizontal flanged bases extending equally beyond opposite sides of the vertical flanges thereof, and refractory tile components having similar end recesses of uniform depth to receive and snugly enclose the horizontal flanged bases of the supporting components and the head members of the said tile components of less length than the base portions of the same components to provide a space between contiguous ends of the heads of a width equal to the thickness of the vertical flanges of the supporting components and whereby the said supporting components are held secured and protected against burning solely by the tile components, the tile components having their upper surfaces below the upper edges of the supporting components and said upper edges of the supporting components and a minimized portion of the vertical flanges of said latter components standing above the top surfaces of the tile components and serving as a reinforcing means, the supporting components being parallel and extending continuously and full length across the arch, the tile components also shielding the base flanges of the supporting components and having interfitting ribs and grooves at the ends and sides below the grooves for the supporting components to prevent formation of crevices below the location of the bases of the supporting components.

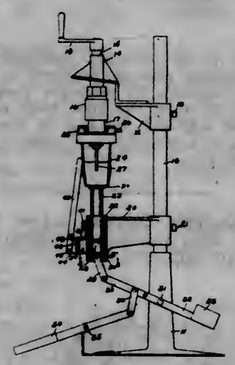
1,578,095. SCREEN. CHRISTOPHER R. RYAN, Cuba, N. Y. Filed Oct. 3, 1925. Serial No. 60,274. 2 Claims. (Cl. 156—39.)

1. A screen of the character described, comprising two screen members movable relatively to each other, elastic tapes connecting the respective members and located adjacent the upper and lower edges of the screen, a spring roller adjacent one end of one member, a curtain wound on said roller, and guides on the shade movable on the tapes.



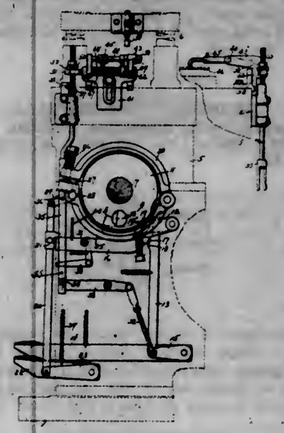
1,578,096. ELECTRIC MOTOR. HENRY K. SANDELL, Chicago, Ill. Filed Aug. 22, 1923. Serial No. 658,714. 9 Claims. (Cl. 172—36.)

1. An electric motor comprising two pole-pieces of opposite polarity, a magnet momentarily having a fixed polarity and rotatable in front of said pole-pieces, and



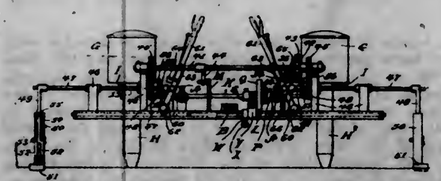
means for changing the polarity of the magnet as it passes the pole-pieces, the magnet being made up of laminated steel sections having soft centers and hardened ends.

1,578,097. DYNAMO-ELECTRIC MACHINE. HENRY K. SANDELL, Chicago, Ill. Filed June 10, 1925. Serial No. 36,151. 6 Claims. (Cl. 171—209.)



1. In a dynamo-electric machine, an armature having prongs, a separate winding on each prong, means for energizing said windings to produce motive power, means for de-energizing said windings and means for utilizing the induced current produced in said windings by the natural drop in magnetization after each energization.

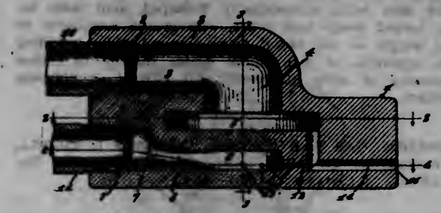
1,578,098. METHOD AND APPARATUS FOR BURNING OFF GLASS. ERNEST C. SCHRADER, Morgantown, W. Va., assignor to The Libbey Glass Manufacturing Company, a Corporation of Ohio. Filed June 14, 1924. Serial No. 720,107. 12 Claims. (Cl. 49—50.)



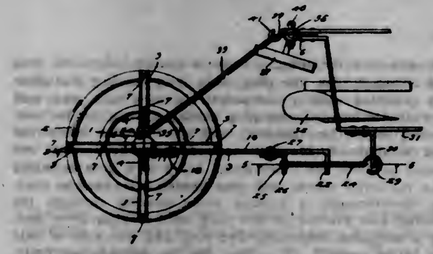
1. The process which consists in impinging a flame upon glass along substantially the entire length of a line where severance is desired, maintaining the flame until severance of the glass, at such intensity that severance occurs without material deformation of the glass, and, while the severed edge is in the condition in which it is left by said severance, playing a flame simultaneously across substantially the entire length of the severed edge at a short distance therefrom and fire-finishing the same.

1,578,099. BRAKE MECHANISM FOR CLUTCHES. CURTIS F. SHERMAN and ALVIN E. ANDREWS, Hartford, Conn., assignors to The Henry & Wright Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Apr. 18, 1922. Serial No. 555,113. 12 Claims. (Cl. 192—144.)

9. A driving mechanism including a clutch, intermittent clutch actuating mechanism, a continuous clutch actuating mechanism including a stop rod, and an operative connection between said intermittent clutch actuating mechanism and said stop rod for operating the latter.



1,578,100. ATTACHMENT FOR CORN PLANTERS. JOHN E. SHOFF, Moorhead, Iowa. Filed Feb. 2, 1923. Serial No. 616,546. 1 Claim. (Cl. 111—32.)



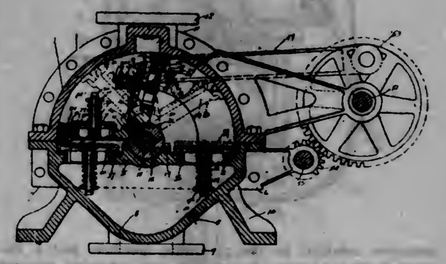
In a corn planter including a rotary axle carrying wheels supporting a frame and further including seed hoppers and dropping shoes equipped with feeding and dropping mechanism; marking means consisting of a counter-shaft driven from the rotary axle of the machine, a pair of outwardly extending shafts carrying marking members engageable with the ground, and a drive connection between said counter-shaft and said last named shafts, consisting of gears on the ends of the counter-shaft, other gears meshing therewith and through which the last named shafts are slidable and rotatable, and clutch means for locking either of said last named shafts for rotation with the associated last named gear.

1,578,101. FUEL BURNER. WILLIAM D. STACEY, Vancouver, Wash. Filed Mar. 6, 1925. Serial No. 13,577. 2 Claims. (Cl. 158—78.)

1. A hydrocarbon burner of the character set forth, comprising a body having a pair of superposed chambers formed therein, constituting oil and steam chambers, means to provide an inlet for said upper chamber entering through the top thereof, means to provide an inlet for the lower chamber entering through the side thereof, said lower chamber being materially smaller than said upper chamber and having the inlet thereto constricted, said upper chamber having a fuel discharge port leading therefrom to the exterior of said body and said lower chamber having a steam discharge port of materially less diameter than said fuel discharge port and leading therefrom and merging with said fuel port.

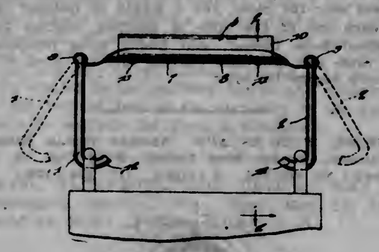
1,578,102. ROTARY HARROW. JOHN C. STOTS, Tolstoy, S. Dak. Filed Mar. 21, 1925. Serial No. 17,282. 4 Claims. (Cl. 55-13.)

1. In combination, a harrow, a vertical axle upon which the harrow is rotatably mounted, a beam secured at one end to the axle and provided at its other end with a guide, a bracket pivotally connected to the beam, and a clevis rod passing through the guide and swivelled to the bracket.



4. In combination, a harrow, a vertical axle upon which the harrow is rotatably mounted, a beam connected to the axle and provided with a clevis, a stay bar pivotally connected to the axle, and a clamp having a loose connection with the stay bar.

1,578,103. BLOCK-MOLDING MACHINE. ALBERT G. SUTTILL, Belmont, and FRANK MASSA, Cambridge, Mass., assignors of one-third to Albert Pasquali, Watertown, Mass. Filed Aug. 21, 1924. Serial No. 733,247. 10 Claims. (Cl. 25—41.)

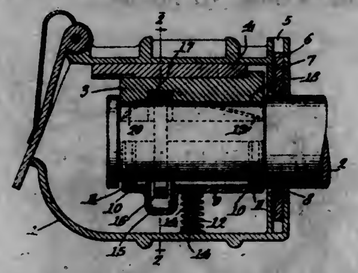


1. In a block molding machine, a frame, a mold box mounted on the frame and including a solid back plate, a partition mounted on the frame and slidable in parallel relation to said back plate, said mold box having a slot in one end for receiving said partition, and means for sliding said partition into and out of the mold box.

1,578,104. PUMP. HORACE H. TAYLOR, San Francisco, Calif., assignor of one-half to John D. Biurcone, San Francisco, Calif. Filed Feb. 24, 1925. Serial No. 11,152. 4 Claims. (Cl. 103—146.)

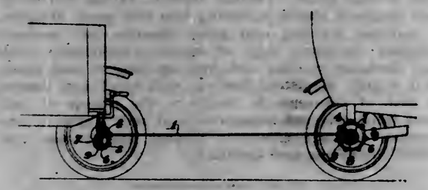
1. An oscillating pump comprising a semi-cylindrical pump chamber having an outlet opening on its upper side, an intake chamber around which the pump chamber is mounted, the upper wall of which intake chamber comprises a lower wall of the pump chamber, said upper wall having intake openings therein, valves controlling said openings, shafts extending into said pump chamber, a partition dividing said pump chamber into separate pumping chambers, each of which communicates with said discharge opening and with openings in said upper wall, a pair of pistons fixed to each shaft and located in each of the separate chambers, the pistons of said pairs being extended substantially at right angles to one another, openings extending through said pistons and valves controlling said openings.

1,578,105. BATTERY CARRIER. JOHN TAYLOR, Chicago, Ill., assignor to The Battery Equipment and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed July 20, 1925. Serial No. 44,937. 1 Claim. (Cl. 16—114.)



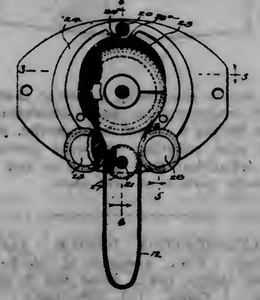
A battery carrier comprising a pair of U-shaped hooks and a handle connecting the hooks consisting of a connecting plate having a curved body portion and its ends formed into ears receiving the yoke portions of the hook and a cylindrical filler secured to and received in the curved body portion of said plate.

1,578,106. LUBRICATING DEVICE. ALVIN THORNBURGH, Manly, Iowa, assignor of one-half to Carl Henry Hass, Manly, Iowa. Filed May 6, 1925. Serial No. 28,481. 1 Claim. (Cl. 308—128.)



In a device of the class described, a casing, a bearing in the upper portion of the casing and provided with a concaved surface intersected by a transverse recess, a rotatable member journaled on said surface, a trough-

shaped pan in the lower portion of the casing and having a transverse oil pocket, a compression spring cooperating with the pan and the casing to hold the pan in

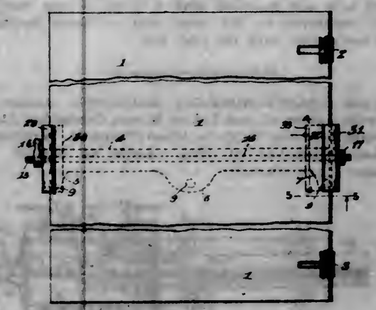


operative relation to the rotatable member, and a distributor ring running loosely on the rotatable member and extended into the pocket and into the recess.

1,578,107. TOWLINE. MATTHEW L. TIPPIT, Olney, Ill. Filed May 10, 1924. Serial No. 712,315. 2 Claims. (Cl. 280—33.14.)

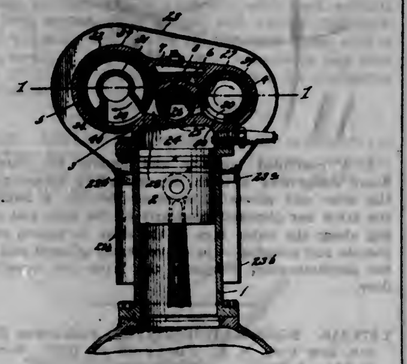
1. A tow line for automobiles or the like comprising a length of cable having each end formed into a permanent loop, a hook having an eye loosely connected to each of the loops, each hook having an internal diameter greater than the diameter of the cable and provided with a restricted entrance opening capable of being freely passed over the cable, and a length of resilient tubing on each end of the cable in abutting relation to the terminal loops thereof, said tubing being rotatable on the cable and insertable endwise into the hook to frictionally engage the same.

1,578,108. FIRE ESCAPE. NEUMAN TOBIAS, Kingston, Jamaica, British West Indies. Filed Dec. 14, 1922. Serial No. 606,881. 4 Claims. (Cl. 254—156.)



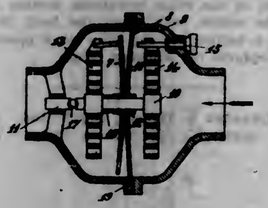
1. A suspensory apparatus adapted for the lowering of weights, including two elements comprising a cable and a cable-guiding structure one of which is adapted to be suspended from a fixed point of support and the other of which is adapted to have mounted thereon the weight to be lowered, said cable-guiding structure including a clutch device including a resilient and warpable main clutch roller, said clutch roller being slit at a plurality of points around its periphery and one of such slits being substantially T-shaped, said cable being looped about said roller, and means responsive to the weight of the object being lowered for controlling the actuation of such clutch device thereby to reduce variation of rates of descent for objects of different weights.

1,578,109. GAS VALVE COCK. NAPOLEON I. TRUDELL, Burlington, Vt. Filed Aug. 10, 1925. Serial No. 49,413. 1 Claim. (Cl. 251—164.)



A gas cock including a body, a spring influenced plug and a handle for the plug, said body having its upper end provided with a comparatively wide slot, one wall of which is beveled, the plug having a stop pin for contacting with the opposite wall of the slot when the cock is shut off, the said end of the body having two spaced notches, the inner notch being of a greater width than the outer notch, said plug having a transverse opening therethrough, a locking lever passing through the opening and pivoted to the plug, said locking lever having a weighted depending dog end, and one side of said dog being beveled, all as and for the purpose set forth.

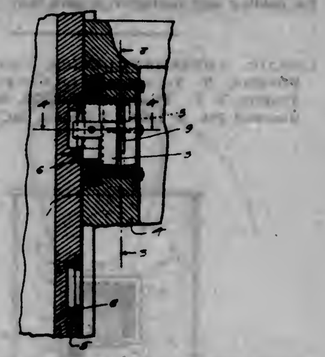
1,578,110. SUPPORTING DEVICE. THADDEUS F. TYLER, Haverhill, Mass. Filed June 19, 1925. Serial No. 38,383. 4 Claims. (Cl. 12—42.)



1. A supporting device for the purpose set forth comprising a heel covering carrier supporting element having means for detachably connecting the carrier therewith, and means for supporting said element at a permanent inclination and further for adjusting the element at an angle when supported at an inclination.

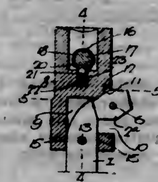
1,578,111. INTERNAL-COMBUSTION ENGINE. HENRY W. CHURCH, Highland Park, Mich.; Edward P. Wright administrator of said Henry W. Church, deceased. Filed Dec. 13, 1924. Serial No. 755,668. 6 Claims. (Cl. 123—190.)

1. In an internal combustion engine, the combination with a cylinder and a piston therein, said cylinder having a head, of a rotary valve carried by the head, said head being provided with a passage controlled by said valve and opening into said cylinder, and a rotary member controlling said passage intermediate said valve and cylinder.



1,578,112. DEVICE FOR REGULATING TEMPERATURES. WILHELM BERNHARD ERNST, Berlin-Schoneberg, Germany. Filed Aug. 18, 1923. Serial No. 657,022. 14 Claims. (Cl. 236—98.)

1. A thermostatic device comprising a casing; a stationary, pliable seat plate arranged in said casing; a shaft in said plate; a rotary pliable disk mounted on said shaft; and a plurality of thermostatic elements for shifting said disk upon variations in temperature.



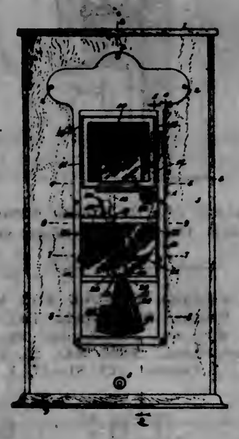
1,578,113. COMBINATION GRAVITY LATCH AND LOCK FOR DOORS, WINDOWS, AND GATES. ORLANDO M. FAN, Lamanda Park, Calif. Filed Jan. 10, 1924. Serial No. 685,482. 1 Claim. (Cl. 292—335.)

A fastening comprising a longitudinally slotted block, an L-shaped latch pivoted by one of its members within the slot of the block and having its other member weighted and extending below the slot of the block to normally operate so that its distal end portion will engage the block to hold the latch in operative position, and an L-shaped dog pivoted by one of its members and

adapted to cooperate with the latch at different locations to selectively hold the latter in locking or withdrawn position.

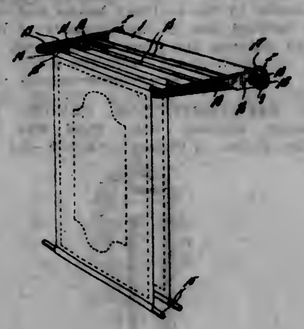
1,578,114. AUXILIARY HANDLE FOR WRENCHES. THOMAS J. FROLEY, Philadelphia, Pa., assignor to North Bro's M'f'g Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 25, 1922. Serial No. 546,732. 3 Claims. (Cl. 81—177.)

1. The combination with a handle having an angularly disposed extremity provided with an inclined face, of an auxiliary handle comprising a hub provided with a socket for mounting on said handle, the wall of said socket having a side opening to accommodate the angularly disposed extremity of the handle, there being an inclined bearing carried by the auxiliary handle and cooperating with the inclined face of the extremity of the handle whereby to maintain the parts in alignment.



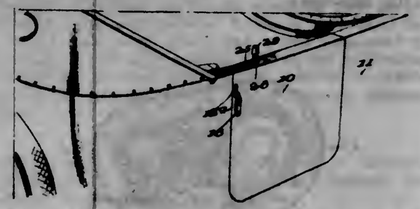
1,578,115. SAFE-PROTECTING DEVICE. JOHN M. FITZGERALD, Madison, Wis. Filed May 12, 1925. Serial No. 29,808. 4 Claims. (Cl. 109—6.)

1. A device of the character set forth comprising, a shield in the form of an elongated casing open throughout one side and having the free side edges thereof recessed,



means for retaining the open face of said casing against a supporting wall, a semi-circular supporting body secured in said casing, a frangible container, and means for holding said container in said body.

1,578,116. AMUSEMENT DEVICE. CHARLES FLEISCHER, Brooklyn, N. Y., assignor to George W. G. Boyce, Yonkers, N. Y. Filed Feb. 19, 1925, Serial No. 10,393. Renewed Feb. 9, 1926. 7 Claims. (Cl. 194—59.)

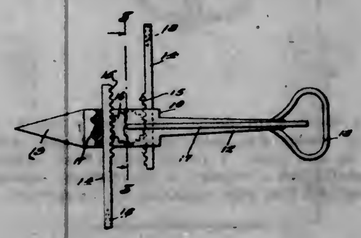


1. An amusement device including a movable door adapted to close a compartment, a latch holding said door in closed position, and a coin balancing and manually operated manipulating member adapted to move a coin into position to release the latch.

1,578,117. CURTAIN STRETCHER. GEORGE J. GARNING, San Antonio, Tex. Filed July 17, 1925. Serial No. 44,205. 4 Claims. (Cl. 45—24.)

1. A curtain stretcher comprising a container having removable container heads and curtain supporting arms carried by the heads, and disposable laterally of the container in parallelism, and means at the ends of the container for passing through the arms when removed from the container and disposed laterally of the ends of the container or through the heads when the arms are arranged within the container.

1,578,118. COMBINED FASTENER AND HANDLE FOR AUTOMOBILE DOORS. PALEMON H. GASKINS, Jacksonville, Fla. Filed July 26, 1923, Serial No. 654,013. Renewed Feb. 8, 1926. 3 Claims. (Cl. 292—126.)



1. A combined fastener and handle for automobile doors comprising a latch bar extending transversely of the door and pivotally mounted thereon, a handle for the latch bar disposed exteriorly of the door and extending along the outer face of the door in spaced relation thereto and adapted to be conveniently gripped and pulled for simultaneously releasing the latch and opening the door.

1,578,119. BOOK-MATCH COVER. ALEXANDER B. HARRIS, New York, N. Y. Filed June 18, 1925. Serial No. 36,874. 5 Claims. (Cl. 206—29.)

1. A book match package, including a match pack and a body therefor to which said match pack is attached, said body including a plurality of hingedly connected sections, one of which is centrally foldable between the ends of the remaining sections to dispose said remaining sections in substantially parallel relation, the match pack being mounted on the outer face of one of said remaining sections, and a side flat hingedly connected to the side edge of the other remaining section to form a cover for the match pack when the body is collapsed and to form a bottom for the body when opened to constitute a receptacle for smoking refuse.

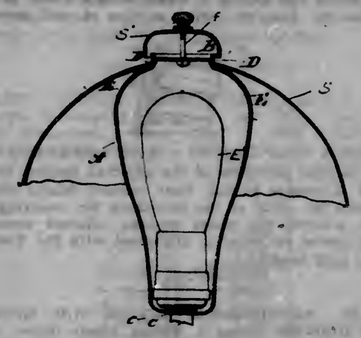
1,578,120. CHARLES E. HARRIS, Brazil, Ind. Filed July 19, 1924. Serial No. 727,017. 1 Claim. (Cl. 294—16.)

A tool comprising an elongated body having an opening extending transversely therethrough, a handle extending from one end of and rigid with the body, a gear mounted for rotation within the opening, oppositely disposed toothed bars engaging the gear and extending from the opening, gripping means at the outer ends of the bars and a handle rigid with and extending from the gear in the direction of the body handle.

1,578,121. PROCESS FOR MAKING RUBBER SUBSTANCE. MATTHIAS M. HAW, Brooklyn, N. Y. Filed Feb. 21, 1922. Serial No. 538,378. 2 Claims. (Cl. 106—23.)

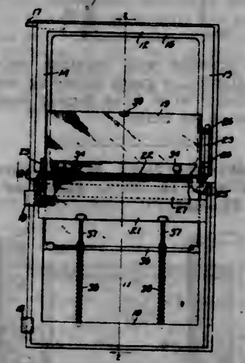
1. The herein described process of producing a rubber substance, which consists in first very slowly mixing a quantity of rubber with a quantity of pulverized hard stone and continuing such operation until each particle of the hard stone is fully covered with rubber, then cooling the mixture, then mixing the resultant mass with a further quantity of one of the said ingredients and then mixing the resultant mass with materials for furthering vulcanization.

1,578,122. JELLIFYING PRODUCT AND METHOD OF MAKING SAME. MABEL WATSON HIGGINS, Scarsdale, N. Y. Filed Sept. 10, 1925. Serial No. 55,569. 2 Claims. (Cl. 99—11.)



2. As a new article of manufacture, a container and a plurality of separate independent layers of jelly disposed therein and adapted when poured out of the container to separate into independent portions.

1,578,123. ADJUSTING DEVICE. STEPHEN HENRY HINMANT, Lemon City, Fla. Filed Dec. 21, 1925. Serial No. 76,721. 1 Claim. (Cl. 292—263.)



An adjusting device for the purpose set forth comprising a retaining member adapted to be secured to a window sill, a coupling member adapted to be fixedly connected to a casement window, a connecting rod attached to said member and having its rear end provided with a bifurcated head piece, a shifting rod extending through said retaining member and having its forward end pivotally connected to said head piece, and a handle member secured to the rear end of the shifting rod and provided with means coacting with said retaining member for detachably locking the casement window in open position, said shifting rod having an angularly disposed rear terminal portion to which the handle is connected.

1,578,124. HARP OR LAMP-SHADE HOLDER. BERNARD HOLZ, Cleveland, Ohio, assignor to The Frankelite Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 29, 1924. Serial No. 716,633. 2 Claims. (Cl. 240—148.)

1. In a shade holder a harp shaped flat metal stamping, having a flat upper end provided with an opening for receiving a binding screw, the extremities of said flat portion on either side of said opening terminating in inwardly curved arcs forming bearing surfaces for the upper edge of said shade, the sides of said harp extending thence outwardly and downwardly and terminating in flattened overlapping and registering eyes.

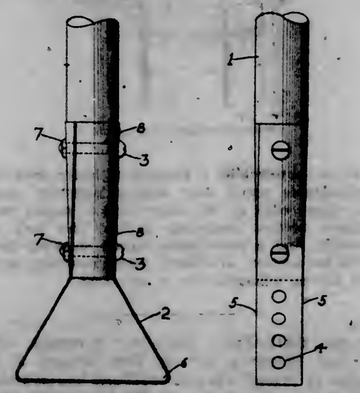
1,578,125. DOOR FOR AUTOMOBILES HAVING DEMOUNTABLE TOPS. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed Oct. 9, 1922. Serial No. 593,899. 4 Claims. (Cl. 296—48.)

4. In an automobile, a permanent lower door section, a demountable upper door section pivotally connected to the upper edge of the lower section, means inclining the upper section resiliently toward the body of the automobile, and a sheet metal apron masking the joint between the section, said apron also concealing said first-named means, substantially as set forth.

1,578,126. CRIBBING. DAVID A. HULTGREN, Chicago, Ill., and CLARENCE TAYLOR, East Orange, N. J., assignors to Massey Concrete Products Corporation, Chicago, Ill., a Corporation of Virginia. Filed Feb. 28, 1924. Serial No. 694,489. 3 Claims. (Cl. 61—47.)

1. A retaining wall constructed of self-supporting cribbing comprising a plurality of headers arranged in super-

posed spaced courses, a course of stretchers positioned between one course of headers and the next, each of said headers having T-shaped extremities arranged with the T-flanges disposed in a substantially vertical plane, each of said stretchers having a flat bottom surface across its entire width and having a single closure flange projecting upwardly from the upper surface of said stretcher,

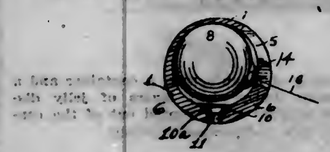


said closure flange being of a depth substantially equal to the vertical thickness of the adjacent header, and all of said stretchers having their closure flanges notched back from the ends of the stretchers for receiving said headers whereby the joints between adjacent stretchers of each course all occur in alignment with the T-shaped ends of said headers.

1,578,127. VENTILATING DEVICE FOR MITTENS AND GLOVES. JOHN J. HYNES, Maple Grove, Nebr., assignor to Charles M. Daly, O'Neill, Nebr. Filed Apr. 6, 1923. Serial No. 630,290. 2 Claims. (Cl. 2—158.)

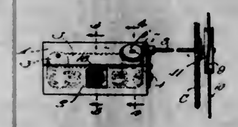
1. A mitten provided with openings near the wrist portion for ventilation, a guard extending over the openings and an elastic wrist band formed integrally with the body portion of the mitten.

1,578,128. WEEDER. JOHN E. JACOBSON, Olympia, Wash. Filed Sept. 18, 1925. Serial No. 57,221. 1 Claim. (Cl. 97—63.)



A weeder comprising a handle of circular cross section, a blade of uniform width and of thin bendable steel provided with spaced apertures throughout its length and having both edges thereof sharpened, said blade being bent into the shape of a triangle and having two free ends at one of the angles of said triangle which partially embrace said handle and are releasably secured thereto by means of bolts and nuts.

1,578,129. SPRAYING DEVICE. JOHN E. JACOBSON, Olympia, Wash. Filed Oct. 10, 1925. Serial No. 61,714. 7 Claims. (Cl. 299—92.)



4. In a device of the class described, a cylindrical tank having an inlet, an annular compressible receptacle within said tank having an outlet extending through said tank and means engageable with a rod whereby said tank may be wheeled wherever desired.

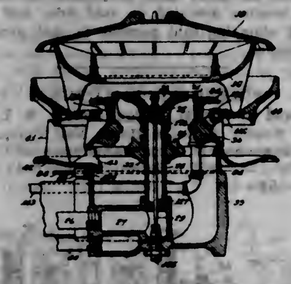
1,578,130. FLOAT VALVE. CLARENCE B. JOHNSON, Norfolk, Va. Filed Jan. 31, 1925. Serial No. 6,054. 4 Claims. (Cl. 137—104.)

1. In a float valve in combination with a casing having an eccentric bore, a rolling ball valve having a projection thereon adapted to have a movement in said eccentric bore for regulating the supply of water.

1,578,131. AUTOMATIC FLOOR INDICATOR FOR PASSENGER ELEVATORS. JOHN F. JONES, Chicago, Ill. Filed Feb. 20, 1924. Serial No. 694,091. 1 Claim. (Cl. 116—122.)

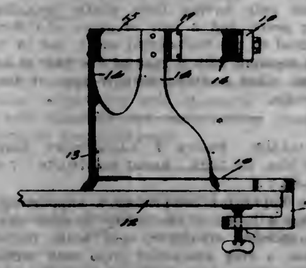
A floor indicator comprising a casing having a view opening and adapted to be carried by an elevator car, a belt in said casing having floor numbers adapted to be successively presented at said view opening, rollers in said casing mounting said belt, a shaft connected operatively with at least one of said rollers, a wheel on said shaft at the exterior of the casing, and a cable adapted to be passed around said wheel, said cable being of a length to extend substantially throughout the length of an elevator shaft and the ends of said cable being adapted for anchorage at the ends of the shaft.

1,578,132. HAM BOILER AND THE LIKE. JOHN KAEFER Jr., Cincinnati, Ohio, assignor to Aluminum Foundry Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 16, 1924. Serial No. 726,305. 1 Claim. (Cl. 100—57.)



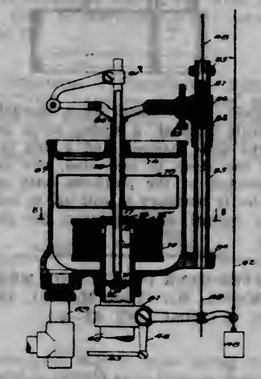
In a cooker including a receptacle, a lid movable to and from compressive engagement with a content, and resilient means adjustably coengageable between lid and receptacle to hold the lid yieldingly engaged, including

a slidable member on the receptacle and a spring opposing its upward movement; the combination therewith of an extension at the lower part of the slidable member



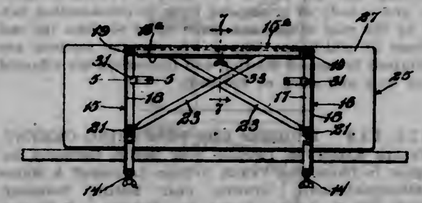
projecting below the bottom of the receptacle when the parts are in disengaged position, movable equally with said slidable member beside the receptacle, and adapted to engage a support under the receptacle.

1,578,133. BURNER. ACHILLE KAIS, Highland Park, Mich. Filed June 22, 1923. Serial No. 647,113. 2 Claims. (Cl. 158—77.)



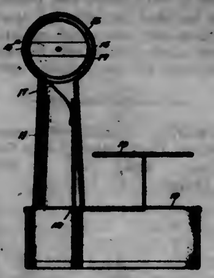
2. In a burner, a fuel mixing fan, means to deliver liquid fuel against the fan, and means to direct a current of air against the fan to revolve the same and to mix with said fuel, first mentioned means including an element adjacent to the fan between which element and the fan the fuel passes, means forming a passage for the air to the fan outside of said element; in combination with a shaft guard ring outward of the said fan and said element; and a flame spreading ring above and of larger radius than the draft guard ring; and a fire butt ring outside of the draft guard ring below said spreader ring.

1,578,134. FRUIT-JAR VISE. WILLIAM FREDERICK KAISER, Archer, Iowa. Filed Apr. 30, 1924. Serial No. 710,087. 1 Claim. (Cl. 81—3.3.)



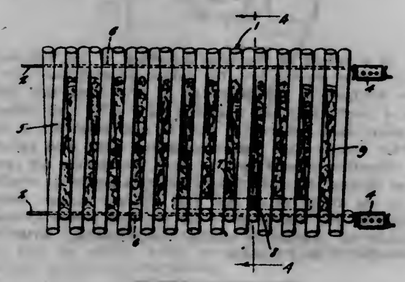
A device of the character described comprising a base, a curved wall rising therefrom, and cut away to provide a plurality of spaced parallel fingers, a clamping band including a fixed section supported by said fingers, and a movable section hingedly connected with one end of the fixed section, cooperating means carried by the free ends of the respective sections for holding the latter in clamping relation, a segmental shaped member corresponding to the curvature of said band, and hooks projecting from one edge of the member and adapted to engage the upper edge of the band, whereby said member is suspended from said band and supported thereon to vary the diameter of the band for the purpose specified.

1,578,135. BURNER. ACHILLE KAISERMAN and ALBERT ZAUGG, Highland Park, Mich.; said Zaugg assignor to said Kaiserman. Filed July 1, 1922. Serial No. 572,184. 2 Claims. (Cl. 158—36.)



1. In a burner of the class described, a fuel reservoir, an inlet pipe leading into the bottom of said reservoir, a valve controlling the discharge of fuel from said inlet pipe, a vertical spindle carrying said valve and extending above said reservoir, a float in said reservoir, a fuel delivery means, and means connected with said spindle and operative by said float to move the spindle for opening or closing said valve; together with means to conduct air to the discharge of said fuel delivery means, means to regulate the discharge of the air, and means to operate said air regulating means simultaneously with the movements of said spindle.

1,578,136. LUGGAGE CARRIER. MURRAY ALBERT KANE, Johnstown, Pa. Filed Nov. 22, 1924. Serial No. 751,679. 6 Claims. (Cl. 224—29.)

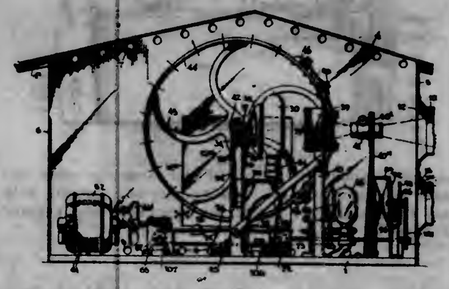


4. A combined luggage carrier and table comprising two vertical supports adapted to be secured to the running board of an automobile, a horizontal support pivotally secured to each vertical support and movable from a first position paralleling the running board to a second position substantially at right angles to the running board, a flat member adapted to lie across the horizontal supports in the second position to form a table and in the first named position to abut the vertical supports to form the side of a luggage carrier and means for securing said flat member to the horizontal supports in the second position and to the vertical supports in the first position.

1,578,137. TOY SCALE. JOSEPH KAPLAN, Newport, R. I. Filed June 5, 1925. Serial No. 35,135. 3 Claims. (Cl. 46—37.)

1. A toy scale, which comprises a movable platform, a rotatable scale element, a spring strap connected at one end to the scale element, and a link to which the other end of the strap is connected, the other end of the link connected to the platform, said spring strap adapted, due to its tendency to coil up, to hold the scale element in a normal position when the platform has been released.

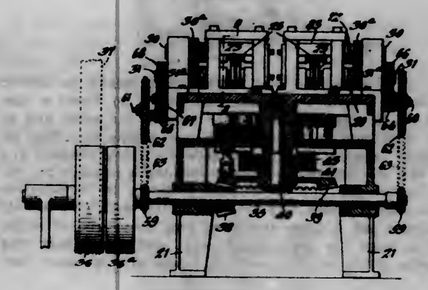
1,578,138. RIVER-BANK PROTECTION MEANS. ISAAC R. KIRK, Weston, Mo. Filed Mar. 21, 1924. Serial No. 700,890. 5 Claims. (Cl. 61—4.)



1. Means for protecting the bank of a stream against currents, comprising three cables adapted to be anchored at one end of each to the bank of stream and to extend outwardly into the stream and in a down stream direction, and a body of triangular form in cross-section carried by the said cables and made up of sections the end portions of which are lapped whereby the sections are maintained in spaced relation and interatices are afforded in the body and sides of the body.

1,578,139. PROCESS FOR PREPARING CEMENT. WALTER KIECHNER, Grunau, near Berlin, Germany, assignor to Chemische Fabrik Grünau Landshoff & Meyer Aktiengesellschaft, Grunau, near Berlin, Germany. Filed Feb. 1, 1924. Serial No. 690,088. 3 Claims. (Cl. 106—27.)

3. The process of producing cement mortar, which consists in stirring the mortar with water containing a solution of protalbinic and lysalbinic acids.

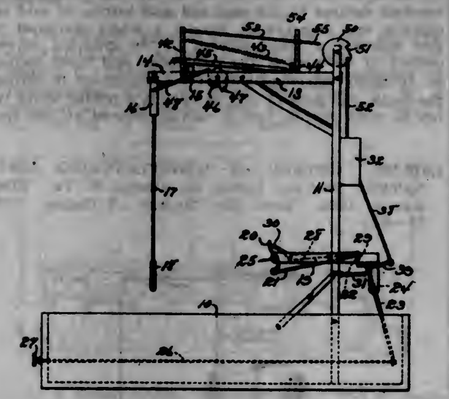


1,578,140. PROJECTING APPARATUS. ALPHEUS L. KISER, Knoxville, Tenn. Filed Sept. 24, 1924. Serial No. 739,504. 12 Claims. (Cl. 88—27.)

1. A projecting apparatus comprising a carrier including a rim, a series of spaced slide abutments disposed throughout said rim, a pair of apertured lugs extended from one side of each of said abutments and adapted to be secured to the rim, an abutment member overlapping the rim and formed integral with the said side of each of said abutments, a holding arm extended from the other side of each of said slide abutments, said arm

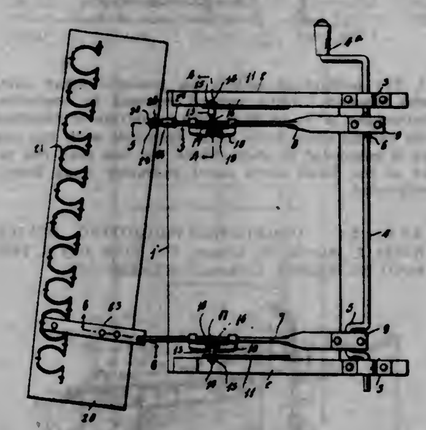
rabbeted on its inner face to provide a seat, a slide clamping member mounted on said arm, and means for detachably clamping said member to said arm to secure a slide thereto.

1,578,141. WIRE-SHAPING MACHINE. GUSTAV W. LANGE and GUSTAV M. LANGE, Buffalo, N. Y., assignors to The Fowler & Union Horse Nail Company, Tonawanda Township, N. Y., a Corporation of Connecticut. Filed Feb. 28, 1922. Serial No. 539,841. 2 Claims. (Cl. 80—54.)



1. In a wire shaping machine, the combination of a rotary shaft having driving means, two pairs of die-rolls arranged on opposite sides of said shaft, the die-rolls of each pair having their shafts provided with intermeshing gears, and a pair of gears of different diameters secured to the first-named shaft, one of the last named gears meshing with a gear of one pair of said die-rolls and the other meshing with a gear of the other pair of die-rolls.

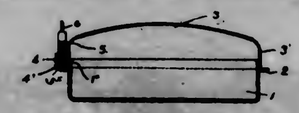
1,578,142. GAME. FRANK J. LASKOWSKI, Bethlehem, Pa. Filed Nov. 23, 1925. Serial No. 70,970. 7 Claims. (Cl. 273—99.)



7. A game apparatus comprising a supporting structure including a beam, a stationary member projecting from the supporting structure, said beam including a hinged section, a ring suspended from said section and adapted to be thrown in the direction of the stationary member to encircle the latter, means for releasing the ring from said member and including a manually operable control element, a register, means for operating said register from the control element incident to the release of the ring from said stationary member, ring

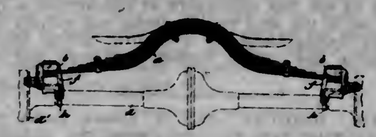
actuated means for normally holding said control element immovable, means for automatically tilting the pivoted section of said beam at predetermined intervals to

arrange the ring in an inactive position, said ring being adapted to be manually lowered to its active position for further use, and means operated incident to the lowering of said ring for resetting said register.



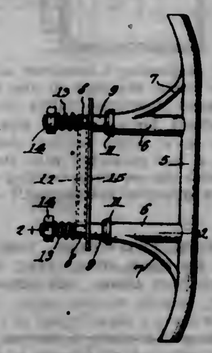
1,578,143. TEST-BOTTLE-SHAKING MACHINE. ELBERT L. LEARD, Boyd, Oreg. Filed Mar. 5, 1925. Serial No. 13,169. 10 Claims. (Cl. 259—56.)

8. A test bottle shaking machine comprising a carrier, carrier supporting elements, means rockably and reciprocably supporting said elements, and means for rocking said elements and reciprocating them in opposite directions simultaneously.



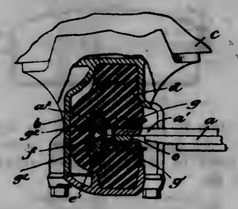
1,578,144. CONTAINER-OPENING DEVICE. JOHN LEE and CHARLES PEARSON, Ingersoll, Ontario, Canada. Filed Dec. 27, 1924. Serial No. 758,470. 2 Claims. (Cl. 220—43.)

1. In an air-tight container, the combination with the container body provided with an annular lip, of a lid fitting around the upper edge of the container body against the aforesaid lip, a projection extending radially from the lid having a threaded orifice therein, and a threaded stem fitting within the orifice and engaging the thread thereof and bearing at its lower end against the lip, the thread being of such a pitch as to produce turning movement within the aforesaid orifice when pressure is exerted against the lower end of the stem,



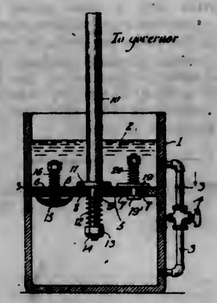
whereby the stem is forced back to its normal position, and means at the upper end of the stem for manually turning the same to carry the stem downward against the aforesaid lip.

1,578,145. CUSHION CONNECTION FOR VEHICLE CONSTRUCTION. AUGUST H. LEIPERT, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 5, 1924. Serial No. 736,021. 8 Claims. (Cl. 267—20.)



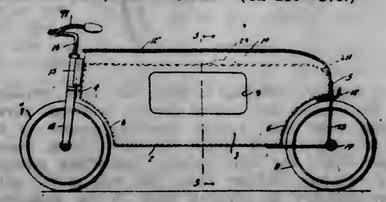
1. In combination with a cross spring in substantial parallelism with a vehicle axle, cushion connections interposed operatively between the ends of the spring and the axle and including housings engaged with the axle, and means substantially parallel to the axle engaging the housing and holding it against displacement, independent means embracing the axle and engaged with the housing to clamp it in place.

1,578,146. BUMPER. PERCY T. LENOIR, Hattiesburg, Miss. Filed June 16, 1925. Serial No. 37,499. 5 Claims. (Cl. 293—55.)



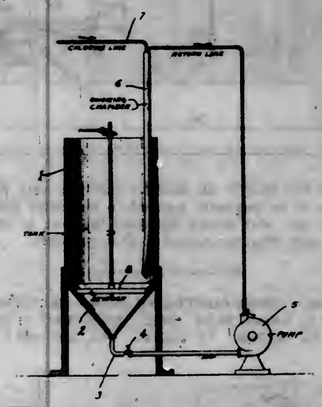
1. A bumper including a main bar, rods extending from the bumper and secured thereto, said rods having threaded inner ends, tubular members secured to the main bar and through which the rods operate, sleeves through which the rods operate, supporting members having openings through which the rods move, coiled springs disposed on opposite sides of the supporting members for restricting movement of the main bar and rods connected therewith, and means for adjusting the tensions of the springs.

1,578,147. CUSHION CONNECTION FOR VEHICLE CONSTRUCTION. FRED L. LIPCOT, New York, N. Y., assignor to The Rubber Shock Insulator Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 27, 1924. Serial No. 702,185. 2 Claims. (Cl. 267—30.)



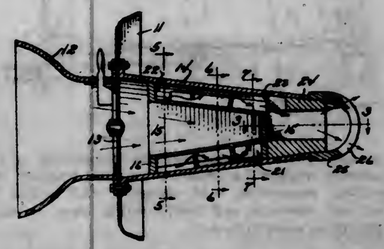
1. In combination with a leaf spring and a cushion connection of the character described, a spring leaf extending into the cushion connection and bent upwardly at substantially a right angle at its end and in force transmitting relation to the cushion connection, a spacer element carried on the underside of the spring leaf and having its end bent downwardly at substantially a right angle and in line with the said spring end whereby driving and braking forces are transmitted directly between the spring and cushion connection through said bent ends.

1,578,148. DASHPOT. OLOV G. LISSEN, Jersey City, N. J. Filed July 30, 1925. Serial No. 47,119. 4 Claims. (Cl. 188—96.)



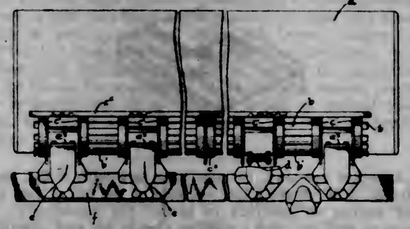
1. A dash pot, comprising a container adapted to contain a liquid, a piston arranged in the container and formed with several apertures, valves members facing in opposite directions for controlling said apertures so that there will be a relief as the piston moves in either direction, a rod connected with the piston, and means coacting with the rod for permitting a quick action of the rod in one direction independently of the piston.

1,578,149. CHILD'S TWO-WHEEL VEHICLE. JOHN S. LOCKWOOD, Cleveland, Ohio. Filed Oct. 30, 1923. Serial No. 671,712. 1 Claim. (Cl. 280—875.)



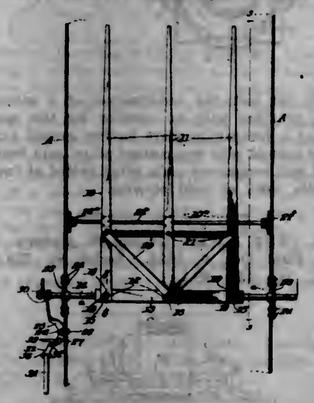
A vehicle of the character specified comprising a receptacle having openings in its side walls for access to its interior and having the lower portions of the front and rear ends inwardly curved, a bracket secured to the front of the receptacle, a steering post carried by said bracket and having it lower end forked, a steering wheel journaled in said forked end of the steering post, angular brackets secured to the rear end and bottom of said receptacle and transversely spaced, a wheel journaled in said brackets, a brake secured to the inwardly curved portion at the rear of the receptacle, said brake having an upwardly extending portion for engagment in setting the brake, the sides of said receptacle extended above its top to form guards, and a cushion secured on the top.

1,578,150. METHOD OF MANUFACTURING ARSENATES. DOMINGO LOPEZ, St. Albans, W. Va. Filed May 2, 1924. Serial No. 710,608. 3 Claims. (Cl. 23—53.)



1. The method of making an insoluble alkali earth metal arsenate, which method consists in contacting chlorine gas as an oxidizer with a mixture of arsenious oxide and an alkali earth metal hydroxide while the mixture is suspended in warm water, not less than five per cent of the alkali earth metal hydroxide being freshly precipitated.

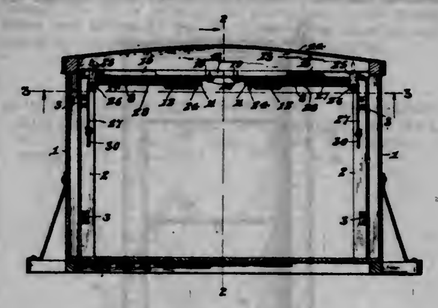
1,578,151. COMBUSTION-PROMOTING DEVICE. HENRY J. MARSH, St. Albans, Vt. Filed July 6, 1925. Serial No. 41,781. 1 Claim. (Cl. 110—175.)



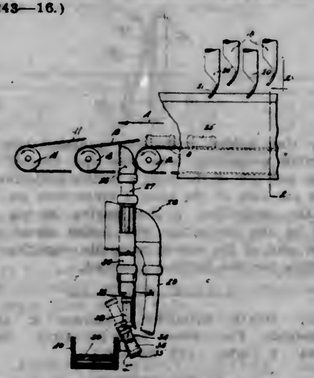
A device for supplying air to a fuel burning apparatus, comprising an outer member extending into the apparatus, a hollow inner member having ribs on its exterior for dividing the space between the two members into a plurality of longitudinally extending chambers, the inner member having a port in its inner end for connecting its interior with one chamber and parts of the ribs being omitted to form ports which connect the outer ends of the first and second chambers together and the inner ends of the second chamber with the third chamber and the outer ends of the third and fourth chambers together, the inner end of the fourth chamber communicating with the inner end of the outer member, a slotted cap on the inner end of the outer member and baffle plates in the chambers.

1,578,152. CUSHIONED SUPPORT FOR THE BODIES OF VEHICLES. ALFRED F. MAGURY, New York, and GEORGE O. HAWSHAW, Brooklyn, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 18, 1924. Serial No. 720,751. 3 Claims. (Cl. 280—106.5.)

1. In a motor vehicle, the combination with a frame carried with a running gear and a tank, of a plurality of saddles bearing the tank and disposed at opposite ends thereof respectively, resilient elements engaged with said saddles at their mid points and extending outwardly transversely thereof, a plurality of housings carried with the vehicle frame and having an open side into which said arms extend respectively, and blocks of yielding non-metallic material retained within the housings.



1,578,153. SIEVE CLEANER. JOHN MRAZ and JULIUS STEDEL, Bashaw, Alberta, Canada. Filed July 11, 1924. Serial No. 725,448. 1 Claim. (Cl. 209—287.)

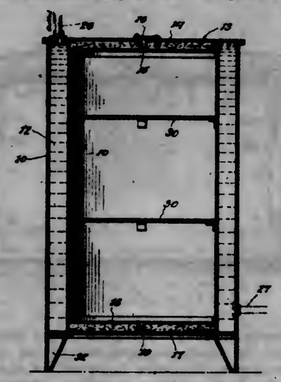


In combination with a separator or the like provided with hand holes through its frame and a sieve within the frame; plates covering said holes and detachably connected to the frame, a reciprocatory rod supported by said plates, a cleaner for the sieve, said cleaner being located within the frame and detachably secured to the rod, a rest rod for the cleaner within and fastened to the frame in spaced relation to the reciprocatory rod, and means to operate the reciprocatory rod.

1,578,154. HOLDING DEVICE. JOSEPH A. MCGRATH, Brooklyn, N. Y. Filed Nov. 18, 1925. Serial No. 69,911. 1 Claim. (Cl. 292—262.)

A holding device for the purpose set forth, comprising a curved, shiftable holding rod adapted to have its outer end anchored to the element with which the device is associated, a yoke-shaped bracket associated with said rod and having one of its arms engaging in the inner terminal of the rod when the latter is shifted outwardly thereby maintaining the rod in extended position for holding said element in set position, a pivoted L-shaped releasing member positioned when moving in one direction on its pivot to have one of its arms engage said rod to release the same to permit of the rod swinging inwardly from holding position, thereby releasing said element, and means connected to said member for shifting it to release said rod.

1,578,155. DISTRIBUTING APPARATUS FOR CONVEYER SYSTEMS. JAMES G. MACLAREN, Syracuse, N. Y., assignor, by mesne assignments, to The Lamson Company, a Corporation of Massachusetts. Original application filed Mar. 26, 1920, Serial No. 369,084. Renewed Mar. 9, 1925. Divided and this application filed Mar. 11, 1925. Serial No. 14,693. 17 Claims. (Cl. 243—16.)

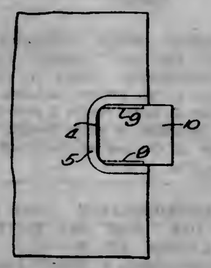


10. A conveyer system comprising a plurality of parallel belt conveyers disposed at different levels in stepped arrangement, means for feeding articles to said conveyer, excess articles spilling from upper conveyers to those at lower levels, a receiving hopper at the end of each conveyer, a guide leading from the hopper, and a receiver at the end of the guide in which articles may come to rest.

1,578,156. REFRIGERATOR. MARK H. MILLER, Claremont, S. Dak. Filed May 25, 1922. Serial No. 563,654. 1 Claim. (Cl. 257—21.)

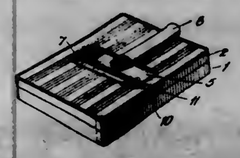
A cooler comprising a cabinet having a food compartment provided with inner and outer walls disposed in spaced relation to provide a compartment between the walls adapted to receive a cooling medium, a top closing the upper end of said food compartment and having a

marginal portion secured to the upper ends of said inner and outer walls and closing the upper end of the space between the inner and outer walls, a bottom for said food compartment closing the lower end thereof and secured to the lower end of the inner wall and having a marginal portion extending across the space between the



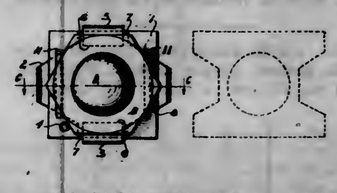
inner and outer walls and secured to the outer wall, and supporting legs extending downwardly from said outer wall and having portions extending upwardly and inwardly from their lower ends and engaging said bottom beneath the inner wall and adapted to support the bottom and inner wall.

1,578,157. KEY-HOLDING ATTACHMENT FOR BELTS. ROBERT F. MILLER, Fitzpatrick, W. Va. Filed June 17, 1925. Serial No. 37,810. 1 Claim. (Cl. 24—8.)



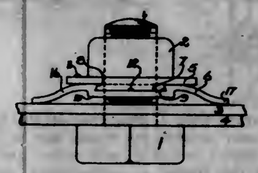
A key ring holder comprising a closed loop, a hook like portion projecting from one end thereof, and arranged at one side of the loop, a hollow projection extending from one side of the loop, a transverse pin arranged within the projection, a leaf spring having one end received by the projection and folded about said pin, the other end of the spring normally engaging the hook like portion for the purpose specified.

1,578,158. DOOR BUMPER. ERNEST R. MITCHELL, Philadelphia, Pa. Filed Apr. 27, 1923. Serial No. 635,064. 1 Claim. (Cl. 16—86.)



The combination in a door bumper, of a recessed metallic supporting structure shaped to receive a bumper block of yielding material and having opposed longitudinal ribs projecting into the recess some distance from the outer sides of the structure; and a bumper block of yielding material mounted in the recess and having independently formed grooves in opposite faces thereof to receive the ribs, said bumper block extending beyond one side and one end of the structure.

1,578,159. POCKET ASH TRAY. JAMES V. MONACO, New York, N. Y. Filed July 25, 1922, Serial No. 577,341. Renewed Nov. 28, 1925. 1 Claim. (Cl. 206—37.)

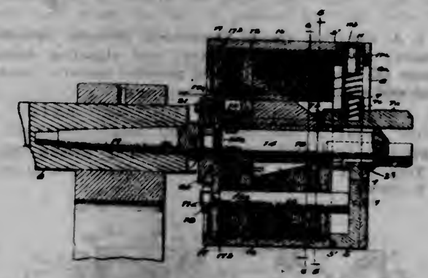


A pocket ash-tray, comprising a box with a flat base-portion, a lid hinged along one side of the top of said box and having an aperture to permit the introduction of ashes to said box, and a slidable closure for said aperture, said closure having operating means projecting beyond said lid at one side.

1,578,160. NUT LOCK. GEORGE E. MONROE, Detroit, Mich. Filed Feb. 18, 1924. Serial No. 693,696. 13 Claims. (Cl. 151—8.)

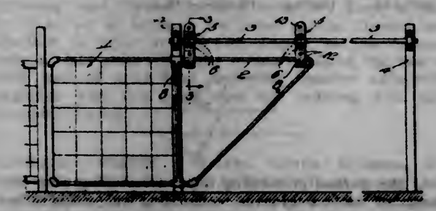
1. In a nut lock the combination of a substantially flat plate provided with an opening for the passage of a bolt, and a companion plate having curved extensions projecting beyond said first named plate, said first named plate and said companion plate being united at two points on opposite sides of said opening.

1,578,161. NUT LOCK. GEORGE E. MONROE, Detroit, Mich. Filed Dec. 6, 1924. Serial No. 754,297. 3 Claims. (Cl. 151—38.)



1. A nut lock of the character described comprising a top plate having a hole therethrough and adapted to form a flat bearing surface for the underside of a nut, a projection adapted to prevent accidental rotation of a nut thereon, and a hole therethrough for the passage of a bolt, in combination with a companion plate having a hole registering with said first named hole, resilient extensions adapted to exert upward pressure against the underside of the top plate, said plates being held in engagement one with the other by means of a projection on the underside of the top plate which cooperates with a groove in the top of the companion plate.

1,578,162. ASPARAGUS HARVESTER. CARL MONTAN, Vail, Ariz. Filed Feb. 28, 1924. Serial No. 695,788. 4 Claims. (Cl. 55—66.)

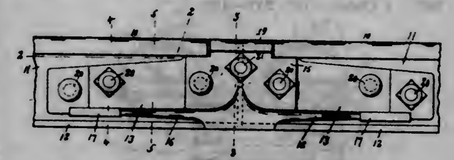


1. An asparagus harvester comprising a wheel mounted frame, a trip member pivoted thereon, a blade and blade carrying means mounted upon the frame, means for moving the blade carrying means, means operatively connected with the trip member for causing the operation of the means for moving the blade carrying means, means for returning the blade carrying means to normal position, and stem grippers carried by the blade carrying means.

1,578,163. WORK-CENTERING DEVICE. AUGUST A. MUEHLEIB, Allentown, Pa. Filed Mar. 22, 1924. Serial No. 701,078. 11 Claims. (Cl. 82—40.)

1. A tool of the class described including a base member having a medial opening and radial slideways communicating with said opening, work-engaging jaws slidably mounted in said slideways and having beveled work supporting surfaces at their forward ends whereby the work can center itself thereon, means for yieldably urging said work engaging jaws toward said medial opening, a member, carried by a plate within the circumferential opening of a sleeve, having cammed surfaces cooperating with the rear portion of said work engaging jaws for moving the same from said medial opening, a sleeve carried by said base member for moving said plate toward and from said work engaging jaws, and means for locking said work engaging jaws in a predetermined position.

1,578,164. SLIDING-GATE HANGER. BERNARD MULHOLLAND, Jackson, Mich. Filed Feb. 19, 1925. Serial No. 10,327. 1 Claim. (Cl. 16—97.)



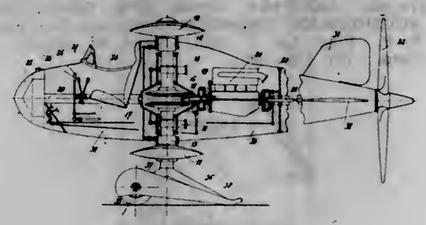
A sliding gate hanger comprising a pair of vertically elongated plates, integral, inwardly extending bosses formed on the inner sides of said plates at the upper and lower ends thereof, the bosses at said lower ends being formed with registering horizontal grooves adapted to receive a gate bar, a pair of vertically spaced rollers revolvably mounted between said plates above said lower bosses and adapted to engage the upper and lower sides of a track, a fastener passing through the upper end of said plates and upper bosses and securing said bosses in contact with each other and other fasteners passing through the lower ends of the plates and lower bosses, above and below the grooves therein, for drawing said bosses in clamping engagement with the gate bar.

1,578,165. SANITARY COVER FOR TELEPHONE MOUTHPIECES. GEORGE BARTON MULLEN, New York, N. Y. Filed Apr. 8, 1925. Serial No. 21,616. 1 Claim. (Cl. 179—185.)

A sanitary cover for a telephone mouthpiece which comprises a flat circular sheet of loosely woven material impregnated with an antiseptic substance and disposed across the mouthpiece of the telephone transmitter, the edges of the sheet being stiff and bent over the edge of the mouthpiece to hold the cover thereon.

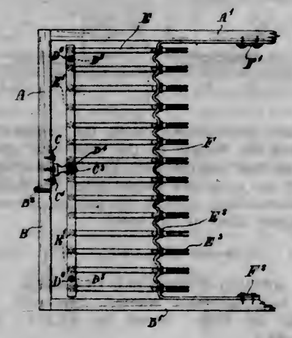
1,578,166. RAILWAY-RAIL JOINT. GEORGE W. MULLEN, Washington, D. C. Filed Nov. 21, 1925. Serial No. 70,520. 14 Claims. (Cl. 238—221.)

1. A clamp plate formed with the terminal portions to bear upon the flanges of the rails and spaced from the ball and the intermediate portion bearing beneath the balls of the rails and spaced from the flanges thereof, said intermediate portion having an extension flush with the upper faces of the balls.



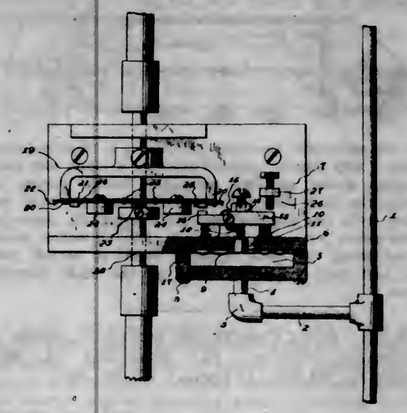
1,578,167. ANIMAL-INTESTINE CLEANER. HERMANN NIGELS and HERMANN NIGELS, Stuttgart, Germany. Filed May 22, 1925. Serial No. 32,202. 8 Claims. (Cl. 17—43.)

1. An apparatus for cleaning animal intestines comprising, a table, a fixed axle, cleaning tools rotatable around the axle, the shortest distance between the tools and the table during rotation of the tools being equal



to a double thickness of intestine and means for drawing an intestine to be cleaned through the space between the tools and the table in a direction opposite to that of the rotation of the tools.

1,578,168. MACHINE OF AERIAL NAVIGATION. RAUL PATERAS PESCARA, Barcelona, Spain. Filed Apr. 25, 1922. Serial No. 556,540. 1 Claim. (Cl. 244—19.)

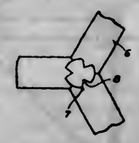


In an aeroplane, a body, a landing carriage supporting the body, a wing arranged intermediate the body and landing carriage, a wing arranged above the body, the axes of the respective wings being in alignment, operating means carried by the body for actuating said wings in opposite directions, and independent means each having its own control whereby either of the wings may be held in fixed relation to the body at will.

1,578,169. MEANS FOR SUPPORTING ARTICLES IN CABINETS. EDWARD HENRY PINTO, West Hampstead, London, England, assignor to Compactom Limited, London, England. Filed Jan. 6, 1925. Serial No. 907. 1 Claim. (Cl. 211—16.)

A wardrobe having a side wall divided to provide a fixed portion and a hinged portion, a door secured to and movable with the hinged portion, a bracket projecting from the fixed portion of the side wall near the pivotal connection of that portion with the movable portion thereof, a frame pivotally mounted on the bracket, a series of arms pivotally mounted in the frame, and a flexible element connected with each of the arms and terminally connected respectively to the fixed and movable portions of the wardrobe, whereby when the movable portion is open the frame is turned on the bracket and the arms are independently turned on their pivotal support in the frame to spread the free ends of the arms in accordance with the degree of opening of the wardrobe.

1,578,170. WARNING SIGNAL. ALBERT H. REIBEL, Jackson Heights, N. Y. Filed Apr. 25, 1925. Serial No. 25,772. 10 Claims. (Cl. 116—67.)

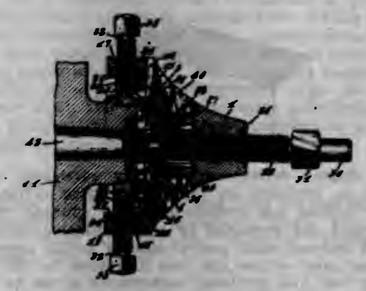


1. A signaling system comprising pressure operated means; speed controlled means; and signaling means under the joint control of said pressure operated means and said speed controlled means.

1,578,171. SMOKING DEVICE. PHILIP RIFKIN, New York, N. Y. Filed May 19, 1925. Serial No. 31,381. 6 Claims. (Cl. 131—51.)

1. A device of the character described comprising a casing formed in its periphery with openings at different points, bands surrounding the casing at said points and rotatable with respect thereto, said bands having openings adapted to be brought more or less into registration with said first named openings, and a yoke member having its end portion pivoted upon the ends of the casing and having its intermediate portion connected with said band members for moving the same simultaneously.

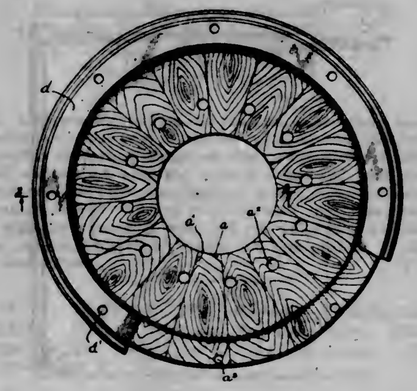
1,578,172. MAKING CONICAL PINS. VALENTIN RETTERATH, Ingolstadt, Germany, assignor to Deutsche Werke Aktiengesellschaft, Berlin-Wilmersdorf, a Corporation of Germany. Filed Feb. 14, 1924. Serial No. 692,845. 3 Claims. (Cl. 29—148.)



1. The method of forming tapered fastening pins with elongated shallow grooves, comprising subjecting a section of stock to limited deforming pressure, radially applied, in a manner to form the grooves axially of the pin and to progressively enlarge the diameter of the pin uniformly toward one end without substantially diminishing the peripheral contact area or the lateral strength of the stock.

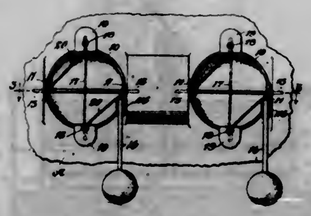
1,578,173. PLUG FOR UNITING STRUCTURAL AND MACHINE PARTS. VALENTIN RETTERATH, Ingolstadt, Germany. Filed July 8, 1925. Serial No. 42,328. 4 Claims. (Cl. 85—10.)

4. A securing means for joining machine elements and structural parts, consisting of a metallic pin of substantially frusto-conical shape to be pressed into a hole and retained therein by frictional contact between the surfaces of the pin and the surrounding walls of the hole, the said pin having its outer surface divided into segmental areas to form frictional contacting surfaces of progressively increasing diameter toward the larger end of the pin, separated by longitudinally arranged surface portions of less distance from the center at any cross-section to receive the translodged metal from the said area when the pin is pressed into the hole in the securing position.



1,578,174. COMBINATION GEAR AND WHEEL PULLER. BENJAMIN E. ROBINSON and ROBERT A. TROBAUGH, Tulsa, Okla. Filed May 8, 1925. Serial No. 28,923. 7 Claims. (Cl. 29—85.)

1. A pulling device comprising a main case consisting of an interiorly threaded head piece, a plurality of spaced pairs of arms formed integral therewith and projecting forwardly therefrom, the arms of each pair arranged in spaced relation and each having the inner side of its forward end formed with a rib, an interiorly threaded boss formed integral with the forward end of each pair of arms at the outer portion thereof and disposed at right angles with respect to the forward edge of said arms, clamping means engaging the ribs of each pair of arms, and a forcing member adjustably engaging with said head piece and coacting with said clamping means.

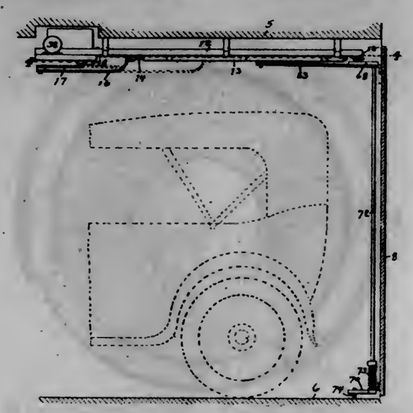


1,578,175. WHEEL. WALTER IRVING RODGERS, Jr., Brooklyn, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 22, 1924. Serial No. 757,808. 1 Claim. (Cl. 301—63.)

In a vehicle wheel, in combination, a hub formed with a flange, a plurality of wood sections arranged in juxtaposition thereabout with the grain of the sections running substantially radially thereof, the rim portions of said wood sections being of increased thickness and offset with respect to the hub portions thereof, a sleeve formed with a flange, bolts to engage the flanges and

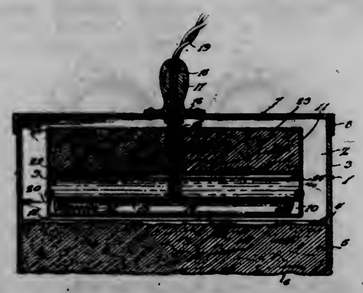
clamp the wood sections therebetween, and a rim shrunk on circumferentially about the wood sections to receive a demountable rim for resilient tires.

1,578,176. DOLL'S EYES. ISAAC A. ROMMER, Brooklyn, N. Y., assignor to Ideal Novelty and Toy Co., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 12, 1924. Serial No. 749,453. 4 Claims. (Cl. 46—40.)



1. A doll's eye having slots at the sides, an element having members extending through said slots rockably mounting the eye, and spring means attached to said eye and bearing against said members, said spring means tending to press the eye forwardly relatively to said members.

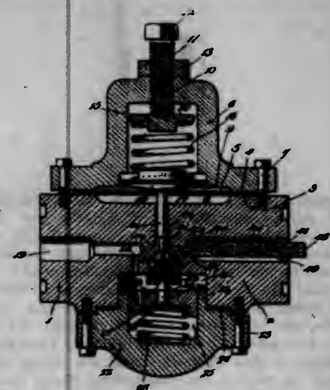
1,578,177. GARAGE-DOOR-OPENING DEVICE. ANDREW J. SCHRADE and ELMER JOHNSON, San Francisco, Calif. Filed Sept. 25, 1925. Serial No. 58,664. 2 Claims. (Cl. 268—9.)



1. In a door closing mechanism adapted to be attached to a pair of swinging doors, a platform positioned in horizontal alignment with said doors, a tubular sliding rod supported from said platform, a gear mechanism positioned on said platform, means for rotating said gear mechanism, a shaft extending downwardly from said gear mechanism, a crank secured to said shaft, a link pivotally connected to said crank, the opposite end of said link being attached to said sliding rod, said sliding rod having a slot formed therein, a block positioned within said sliding rod, stops positioned within said sliding rod and adapted to be intermittently contacted by said block, a pin extending through said slot and en-

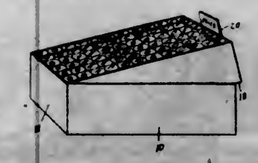
gaging said block, a rocker arm secured to said pin, a pair of diverging links secured to said rocker arm, and having their opposite ends pivotally engaging said

doors for the purpose of moving said doors in one direction when said sliding rod is moved forwardly, and for moving said doors in a reversed direction when said sliding rod is moved in a reversed direction.



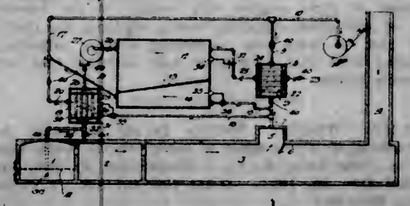
1,578,178. APPARATUS FOR APPLYING LIQUID COMPOSITIONS. ARTHUR W. SCOLES, Kansas City, Mo. Filed Sept. 4, 1924. Serial No. 735,944. 3 Claims. (Cl. 15—131.)

1. An apparatus for applying liquid compositions for the removal of paint, varnish, etc., comprising a casing open at its bottom, an absorptive filling within the casing having a portion projecting through and below the said open bottom of the casing and constituting a medium for absorbing and retaining a quantity of the liquid composition, and means within the casing for heating the interior thereof whereby to volatilize the liquid composition, whereby the vapors thereof will issue through the projecting portion of the filling and be brought into direct contact with the surface to be treated.



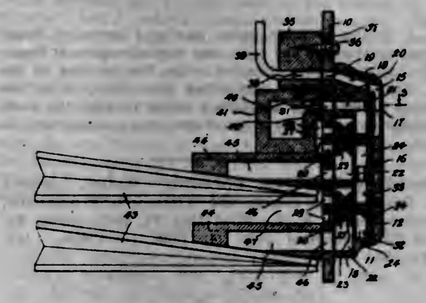
1,578,179. AUTOMATIC EXPANSION VALVE. JOHN L. SHEDDS, Mount Vernon, Ill. Filed Feb. 21, 1924. Serial No. 694,354. 2 Claims. (Cl. 50—23.)

1. An expansion valve of the class described comprising a casing having an inlet passage and an outlet passage, and a valve within said casing to control passage of fluid through the casing from the inlet passage to the outlet passage, said outlet passage having its intermediate portion threaded, its inner end portion of materially less diameter than the threaded intermediate portion and from the said intermediate portion to its outer end of materially increased diameter, said intermediate portion constituting a socket whereby discharge tubes



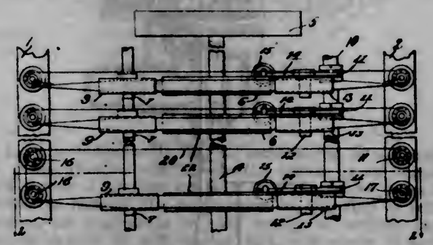
of a common external diameter and of varying internal diameters may be selectively passed through the enlarged outer portion of said outlet passage in spaced relation to the walls thereof and screwed into said socket.

1,578,180. DISPLAY DEVICE. EDWARD H. SNYDER, Indianapolis, Ind. Filed May 15, 1924. Serial No. 713,466. 2 Claims. (Cl. 211—24.)



1. A display device comprising an enveloping wall adapted to surround an article containing carton, a pair of inclined side portions extending upwardly from and beyond and supported by said enveloping wall to form an obstructionless central opening having substantially the same outline and area as formed by the enveloping wall and providing unobstructed access to the entire enclosed portion formed by said wall, and an inclined tray detachably supported by said side portion for covering the carton and for display purposes.

1,578,181. SYSTEM OF DISTRIBUTION OF REFUSE-DESTRUCTOR GASES. ROBERT BALMER, Toronto, Ontario, Canada, assignor to The Balmer Corporation. Filed Mar. 22, 1924. Serial No. 701,013. 10 Claims. (Cl. 110—8.)

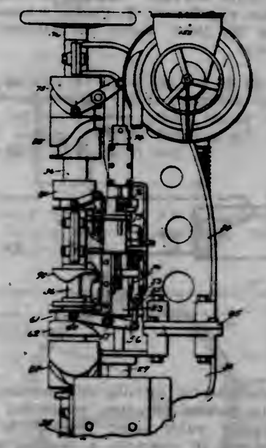


1. In a refuse destructor having a combustion chamber and a refuse storage chamber, a system of distribution of the gaseous products of secondary combustion comprising a heating chamber adjoining said storage chamber, a flue from said combustion chamber, pipes from said flue adapted to conduct the flue gases to said heating chamber, pipes from said heating chamber adapted to conduct the gases therefrom and to the stack, and a fan adapted to cause the gases to circulate through said pipes and heating chamber and to deliver said gases into said flue at a pressure adapted to equalize the loss occasioned by withdrawal of the gases from the combustion chamber.

1,578,182. PNEUMATIC ACTION. STEPHEN BATTNER, Brooklyn, N. Y., assignor, by mesne assignments, to The Rudolph Wurlitzer Manufacturing Company, North Tonawanda, N. Y., a Corporation of New York. Filed Sept. 24, 1921. Serial No. 502,860. 6 Claims. (Cl. 84—53.)

1. In a pneumatic action, an assembling plate, a vacuum chest, a valve unit comprising two mating blocks having registering vacuum ports communicating with said chest through said plate, a plurality of valves, one of the blocks being pitted to receive entirely therein said plurality of valves and all controlled from the same vacuum chest, and a diaphragm sheet constituting the only packing between said blocks and serving as diaphragms for the respective valves.

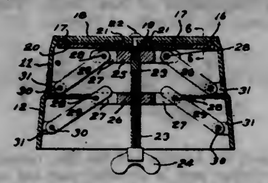
1,578,183. DRIVE MECHANISM FOR TWISTING AND SPINNING FRAMES. HERBERT G. BEEDE, Pawtucket, R. I. Filed Feb. 19, 1923. Serial No. 619,793. 3 Claims. (Cl. 118—48.)



1. A machine of the class described comprising a pair of spaced spindles, a drive pulley intermediate said spindles, an endless band partially encircling said spindles, the entire band lying to one side of the axis of the drive pulley, a guide pulley arranged between one of said spindles and the drive pulley, a second guide pulley arranged between the other of said spindles and the drive pulley, a movable support for said second guide pulley, and means normally tending to move said second guide pulley in a direction to press a run of the endless band into contact with the drive pulley.

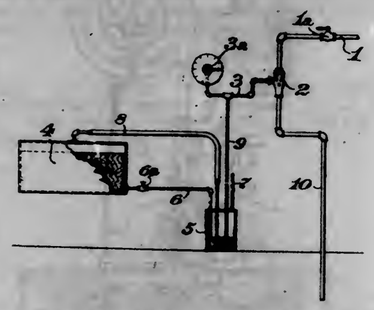
1,578,184. ADJUSTABLE SUPPORT FOR BARRELS AND THE LIKE. EDWIN F. BEUDELER, Buffalo, N. Y., assignor to E. & B. Holmes Machinery Co., Buffalo, N. Y., a Corporation of New York. Filed June 19, 1924. Serial No. 720,969. 8 Claims. (Cl. 147—1.)

1. A support for barrels and the like, comprising a base having a circular well, a circular wall for said well, an inwardly projecting flange on the lower part of said wall, and shelves arranged on said flange and each provided with an upper cam surface, and a rotatable table arranged in said well and provided with an annular row of laterally projecting lugs each of which has a lower cam surface adapted to engage the cam surface of one of said shelves.



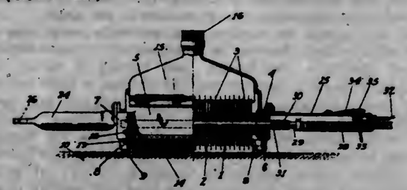
1,578,185. MACHINE FOR MAKING INSULATED NAILS. CHARLES C. BLAKE, Brookline, Mass. Filed Mar. 4, 1922. Serial No. 541,114. 28 Claims. (Cl. 10—158.)

1. A machine for making insulated nails of the type described having, in combination, a rotary turret, mechanism for rotating said turret step-by-step, said turret having a series of peripherally arranged pockets presenting chambers which remain open at both ends throughout their travel, a device for supplying said pockets successively with blocks through one open end at each period of rest, means operating simultaneously with said block supplying device to support two previously supplied blocks for operations thereon through the other open ends of the pockets containing said blocks, and means for successively removing the blocks from the pockets and completing the formation of the nails.



23. A machine for making insulated nails comprising a nail and a block having, in combination, a nail-holding turret rotatable step-by-step and having a series of peripheral pockets open at top and bottom, a slide below said turret carrying a block supplying plunger, and two anvils registering with three successive pockets, means for reciprocating said slide toward and from the turret during periods of rest whereby said anvils are positioned to support blocks previously supplied to two of said pockets, and means for center-punching and nailing said two blocks while so supported, said nailing anvil being hollow to permit the nailing means to drive the nail through the block and extend from the lower face thereof.

1,578,186. HAT STRETCHER. ARVID BRODIN, Los Angeles, Calif. Filed Aug. 1, 1923. Serial No. 654,994. 4 Claims. (Cl. 223—33.)

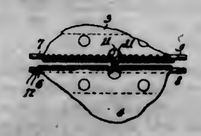


1. A hat stretcher comprising a plurality of form segments corresponding substantially to the shape of a hat for personal wear; a plurality of covers disposed in spaced relation, engaging portions of said segments for controlling the movement thereof to and from the center of the stretcher; a screw member; and a plurality of links pivotally connected to said segments and operatively connected with said screw whereby the inner ends of said links are caused to travel in parallel relation to the axis of said screw.

1,578,187. APPARATUS FOR FORMING EMULSIONS OF OIL AND WATER. SAMUEL A. BULLOCK, Port Washington, and BERTEL T. PERRY, Schenectady, N. Y. Filed Apr. 30, 1924. Serial No. 710,096. 3 Claims. (Cl. 87—9.)

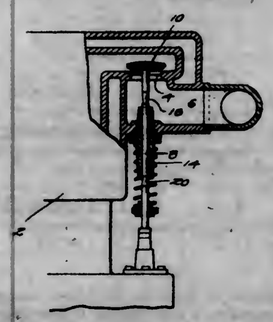
2. An apparatus for forming an emulsion of oil and water for lubricating purposes, comprising an ejector, means to supply water under pressure to the nozzle thereof, a closed oil reservoir, a leveling trap, a pipe leading from the bottom of said reservoir to a point near the bottom of said trap, an air pipe leading from the top of said reservoir to a point near the bottom of said trap, the latter having an inlet for air in its top, a pipe leading from the bottom of said trap to said ejector and having a branch for the admission of air to regulate the flow of oil.

1,578,188. ELECTRIC-MOTOR-DRIVEN BUTCHER-BLOCK CLEANER. HARRY W. BURTON, Taft, Calif. Filed June 6, 1924. Serial No. 718,289. 2 Claims. (Cl. 15—23.)



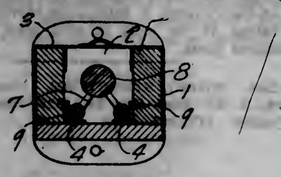
1. A cleaning device comprising a housing open along one face, a rigid shaft journaled in the ends of the housing, a cylindrical brush structure mounted on the shaft, a handle projecting from one end of the housing, a flexible driving shaft terminating at and mounted in the handle in alinement with the rigid shaft, a slidable sleeve coupling releasably connecting the shafts in driving relation, and removable means connecting the rigid shaft to the housing to enable the shaft and brush to be removed from the housing as a unit.

1,578,189. FISHING-LINE LEADER AND SNELL. CHARLES ARTHUR DAWSON, River Falls, Wis., assignor to Kinnickinnic Tackle Company, Stevens Point, Wis., a Corporation of Wisconsin. Filed Aug. 30, 1923. Serial No. 660,187. 4 Claims. (Cl. 43—28.)



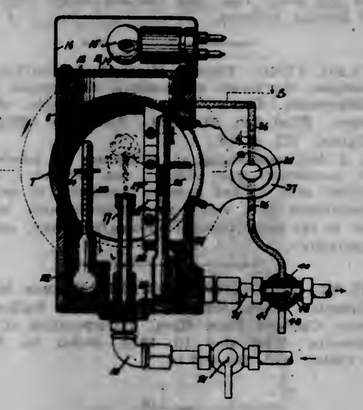
4. A fishing snell or leader having a series of longitudinal portions of one color and another series of longitudinal portions of a different color, the portions of the last mentioned series alternating respectively with the portions of said first mentioned series whereby the snell or leader is effectively camouflaged when submerged in water.

1,578,190. HINGE FOR FOLDING CHAIRS. ARTHUR F. DERBY, Union Course, and WILLIAM B. WILSHUSEN, Mount Vernon, N. Y. Filed May 27, 1922, Serial No. 564,177. Renewed July 24, 1925. 1 Claim. (Cl. 16—163.)



A hinge consisting of a wire bent into two sets of parallel lengths, said sets being arranged end to end and the length of each set being connected together, each length of each set being connected by a cross-over portion to that length of the other set that is not co-axial therewith.

1,578,191. SUPERVALVE. RICHARD DEVOS and ALOIS DEVOS, Detroit, Mich. Filed Jan. 8, 1923. Serial No. 611,453. 1 Claim. (Cl. 123—188.)



In combination with a valve seat and guide; of a valve including a head and stem, said stem being slidably received in said guide and provided intermediate of its ends with a pair of spaced apart recesses, said recesses having their walls diverging respectively in opposite directions providing substantially inner opposed shoulders on said stem, said shoulders being adapted to cooperate with the respective end edges of said guide in the operation of said valve, as and for the purposes described.

1,578,192. CIRCUIT BREAKER. JOSEPH F. DODGE, Chamberlain, S. Dak. Filed July 21, 1921. Serial No. 486,352. 1 Claim. (Cl. 200—52.)

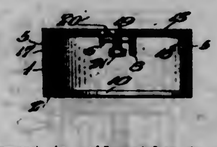
In a device of the kind described, a dielectric case having a narrow, rectangular interior chamber; two electrodes mounted one at either end of the bottom of the chamber; and a rocking contact element mounted within the chamber, the said contact element including a central weight having two feet diverging therefrom and resting one on each of the said electrodes and so normally connecting the same, the said interior chamber being of a size and shape to freely receive the said gravity contact element and maintain it in a normal upright position with the feet thereof in contact with the said electrodes, but allowing room for the central weight of the contact element to rock toward either end of the chamber and so disconnect the said electrodes.

1,578,193. ENGINE-COOLING INDICATOR. CLARKE S. DRAKE, Milwaukee, Wis. Filed Sept. 3, 1920. Serial No. 407,960. 9 Claims. (Cl. 23—52.)

1. In an indicator device, the combination, of a casing in communication with the cooling system of an engine and having a transparent wall, a thermometer in said casing to indicate the temperature of the fluid in said system, an instrument in said casing to indicate the specific gravity of said cooling fluid, and means in said casing providing a visible indication of the flow of the cooling fluid.

1,578,194. WATER AND VENT BOX. HENRY EDELMAN, Philadelphia, Pa., assignor of one-half to Pauline Edelman, Philadelphia, Pa. Filed Aug. 6, 1925. Serial No. 48,455. 8 Claims. (Cl. 137—13.)

1. In a device of the character stated an annular casing the upper rim of which is notched upon opposite sides, overhanging ledges intermediate said notches, a cover-plate provided with projections upon its under side for normally engaging with said notches and with said ledges to prevent accidental rotation of said cover-plate and finger engaging means provided said cover-plate whereby said cover-plate must be first raised to disengage said



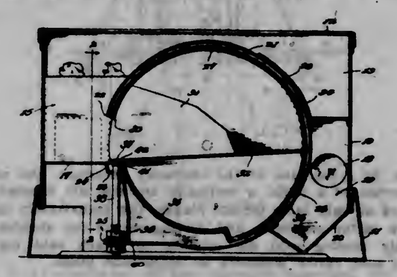


plate with respect to said notches in order that said cover-plate may thereafter be rotated for entire disengagement.

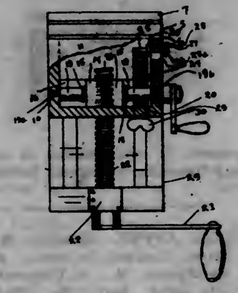
1,578,195. SHOE UPPER. MARTIN W. FITZGERALD, Brockton, Mass., assignor to Sears, Roebuck & Co. of Maine, Springvale, Me., a Corporation of Maine. Filed July 16, 1924. Serial No. 726,281. 1 Claim. (Cl. 36—57.)

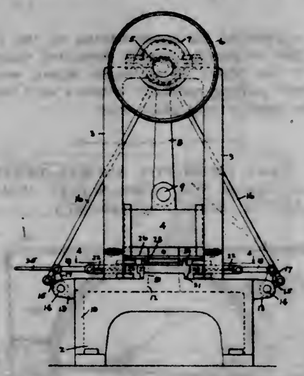
A shoe comprising an upper having at the free edge thereof a pair of parallel braids connected together and attached to the upper by a single zigzag seam, each stitch thereof passing centrally between said braids and through the upper at one point only.

1,578,196. TRAP DRUM FOR ANIMAL TRAPS. IRAD W. HILLS, Stanley, Wis. Filed Nov. 12, 1924. Serial No. 749,541. 2 Claims. (Cl. 43—67.)



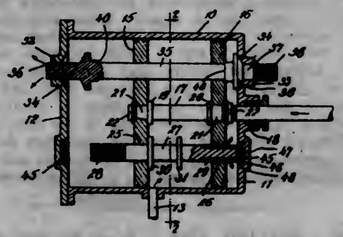
1. In an animal trap, a casing having a substantially cylindrical chamber formed therein and provided with circumferentially spaced inlet and outlet passages, an inwardly extending flange being provided below the bottom of said inlet and a support below said flange, a magnet carried by said support and extending upwardly through said flange, a hollow drum rotatably mounted in said chamber and having inlet and outlet openings spaced to alternately register with the inlet and outlet passages of the chamber as the drum is oscillated in said chamber, a lip at the lower edge of the inlet of said drum disposed over said flange, an armature for said magnet carried by said lip, and a flooring in said drum extending between said lip and the outlet of the drum.

1,578,197. MILLING VISE. JOHN FRANCIS KEYES, Springfield, Mass. Filed Aug. 26, 1920. Serial No. 406,210. 11 Claims. (Cl. 90—60.)



1. A vise comprising a rigid jaw, a jaw movable relatively thereto, a screw for propelling the movable jaw,

separable nut sections for connecting the movable jaw to the screw, means for moving the nut sections toward and away from each other, and means for moving the



movable jaw away from the rigid jaw releasable when the nut section are disengaged from the propelling screw.

1,578,198. PRESS FOR FORMING TILE BLANKS. JOHN A. LANNERT, Cleveland, Ohio. Filed Oct. 3, 1925. Serial No. 60,186. 3 Claims. (Cl. 25—42.)

1. In a machine of the character described, the combination of a table, a vertically movable die member, a track on said table for the blanks, two transversely movable cutter members, and driving means for simultaneously moving said die member to punch said blank, and said cutter members to notch said blank.

1,578,199. ENGINE. GEORGE MATZ, New York, N. Y. Filed May 26, 1925. Serial No. 32,881. 7 Claims. (Cl. 121—123.)

1. An engine comprising a cylinder, a piston comprising a pair of spaced disks, an intake port in the cylinder intermediate the ends thereof and adapted to admit motive fluid to the cylinder intermediate the piston disks, exhaust ports in said cylinder, a valve carried by the piston disks and movable with and relatively to the piston for controlling the admission of the motive fluid from the space between the piston disks to the ends of the cylinder, a valve stem carried by the piston and valves at the ends of said stem for controlling the exhaust ports.

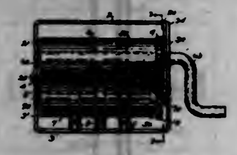
1,578,200. WHEEL STRUCTURE. GEORGE MATZ, New York, N. Y. Filed July 23, 1925. Serial No. 45,479. 4 Claims. (Cl. 305—7.)

3. A wheel structure comprising an outer rim, a wheel having a rim disposed within said outer rim and adapted to roll therein, the diameter of the outer rim being greater than the diameter of the wheel rim, annular surfaces formed on the wheel rim and outer rim at the peripheries thereof adapted to coact and support the wheel on said outer rim and traction means extending inwardly from the outer rim and outwardly from the wheel rim, said traction means overlapping said annular surfaces.

1,578,201. FUEL. THOMAS MIDGLEY, JR., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware. Filed Feb. 28, 1920. Serial No. 362,139. 4 Claims. (Cl. 41—9.)

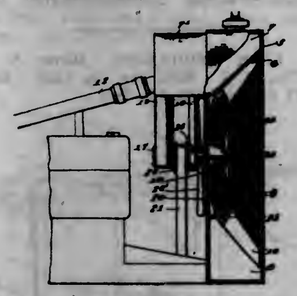
1. A fuel comprising an admixture of substantially 50% commercial ethyl alcohol, and 50% of a cracked gasoline, said cracked gasoline consisting of saturated hydrocarbons and unsaturated hydrocarbons, or "olefines" in the proportions of substantially 84% and 16% respectively.

1,578,202. BEAD CONSTRUCTION. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed May 10, 1922. Serial No. 559,804. 1 Claim. (Cl. 154—14.)



The process of making a clincher tire casing which comprises forming separate bead fillers of rubber compound, said fillers having heel portions adapted to be molded into the form of the heel of the clincher bead, covering the heel portions of the fillers with fabric while leaving the opposite side of the fillers uncovered, incorporating the fillers with the coverings thereon between the edges of the plies of the tire casing so that they serve as anchorages therefor, and vulcanizing the assembled casing under molding pressure to give form and coherence to the beads.

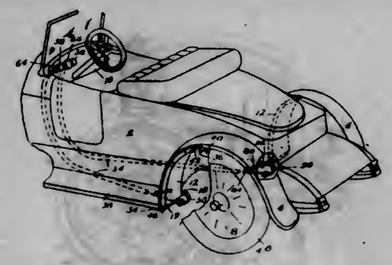
1,578,203. TRANSFER FILM. CARL P. OLSON, Irvington, N. J., assignor to Karl E. Olson & Son, Inc., Irvington, N. J. Filed June 19, 1924. Serial No. 721,143. 11 Claims. (Cl. 41—33.)



1. A film support consisting of a ribbon-like strip of flexible material, a layer thereon consisting of Chinese insect wax and varnish, and a coating of metallic powder upon said layer.

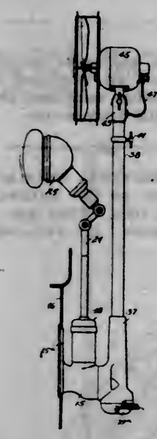
1,578,204. RAZOR-BLADE SHARPENER. DOMENICO PACE, Syracuse, N. Y. Filed June 11, 1925. Serial No. 36,403. 1 Claim. (Cl. 51—80.)

A razor blade sharpener composed of a casing having an upper and a lower section, means to hingedly connect the sections at one end thereof, blade engaging posts connected to the lower section, a pair of lower stropping rolls journaled in the lower section and disposed on opposite sides of the posts, a pair of upper stropping rolls journaled in the upper section and disposed in close relation, gears on the upper rolls in mesh with each other, gears on the lower rolls in mesh with the overlying gear of the respective adjacent upper rolls and disposed on opposite sides of the posts, and means to rotate one of the rolls, all of the gears of the rolls being located at the end of the casing opposite to the hinged end thereof so as to permit the opposite ends of the upper and lower rolls to freely approach upon closing movement of the sections about the hinged means thereof.



1,578,205. RADIATOR. STANLEY PACHNER, Dresden, Kan. Filed Feb. 17, 1925. Serial No. 9,762. 5 Claims. (Cl. 257—127.)

1. A radiator including a body having a central opening and upper and lower water chambers, a series of tubes disposed within said opening, having their ends opening into an annular passage surrounding said tubes, a rotary tubular shaft disposed axially with respect to said opening, means for conducting the water from said upper chamber to said shaft, a series of pipes radiating from the free end of said shaft having their discharge ends disposed within said passage adjacent the ends of said tubes and means for rotating said shaft.

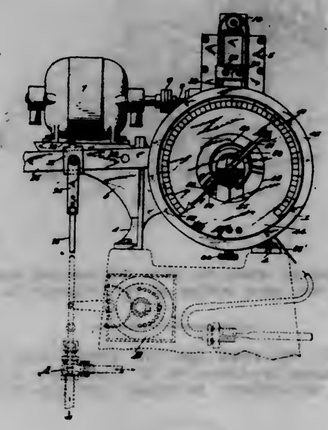


1,578,206. SANDING DEVICE FOR MOTOR VEHICLES. LOUIS H. PERRUS, Kansas City, Mo. Filed Jan. 13, 1926. Serial No. 80,985. 7 Claims. (Cl. 291—28.)

1. In a sanding device for motor vehicles, a receptacle adapted to fit against the inner surface of the vehicle fender and provided with an inlet and an outlet, means operably connecting the lower portion of said receptacle to the vehicle so that its upper portion may

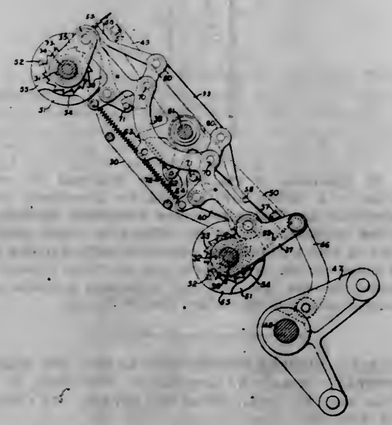
be lowered to expose the inlet, and securing means for holding the upper portion of the receptacle in raised position.

1,578,207. UNITARY DENTAL APPARATUS. OSCAR H. PIEPER, Rochester, N. Y. Filed Nov. 20, 1923. Serial No. 675,931. 10 Claims. (Cl. 230—1.)



1. In apparatus of the character described the combination of a hollow arm adapted for attachment to a support and provided with hollow branching portions, a fan and an electric motor for driving the same carried by one of said portions, an adjustable control device for said motor carried by said arm, and electrical conductors extended through said arm and branching portions and connected with said motor and control device.

1,578,208. TEMPERATURE REGULATOR OR THERMOSTAT. RALPH B. RICHARDSON, New York, N. Y. Filed Aug. 13, 1923. Serial No. 657,232. 10 Claims. (Cl. 236—20.)

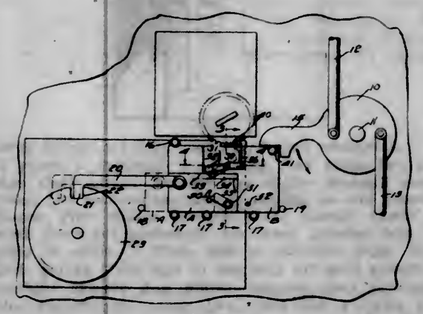


1. In a temperature regulator or thermostat, in combination, a reading dial, a pointer associated therewith, means capable of manually setting said pointer and other means adapted to automatically change the position of said pointer, said automatic means being removable and said manual setting means being operative on the removal of said automatic means a prime mover, mechanism arranged to be actuated by said prime mover to operate

a valve means or rheostat, means to place the prime mover in operative relation with said mechanism, a Bourdon tube or gage, means movable under the impulses

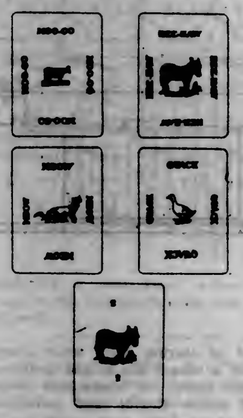
of said tube or gage, and means operated by the prime mover to actuate said last mentioned means for operatively connecting said first mentioned mechanism in operative relation with said prime mover.

1,578,209. CASH REGISTER. CHARLES F. ROSIEN, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio. Filed Apr. 2, 1924. Serial No. 703,693. 9 Claims. (Cl. 197—160.)



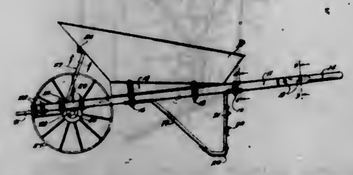
8. In a ribbon reversing mechanism, a spool having a flange the periphery of which comprises a fixed portion and a movable portion, and means for holding the movable portion in position until a predetermined amount of ribbon has been unwound from said spool.

1,578,210. LOW-PRESSURE GAS BURNER. HAROLD D. SCHRADER, Midwest, Wyo., assignor of one-half to Leo Maynard Stauffer, Midwest, Wyo. Filed Aug. 17, 1925. Serial No. 50,751. 3 Claims. (Cl. 158—114.)



1. A gas burner comprising an air admission cylinder, and a burner head in the delivery end of said cylinder having a plurality of radial arms disposed in a plane at right angles to the axis of said cylinder and terminating in spaced relation therewith, each of said arms having two parallel longitudinal rows of perforations, the perforations along any two adjacent portions of any two arms being arranged to discharge gas between said arms on lines which are parallel with each other and diverge widely from the aforesaid plane toward the wall of the cylinder, the outer ends of said arms each having a central perforation also disposed to discharge the gas on a line which diverges widely from the aforesaid plane toward the cylinder wall.

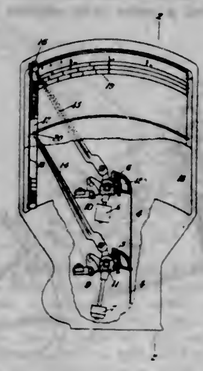
1,578,211. LOCK MECHANISM. HENRY N. SLEDGE, Jersey City, N. J. Filed Jan. 24, 1925. Serial No. 4,436. 11 Claims. (Cl. 70—26.)



1. Lock mechanism comprising locking elements, a detent for preventing the operation of said elements, power driven means for withdrawing said detent and manually operable means for setting said means in operation.

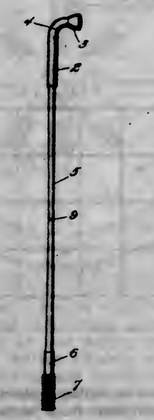
1,578,212. CARD GAME. DAVID E. SMITH, Chicago, Ill. Filed Oct. 7, 1925. Serial No. 61,123. 3 Claims. (Cl. 273—152.)

1. A deck of cards for playing the game of "Hee-Haw," said cards and game being designed to depict certain well known animals, and comprising four "word cards" each bearing a picture of a different animal, and thirty-six suit cards, nine bearing the representation of each of said animals, and numbered consecutively from two to ten, both inclusive, substantially as shown, and for the purposes described.



1,578,213. WHEELBARROW. IRVING R. SMITH, Wauwatosa, Wis. Filed June 4, 1923. Serial No. 643,343. 3 Claims. (Cl. 280—52.)

1. A wheelbarrow comprising a body, a pair of longitudinally extending supporting members, legs secured by bolts to said supporting members, handles secured to the ends of said supporting members, said supporting members each comprising a pair of channel bars clamped together with their side flanges extending laterally therefrom, the vertical webs of said channel bars being bulged outwardly forming passages for said bolts.

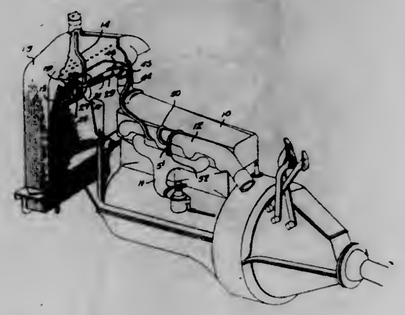


1,578,214. PRICE-COMPUTING WEIGHING SCALE. HUBERT ALDERSLADE SPANNER, Birmingham, England. Filed Feb. 15, 1922. Serial No. 536,831. 4 Claims. (Cl. 265—37.)

1. In a price computing weighing scale, the combination of a scale housing, a fixed weight and price chart located within said housing, automatic means for offsetting the load applied to the scale, a vertically disposed traversable weight indicating price index and means

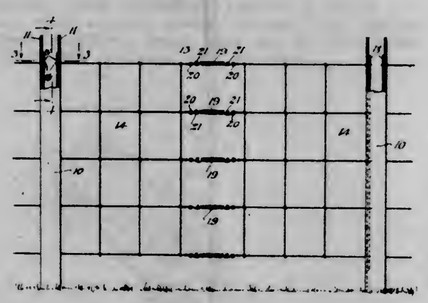
connecting said index to the load offsetting means for supporting and maintaining the index parallel with its initial direction throughout its traverse.

1,578,215. WIRE SPOKE. EDWARD W. STOLER, Mansfield, Ohio. Filed Apr. 17, 1923. Serial No. 632,680. 1 Claim. (Cl. 301—104.)



A wire spoke having enlarged terminals of substantially uniform diameter, and a main body length intermediate the terminals, the body length being gradually tapered in both directions from said terminals, with the tapering portions meeting at substantially the mid-length of such body length.

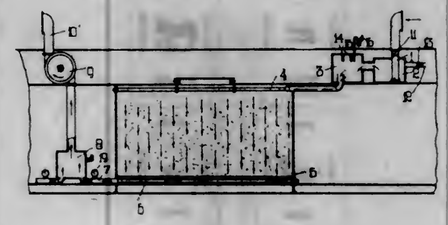
1,578,216. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. JOHN STUTIKA, West Pullman, Ill. Filed Aug. 11, 1924. Serial No. 731,513. 4 Claims. (Cl. 123—25.)



1. A device of the character described, comprising a valve casing communicating at its outlet end with the intake manifold of an engine, the opposite end of said

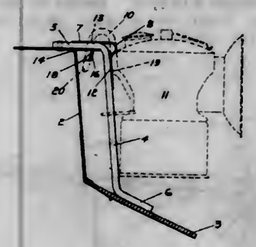
casing being open and provided with a substantially cylindrical bore and a slightly tapered bore spaced therefrom and increasing in diameter inwardly, a valve seat connecting said bores, a valve arranged in said casing, said valve having a valve face adapted to engage said

seat and a substantially cylindrical portion arranged within and slightly spaced from said cylindrical bore and being further provided with a portion tapered to correspond with and slightly spaced from said tapered bore, and a coil spring normally seating said valve face.



1,578,217. FENCE CONSTRUCTION. JOHN STUTTER, Maspeth, N. Y. Filed Jan. 29, 1925. Serial No. 5,504. 4 Claims. (Cl. 256—39.)

1. A wire fence including a plurality of spaced vertical supports and individual fence units between each pair of adjacent supports, each of said units comprising a pair of sections, each section including a plurality of horizontal and vertical wires connected at their points of crossing, said sections having detachable connections at their outer ends with the supports, and detachable connections at their inner ends with one another, said latter connections being contractible and normally expanded when in place to set up a tension upon the sections.

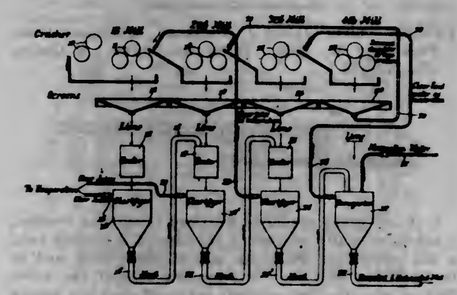


4. A wire fence including spaced posts and individual fence units between each adjacent pair of posts, said units each comprising separable sections of wire mesh, means for detachably connecting the outer end of each section to a post, contractile spring links for detachably connecting the inner ends of the sections together, the terminals of the links detachably engaging the ends of the sections, and means adjacent the terminals of the links for receiving an expanding tool for stretching the links to facilitate their attachment or detachment.

1,578,218. METHOD OF STORAGE OF VEGETABLE PRODUCE. JOHN MCLEAN THOMPSON, Liverpool, England. Filed Dec. 5, 1925. Serial No. 73,426. 5 Claims. (Cl. 99—11.)

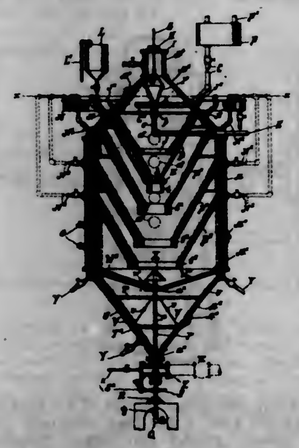
5. A method of storing fruit which comprises holding the fruit in a closed space, and continuously maintaining in said space, an atmosphere containing less than 0.1% of carbon dioxide, and maintaining therein a humidity of about 65%, such conditions being maintained by slow aeration of the said space.

1,578,219. LAMP HOLDER FOR MINERS' CAPS. FRANK K. TOVEY, Pittsburgh, Pa., assignor to Union Cap Manufacturing Company, Pittsburgh, Pa., a Copartnership composed of himself and Edward J. Eagan. Filed Nov. 13, 1924. Serial No. 749,675. 1 Claim. (Cl. 240—60.)



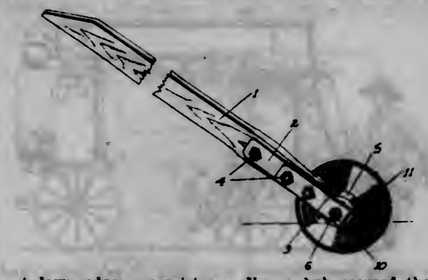
A supporting bracket for a miner's lamp consisting of a bracket frame secured to the cap and visor respectively having a top flat portion provided with a hook hole, a forwardly bulging slotted front bearing plate, and a rearwardly inclined open back grooved friction socket for the hook terminal secured to the bracket frame below and in register with the hook hole.

1,578,220. PROCESS FOR INCREASING SUGAR RECOVERY. RAFAEL VACHIER, Baton Rouge, La. Filed May 12, 1925. Serial No. 29,750. 3 Claims. (Cl. 127—46.)



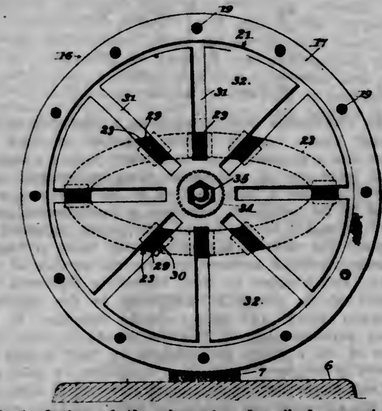
1. That process for desugarizing the partially exhausted mud obtained as the residue in the sugar recovery process and without the necessity for the filtering operation, which consists in subjecting the partially exhausted mud

to fresh water and a quantity of lime sufficient to produce coagulation and extract the sugar content of the mud,



thereby producing a clear sweet water as maceration water for use in the milling process and a substantially desugarized mud.

1,578,221. CLARIFIER FOR SACCHARINE SOLUTIONS. RAFAEL VACHIER, Baton Rouge, La. Filed Oct. 15, 1925. Serial No. 62,638. 9 Claims. (Cl. 127—18.)

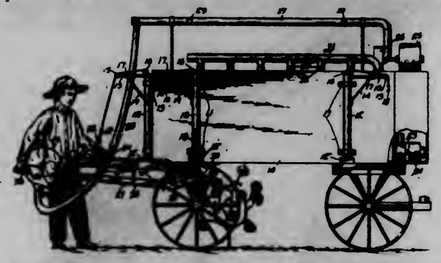


1. A clarifier for saccharine solutions comprising an outer shell having a central cylindrical liquid chamber with a downwardly inclined conical bottom open at its center, a lower mud chamber in the form of an inverted hollow truncated cone, below said bottom, and an upper scum chamber in the form of a truncated hollow cone, means for supplying the liquid to be clarified to said scum chamber, means for heating the liquid in said scum chamber, a series of inverted truncated hollow baffle cones projecting downwardly into said shell, and each provided with a cylindrical band at its lower open end, a vertical adjustable scum overflow cone mounted in the scum chamber, with means for carrying off the scum from said overflow cone, means for carrying off the clear liquid from the upper portions of the V-shaped annular spaces between said baffle cones and the outer shell, a rotary hollow perforated shaft projecting up through the axis of the mud chamber, scrapers carried by said shaft for scraping the bottoms of said liquid chamber and of said mud chamber, means of supplying water under pressure to said shaft, means for rotating said shaft, and means for carrying off the mud and liquid contents from the bottom of said mud chamber.

1,578,222. LAWN EDGER. FRANK VAN ALSTINE, Sacramento, Calif. Filed May 11, 1925. Serial No. 29,885. 1 Claim. (Cl. 97—227.)

A lawn edger comprising a disc, a hub secured thereto only on one side of the same, a spindle on which the hub is turnable, a support in which one end of said spindle is fixed disposed adjacent that face of the hub opposite to the disc, a head on the opposite end of the spindle countersunk in the hub, and a handle secured to the support and disposed in a plane between the support and disc.

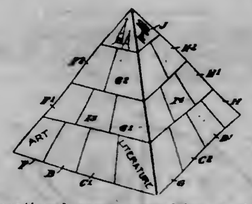
1,578,223. DYNAMIC COMPENSATOR. MARTIN J. WACLAW, Bethlehem, Pa. Filed Dec. 26, 1924. Serial No. 758,267. 2 Claims. (Cl. 74—14.)



1. A device of the character described comprising a driving element having radial slots, a driven element rotatable independently of said driving element being arranged to house the driving element, eccentric races including elliptical races in said driven element confronting said driving element, weights slidable in said slots when the driving element is rotated, and rollers carried by said weights actuated in said eccentric races to rotate said driven element.

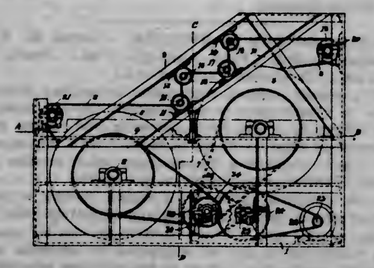
1,578,224. COTTON HARVESTER. GEORGE S. WEST, Baltimore, Md. Filed Apr. 23, 1921. Serial No. 464,003. 27 Claims. (Cl. 56—14.)

12. A cotton picking mechanism embodying spindles, means to rotate them to wind cotton thereon from the bolls, means to rotate them reversely and means to simultaneously rotate a brush in contact with the spindles, said brush comprising interspersed wire bristles and natural bristles, substantially as set forth.



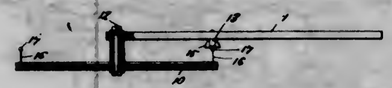
21. In a cotton harvester, a wagon having a closed body, a pair of pipes extending approximately from end to end of the wagon above said body, flexible suction tubes connected to one of said pipes at intervals along its length, mechanical cotton picking devices attached to said flexible tubes to feed cotton thereto, spaced brackets pivoted along the side of the wagon body, flexible means

on said brackets for supporting said mechanical picking devices, branches at intervals along the other pipe leading into said body, valves for closing said branches, a



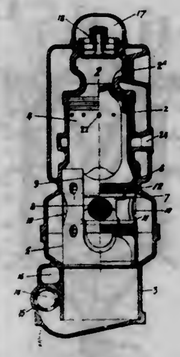
fan casing communicating with both of said pipes, and a fan in the casing operative to draw air through the one pipe and force it through the other into the wagon body, substantially as set forth.

1,578,225. GAME. OLGA H. WHITE, New York, N. Y. Filed June 3, 1924. Serial No. 717,470. 7 Claims. (Cl. 35—12.)



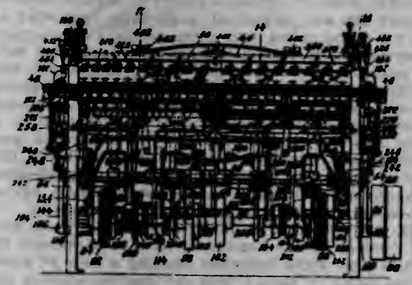
1. An educational game comprising a plurality of coordinated blocks bearing indicia, together arranged to be built into a pyramid, said blocks each having a square base at least one of said blocks being rectangular and arranged to form a body portion of the structure and adapted by its indicia to represent a fundamental principle to be taught by the blocks, side blocks arranged to fit against the sides of said rectangular block or blocks and having inclined surfaces to form the surface of the pyramid, and adapted by their indicia to represent expressions of the principle represented by the adjacent rectangular block, and corner blocks arranged to fit between adjacent sides of the side blocks to form the corners of the pyramid and adapted by their indicia to represent principles joining the expressions on said adjacent side blocks, and an apex block arranged to form the top of the structure and adapted by their indicia to represent all ultimate result of the principles represented by the other blocks.

1,578,226. MEANS FOR DISPLAYING STAIR COVERINGS. ERIC BRYAN WILLIAMSON, Bromley, England. Filed Apr. 10, 1925. Serial No. 22,229. 6 Claims. (Cl. 211—20.)



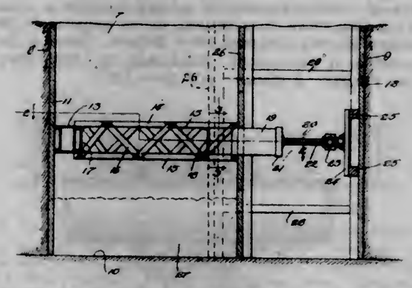
1. A stair covering displaying device comprising a track formed of fixed surfaces and a movable surface between said fixed surfaces and means adapted to draw a length of stair covering over said fixed and movable surfaces.

1,578,227. TOY. JAMES J. WOLSELEY, Bridgeport, Conn. Filed May 27, 1925. Serial No. 38,209. 2 Claims. (Cl. 272—85.)



1. A toy of the character described comprising a wheel, a handle pivotally secured to one side of the wheel axle, a bell secured to the inner side of the handle and in juxtaposition with the corresponding side of the wheel felly, a pair of spring members arranged upon the handle upon diametrically opposite sides of the bell, and a plurality of spring wires extending outwardly from the inner sides of the wheel felly and carrying balls upon their outer free ends and adapted for selective engagement with the spring members and bell respectively.

1,578,228. INTERNAL-COMBUSTION ENGINE. RALPH ALGERNON YEARSLEY, West Ealing, London, England. Filed June 2, 1924. Serial No. 717,323. 4 Claims. (Cl. 123—73.)

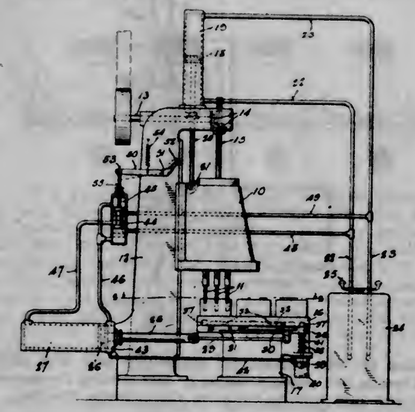


2. In internal combustion engines of the type specified; the combination with a one-piece structure comprising a coaxial power cylinder and larger diameter pump cylinder and a cylindrical one piece coaxial power and pump piston fitting therein and having its opposite ends closed; of a crank shaft, diametrically opposite bearings in the side wall of said pump cylinder to carry said crank shaft, said pump piston having diametrically opposite slots in its wall extending in the direction of the axis of said power and pump pistons to permit of the passage of said crank shaft and of the reciprocations of said pistons, said crank shaft having a crank within said cylindrical pump piston, two cross heads at a distance apart formed with and extending across the interior of said pump piston transversely of the axis of said crank shaft, opposed guiding surfaces on the inner faces of said cross heads, a slide block located between said cross heads and adapted to slide between said guides carried thereby, bearings in said slide block to receive the crank pin of said crank shaft, said pump piston having diametrically opposite openings in its wall at the ends of said cross heads to permit of the passage of said slide block in its transverse motions, and said pump cylinder having diametrically opposite internal enlargements at the opposite ends of said cross heads to permit the end portions of said slide block passing into said enlargements during the operation of the engine.

1,578,229. HEEL-BUILDING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 25, 1918, Serial No. 263,994. Renewed May 28, 1923. 66 Claims. (Cl. 12—50.)

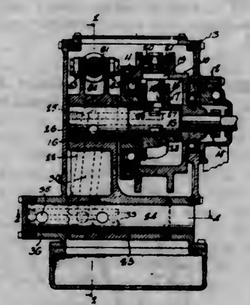
1. A heel-building machine having, in combination, means for feeding strips of sheet material, a reciprocable straight knife for cutting a series of polygonal lifts therefrom, means for superposing said lifts in a pile, and means for securing said lifts together to form a heel-block.

1,578,230. TRENCH SUPPORTING. JOHN P. CARROLL, Chicago, Ill. Filed June 8, 1925. Serial No. 35,712. 7 Claims. (Cl. 25—131.5.)



1. The method of constructing a trench and wall therein, which consists in digging the trench and supporting the sides by means of suitable sheathing and two-part shoring members, then making a form which will enclose one part of each shoring members, then filling the form with concrete, thereby embedding such parts of the shoring members therein, and finally removing the other portions of the shoring members and the removable portions of the wall supports and forms.

1,578,231. REEL. LOUIS GOMEZ DUARS and ANTONIO DE MENDOZA, Mexico, Mexico, assignors to Camex Displays Corporation, New York, N. Y., a Corporation of Nevada. Filed Oct. 6, 1925. Serial No. 60,924. 4 Claims. (Cl. 242—74.)

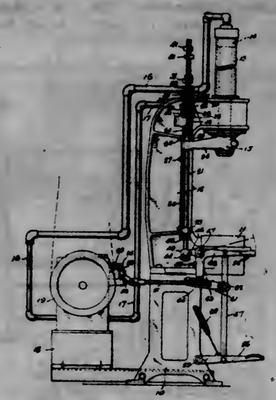


1. A reel having hub members adapted to telescope together and to rotate relatively to one another and to receive and grip a strip or flexible element between them, said members having portions adapted to interengage by relative rotation of said members to prevent longitudinal separation of said members until they are rotated reversely relatively to another.

1,578,232. HYDRAULIC INDEXING MECHANISM. WALTER FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 11, 1923. Serial No. 644,713. 8 Claims. (Cl. 77—64.)

1. In a machine of the character described having a tool carrier and work support the combination of hydraulically actuated feed mechanism for effecting relative reciprocation between said carrier and support, a variable displacement pump for driving said mechanism and for controlling the speed of operation thereof, indexing mechanism, and fluid connections between said pump and said indexing mechanism for effecting an intermittent operation thereof in timed relation with respect to the operation of said feed mechanism.

1,578,233. HYDRAULIC PRESS. WALTER FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 24, 1924. Serial No. 701,356. 19 Claims. (Cl. 138—17.)

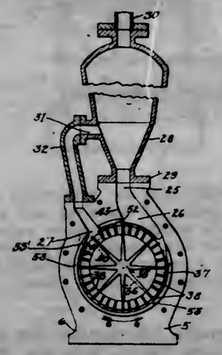


1. In a hydraulic press the combination of a plunger, and hydraulic means for operating said plunger, comprising a variable displacement pump automatically operable to advance said plunger at a predetermined rate and to maintain a predetermined pressure between said plunger and work against leakage losses.

1,578,234. CONTROL MECHANISM FOR HYDRAULIC DRIVES. WALTER FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 9, 1924. Serial No. 712,157. 14 Claims. (Cl. 138—17.)

1. In a machine of the character described the combination of a reciprocating member, driving means there-

for, means automatically operable in one direction to vary the rate of movement of said member, means con-



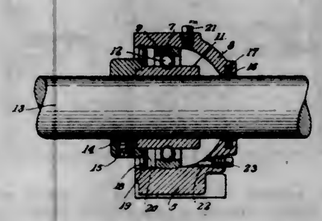
trolled by said member for controlling said rate varying means, and means actuated by said member for operating said rate varying means in the opposite direction.

1,578,235. GILSONITIC PRODUCT AND ITS MANUFACTURE. CHARLES N. FORREST, Rahway, and HAROLD P. HAYDEN, Raritan Township, Middlesex County, N. J., and ORIN R. DOUTHETT, Beaver Falls, Pa., assignors to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Aug. 28, 1919. Serial No. 320,514. 22 Claims. (Cl. 260—159.)

5. The process of preparing sulphonation reaction products from gilsonitic material which comprises subjecting the gilsonitic material to sulphuric purification, thereby removing organic bases, olefines, or other impurities; and subjecting the thus purified material to the action of a sulphonating reagent under sulphonating conditions.

15. A gilsonitic sulphonic material; serviceable as an agent for the hydrolysis of glycerides; detergent; and characterized by a radical whose alkali salts and free acid are water-soluble, but whose alkaline earth salts are water-insoluble.

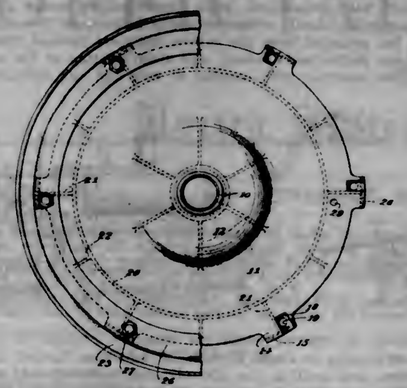
1,578,236. CENTRIFUGAL PUMP. HARRY E. LA BOUR, Chicago, Ill. Filed Mar. 4, 1922. Serial No. 541,030. 41 Claims. (Cl. 103—103.)



3. The method of priming a centrifugal pump containing gas, which comprises rotating the impeller and simultaneously introducing liquid peripherally into the impeller at a point posterior to the normal discharge opening.

18. A pump casing, comprising two halves divided along a vertical plane, one half having an opening for permitting the entry of an impeller shaft, the other half having an opening in the central portion thereof, serving as an inlet for liquid, a cylindrical channel or race-way within the casing, a runner or impeller mounted in said race-way or channel, a discharge connection at the top of the casing, said casing having a substantially tangential outlet connection formed partly in each half, an auxiliary inlet connection formed partly in each half of the pump casing, said inlet connection formed partly in each half of the pump casing, said inlet connection opening substantially radially into said channel, at a point adjacent the discharge or outlet connection, posterior to said discharge or outlet connection and a discharge connection having an enlargement extending upwardly above the pump, said outlet connection having communication with the auxiliary inlet connection.

31. The method of operating a centrifugal pump having a casing and an impeller to cause it to evacuate its suction pipe, which comprises trapping a body of water in the casing in contact with the impeller, whirling the impeller to mix the liquid with the air in the casing, drawing the mixture out of the casing of the pump into a closed separating chamber, developing pressure in said chamber, separating the liquid from the air in said chamber, returning the liquid peripherally into the casing, and stopping the flow of liquid from the separating chamber when the air is substantially exhausted, by the increasing peripheral pressure of the solid liquid.



1,578,237. SELF-ALIGNING SHAFT BEARING. HARRY R. REYNOLDS, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed May 13, 1924. Serial No. 712,931. 2 Claims. (Cl. 308—189.)

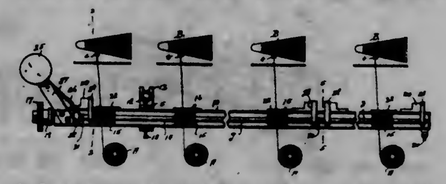
1. In a pillow block for shafts, a one piece main body having an integral spherical seat with an entrance notch at one side, an outer bearing ring having its outer surface formed to fit said seat, an inner bearing ring, antifriction bearing members between said bearing rings, said spherical seat and correspondingly-shaped outer ring serving to permit orientation to compensate for misalignment of a shaft passing through said inner ring, said main body being extended at one side so as to permit the angular assembly of said outer bearing ring with said sperical seat and to provide an integral closure to loosely surround a shaft extending through the inner ring, separate means for closing said housing at the opposite side, and means extending outside of the last mentioned closing means to lock the inner bearing ring on a shaft.

1,578,238. CAST-METAL VEHICLE WHEEL. THOMAS RICE DAVIS, Fairfield, Conn., assignor to The Eastern Malleable Iron Co., Bridgeport, Conn., a Corporation of Connecticut. Filed May 29, 1924. Serial No. 16,585. 11 Claims. (Cl. 301—65.)

8. In a vehicle wheel, a casting including an integral hub and web structure including a circular web portion, a cylindrical brake drum integrally formed upon the periphery of said circular web portion, said web structure including spaced radial extension portions formed integrally with said circular web portions and extending radially outward from said brake drum, rim seats formed

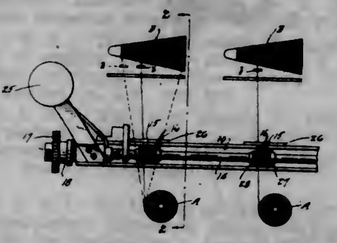
integrally upon the ends of said extension portions, and a demountable rim engaged upon said seats and means adapted to secure said rim to said seats.

1,578,239. CAST-METAL VEHICLE WHEEL. THOMAS RICE DAVIS, Fairfield, Conn., assignor to The Eastern Malleable Iron Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 25, 1925. Serial No. 11,448. 4 Claims. (Cl. 301—65.)



1. In a vehicle wheel, a casting including an integral hub and circular web portion, an annular rim seat on said web portion, spaced rim seats formed integrally with said web portion, radial reinforcing ribs integrally formed between said spaced rim seats and said web portion, a demountable rim engaging said annular seat at its forward portion and said spaced rim seats at their rearward portion, and means adapted to secure said rim to said seats.

1,578,240. SMALL COIN SAVINGS BANK. HARRY S. GOODMAN, Chicago, Ill., assignor to Bankers Thrift Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 7, 1923. Serial No. 623,320. 7 Claims. (Cl. 232—6.)

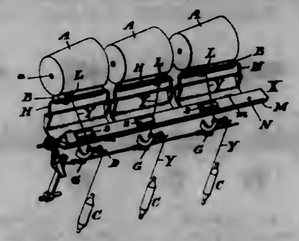


1. A coin bank made in the form of a house or cottage having a base member provided with an upstanding rim and horizontally extending ledges within said rim and upright members resting on said ledges and having inwardly extending flanges, said base member ledges being provided with flexible members adapted to be bent over said flanges and thereby hold the upright members in position.

1,578,241. YARN-TREATING MECHANISM FOR WINDING MACHINES. JAMES A. JOHNSON, Danville, Va., assignor to Danville Conditioning Machine Company, Danville, Va., a Corporation of Virginia. Filed Aug. 6, 1921. Serial No. 490,253. 8 Claims. (Cl. 28—59.)

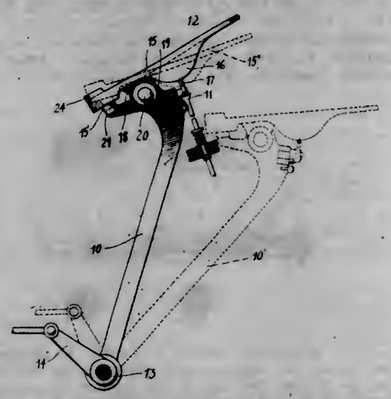
1. In a yarn treating tank, a roller mounted therein, the tank being adapted to hold water and the roller being partially submerged in the tank, means for guiding yarn over and in contact with the roller, and means for rotating the roller, the roller being formed with a series of longitudinally extending liquid holding recesses, each of these recesses having a radially extending wall and a wall inclined from the inner end of the radial wall of the outer face of the roller and in the direction of rotation of the roller.

1,578,242. YARN-TREATING MECHANISM FOR WINDING MACHINES. JAMES A. JOHNSON, Danville, Va., assignor to Danville Conditioning Machine Company, Danville, Va., a Corporation of Virginia. Filed Feb. 2, 1922. Serial No. 533,614. 3 Claims. (Cl. 28—59.)



1. Yarn moistening means including a moistening roller, means for rotating the roller in one direction, means for causing the yarn to bear against the periphery of said roller, means for causing the traverse of the yarn longitudinally of the roller, and means for moistening the roller, the roller having elongated conical ends tapering toward the axial center of the roller, the distance between the bases of said conical ends being less than the traverse of the yarn, the total length of the roller being greater than the length of travel of the yarn whereby said yarn in its traverse shall move onto said tapering ends of the rollers, the taper of the roller at its ends being such as to automatically guide the yarn back upon the body of the roller inward of the tapering ends without additional assistance.

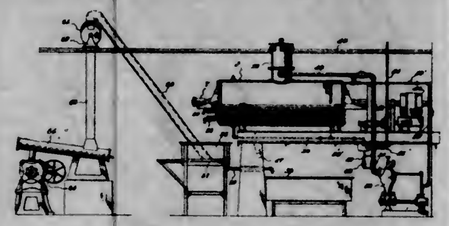
1,578,243. CONE-WINDING MACHINE. ADOLPH A. JOHNSON, Hanes, N. C., assignor, by mesne assignments, to Danville Conditioning Machine Company, Inc., Danville, Va., a Corporation of Virginia. Filed Sept. 27, 1922. Serial No. 590,977. 11 Claims. (Cl. 28—59.)



1. A cone winding machine comprising a plurality of cones mounted to revolve about horisontal axes, a plurality of yarn carrying bobbins, means for guiding the yarn from the bobbins to the cones, a horisontally arranged water containing trough interposed between the bobbins and the cones, a horizontally arranged shaft associated with the trough, means for slowly rotating the shaft, collars fixed to the shaft which are of larger diameter than the shaft, are partly submerged in the

liquid and are engaged by the yarn as it passes from the bobbins to the cones, means for causing the yarn to move sidewise relatively to the collars substantially from end

to end thereof, to thus remove lint therefrom while the yarn is being wound and means for holding the yarn in contact with the collars, which when the yarn breaks arrests the moistening operation.



1,578,244. CONTROL MECHANISM FOR AUTOMOBILES. VINCENT HILLFORD, Newark, N. J. Filed Oct. 16, 1924. Serial No. 744,078. 2 Claims. (Cl. 74—81.)

1. In a motor vehicle, in combination, means to actuate the usual brake mechanism of the vehicle, means to control the fuel supply of the vehicle, a pivoted treadle on said first mentioned means whereby a direct pressure by the foot of the operator will cause a braking effect on the vehicle, a normally inoperative connection between said treadle and said fuel controlling means whereby a forward tilting of the treadle by the toes of the operator will cause said means to increase the fuel supply to the vehicle, said connection comprising a transverse lever pivoted on said treadle over said fuel controlling means and a spring to normally keep said lever out of engagement with said fuel controlling means.

1,578,245. PROCESS OF RENDERING FAT AND OIL CONTAINING SOLIDS OF ANIMAL ORIGIN. WILLIAM LAABS, Milwaukee, Wis., assignor to The Allbright-Nell Company, Chicago, Ill. Filed June 22, 1925. Serial No. 38,809. 6 Claims. (Cl. 87—13.)

4. The process of rendering fat containing solids of animal origin which comprises agitating and heating the materials to be rendered at temperatures and pressures not sufficiently high to cause substantial disintegration of the materials and separation of fats and oils therefrom before the moisture content thereof is reduced to 60 percent; then agitating and heating the materials above 240° Fahrenheit while disintegrating steam pressures substantially above atmospheric pressure developed in the material from the natural moisture content thereof are maintained thereon, and disintegration of the materials together with melting of fats and oils contained

therein is effected while the moisture content of the solid residue is above 17 percent; and then further agitating and heating the disintegrated materials at subatmospheric pressures and temperatures below 240° Fahrenheit and removing the moisture therefrom until the moisture content of the solid residue is substantially below 15 percent, and then expressing the solid residue to separate residual fats and oils therefrom.

1,578,246. RADIOCABINET. ALFRED H. HAAG, Baltimore, Md., assignor of forty one-hundredths to Emmor Roberts, Moorestown, N. J., and of twenty one-hundredths to E. Hayward Fairbanks, Merchantville, N. J. Filed Oct. 21, 1925. Serial No. 63,814. 5 Claims. (Cl. 45—52.)

1. In a radio cabinet of the character stated, a horizontally disposed radio supporting shelf extending rearwardly from the cabinet front, a horizontal loud speaker shelf located at a lower level than said first mentioned shelf and extending forwardly so that the rear end of said radio shelf overhangs the front of said loud speaker shelf, and a vertically disposed grill positioned in the upper front portion of the cabinet about on a line with the middle of said radio supporting shelf, whereby when the radio cabinet and loud speaker are assembled, the rear end of the radio cabinet overhangs the base of the loud speaker and the front exit end of the loud speaker overhangs the top of the radio cabinet.

Patents Nos. 1,578,247 to 1,579,198.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 344—No. 5. TUESDAY, MARCH 30, 1926. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Changes in Personnel.

The following changes took place on March 6, 1926:
Associate Examiner Archibald Lindsey promoted to Principal Examiner in charge of Division 2.
Associate Examiner Orren F. Hunter promoted to Principal Examiner in charge of Division 10.
Associate Examiner Maurice E. Weaver promoted to Principal Examiner in charge of Division 38.

Notice.

Classification Bulletin No. 55, containing changes in classification from July 1, 1925, to December 31, 1925, is now on sale for 10 cents per copy at the Patent Office.

ADJUDICATED PATENTS.

(C. C. A. Ohio) The De Vilbiss patent, No. 839,736, for weighing scale, claims 1–4 *Held* invalid. *Toledo Scale Co.* v. *Computing Scale Co.*, 9 F. (2d) 823.

(C. C. A. Ind.) The Dalen patent, No. 904,183, for a filling mass for receivers for storing explosive gases, *Held* invalid. *American Gas Accumulator Co.* v. *Prest-O-Lite Co.*, 9 F. (2d) 784.

(C. C. A. Wis.) The Ferris patent, No. 988,561, for animal stall, claims 1 and 4 *Held* not infringed. *Helm, Ferris & Co.* v. *Elbert*, 9 F. (2d) 922.

(C. C. A. Ind.) The Dalen patent, No. 1,140,124, for storing mass for acetylene gas, *Held* not infringed. *American Gas Accumulator Co.* v. *Prest-O-Lite Co.*, 9 F. (2d) 784.

(C. C. A. Mich.) The Andrews patent, No. 1,142,223, for irrigating plant, claims 10 and 11 *Held* invalid. *Skinner Irrigation Co.* v. *March Automatic Irrigation Company*, 9 F. (2d) 751.

(D. C. N. Y.) The Clulee patent, No. 1,219,254, for art of making eyeglass rims, claim 8 *Held* valid and infringed. *American Optical Co.* v. *Sharon Optical Co.*, 9 F. (2d) 932.

(C. C. A. Ill.) The Brush patent, No. 1,265,735, for hot plate to heat portion of inlet manifold of internal-combustion engine, claim 8 *Held* not infringed. *Brush* v. *Lexington-Chicago Co.*, 9 F. (2d) 781.

(C. C. A. Ill.) The De Vry patent, No. 1,287,576, for motion-picture projectors, claims 1–4 *Held* invalid. *De Vry Corporation* v. *Acme Motion Picture Projector Co.*, 9 F. (2d) 921.

(C. C. A. Ill.) The De Vry patent, No. 1,308,542, for motion-picture projectors, claims 1–8 *Held* invalid. *De Vry Corporation* v. *Acme Motion Picture Projector Co.*, 9 F. (2d) 921.

(C. C. A. Ill.) The De Vry patent, No. 1,308,543, for motion-picture projectors, claims 1–10, 17, and 18 *Held* invalid. *De Vry Corporation* v. *Acme Motion Picture Projector Co.*, 9 F. (2d) 921.

(D. C. N. Y.) The Clulee patent, No. 1,366,768, for construction for eyeglasses, claims 1, 2, and 3 *Held* valid and infringed. *American Optical Co.* v. *Sharon Optical Co.*, 9 F. (2d) 932.

(D. C. N. Y.) The Schumacher and Boutelle patent, No. 1,384,862, for bridge or mounting for spectacle frames, *Held* invalid. *American Optical Co.* v. *Sharon Optical Co.*, 9 F. (2d) 932.

(C. C. A. Wis.) The Nims and Nims patent, No. 1,459,160, for water circulator for gas engines, claims 1 and 4 *Held* not infringed. *Cramer Mfg. Co.* v. *Nims Pump Co.*, 9 F. (2d) 914.

(D. C. N. Y.) The Gerrard and Wright patent, No. 1,466,334, for machine for cutting and swaging bale ties, claims 1, 2, 3, 5, and 6 *Held* invalid, and, if valid, not infringed. *Gerrard* v. *Cary*, 9 F. (2d) 949.

(C. C. A. N. Y.) The Gerrard and Wright patent, No. 1,466,334, for machine for cutting and swaging bale ties, claims 1, 2, 3, 5, and 6 *Held* invalid. *Gerrard* v. *Cary*, 9 F. (2d) 957.

Condition of Applications Under Examination at Close of Business March 19, 1926.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 41,196; Trade-Mark Division, 1,983. Oldest new case, Aug. 7, 1925; oldest amended, Sept. 16, 1925. The dates given are 1925 except where † indicates 1926.) Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
112	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plant Husbandry; Plows; Planting; Scattering Unloaders.	†Jan. 2	†Jan. 4	570
126	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tobacco	Nov. 30	Nov. 12	592
231	3. RICH, WM. J., Electric Heating; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Nov. 28	Dec. 10	991
284	4. MERRITT, A. D., Conveyors, Chutes, Slides, Guides, and Ways; Conveyors, Fluid Current; Conveyors, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Material or Article Handling; Pushing and Pulling Implements; Traversing Hoists.	†Jan. 2	†Jan. 7	529
108*	5. MACNAB, J. F., Harvesters; Jewelry; Music; Acoustics; Sound Recording and Reproducing; Tying Cards or Strands.	Oct. 15	Oct. 16	859
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemistry; Chemistry—Carbon Compounds; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Substance Preparation; Hides, Skins and Leather; Sugar and Starch; Concentrating Evaporators.	Dec. 11	Nov. 7	1,116
108	7. JARBOE, C. O., Amusement and Exercising Devices; Toys; Optics; Photography	†Jan. 2	†Jan. 2	802
133	8. HENRY, C. C., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture	†Jan. 1	†Jan. 3	985
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	Dec. 7	Oct. 28	532
118	10. HUNTER, O. F. (Acting), Motor Vehicles; Land Vehicles—Animal Draft Appliances, Bodies and Tops, Dumpers.	Dec. 5	Dec. 5	965
149*	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus; Cutting and Punching Sheets and Bars; Drives, Headed, and Screw-Threaded Fastenings.	†Jan. 2	Dec. 30	710
200	12. PIERCE, F. P., Machine Elements	Dec. 21	Dec. 21	623
154*	13. CLIFT, J. W., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning.	Dec. 30	†Jan. 20	583
102*	14. BRUMBAUGH, N. J., Compound Tools; Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working; Metal Working, Assembling, and Blanks and Processes.	Dec. 1	Dec. 10	928
220	15. REDROW, W. L., Glass; Paper Making; Plastic Block and Earthenware Apparatus; Plastics	†Jan. 2	†Jan. 7	578
242*	16. SPENCER, C. J., Batteries; Resistances and Rheostats; Telegraphy; Telephony	Dec. 5	Dec. 7	878
307	17. RAFTER, G. S., Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet or Web Feeding or Delivering; Type Setting.	Dec. 5	Dec. 2	416
229	18. PORTER, M. E., Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices	Nov. 17	Nov. 17	806
236	19. GLASCOCK, E. S., Furnaces; Heating Systems; Liquid and Gaseous Fuel Burners; Stoves and Furnaces.	Nov. 28	†Jan. 15	511
179	20. GROVE, S. D., Miscellaneous Hardware; Closure Fasteners; Locks and Latches; Safes; Undertaking	†Jan. 4	†Jan. 2	770
212	21. THURBER, W. L., Winding and Reeling; Textiles; Cloth Finishing	Dec. 24	Dec. 20	479
244*	22. COLWELL, J. H., Aeronautics; Amusement Devices, Games; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive-Charge Making; Air Guns, Catapults, and Targets; Boats and Buoys; Ships; Marine Propulsion.	Dec. 21	†Jan. 2	560
217	23. GROESBECK, W. D., Coin Handling; Recorders; Registers; Horology; Time-Controlling Mechanism.	Nov. 3	Nov. 20	262
147*	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Dec. 24	†Jan. 13	475
314	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal-Bowl Separators; Cutlery; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Gas Separation.	†Jan. 4	†Jan. 2	831
289*	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime-Mover Dynamo Plants	Sept. 29	Oct. 8	764
214	27. ANDERSON, L. S., Brush, Broom, and Mop Making; Brushing, Scrubbing, and General Cleaning; Laundry; Washing Apparatus.	†Jan. 20	†Jan. 11	518
235	28. BENSON, A. R., Internal-Combustion Engines	†Jan. 18	†Jan. 19	719
160*	29. MORRIS, B. N., Abrading; Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool-Handle Fastenings; Wheelwright Machines; Wood Sawing; Wood Turning; Woodworking; Woodworking Tools.	Aug. 7	Sept. 16	1,120
248	30. SULLIVAN, M. B., Automatic Temperature and Humidity Regulation; Illuminating Burners; Illumination; Typewriting Machines; Thermostats and Humidostats.	†Jan. 2	†Jan. 2	773
312	31. HOLMES, W. N., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Gas, Heating and Illuminating; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue.	†Jan. 23	†Jan. 21	742
249	32. BARTHOLOMEW, J. A., Gas and Liquid Contact Apparatus; Heat Exchange	Dec. 1	Dec. 5	609
152	33. WYMAN, W. I., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs; Wooden Buildings.	†Jan. 14	†Jan. 27	689
304	34. SIMPSON, G. R., Electricity-Transmission to Vehicles; Pneumatic Dispatch; Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Snow Service; Track Sanders; Vehicle Fenders.	Oct. 16	Oct. 17	677
116*	35. REYNOLDS, E. C., Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet.	†Jan. 14	†Jan. 27	539
105	36. MORTON, G. L., Automatic Weighers; Geometrical and Measuring Instruments; Force Measuring	Dec. 12	Dec. 24	1,031
226*	37. TAYLOR, E. C., Electricity, Circuit Makers and Breakers	Dec. 12	Dec. 17	937
145	38. IDE, G. B., Animal Husbandry; Earth Boring; Fishing, Trapping, and Vermin Destroying; Mining, Quarrying, and Ice Harvesting; Stoneworking; Wells.	Oct. 27	Oct. 30	822
220	39. COWLES, A. W., Fluid-Pressure Regulators; Multiple Valves; Valves; Water Distribution	Dec. 30	†Jan. 16	449
220	40. OBERLIN, J. J., Baggage; Bottles and Jars; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Dec. 19	Dec. 19	1,089
126	41. BROWN, J. L., Land Vehicles, Wheels and Axles; Resilient Tires and Wheels; Wheel Substitutes	Dec. 26	Dec. 30	423
223*	42. CUTTING, H. O., Electrical Conduits and Housings; Electric Signaling	Dec. 11	Dec. 8	1,033
134*	43. HOPKINS, F. M., Baths, Closets, Sinks, and Spittoons; Sewerage; Electricity, Medical and Surgical; Medicines; Surgery; Dentistry; Artificial Body Members; Railway Draft Appliances.	Dec. 8	Dec. 8	837
263	44. SHAFFER, C. H., Bread, Pastry, and Confection Making; Dispensing; Dispensing Beverages; Filling and Closing Portable Receptacles; Refrigeration.	Oct. 1	Sept. 25	908
270	45. GILES, A. H., Pulleys and Shafting; Lubrication; Machine Elements; Bearings and Guides	†Jan. 4	Dec. 28	547
283	46. WOLCOTT, C. L., Fluid Sprinkling, Spraying, and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers.	Dec. 3	Dec. 3	657
264	47. BARKER, H., Brakes; Clutches and Power Stop Control; Elevators; Fluid-Pressure Brake and Analogous Systems; Motors; Spring Devices	Nov. 27	Nov. 30	1,103
219*	48. ROEPKE, O. B., Electricity, Conductors; Electricity, General Applications	Oct. 10	Oct. 17	1,657
239	49. EDINBURG, F. P., Check-Controlled Apparatus; Domestic Cooking Vessels; Fuel and Igniting Devices; Pneumatics; Velocipedes; Driers; Liquid Separation or Purification	†Jan. 2	†Jan. 2	566
222	50. BLAKE, C. L., Plastic and Liquid Coating Compositions; Coating; Laminated Fabrics	Nov. 16	Nov. 19	1,200

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

THE DURO PUMP & MANUFACTURING COMPANY *v.* CALIFORNIA CEDAR PRODUCTS COMPANY.

Decided July 16, 1924.

(Reversed by the Court of Appeals of the District of Columbia. See p. 1058 post.)

Opposition No. 4,531.

ON APPEAL.

TRADE-MARK FOR WALL BOARD.

Application of the California Cedar Products Company filed April 1, 1922, Serial No. 161,620, published October 10, 1922.

Mr. F. L. Walker for The Duro Pump & Manufacturing Company.

Mr. Percy S. Webster and *Mr. E. J. Clarkson* for the California Cedar Products Company.

KINNAN, *First Assistant Commissioner:*

This is an appeal by The Duro Pump & Manufacturing Company from the decision of the Examiner of Interferences dismissing its opposition to the registration of a trade-mark for wall board by the California Cedar Products Company.

The mark sought to be registered consists of the word "DurO," the letters of which are associated with a rectangular piece of wall board, two of the corners of the rectangle extending one through the "D" and the other through the "O" and the letters "u" and "r" being of smaller size than the "D" and the "O" and placed over the rectangular outline, the representation of the piece of wall board being disclaimed except in connection with the mark as shown.

The opposition is based on two grounds, first, that The Duro Pump & Manufacturing Company has long been engaged in the manufacture and sale of residence water systems, consisting of pneumatic pressure systems for pumping, storing, and supplying water and other fluids, and parts and appurtenances thereof, including pumps, fluid-pressure motors, explosive engines, and parts thereof, electric motors, etc., to which they have applied the trade-mark "Duro", and that the goods of the respective parties are such that the contemporaneous use of the two marks thereon would be likely to cause confusion in the mind of the public; and, second, that the mark sought to be registered is substantially the corporate name of the opposer.

The Examiner of Interferences held that the goods were of entirely different descriptive properties and that the mark sought to be registered was not merely the corporate name of the opposer.

In my opinion the Examiner of Interferences properly held that the goods are not of the same descriptive properties. They are for entirely different purposes; they are not usually handled by the same class of dealers; the goods of the applicant are not such as would be made by opposer in the normal expansion of its business. No reason is seen, therefore, for believing that any one familiar with the products of the opposer would, on seeing applicant's mark on wall board, conclude that the wall board was made by the opposer.

No decision is cited, and I am aware of none, which holds that goods so different as those of the two parties to this proceeding can be regarded as goods of the same descriptive properties. In all the cases where such a holding has been made there has been some connection between the goods or their use or there has been some relation to lead one to suppose that the public would confuse either the goods or their origin.

In the case of *Aunt Jemima Mills Co.* v. *Rigney & Co.*, 247 Fed. Rep. 407, where the court enjoined the use of a mark on sirup which had been previously used on pancake flour, the court said:

> • • • But we think that goods, though different, may be so related as to fall within the mischief which equity should prevent. Sirup and flour are both food products, *and food products commonly used together.* Obviously the public, or a large part of it seeing this trade-mark on a sirup, would conclude that it was made by the complainant. (Italics mine.)

It is to be noted that the court pointed out that sirup and flour are commonly used together, meaning, it is understood, that sirup is commonly used on pancakes.

The same thought of some connection between the goods or the uses to which they are put will be found to run through all the decisions.

In the case of *Johnson Educator Food Company* v. *Sylvanus Smith & Co., Inc.*, 175 O. G. 268; 37 App. D. C. 107, the Court of Appeals of the District of Columbia held that crackers are not goods of the same descriptive properties as canned salmon; and in the case of *The Muralo Co.* v. *National Lead Co.*, 165 O. G. 475; 36 App. D. C. 541, held that calcimine and white lead are not goods of the same descriptive properties.

Opposer's corporate name is The Duro Pump & Manufacturing Co. The mark sought to be registered is not merely the word "Duro," but that word arranged in a peculiar and particular way. The word "Duro" as appearing in applicant's mark being, therefore, not the entire corporate name of the opposer and being written in a peculiar way, it is not deemed that it can be held to be "merely" the corporate name of the opposer. The case is thought to be clearly distinguishable from cases such as *Simplex Electric Heating Co.* v. *The Ramey Co.*, 243 O. G. 793; 46 App. D. C. 400, and the recent decision in *National Cigar Stands Co.* v. *Frishmuth Bros. & Co., Inc.*, 297 Fed. Rep. 348; 324 O. G. 675; 54 App. D. C. 275.

In the latter case the mark sought to be registered was the word "Nationals" written on a slant with a paraph extending from the letter "s" under

the other letters, whereas the corporate name of the opposer included as a prominent part thereof the word "National." The mere writing of a paraph under the letters was not regarded by the court as being in any way an identifying or distinguishing manner of writing the word. In the instant case the letters "DurO" are somewhat suggestive of durability and it is thought the public would be more likely to note this suggestion than that the entire mark could be twisted into a part of the corporate name of the opposer. It should be noted, further, that the word "Duro" has been repeatedly registered as a trade-mark for various classes of goods long prior to opposer's date of incorporation.

The decision of the Examiner of Interferences is affirmed.

Court of Appeals of the District of Columbia.

THE DURO PUMP & MANUFACTURING COMPANY v. CALIFORNIA CEDAR PRODUCTS COMPANY.

No. 1,764. Decided February 1, 1926.

1. TRADE-MARKS — CORPORATE NAMES — DESCRIPTIVE PROPERTIES.

It is apparent from the language used in *American Steel Foundries* v. *Robertson, Commissioner of Patents*, and *Simplex Electric Heating Co.*, 342 O. G. 711, that the Supreme Court did not intend to rule that identity of the descriptive properties of the goods of two parties was controlling where one had taken for its mark the distinguishing part of the corporate name of the other.

2. SAME—SAME—SAME—CONFUSION OF IDENTITY.

Where under the facts before the court The Duro Pump & Manufacturing Company was the originator of the mark "Duro" and the word had become so identified with that particular corporation when the California Cedar Products Company adopted the word as its trade-mark that whenever used it designated to the mind The Duro Co., *Held* that concurrent use would tend to confusion of the identity of The Duro Co., the products of both companies being used in residences, although their descriptive properties were technically different.

3. APPEAL TO COURT OF APPEALS, DISTRICT OF COLUMBIA.—MATTERS ALLEGED IN THE BRIEF BUT NOT MENTIONED IN THE RECORD.

An attempt to supplement the record by reference in appellee's brief to certain alleged registrations in the Patent Office not mentioned in the record can not avail on appeal from the Commissioner of Patents to the Court of Appeals of the District of Columbia.

Appeal from Patent Office. Reversed.

Mr. H. A. Toulmin, Mr. H. A. Toulmin, jr., and *Mr. W. L. Symons* for The Duro Pump & Mfg. Co.

Mr. C. H. Riordon for California Cedar Products Co.

(*For Commissioner's decision, see p. 1057 ante.*)

Before MARTIN, Chief Justice, ROBB, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

ROBB, *J.*:

Appeal from a decision of the Patent Office in a trade-mark proceeding brought by the Duro Pump & Manufacturing Co., hereinafter called the Duro Co., and opposing the registration by the California Cedar Products Co. of the word "Duro" as a trade-mark.

The Patent Office tribunals ruled that the goods of the respective parties possessed different descriptive properties and that the word "Duro", having been written by applicant in such a peculiar way as not to constitute "merely" the distinguishing word in the corporate name of the opposer, was registrable.

The predecessor of the Duro Co., or the Burnett-Larsh Mfg. Co., early in January of 1916 adopted "Duro" as its trade-mark and extensively advertised the same. Its business was the manufacture and sale of pneumatic pressure systems for pumping, storing and supplying water to residences, and included pumps, fluid-pressure motors, explosive engines and necessary electrical apparatus. This business soon attained large proportions and the evidence showed that the mark came to represent and identify the product and the company. For this reason, the Duro Co. was incorporated in 1921 and took over the business, goodwill and trade-mark of the old company. At that time the volume of business amounted to about $2,000,000 per year. Under the facts before us, the Duro Co. was the originator of the mark "Duro".

The California Cedar Products Co. alleges in its applications for registration that it adopted its mark in 1922, "for wall-board in Class 12, Construction materials", which the company manufactures and sells in the same territory covered by the opposer. The president of the company testified that he "coined" the word "Duro" himself.

American Steel Foundries v. *Robertson, Commissioner of Patents*, and *Simplex Electric Heating Co.*, decided January 4, 1926 [342 O. G., 711], in the Supreme Court of the United States, involved the right of the first-named company to register the mark "Simplex," the goods of the two parties being of different descriptive properties. "The effect of assuming a corporate name," says the Court, "by a corporation under the law of its creation is to exclusively appropriate that name. It is an element of the corporation's existence," and that in some degree at least the natural and necessary consequence of a wrongful appropriation of that name is to injure the business and rights of the corporation by destroying or confusing its identity. The Court further said:

> Where the appropriation of the corporate name is complete, the rule of the statute, by its own terms, is absolute and the proposed mark must be denied registration without more. But where less than the whole name has been appropriated, the right of registration will turn upon whether it appears that such partial appropriation is of such character and extent that, under the facts of the particular case, it is calculated to deceive or confuse the public to the injury of the corporation to which the name belongs. The fact, for example, that the articles upon which the mark is used are not of the same description as those put out by the corporation, is entitled to weight, since the probability of such confusion and injury in that situation obviously is more remote than where the articles are of like kind. The cases, naturally, present varying degrees of difficulty for the application of the rule.

[1] It is apparent from the language already quoted that the Supreme Court did not intend to rule that identity of the descriptive properties of the goods of two parties was controlling where one had taken for its mark the distinguishing part of the corporate name of the other. This is made even plainer in subsequent language of the Court, as follows:

> There may be, of course, instances where a single word in the corporate name has become so identified with the particular corporation that whenever used it designates to the mind of the public that particular corporation. But here it is not shown that, standing alone, the word "Simplex" has that effect; that it is any more calculated to denote to the public the defendant corporation than any of the other corporations in the names of which it is likewise embodied; or, indeed, that it signifies the appropriation of some corporate name though incapable of exact identification.

[2] In the Simplex case, the Court observed that the word "Simplex" comprises the whole or a part of about 60 registrations by nearly as many parties upon many kinds of merchandise, that it formed part of the names of other corporations in the country, and hence did not identify any corporation in particular; that it merely was one of a large class of words which had been used for a great many years because of their suggestive meaning, including such words as Acme, Anchor, Champion, Eureka, Excelsior, Ideal, Jewel, Liberty, etc. In the present case, when the California Cedar Products Co. adopted the word "Duro" as its trade-mark, that word had "become so identified with the particular corporation" (the Duro Co.) that whenever used it designated to the mind "that particular corporation." While the descriptive properties of the products of the two companies are technically different, both are used in residences and, under the evidence, we are constrained to the view that their concurrent use would tend to confusion of the identity of the Duro Co. If the California Cedar Products Co. were permitted to use this mark, which has come to represent the Duro Co., and its product to the public, other companies likewise might use it, with resultant loss of identity of the Duro Co.

[3] Appellee's counsel refers in his brief to certain alleged registrations in the Patent Office not mentioned in the record. Obviously, this attempt to supplement the record can not avail here, where the case must be decided upon the record made below. What effect, if any, these alleged registrations would have had upon our decision, had they been of record, we need not and do not determine.

It results that the decision is reversed.

Reversed.

Supreme Court of the United States.

INDEPENDENT WIRELESS TELEGRAPH COMPANY v. RADIO CORPORATION OF AMERICA.

Decided March 1, 1926.

CERTIORARI—REHEARING—QUESTION RAISED FOR THE FIRST TIME IN PETITION.

Where a bill in equity filed by the Radio Corporation of America made the specific averment that it had the rights of an exclusive licensee, and both courts below found that it had the exclusive rights as sublicensee which it claimed, the Supreme Court refused to examine this question when raised for the first time on a petition for rehearing of the case after its opinion had been rendered on certiorari, holding that the Radio Corporation properly made the De Forest Company a cocomplainant; but the Court directed that the mandate include a provision that further proceedings should be without prejudice to the right of the Independent Wireless Company to raise the issue whether the Radio Corporation had the rights as an exclusive sublicensee which it averred in its bill.

Mr. Wm. H. Davis for Independent Wireless Telegraph Company.

Mr. John W. Davis for Radio Corporation of America.

Mr. Chief Justice TAFT delivered the opinion of the Court.

This is a petition for rehearing of a case in which the opinion was handed down January 11th last. [344 O. G. 3.] The case was a bill in equity in the District Court for the Southern District of New York, filed by the Radio Corporation to enjoin the Independent Wireless Company from infringing the rights of the Radio Company, which were averred in its bill to be those of an exclusive sublicensee of the patentee, the De Forest Radio Telegraph & Telephone Company, in respect of the use of certain radio apparatus for commercial communication between ships and shore for pay. The Radio Company made the De Forest Company a cocomplainant in the bill, reciting that it had asked the De Forest Company to become a cocomplainant, and that it had refused; that the De Forest Company was a resident of Delaware, was beyond the jurisdiction of the District Court for the Southern District of New York, and could not be served with process, and that under such circumstances it had the right to use the name of the De Forest Company as cocomplainant without its consent. A motion to dismiss the bill was granted by the district court for lack of the presence of the patentee as a party, and an appeal was taken from the decree of dismissal to the circuit court of appeals. The latter court reversed the decree of dismissal and remanded the case for further proceedings. Thereupon an application was made to this Court for certiorari, and the certiorari was issued. In the opinion already rendered, January 11th last, this Court held that the Radio Corporation properly made the De Forest Company a cocomplainant with it in the bill without its consent, and therefore that the action of the circuit court of appeals in reversing the decree of the district court dismissing the bill was right. The petition for rehearing on behalf of the Independent Wireless Company now filed, raises the question whether the Radio Corporation is an exclusive sublicensee of the patentee, the De Forest Company, under the contracts from which the Radio Company derives its rights, and which are exhibits to the bill. It is the first time that this question has been made in this Court. The bill which was dismissed makes the specific averment that the Radio Corporation did have the rights of an exclusive licensee. Both the district court and the circuit court of appeals found from the contracts as exhibited that the Radio Company had the exclusive rights as sublicensee which it claimed. The briefs for the Independent Wireless

Company did not raise any question on this point in this Court, nor was it mentioned in that company's petition for certiorari. Its whole argument therein was devoted to the issue whether, assuming that the Radio Company was an exclusive licensee, it could make the patentee company, the De Forest Company, a cocomplainant. As the district judge remarked in his opinion, the contracts out of which the Radio Company's alleged exclusive license arises are complicated, and this Court, in view of the decision of both the lower courts, holding such exclusive rights in the Radio Company as a licensee to exist, decided the case on the basis of those rights. In view of the course of the Independent Wireless Company in not making this point in its petition for certiorari, briefs or argument, we do not propose to examine this question now raised for the first time. Our writ of certiorari was granted solely because of the importance the question of patent practice decided in our opinion already announced. However, as the case must now be remanded to the district court for further proceedings, we have no wish by action of ours to preclude the defendant below from making the point unless it is prevented by his course in the courts below. We therefore direct the mandate to include a provision that the further proceedings to be taken shall be without prejudice, by reason of anything in the opinion or decree of this Court, to the right of the Independent Wireless Company to raise the issue, by answer or otherwise, whether the Radio Corporation has the rights as an exclusive sublicensee, which it avers in its bill. With this reservation, the petition for rehearing is denied.

Court of Appeals of the District of Columbia.

DE FOREST *v.* HARTLEY AND WHITE. WHITE *v.* DE FOREST AND HARTLEY.

Nos. 1,761 and 1,762. Decided January 4, 1926.

INTERFERENCE—REDUCTION TO PRACTICE—BY FELLOW EMPLOYEES OF COMMON ASSIGNEE—DILIGENCE.

Where Heising tested Hartley's invention and conceived an improvement while testing it, the tests constituting a reduction to practice of Hartley's invention, and Hartley and Heising were employees of a common assignee, working toward the same end, their diligence or lack of diligence enured to the benefit of or was chargeable against their employer and assignee.

APPEALS from Patent Office. Affirmed.

Mr. S. E. Darby, Mr. S. E. Darby, jr., Mr. C. M. Thomas, and *Mr. F. D. Thomas* for De Forest.

Mr. F. T. Woodward, Mr. G. W. Rich, and *Mr. J. W. Schmied* for Hartley.

Mr. A. D. Lunt, Mr. H. E. Dunham, and *Mr. Ira J. Adams* for White.

Before MARTIN, Chief Justice, ROBB, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

ROBB, *J.*:

Appeals from a decision of the Patent Office in an interference proceeding awarding priority to the party Hartley.

The invention relates to wireless signaling systems that involve the use of an audion or "electron discharge device" for producing continuous electrical waves of radiofrequency. The audion is provided with three electrodes, designated plate, grid, and filament. In these systems it was usual to apply modulating potentials of audio or speech frequencies to certain of the audion circuits to vary the amplitude of the radiofrequency waves to transmit intelligence. The improvement over the prior art essentially consists in applying in such systems the audiofrequency potentials to "the plate circuit" of the audion. Certain of the counts define the apparatus; others the method. Some include an antenna, while others specify merely the oscillation circuit. Counts 1, 5 and 8 are sufficiently illustrative and are here reproduced:

1. The combination in a wireless signalling system of an antenna, means comprising an electron discharge device having plate and grid circuits associated therewith for producing continuous electrical waves of radio frequency in said antenna, and means for supplying a potential which varies at audio frequencies to the plate circuit of said electron discharge device to vary the amplitude of the waves produced.

5. The method which consists in producing continuous electrical waves by means of an electron discharge device having grid and plate circuits associated therewith and varying the amplitude of the waves thus produced by directly applying a variable potential to the plate circuit of said device.

8. The combination of an oscillation circuit with means comprising an electron discharge device having plate and grid circuits associated therewith for producing continuous electrical waves of high frequency in said oscillation circuit, and means for supplying a potential which varies at audio frequencies to the plate circuit of said electron discharge device to vary the amplitude of the waves produced.

The parties White and Hartley have taken testimony, but De Forest has not. The Examiner of Interferences ruled that Hartley had established conception prior to any date available to White or De Forest, but he awarded priority to De Forest as to claims 1 to 11, inclusive, on the ground that Hartley was lacking in diligence. As to counts 12 and 13, the award went to White, on the ground that De Forest could not make these claims in his earlier application; in other words that, on the record, White was prior to De Forest as to these claims, and that in the view of the Examiner Hartley, while first to conceive these claims, was lacking in diligence.

The Board of Examiners in Chief concurred in the ruling of the Examiner that Hartley was first to conceive all the counts of the issue, but reversed the final decision of the Examiner, on the ground that Hartley's conception had been followed by reduction to practice prior to conception by either White or De Forest.

The [First] Assistant Commissioner also reviewed the evidence and affirmed the decision of the Board.

Hartley is an engineer in the research department of the Western Electric Company, the assignee of Hartley and real party in interest here. On or about February 15, 1915, Hartley submitted a report to the company in which he reviewed the various systems that had been given consideration by his department. In this report he made reference to the possibility of obtaining modulation by superimposing speech voltage "on the grid of an oscillator," and illustrated this suggestion by two sketches, one of which conforms essentially to the application drawing in this case. If, therefore, the application discloses the invention, so likewise does the sketch; and, since no motion was filed challenging Hartley's right to make the counts responding to this sketch, such disclosure must be assumed here.

Shortly after this a Mr. Heising, another research engineer in the same department with Hartley, tested Hartley's apparatus, and when called to the witness stand stated that both plate and gird modulation was effected. Heising, while testing the Hartley system, as disclosed by the sketch to which reference has been made, conceived an improvement consisting in the insertion of an adjustable resistance in the oscillation circuit. These tests were completed sometime prior to March of 1915, and a memorandum was filed with the patent department of the company a little later. In May of the same year a patent application for the improved system was authorized, and shortly thereafter drawings were begun which resulted in the filing of an application in Heising's name during the following September. The invention of the present issue is clearly disclosed in this Heising application.

We agree with the Board and [First] Assistant Commissioner that these tests by Heising constituted a reduction to practice of the Hartley invention. *Hathaway v. Field, Lanning and Colman*, 48 App. D. C. 369. Hartley and Heising were employees of a common assignee, were working toward the same end, and their diligence or lack of diligence enured to the benefit of or was chargeable against their employer and assignee.

We are not unmindful of the contentions of both De Forest and White as to the sufficiency of the evidence concerning the Heising tests. But, as pointed out by the [First] Assistant Commissioner, there can be no doubt that these tests were made, and there is no reason why the testimony of these highly skilled and reputable witnesses should not be accepted. Error on the part of the Patent Office tribunals, in a case involving such highly technical subject matter as is presented here, would have to be made very clear to warrant or justify us in disturbing the conclusions reached.

Since reduction to practice has been established for Hartley prior to the conception of either of the other parties, and no concealment or abandonment followed, the delay on the part of his assignee in filing the application presents no bar to the award of priority to Hartley. The decision therefore is affirmed, in each appeal.

Affirmed as to No. 1,761.

Affirmed as to No. 1,762.

Note.—Decisions of the Commissioner of Patents affirmed January 4, 1926, in the following cases for the reasons stated in the foregoing decision: *White v. Hartley*, No. 1,763; *De Forest v. Hartley*, No. 1,767; *De Forest and Logwood v. Hartley*, No. 1,768.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Mar. 18, 1926.*

Archie W. Tipps, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Josie B. Sample, of Eudora, Ark., for registration of a trade-mark and trade-mark registered February 27, 1923, No. 164,916, to Archie W. Tipps, 3211 Thomas Avenue, Dallas, Tex., and a notice of such declaration sent by registered mail to said Archie W. Tipps at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Archie W. Tipps, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Mar. 5, 1926.*

Tennessee Packing & Provision Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Wagner & Company, 4123–29 West Grand Avenue, Chicago, Ill., and Neuhoff Packing Company, Nashville, Tenn., for registrations of trade-marks and trade-marks registered March 7, 1905, No. 44,290, and June 11, 1907, No. 63,296, to Tennessee Packing & Provision Company, Nashville, Tenn., and a notice of such declaration sent by registered mail to said Tennessee Packing & Provision Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Tennessee Packing & Provision Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Mar. 4, 1926.*

John Densley, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Enos Ashley, 83 Oliver Avenue north, Minneapolis, Minn., and John Densley, 89 South Thirteenth Street, Minneapolis, Minn., and a notice of such declaration sent by registered mail to said John Densley at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said John Densley, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Disclaimer.

1,518,917.—*John B. Griffin*, Newington, Conn. TYPEWRITER-TYPE SOLDERING AND ALIGNING APPARATUS. Patent dated December 9, 1924. Disclaimer filed March 12, 1926, by the assignee, *Underwood Typewriter Company.*

Hereby enters its disclaimer to claims numbered 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 28, 35, 36, 37, 38, 39, 40, 41, 42, 44, 56, 85, and 86, the right to said claims having been established by George A. Seib in interference proceeding No. 52,331.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 30, 1926.

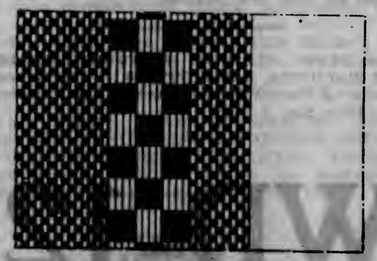
[VOL. 344. No. 5.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 184,606. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FOLEY BROS. GROCERY COMPANY, St. Paul, Minn. Filed Aug. 17, 1923.



Foley's

The trade-mark consists of the word "Foley's" in yellow letters having shaded margins. No claim is made to the exclusive right to the use of the word "Foley's" apart from the combination shown in the drawing.

Particular description of goods.—Pickles, Olives, Peanut Butter, Olive Oil, Corn Oil, Catchup, Vinegar; Dried, Evaporated, and Dehydrated Fruit; Cocoa, Jelly Powders, Mincemeat, Sausage, Sorghum, Tea, Jams, Jellies, Canned Fruit, Canned Vegetables, Canned Fish, Canned Soup, Coffee, Spices, Tapioca, Canned Shellfish, Evaporated Milk, Sirup for Table and Cooking Use, Rolled Oats, Oatmeal, Corn Flakes, Breakfast Cereals and Alimentary Pastes, Fruit Preserves, Berry Preserves, and Marmalade, Thousand Island Dressing and Mayonnaise Dressing, Celery Salt, Onion Seasoning, Prepared Mustard, Horse-Radish, Chowchow, Sweet Vegetable and Meat Relish, Cornstarch for Food Purposes, and Potato Flour, Canned Hominy, Canned Sauerkraut, Pimentos, Canned Fruit Salad, Roasted Peanuts, Food-Flavoring Extracts, Birdseed, Red-Hot Sauce, and Mint Sauce.

Claims use since about Dec. 1, 1919.

Ser. No. 201,634. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) THE WESTERLY TEXTILE COMPANY, Westerly, R. I. Filed Aug. 19, 1924.

The representation of the goods apart from the mark shown by the drawing is disclaimed. The checkerboard stripe of threads comprises the trade-mark, the selvage being so woven as to cause alternate squares of warp and filler threads to be shown in a stripe of checkerboard arrangement in said selvage.

Particular description of goods.—Textile Piece Goods of Cotton and also of a Mixture of Cotton and Artificial Silk, Draperies, and Dress Goods.

Claims use since about Feb. 1, 1924.

Ser. No. 201,910. (CLASS 21. ELECTRICAL APPARATUS MACHINES, AND SUPPLIES.) THE UNITED ELECTRIC COMPANY, Canton, Ohio. Filed Aug. 26, 1924.

The words "The Cleaner with the Self Starter" and "Oil Here" are disclaimed apart from the mark shown in the drawing. The color red indicated by conventional shading in the drawing is not an essential feature of the trade-mark.

Particular description of goods.—Electrically-Operated Vacuum Cleaners.

Claims use since July 15, 1924.

Ser. No. 203,259. (CLASS 21. ELECTRICAL APPARATUS MACHINES, AND SUPPLIES.) COOPER HEWITT ELECTRIC COMPANY, Hoboken, N. J. Filed Oct. 1, 1924.

COOPER HEWITT
Work-Light

No claim is made to the words "Cooper-Hewitt Work Light" apart from the mark as shown, but applicant waives none of its common-law rights.

Particular description of goods.—Mercury-Vapor Arc Lamps as Sources of Light for Industrial and Photographic Purposes.

Claims use since Sept. 29, 1924.

Ser. No. 204,025. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GLENDORA LEMON GROWERS ASSOCIATION, Glendora, Calif. Filed Oct. 17, 1924.

DIXIE

Particular description of goods.—Fresh Citrous Fruits—Namely, Fresh Lemons.
Claims use since Sept. 1, 1924.

Ser. No. 204,735. (CLASS 12. CONSTRUCTION MATERIALS.) UNIVERSAL GYPSUM COMPANY, Chicago, Ill. Filed Nov. 1, 1924.

No claim is made to the exclusive use of the word "Gypsum" apart from the mark as shown in the drawing. The crosshatching in the drawing represents the color green.
Particular description of goods.—Wood-Fibered Plaster.
Claims use since June 21, 1924.

Ser. No. 204,736. (CLASS 12. CONSTRUCTION MATERIALS.) UNIVERSAL GYPSUM COMPANY, Chicago, Ill. Filed Nov. 1, 1924.

No claim is made to the exclusive use of the word "Gypsum" apart from the mark as shown in the drawing. The crosshatching on the drawing represents the color brown.
Particular description of goods.—Nufibered Plaster.
Claims use since June 19, 1924.

Ser. No. 204,737. (CLASS 12. CONSTRUCTION MATERIALS.) UNIVERSAL GYPSUM COMPANY, Chicago, Ill. Filed Nov. 1, 1924.

The crosshatching of the drawing represents the color red. No claim is made to the exclusive use of the word "Gypsum" apart from the mark shown in the drawing.
Particular description of goods.—Finishing Plaster.
Claims use since July 3, 1924.

Ser. No. 204,738. (CLASS 12. CONSTRUCTION MATERIALS.) UNIVERSAL GYPSUM COMPANY, Chicago, Ill. Filed Nov. 1, 1924.

No claim is made to the exclusive use of the word "Gypsum" apart from the mark as shown in the drawing. The crosshatching in the drawing represents the color purple.
Particular description of goods.—Finishing Lime.
Claims use since Nov. 2, 1923.

Ser. No. 204,986. (CLASS 21. (ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY, East Pittsburgh, Pa. Filed Nov. 7, 1924.

WD-12

Particular description of goods.—Vacuum Tubes.
Claims use since Mar. 1, 1923.

Ser. No. 204,987. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY, East Pittsburgh, Pa. Filed Nov. 7, 1924.

WD-11

Particular description of goods.—Vacuum Tubes.
Claims use since April 1, 1922.

Ser. No. 205,207. (CLASS 37. PAPER AND STATIONERY.) THE GLOBE-WERNICKE CO., Norwood, Ohio. Filed Nov. 13, 1924.

RAINBOW

Particular description of goods.—Angular Celluloid Tab Guides.
Claims use since August, 1921.

Ser. No. 206,255. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE NEW WASHINGTON HATCHERY CO., New Washington, Ohio. Filed Dec. 4, 1924.

No claim is made to the pictorial representation of a chick apart from the showing disclosed herein.
Particular description of goods.—Baby Chicks.
Claims use since 1015.

Ser. No. 206,282. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) DEUTSCHE GASGLUHLICHT-AUER-GESELLSCHAFT MIT BESCHRANKTER HAFTUNG, Berlin, Germany. Filed Dec. 5, 1924.

DEGEA

Particular description of goods.—Incandescent Gas and Oil Lamps, Petroleum Lamps, Storm Lanterns, Chandeliers, Candelabra, and all Parts of Such Lamps.
Claims use since July 14, 1902.

Ser. No. 206,531. (CLASS 28. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) LEACH COMPANY, Oshkosh, Wis. Filed Dec. 10, 1924.

OSHKOSH

The trade-mark denotes the celebrated Indian chief Oshkosh. No claim is made to the word "Oshkosh" except when displayed in the distinctive manner shown.
Particular description of goods.—Logging Tools and Electrical Pole-Line Construction Tools.
Claims use since 1914.

Ser. No. 206,858. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) HENRY W. PETERS, doing business as H. W. Peters Co., Boston, Mass. Filed Dec. 17, 1924.

MADE
THE VICTORY WAY

Particular description of goods.—Finger Rings and Breastpins.
Claims use since July 10, 1924.

Ser. No. 207,124. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EL CAMPO RICE MILLING CO., El Campo, Tex. Filed Dec. 23, 1924.

ELCO

Particular description of goods.—Laying Mash With Buttermilk, Rice Bran, Rice Polish, and Rice.
Claims use since May 1, 1924.

Ser. No. 207,530. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) JOHN SIDEBOTHAM, Frankford, Philadelphia, Pa. Filed Dec. 31, 1924.

Particular description of goods.—Woven Tape.
Claims use since Dec. 1, 1920.

Ser. No. 207,567. (CLASS 27. HOROLOGICAL INSTRUMENTS.) HERALD WATCH CO., INC., New York, N. Y. Filed Jan. 2, 1925.

HERALD

Particular description of goods.—Watches, Watchcases, Watch Movements, and Parts of the Same.
Claims use since 1887.

Ser. No. 207,568. (CLASS 27. HOROLOGICAL INSTRUMENTS.) HERALD WATCH CO., INC., New York, N. Y. Filed Jan. 2, 1925.

The closely-spaced parallel lines shown in the drawing are not to denote color.
Particular description of goods.—Watches, Watchcases, Watch Movements, and Parts of the Same.
Claims use since 1887.

Ser. No. 207,951. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) SAMUEL RUBINTON, Brooklyn, N. Y. Filed Jan. 10, 1925.

ERMINE SKIN

The word "Ermine" is disclaimed.
Particular description of goods.—Fur Skins.
Claims use since Dec. 20, 1924.

Ser. No. 208,030. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) AMBASSADOR SALES CO., INC., New York, N. Y. Filed Jan. 12, 1925.

"BABY"

Particular description of goods.—Condensers for Radio Apparatus.
Claims use since Dec. 16, 1924.

Ser. No. 208,102. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) HARKNESS RADIO CORPORATION, New York, N. Y. Filed Jan. 16, 1925.

Kenneth Harkness

The mark consists of a facsimile signature; but the name, however, is fictitious, not belonging to any person. No claim is made to the name "Kenneth Harkness" apart from the mark shown.
Particular description of goods.—Wireless and/or Radio Transmitting and Receiving Circuits as Completed Assembled Sets or Parts Thereof—Namely, Coils, Condensers, Rheostats, Resistances, Tubes, and Batteries.
Claims use since Dec. 1, 1922.

Ser. No. 208,670. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) NATIONAL SANDING MACHINE COMPANY, Chicago, Ill. Filed Jan. 26, 1925.

"Lightning"

Particular description of goods.—Sandpaper.
Claims use since Mar. 1, 1922.

Ser. No. 208,704. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) NATHAN HALPERIN, doing business as Halperin Mills, Brooklyn, N. Y. Filed Jan. 27, 1925.

TANG-O-CHANG

Particular description of goods.—Artificial-Silk Knitted Fabric.
Claims use since Oct. 18, 1924.

Ser. No. 208,719. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LOUISE E. PATERSON, doing business as Sat-Ten Products Company, Wellesley, Mass. Filed Jan. 27, 1925.

SAT-TEN

Particular description of goods.—Chocolate Sauce.
Claims use since Nov. 18, 1924.

Ser. No. 209,468. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EASTMAN SUGAR CO. INC., New Orleans, La. Filed Feb. 12, 1925.

Particular description of goods.—Coffee.
Claims use since Nov. 15, 1924.

Ser. No. 209,473. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) RALPH GASPARINI, doing business as Globe Preserve Co., Los Angeles, Calif. Filed Feb. 12, 1925.

Particular description of goods.—Crushed Fruits for Food Purposes, Especially for Use With Ice Cream, Also Table Sirups.
Claims use since Oct. 20, 1923.

Ser. No. 209,903. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) FAGERSTA BRUKS AKTIEBOLAG, Fagersta, Sweden. Filed Feb. 20, 1925.

BOR

Particular description of goods.—Rolled, Drawn, and Forged Iron and Steel.
Claims use since 1910.

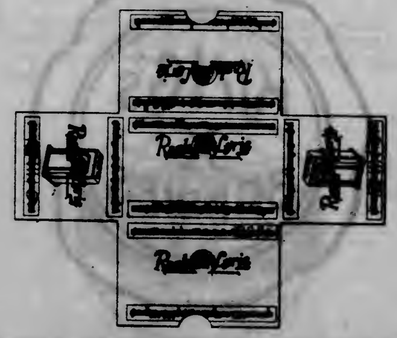
Ser. No. 209,905. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) FAGERSTA BRUKS AKTIEBOLAG, Fagersta, Sweden. Filed Feb. 20, 1925.

TRYGG

Particular description of goods.—Rolled, Drawn, and Forged Iron and Steel.
Claims use since 1910.

Ser. No. 209,924. (CLASS 39. CLOTHING.) LEVINSOHN & LEVINSOHN, New York, N. Y. Filed Feb. 20, 1925.

THE Jim Dandy



Particular description of goods.—Boys' Suits in One, Two, Three, and Four Piece Garments, Manufactured From Woolen Fabrics.
Claims use since Dec. 20, 1924.

Ser. No. 209,995. (CLASS 37. PAPER AND STATIONERY.) LE BOEUF FOUNTAIN PEN CO., INC., Springfield, Mass. Filed Feb. 21, 1925.

UNBREAKABLE

No claim is made to the exclusive use of the word "Unbreakable" apart from the mark shown.
Particular description of goods.—Fountain Pens.
Claims use since May, 1919.

Ser. No. 210,210. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ALL-AMERICAN RADIO CORPORATION, Chicago, Ill. Filed Feb. 27, 1925.

No claim is made to the exclusive right to the use of the representation of a transformer.
Particular description of goods.—Transformers.
Claims use since Aug. 27, 1924.

Ser. No. 210,366. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HUGH JAMES CONNOR, Los Angeles, Calif. Filed Mar. 2, 1925.

Aloha

Particular description of goods.—Candy.
Claims use since 1905.

Ser. No. 210,600. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE AMERICAN WIREMOLD COMPANY, Hartford, Conn. Filed Mar. 6, 1925.

WIREX

Particular description of goods.—Insulated Electric Wires.
Claims use since Jan 31, 1925.

Ser. No. 211,473. (CLASS 37. PAPER AND STATIONERY.) HOBERG PAPER & FIBRE COMPANY, Green Bay, Wis. Filed Mar. 23, 1925.

SUMMIT

Particular description of goods.—Toilet Paper.
Claims use since Apr. 18, 1899.

Ser. No. 211,854. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) C. W. LOMASNEY & COMPANY, Minneapolis, Minn. Filed Mar. 30, 1925.

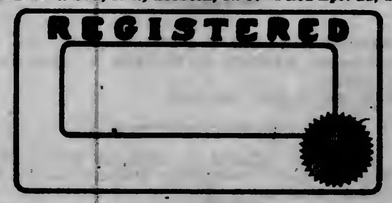
No claim is made to the word "Candies" or the word "King's" apart from the mark as shown.
Particular description of goods.—Candies, Sweetmeats, Candied and Salted Nuts, and Nuts in Their Natural State.
Claims use since Jan. 1, 1919.

Ser. No. 212,298. (CLASS 49. DISTILLED ALCOHOLIC LIQUORS.) SCHENLEY PRODUCTS COMPANY, Jersey City, N. J., and Louisville, Ky. Filed Apr. 6, 1925.

The words "Quadruple Sealed," "Kentucky," and "Schenley Products Co." are disclaimed apart from the mark shown in the drawing.
Particular description of goods.—Grain Alcohol (Non-beverage).
Claims use since Oct. 1, 1923.

Ser. No. 212,579. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) SUPERIOR HARD RUBBER COMPANY, INC., Butler, N. J. Filed Apr. 11, 1925.

HEVEANOID



Particular description of goods.—Cigarette Holders and Cigar Holders.
Claims use since on or about Apr. 1, 1924.

Ser. No. 212,643. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) RUSSELL-MILLER MILLING CO., Minneapolis, Minn. Filed Apr. 13, 1925.

BALTIC

Particular description of goods.—Wheat Flour.
Claims use since about Jan. 1, 1910.

Ser. No. 213,073. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. M. FLEBON & SON, INC., Trenton, N. J. Filed Apr. 21, 1925.

No claim is made to the trade-mark "Registered" except in conjunction with the other elements of the mark. The trade-mark "Registered" and the seal are lined to indicate a red color.
Particular description of goods.—Face Powders, Face Creams, Vanishing Creams, Massage Creams, Lemon Creams, Cocoa Creams, Cold Creams, Toilet Waters, Rouges, Perfumes, Hair Tonics, Hair Oils, Brilliantines, Dentifrices, Tooth Powders, Nail Polishes, Deodorising Preparations, Bath Salts, Smelling Salts, and Sachets.

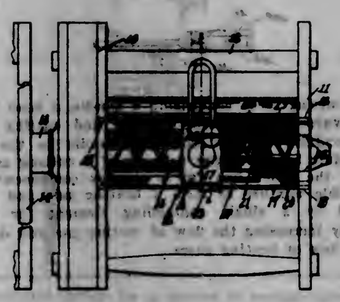
REISSUES

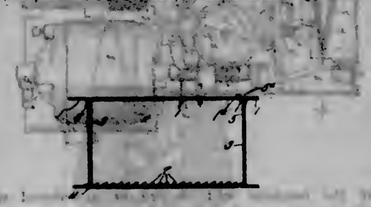


MARCH 30, 1926.

16,299. BOOK COVER. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership; F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson, trustees. Filed Feb. 4, 1926. Serial No. 86,093. Original No. 1,556,721, dated Oct. 13, 1925. Serial No. 26,871, filed Apr. 28, 1925. 5 Claims. (Cl. 129—24.)

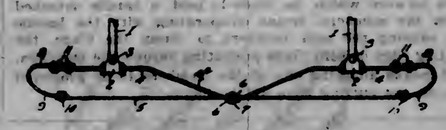
1. A book cover for a loose leaf structure, comprising a single piece of material forming the side covers and back, a ridge extending lengthwise of the inside of said back and having lateral free edges, and a metal sheath upon the face of this ridge and secured to said edges.

16,300. FISHING REEL. NICHOLLS J. SMITH, Bainbridge, Ga. Filed Nov. 19, 1925. Serial No. 70,170. Original No. 1,551,063, dated Aug. 25, 1925, Serial No. 25,086, filed Apr. 22, 1925. 10 Claims. (Cl. 242—84.4.)



1. The combination with the end disks of a fishing reel, and the screw shaft thereof, of a line guide movable by said shaft, and a support for the guide including ways supported by the end disks, and lubricant carrying means on the block within the ways.

16,301. TREATMENT OF ROCK ASPHALT. WILLIAM P. BENTLEY, Dallas, Tex. Filed Feb. 11, 1926. Serial No. 87,693. Original No. 1,529,829, dated Mar. 17, 1925, Serial No. 643,087, filed June 2, 1923. 7 Claims. (Cl. 180—31.)

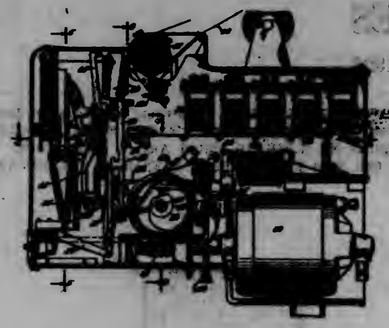


7. A process for making a road composition, comprising mixing pulverized bitumen-containing rock with an atmospherically volatile liquefier and a normally adhesive flux, causing said flux to permanently unite with the naturally contained bituminous material, and controlling the percentage of bituminous material and consistency of bitumen in the final composition by regulating the quantity and viscosity of flux added.

16,302. STEEL LUMBER. HOWARD B. SHERMAN, Battle Creek, Mich. Filed Oct. 15, 1925. Serial No. 62,678. Original No. 1,548,810, dated Aug. 4, 1925, Serial No. 531,082, filed Jan. 28, 1922. 32 Claims. (Cl. 72—116.)

1. A one piece steel lumber section rolled into a unitary member comprising a relatively thick studding portion that serves as a building supporting element, and a relatively thin sustaining plate portion formed integrally therewith that extends laterally from one side of said studding portion and possesses a width suitable to span the space between studding portions of adjacent lumber sections.

16,303. BUMPER. CHRISTIAN GIBL, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Jan. 28, 1924. Serial No. 689,137. Original No. 1,472,905, dated Nov. 6, 1923, Serial No. 615,907, filed Jan. 31, 1923. 12 Claims. (Cl. 293—55.)

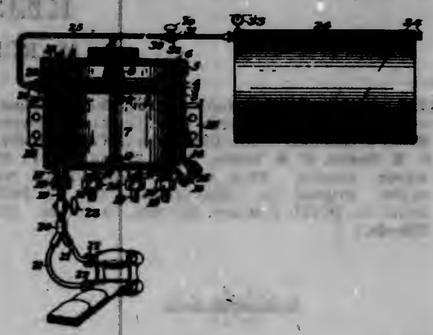


1. A bumper comprising a pair of vertically spaced bars and an auxiliary bar having its ends spaced rearwardly from the ends of the first-mentioned bars, and a forked plate bent into looped form and having its forks connected with the ends of the first-mentioned bars and its intermediate portion or stem connected with the adjacent end of the other bar.

16,304. PRINTING TABULATOR. CLAIR DENNISON LAKE, Binghamton, N. Y., assignor to The Tabulating Machine Company, a Corporation of New Jersey. Filed Dec. 3, 1921. Serial No. 519,780. Original No. 1,379,268, dated May 24, 1921, Serial No. 343,069, filed Dec. 29, 1919. 53 Claims. (Cl. 235—58.)

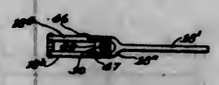
2. The combination with a power driven tabulating machine of a printing or listing attachment, intermediate mechanism for connecting the same with or disconnecting it from the tabulator mechanism, and means for ap-

plying the driving power to the tabulator at varying rates, operatively controlled by said intermediate mechanism



whereby the machine will be run at a reduced speed when the printing and listing attachment is connected with the tabulator mechanism.

16,305. CUTTER HOLDER. OSCAR L. SCALBOM, Glenview, Ill. Filed Aug. 31, 1925. Serial No. 53,718. Original No. 1,500,643, dated July 8, 1924, Serial No. 693,085, filed Nov. 24, 1922. 22 Claims. (Cl. 30—25.)



1. A cutter blade holder embodying co-operating members between which the blade is held, a handle detached from the members, means co-operating with the handle for causing the said members to clamp the blade, the cutting edge of said blade projecting beyond the members, and means adapting one of the members to be projected beyond the cutting edge of the blade.

16,306. LUBRICATING SYSTEM. AVERIL P. ANDERSON, Bellevue, Pa. Filed Nov. 3, 1923. Serial No. 672,670. Original No. 1,465,620, dated Aug. 21, 1923, Serial No. 519,669, filed Dec. 3, 1921. 5 Claims. (Cl. 184—7.)

2. In a lubricating system for an automotive vehicle, a plurality of parts to be lubricated, a source of lubricant, a plurality of headers connected to the source by conduits, a single pressure means adapted to force lubricant to the several headers, and a plurality of conduits leading from the several headers to the parts to be lubricated, substantially as described.

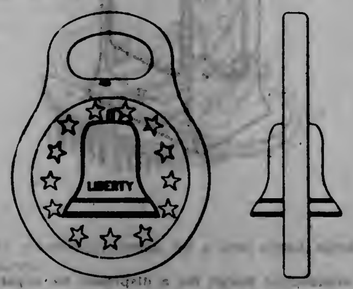
16,307. CUTTING AND WELDING TORCH. JAMES D. MCCUTCHEON, Pittsburgh, Pa. Filed Feb. 23, 1926. Serial No. 90,217. Original No. 1,537,481, dated May 12, 1925, Serial No. 613,874, filed Jan. 20, 1923. 10 Claims. (Cl. 158—27.4.)

1. A cutting torch comprising a handle, a head having passageways for delivering heating and cutting gases, three conduits leading from the handle to the head, one conduit being for the delivery of a cutting gas and each of the other two for a gaseous component of a combustible mixture to form a heating gas, and means operated by a single controlling element for simultaneously increasing the flow of cutting gas and decreasing the flow of heating gases.

DESIGNS

MARCH 30, 1926.

69,791. CABINET. JOHN M. BEACH and OAKLEY V. WEEKS, Grand Rapids, Mich., assignors to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 18, 1925. Serial No. 14,818. Term of patent 3½ years.

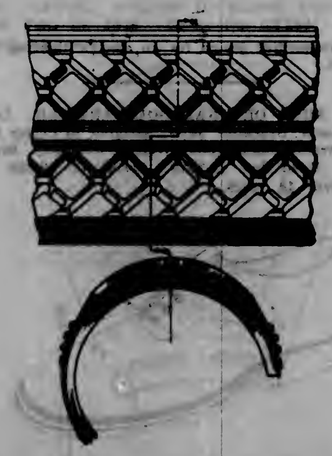


The ornamental design for a cabinet or similar article as shown.

69,792. CABINET. JOHN M. BEACH and OAKLEY V. WEEKS, Grand Rapids, Mich., assignors to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 18, 1925. Serial No. 14,819. Term of patent 3½ years.

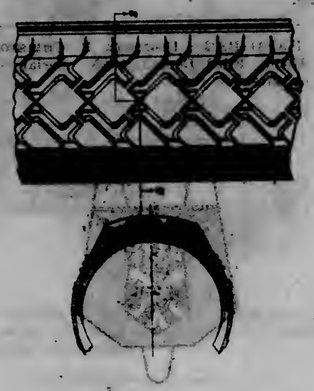
The ornamental design for a cabinet or similar article as shown.

69,793. HAND BELL. ARON BRILL, New York, N. Y. Filed Jan. 30, 1926. Serial No. 16,337. Term of patent 3½ years.



The ornamental design for a hand bell, as shown.

69,794. HAND BAG. FLORENCE R. CHRISTOPHER, Detroit, Mich. Filed Dec. 2, 1925. Serial No. 15,609. Term of patent 7 years.



The ornamental design for a hand bag, as shown.

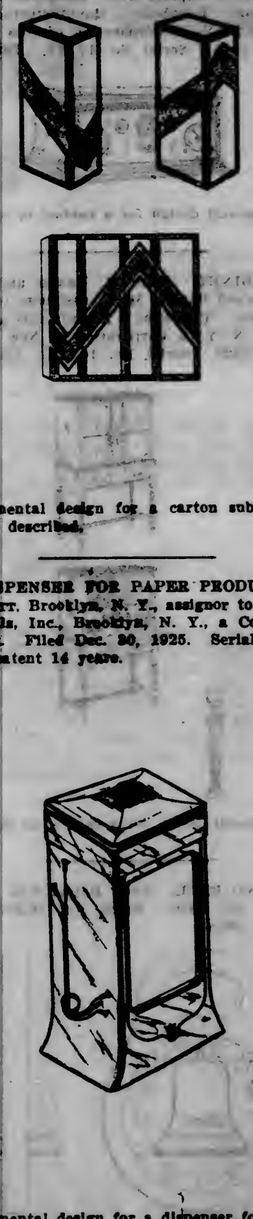
69,795. TIRE. ASA P. COOLEY, Hubbard Woods, Ill., assignor to Montgomery Ward & Co., Incorporated, Chicago, Ill., a Corporation of Illinois. Filed Dec. 23, 1925. Serial No. 15,881. Term of patent 14 years.

The ornamental design for a tire substantially as shown.

69,796. TIRE. ASA B. COOLEY, Hubbard Woods, Ill., assignor to Montgomery Ward & Co., Incorporated, Chicago, Ill., a Corporation of Illinois. Filed Dec. 28, 1925. Serial No. 15,833. Term of patent 14 years.

The ornamental design for a tire substantially as shown.

69,797. ELECTRIC-LIGHTING FIXTURE. EUGEN JULIUS DIETZMANN, Los Angeles, Calif. Filed Oct. 12, 1925. Serial No. 16,096. Term of patent 3½ years.



The ornamental design for an electric lighting fixture, as shown.

69,798. SHOE OR ANALOGOUS ARTICLE. LORENZO H. GILSON, Brockton, Mass., assignor to Perley E. Barbour, trading as Barbour Welting Company, Brockton, Mass. Filed Nov. 4, 1925. Serial No. 15,338. Term of patent 14 years.

The ornamental design for a shoe or analogous article, having a checkered welt strip, substantially as shown and described.

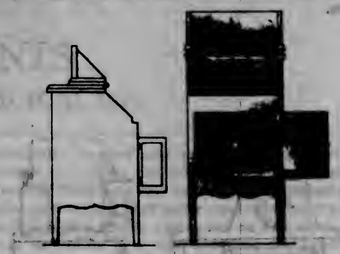
69,799. CARTON. THOMAS S. HARRIS, Lowell, Mass., assignor to The Ayer Company, Lowell, Mass., a Corporation of Massachusetts. Filed Oct. 30, 1925. Serial No. 15,296. Term of patent 14 years.

The ornamental design for a carton substantially as shown, and described.

69,800. DISPENSER FOR PAPER PRODUCTS. PAUL H. HORWITT, Brooklyn, N. Y., assignor to Independent Paper Mills, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 30, 1925. Serial No. 15,908. Term of patent 14 years.

The ornamental design for a dispenser for paper products, as shown.

69,801. HEATING STOVE. GEORGE W. HOWES, Dowagiac, Mich., assignor to Beckwith Company, Dowagiac, Mich. Filed Sept. 23, 1924. Serial No. 10,772. Term of patent 14 years.

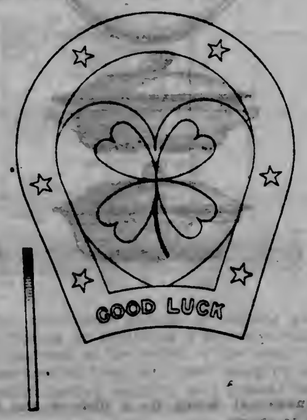


The ornamental design for a heating stove, as shown.

69,802. DESK STAND. ALVERD B. LEMON, Providence, R. I. Filed Nov. 6, 1925. Serial No. 15,370. Term of patent 3½ years.

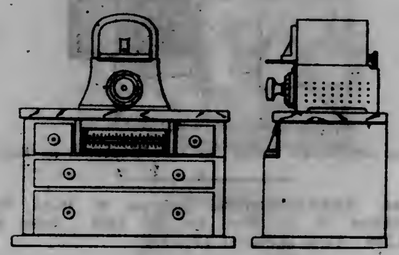
The ornamental design for a desk stand, substantially as shown.

69,803. RADIOCABINET. WALTER LYTTON, Chicago, Ill. Filed Oct. 14, 1922. Serial No. 3,977. Term of patent 3½ years.



The ornamental design for a radiocabinet, as shown.

69,804. THERMOMETER. RICHARD E. MANN, New Brighton, N. Y. Filed Jan. 23, 1926. Serial No. 16,288. Term of patent 14 years.

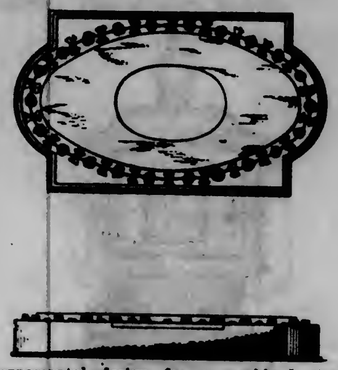


The ornamental design for a thermometer as shown.

69,805. BADGE. RICHARD D. NILSON, Denver, Colo. Filed Feb. 10, 1925. Serial No. 12,884. Term of patent 14 years.

The ornamental design for a badge, as shown.

69,806. ELECTRIC DENTAL FURNACE. FLOYD W. PEARS and FRED R. PEARS, Cleveland Heights, Ohio. Filed May 16, 1924. Serial No. 9,620. Term of patent 3½ years.



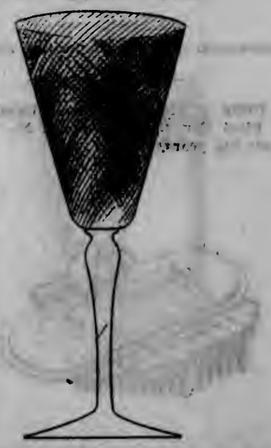
The ornamental design for an electric dental furnace, as shown.

69,807. DISH OR THE LIKE. MARC SOLON, Trenton, N. J., assignor to Mercer Pottery Company, Trenton, N. J., a Corporation of New Jersey. Filed Feb. 10, 1926. Serial No. 16,471. Term of patent 3½ years.

The ornamental design for a dish or the like, substantially as shown.

69,808. COMBINED STAND AND HOLDER FOR PERFUME BOTTLES. BLANCHE SERVENS-ARVOT, née RENEAUX, Paris, France, and CHARLES LEONE, MARCUS, New York, N. Y. Filed Dec. 12, 1924. Serial No. 11,680. Term of patent 3½ years.

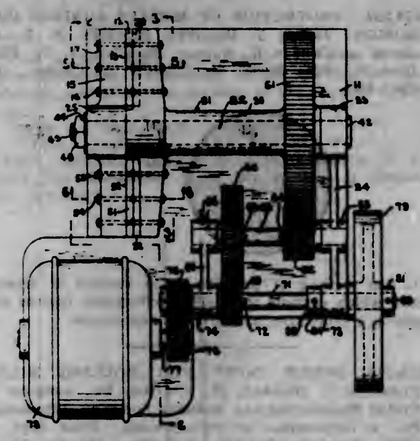
The ornamental design for a combined stand and holder for perfume bottles, as shown.



69,809. DESIGN FOR A RING OR SIMILAR ARTICLE. BERTHOLD VEIT, New York, N. Y. Filed Jan. 25, 1926. Serial No. 16,257. Term of patent 14 years.

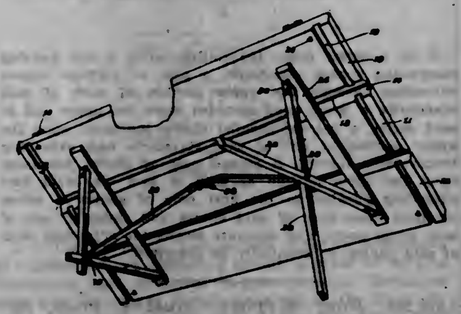
The ornamental design for a ring or similar article, substantially as shown and described.

69,810. GOBLET OR SIMILAR ARTICLE. JULES H. VERNON, New York, N. Y. Filed Feb. 18, 1925. Serial No. 12,410. Term of patent 7 years.



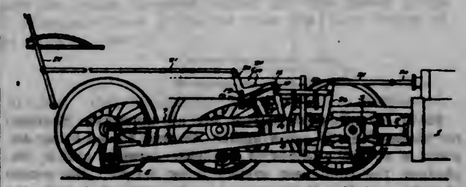
The ornamental design for a goblet or similar article, as shown and described.

PATENTS



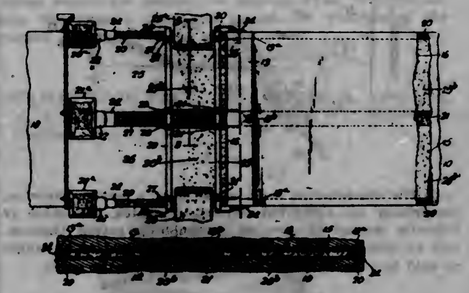
GRANTED MARCH 30, 1926.

1,578,247. METAL-CUTTING SHEARS. CARL S. ALLEN, Cincinnati, Ohio. Filed Mar. 24, 1925. Serial No. 18,046. 3 Claims. (Cl. 164—10.6.)



1. A metal cutting shears comprising a base, a relatively stationary cutter-blade fixed thereto, a rotatable frame comprising oppositely laterally extending arms, a cutter-blade fixed to each of said arms coacting alternately with said first-named cutter-blade, and a resistance-plate fixed to said base with which said second-named cutter-blades alternately coact, constructed and arranged whereby when one of said second-named cutter-blades coacts with said first-named cutter-blade the other of said second-named cutter-blades coats with said resistance-plate to counteract the lateral cutting strain on said oppositely extending arms.

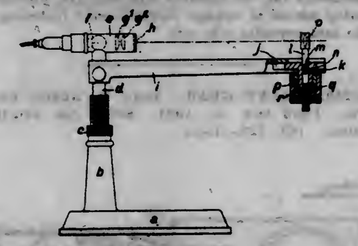
1,578,248. COLLAPSIBLE CAMP FURNITURE. NICHOLAS ACKERMAN, Wenatchee, Wash. Filed May 29, 1924. Serial No. 716,728. 2 Claims. (Cl. 190—12.)



1. Convertible camp furniture including leaves hingedly connected and having aligning grooves adjacent opposite ends, end members having three marginal edge portions seated in the grooves when the outer leaves are extended vertically, headed pins carried by the outer leaves, latch plates carried by the side leaves and having portions extending therefrom and formed with notches to receive said pins and secure said outer leaves in an upright position, and a leaf movably connected to one of the outer leaves and extending over and engaging the upper edges of the end members and the opposite side leaf and provided with fastening means to engage complemental fastening means on the said opposite side leaf.

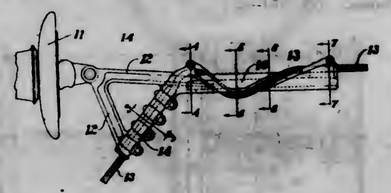
1,578,249. VALVE GEAR. JOHN H. ALTER, Conneaut, Ohio. Filed Oct. 24, 1921. Serial No. 510,135. 11 Claims. (Cl. 121—163.)

1. In a valve gear, the combination of a pair of bell cranks, a single element pivotally connected to an arm of each of said bell cranks, a reverse lever operatively connected with the other arm of one of said bell cranks, means for imparting a translatory motion to the other bell crank with respect to the pivotal connection between said element and the first mentioned bell crank, and an operative connection between the valve and the bell crank to which the translatory motion is imparted.



1,578,250. PROCESS OF MAKING PLASTER BOARD. MORGAN K. ARMSTRONG, Hampton, Va. Filed Dec. 12, 1921, Serial No. 521,577. Renewed July 20, 1925. 8 Claims. (Cl. 154—2.)

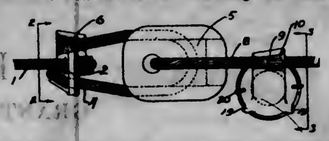
1. The continuous process of making plaster board, which consists of advancing a bottom covering sheet of fibrous material of the width of the board to be made; of superimposing upon said sheet along its edges ribbons of a plastic sailing mixture, said ribbons being substantially rectangular in cross-section and of predetermined width and thickness; of spreading a plastic gypsum mixture over said sheet intermediate said ribbons; of con-



fining said gypsum mixture to prevent its overflow on said ribbons while it is being spread; of superimposing a top covering sheet of fibrous material of the same width as that of the bottom sheet on said several plastic mixtures; and of applying pressure to the full width of said top sheet to firmly adhere it to the top surface of the said several mixtures comprising the body of the board, at the same time forcing the intermediate plastic mixture laterally outward at its edges into intimate contact with the proximate edges of said ribbons.

1,578,251. ILLUMINATING DEVICE. HERMENEGILDO ARNOSA, Barcelona, Spain, assignor to Carl Zeiss, Jena, Germany. Filed July 24, 1924. Serial No. 728,982. 1 Claim. (Cl. 88—70.)

In an illuminating device for an apparatus destined for examining the eye a holder, on this holder being disposed a source of light, a condenser system and a diaphragm, the condenser system lying between the source of light and the diaphragm, an arm connected with the said holder, optical means, adapted to form a real image, an arm on which the said optical means are disposed, the diaphragm lying between the said condenser system and the said optical means and the latter being adapted to image the diaphragm into the interior of the eye, and an adjusting device fitted to the arm and admitting of displacing the said optical means vertical relatively to the arm.

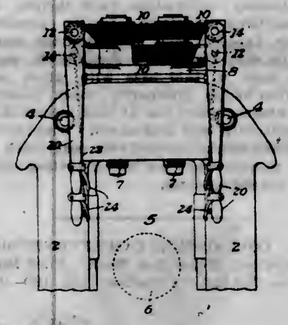


1,578,252. HOLDER FOR CABLES OR THE LIKE. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 1, 1923. Serial No. 621,973. 15 Claims. (Cl. 24—135.)

1. The combination with a cable, of a holder therefor, comprising an elongated bar about which the cable is helically wound to provide a snubbing action thereon, and an elongated clamping member arranged at an angle to said bar for holding the snubbed end of the cable.

1,578,253. ATTACHING MEANS FOR CABLES OR THE LIKE. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 12, 1923. Serial No. 624,498. 8 Claims. (Cl. 24—129.)

6. Means for holding a cable in looped formation, comprising a fitting having an attaching socket for the end of the cable and a grooved seat about which the cable may be wound, and means for retaining the cable in position in said seat, said retaining means being movable into operative position after the cable is placed in its seat.



1,578,254. PROTECTION OF METALS AGAINST CORROSION. IRVING T. BENNETT, Brooklyn, N. Y., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed June 26, 1924. Serial No. 722,462. 10 Claims. (Cl. 204—13.)

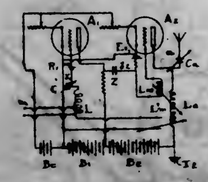
1. The method of protecting the surface of ferrous metal, which consists in applying chromium thereto and applying a protective layer over the chromium.

1,578,255. SCREW DOWN FOR ROLLING MILLS. FLORENCE C. BIGGERT, Jr., Crafton, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 7, 1923. Serial No. 661,405. 6 Claims. (Cl. 80—56.)

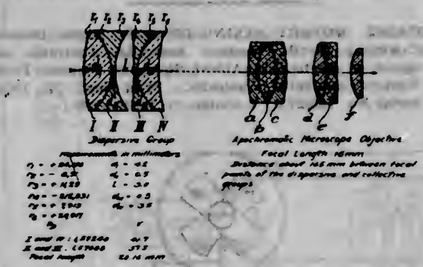
1. In a screw down for rolling mills, a roll housing comprising spaced standards, a pair of vertical screws extending through the upper portion of each of said standards, a worm gear mounted upon the upper end of each screw, a pair of parallel shafts journaled upon the upper portion of one of said standards and extending transversely thereof, a second pair of shafts journaled upon the upper portion of both of said standards and extending parallel to the first pair of shafts, a worm mounted upon each of said shafts and engaging one of said worm gears, and separate means for actuating each of said shafts, substantially as described.

1,578,256. JOIST SUPPORT. JAMES S. BIRCH, Chicago, Ill. Filed Oct. 5, 1925. Serial No. 60,386. 7 Claims. (Cl. 25—131.5.)

1. A joist support for a concrete floor form, said joist support comprising a pair of angle clamps adapted to be engaged against opposite sides of the upper flange of an I-beam, said angle clamps having notches and apertures therein, and a pair of looped metal hangers, the arms of which are hooked and projected through the apertures of said angle clamps with the arms of the hangers projecting transversely across the top of the I-beam and seated in the notches of the opposite angle clamps.

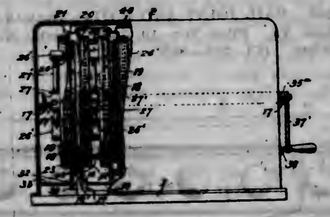


1,578,257. SPOOL. GEORGE H. BIRD, Brooklyn, N. Y. Filed July 24, 1925. Serial No. 45,801. 6 Claims. (Cl. 242—70.)



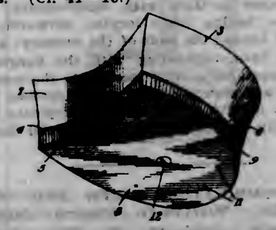
1. A spool comprising a body having an axial opening, end flanges for said body having openings coaxial with said opening in the body, a metal tube arranged in said openings, and a thimble fitted exteriorly upon each end of said tube with one of said flanges between it and said body, the ends of said tube being expanded into said thimbles to clamp said flanges against said body.

1,578,258. MEANS FOR GENERATING HIGH-FREQUENCY CURRENTS. ANDRÉ BLONDEL, Paris, and MARCEL TOULY, St.-Cloud, France. Filed May 18, 1921. Serial No. 470,598. 4 Claims. (Cl. 250—17.)



2. A high frequency vacuum tube generator comprising in combination, an oscillating circuit, a power or working thermionic unit connected thereto, a relay thermionic unit with its output circuit connected to the input circuit of the said working unit, means for retroactively coupling the input and output circuit of the first unit through the second one, of an amount sufficient to keep the system oscillating and means for varying the said amount according to the rhythm of signals.

1,578,259. GROUP OF LENSES. HANS BOEGEHOLD, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 8, 1921. Serial No. 490,725. 1 Claim. (Cl. 88—57.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



An objective system for producing minutely reduced photographs, composed of a group of lenses consisting of two dispersive members separated from one another, each member comprising at least two lenses, of which the one is dispersive while the other is collective, and a collective group, disposed behind the first-named group at a distance from it greater than the focal length of the collective group.

1,578,260. CALCULATING MECHANISM. EDWARD J. BRANDT, Watertown, Wis., assignor to Brandt Automatic Cashier Company, Watertown, Wis. Filed Apr. 19, 1919. Serial No. 291,208. 10 Claims. (Cl. 235—144.)

1. A machine of the character described comprising a shaft, an adding wheel rotatably mounted on the shaft, a friction disc secured to the shaft, spring controlled plungers adapted to exert their effective pressure at separated points for forcing the adding wheel into contact with the friction disc, and means for overcoming the friction and rotating the adding wheel.

1,578,261. SHOE HEEL. JOHN H. BURGER, Evergreen, N. Y. Filed Sept. 26, 1925. Serial No. 58,694. 4 Claims. (Cl. 41—10.)

1. A shoe heel of the character disclosed, comprising a turned one piece wooden heel of the full finished heel height having a groove about the side of the same positioned above the bottom of the block a distance approxi-

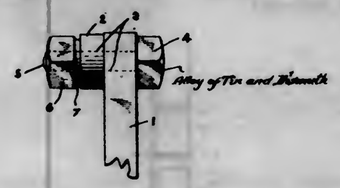
mately equal to the thickness of a top lift, said one piece heel block being painted above the groove to resemble a covered wooden heel and below the groove to resemble a top lift attached to a covered wooden heel.

1,578,262. ROTARY MIXING DEVICE. HENRY GORDON CAMPBELL, Perth, Western Australia, Australia, assignor of one-half to Alfred Stephens, Victoria Park, Western Australia, Australia. Filed Sept. 27, 1924. Serial No. 740,214. 1 Claim. (Cl. 48—180.)

A rotary mixing device for internal combustion engines comprising a split sleeve adapted to be accommodated in the intake manifold, a standard extending inwardly radially from said sleeve opposite the split thereof, said standard having an enlarged end situated axially of the sleeve, a headed stud carried by said enlarged portion of the standard at each end thereof, and a propeller mounted on each stud, said propellers being constructed to rotate in opposite directions under the influence of a current passing through the sleeve.

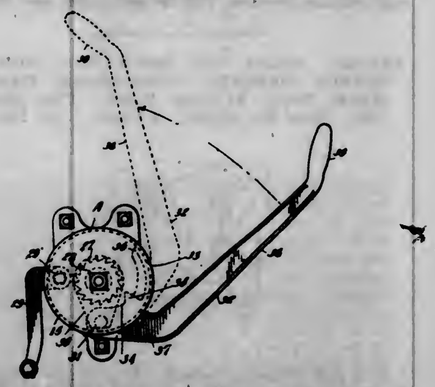
1,578,263. RAIL JOINT AND RAIL. THOMAS M. CATE, Norfolk, Va. Filed Nov. 10, 1925. Serial No. 68,182. 3 Claims. (Cl. 238—176.)

1. A pair of rails comprising balls, webs, and flanges, the balls, the webs and the flanges of both rails being cut away at opposite sides of the rails to form shoulders which are inclined longitudinally of the rails, to form an inclined end surface in each rail, cooperating with the shoulder of the other rail, and to form overlapped longitudinal extensions in the rails, those portions of the webs which are located in the extensions being provided upon their inner surfaces with complemental recesses, and the webs having seats located outwardly of the shoulders and beyond the ends of the recesses; a member comprising a base cooperating with the flanges of the rails, and an upstanding wing received in the recesses and in the seats; and securing elements connecting the webs and the wing, certain of the securing elements being located outwardly of the shoulders, and beyond the ends of the recesses.



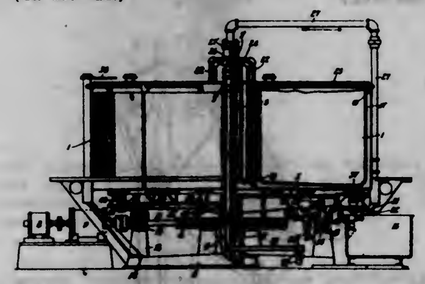
1,578,264. COMBINATION KNIFE AND SCISSORS SHARPENER. WILLIAM H. CHURCH, Calgary, Alberta, Canada. Filed Apr. 28, 1924. Serial No. 709,694. 2 Claims. (Cl. 76—87.)

1. In a blade sharpener, a base provided with opposing side wings, a cross shaft carried by the wings, a set of similar spaced sharpening discs rotatably mounted on the shaft, a rocker member carried by the base, a cross shaft shiftable with the rocker member and movable towards or away from the former shaft, means for holding the



rocker member in any adjusted position and a plurality of similar suitably spaced sharpening discs carried by the shiftable shaft and alternated with the former discs.

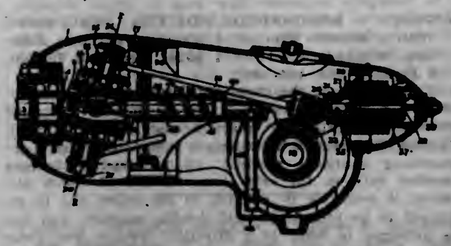
1,578,265. CONNECTING CONSTRUCTION FOR BATTERIES AND THE LIKE. THEODORE S. COLE, New Haven, Conn., assignor to Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Jan. 14, 1922. Serial No. 529,120. 5 Claims. (Cl. 173—259.)



1. In an apparatus of the general nature of that herein described, in combination, a terminal connecting device for connecting adjacent leaden members of different material from such members and of substantially the same potential relative to acid as lead, said device being formed of an alloy of tin and bismuth.

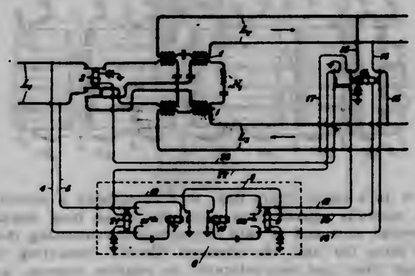
1,578,266. HAND BRAKE FOR RAILWAY CARS. CHARLES E. DATH, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed June 27, 1924. Serial No. 722,756. 3 Claims. (Cl. 74—114.)

1. In a construction of the character described, the combination with a railway car having side and end walls, there being obstructions along said side wall such as steam pipes, said end wall being equipped with a hand brake of the inside and outside type and comprising a rotatable shaft extending through said wall and being provided with a winding drum, and ratchet wheels adjacent the inner and outer ends of said rotatable member, said ratchet wheels being movable in a clockwise direction with reference to said side wall to wind the brake chain on said drum, said brake being provided with inner and outer housings having openings on their under sides to permit access to said ratchet wheels; of a depending lever arranged at the outer side of said end wall and having pawl means adapted to rotate said ratchet wheel to wind said brake chain when moved in a direction toward the plane of said side wall; and a continuous lever on the inside of said car, extending through the opening at the bottom of the inside housing, said lever being inclined upwardly between the side wall and adjacent housing to clear the obstructions on the side walls, said lever being accessible above said housing and having pawl means associated therewith adapted to rotate the inside ratchet wheel to wind the chain when the lever is moved in a direction away from the plane of said side wall.



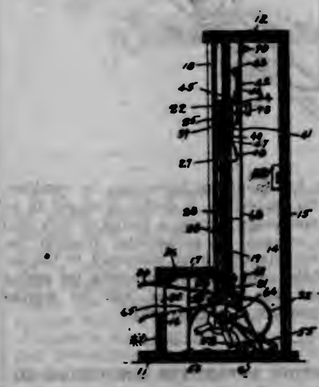
1,578,267. PASTEURIZING APPARATUS. ALBERT J. DAVIS, New York, N. Y. Original application filed June 29, 1925, Serial No. 40,135. Divided and this application filed Nov. 24, 1925. Serial No. 71,206. 12 Claims. (Cl. 137—21.)

1. In apparatus for pasteurizing milk, the combination of a plurality of movable holders each provided with a milk receiver and means for conveying the milk from said receiver to the lower portion of the holder, and a stationary cover for said receivers having means for admitting milk to said receivers while the cover is in position with respect to said holders.



7. The combination of a liquid holder having an outlet valve, a sterilising device having a valve, means for producing a relative movement between said holder and sterilising device whereby said outlet valve and sterilising device are moved into and out of register with each other, and automatic means for opening said sterilizer valve when said outlet valve and said sterilising device are in register with each other.

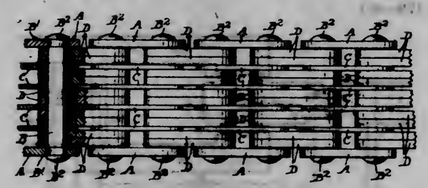
1,578,268. VARIABLE SPEED TRANSMISSION. DIMITRI SENSAUD DE LAVAUD, Paris, France. Filed Jan. 21, 1924. Serial No. 687,672. 8 Claims. (Cl. 74—53.)



2. In a variable speed transmission, a driving shaft, an oscillating member supported on said driving shaft and longitudinally movable thereon, means co-operating with the driving shaft adapted upon the longitudinal movement of the oscillating member upon the driving shaft to change the axis of oscillation thereof, and elastic means opposing the longitudinal movement of said oscillating member.

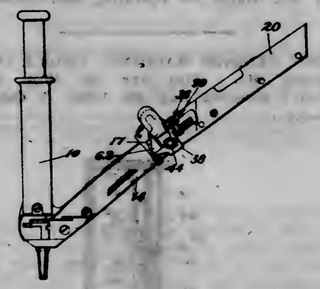
1,578,269. SIGNALING ARRANGEMENT FOR FOUR-WIRE CIRCUITS. CHARLES S. DEMAREST, Ridgewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 19, 1924. Serial No. 687,377. 1 Claim. (Cl. 179—4.)

A transmission system comprising a terminal two-way line, a hybrid coil and an artificial line associated with said line, a cut-off relay for opening said line and said artificial line, two one-way lines for transmission in opposite directions associated with said terminal line by said hybrid coil, a composite ringer, means for connecting one branch of said ringer with said terminal two-way line, switching means associated with said two one-way lines for connecting the other section of said ringer with either of said one-way lines means controlled by said ringer for operating said switching means, and means controlled by said switching means and by said ringer for operating said cut-off relay.



1,578,270. VENDING MACHINE. LOUIS J. DISSER, Sr., Ferguson, Mo. Filed Apr. 26, 1924, Serial No. 709,306. Renewed Aug. 20, 1925. 7 Claims. (Cl. 194—1.)

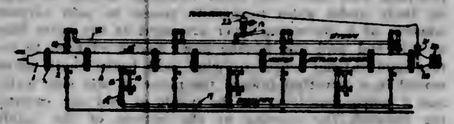
1. A vending machine comprising a cabinet, a plate having visible spaced apart receiving and discharging coin passages, a curved passage connecting said passages at their upper ends, a pocket formed in said plate between the receiving and discharging passages and communicating with the curved passage to the side of its center adjacent the discharge passage, means for pro-



jecting a coin through certain of said passages, a coin receptacle located beneath the discharge passage, and means for rocking said coin receptacle for discharging the coin therefrom.

1,578,271. NOISELESS CHAIN. RAYMOND W. DULL, Chicago, Ill., and FRANK J. OAKES, Indianapolis, Ind., assignors to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 30, 1924. Serial No. 689,421. 9 Claims. (Cl. 74—32.)

8. In a chain, chain links each comprising a plurality of laterally spaced link elements, cross pins passing through each end of said elements and connecting them to form the link, the elements directly contacting the cross pins, and non-rotatable in relation thereto, and means for connecting said links comprising link sections mounted upon and rotatable about and in direct engagement with said pins, said rotatable elements being substantially thicker than said non-rotatable elements at their points of engagement with said pins.



1,578,272. FASTENER-SUPPLYING DEVICE. RENÉ E. DUPLESSIS, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 26, 1921. Serial No. 447,997. 20 Claims. (Cl. 1—49.5.)

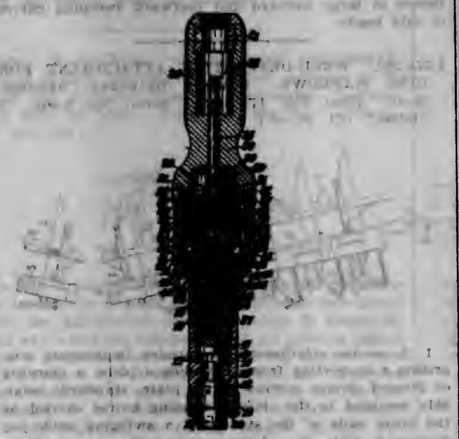
1. In a device for supplying fastenings, in combination, a raceway for fastenings, a detent arranged to be rocked to retain fastenings therein, a spring to rock said detent into the raceway, a pin-and-slot fulcrum for the detent, and an actuating lever connected to the detent by a pin-and-slot connection for allowing the spring to rock the detent into the raceway, and for moving the detent longitudinally of the raceway.

1,578,273. TREATING APPARATUS FOR CRUDE OIL. HARRY L. EDWARDS, Houston, Tex., assignor, by direct and mesne assignments, of one-half to G. H. L. Kent, Houston, Tex., and of one-sixth to Ray Richmond, Corsicana, Tex. Filed Mar. 29, 1924. Serial No. 702,803. 4 Claims. (Cl. 196—5.)

2. In a dehydrator for crude oil, an approximately horizontal oil conducting pipe, heating sections therein, said sections being closed transversely except for oil tubes extending longitudinally therethrough, a pipe for heating fluid connected to said sections, other sections

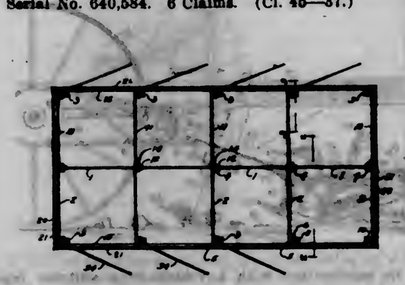
between said heating sections being unobstructed to allow settling out of the water and having liquid outlets on the lower side thereof.

1,578,274. METHOD OF TREATING PARTICLES OF MATTER. BYRON E. ELDRED, Great Neck, and ROBERT N. GRAHAM, Long Island City, N. Y., assignors, by direct and mesne assignments, to National Carbon Company, Inc., a Corporation of New York. Filed Mar. 10, 1922. Serial No. 542,766. 7 Claims. (Cl. 209—164.)



3. The process of separating carbonaceous material from a comminuted mixture containing such material and non-carbonaceous matter, which process consists in effecting a flotation of the carbonaceous material in a liquid and free of the particles of non-carbonaceous matter substantially wholly by means of a gas initially carried by the particles of carbonaceous material and a normal constituent thereof and developed in bubble form upon the carbonaceous particles.

1,578,275. MECHANICALLY-DRIVEN PERCUSSIVE TOOL. ROBERT WILLIAM JOHNSTON FLETCHER, Edinburg, Scotland. Filed Dec. 4, 1924. Serial No. 754,001. 4 Claims. (Cl. 125—33.)



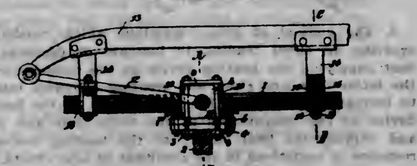
1. In a tool of the character described, the combination of a casing, a rotatable driving member journaled therein, a reciprocatory driven member capable of longitudinal movement in the casing, a cam element and a co-operating abutment element, an anti-friction bearing member between the said elements, one of which elements is rotatable in relation to the other, and is arranged to be rotated by said driving member, and one is arranged to move in a direction towards and away from the other and to reciprocate said driven member, which bearing member is permitted a controlled translatory movement between said elements relatively to said

driving and driven members in the same direction as and also in the opposite direction to that of the rotary movement of the movable element, and stops fixed on one of

said elements and arranged to limit the movement of said bearing member in each direction of travel whilst permitting it to move bodily between the stops in relation to said elements, substantially as described.

1,578,276. SHEET-METAL CABINET AND LOCKER. EDWARD FOOSE, Washington, D. C. Filed May 21, 1923. Serial No. 640,584. 6 Claims. (Cl. 45—87.)

3. A sheet metal structure comprising integral wall elements, each of said wall elements composed of a back, a side and a stile, said side being approximately at a right angle to the back, said stile being approximately at a right angle to the side, an offset portion formed parallel with and along one edge of back, said portion being offset for a distance equal to the thickness of the sheet metal forming the back whereby adjoining back walls are alined, and means for securing one wall element to an adjoining wall element for forming compartments.

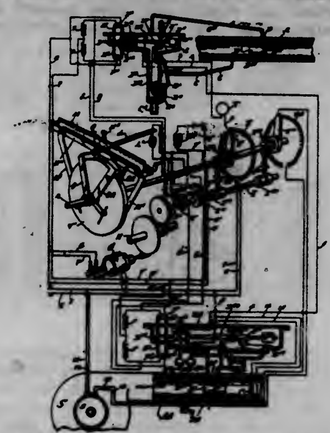


1,578,277. WINDOW SCREEN. CHARLES F. GRECKSCHTEIN, Washington, D. C. Filed Feb. 12, 1924. Serial No. 692,414. 1 Claim. (Cl. 156—14.)

The combination with a screen frame having a pair of slots in each side stile, of an attachment to be placed in each of said slots, said attachment comprising a housing having a slot in each of its side walls, a leaf spring within the housing and secured at one end to the housing, depending flanges at the free end of the spring, a roller secured between said flanges, said spring normally holding the roller within the housing, said roller being

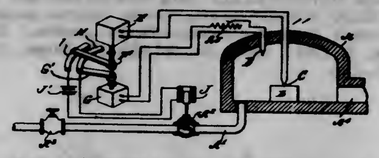
adapted to be projected through one of said slots of the housing, a cam slidably mounted in the other of the slots of the housing and adapted to slidably engage the said spring and project the said roller through one of the slots of the housing.

1,578,278. SPRING-SUSPENSION ARRANGEMENT MORE PARTICULARLY FOR POWER-DRIVEN VEHICLES. LEOPOLD GEYM, Vienna, Austria, assignor to Edgar Tafler & Company, Vienna, Austria. Filed Sept. 5, 1923. Serial No. 661,079. 5 Claims. (Cl. 267—56.)



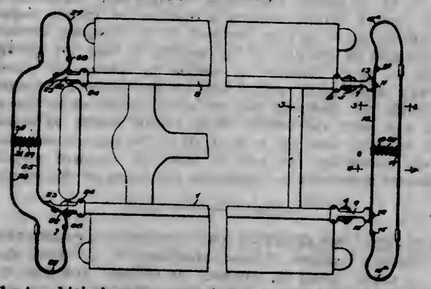
1. In a spring suspension arrangement particularly for power driven vehicles a number of loosely superimposed plate springs fastened in a clamping member arranged on the axle of the vehicle, so that the springs can be made stronger or weaker by adding or taking away single plate springs said springs being all of equal length, the clamping member being connected by means of rods with the vehicle frame resting loosely by means of supports upon the ends of all of the springs, and said rods permitting the axle to have the required perpendicular movement in relation to the frame of the vehicle.

1,578,279. MEASURING AND CONTROL APPARATUS. GEORGE HERBERT GIBSON, Montclair, N. J. Filed Jan. 8, 1920. Serial No. 349,303. 10 Claims. (Cl. 236—1.)



1. The combination with a measuring instrument comprising a swinging arm, of a relay mechanism comprising a pair of members automatically actuated to move toward and away from each other and from the neutral

position of said arm and one or the other engaging said arm in such movement if the latter is displaced from its neutral position in one direction or the other, and

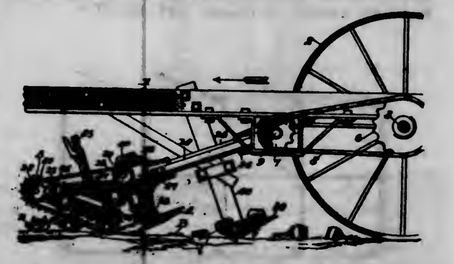


mechanism adjusted in one direction on such engagement of the arm by one member and in the opposite direction when said arm is engaged by the other member.

1,578,280. HEATER REGULATION. GEORGE HERBERT GIBSON, Montclair, N. J. Filed Feb. 6, 1920. Serial No. 356,778. 19 Claims. (Cl. 236—70.)

1. The method of heat regulation which consists in creating an effect tending to increase or decrease the heat supply to the heating device as the temperature of the latter falls and rises, and creating an effect tending to increase and decrease the heat supply to the heating device as the temperature of the work falls and rises, and varying the heat supply to the heating device in response to variations in the resultant of said effects.

1,578,281. COLLISION SHOCK ABSORBER. BERT D. GILSON, Chicago, Ill. Filed Feb. 21, 1925. Serial No. 10,760. 6 Claims. (Cl. 293—55.)

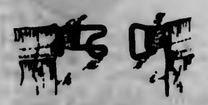


1. A vehicle bumper comprising a pair of brackets perforated at each end for attachment to the vehicle, clips on said brackets intermediate their ends, a cross bar clamped in said clips, said bar terminating adjacent to said clips in perforated heads, a flexible impact member formed with similar perforated heads at the ends, pivots seated in said perforations, said impact member comprising a straight portion extending in parallel spaced relation to and the full length of said bar, and continuing thence in large outward and rearward sweeping curves to said heads.

1,578,282. WEED-DESTROYING ATTACHMENT FOR DISK HARROWS. GUSTAVE GRIMSRUD, Antelope, Mont. Filed Feb. 17, 1925. Serial No. 9,862. 7 Claims. (Cl. 97—9.)

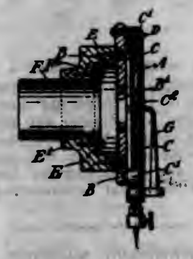
1. A weeder attachment for farming implements comprising a supporting frame including a plate, a plurality of pivoted clamps carried by the plate, standards rotatably mounted in the clamps, weeding knives carried by the lower ends of the standards, a swinging guide bar connected with the plate engaging the standards, a radially extending arm connected with each standard, a bolt extending through the arm carried by the guide plate, spring means coiled about the bolts engaging the arms, and means for simultaneously sliding the bolts on said arms toward and away from the standards.

1,578,283. BEET TOPPER. ERVIN J. HAMMER, Miller City, Ohio. Filed Feb. 29, 1924. Serial No. 696,024. 7 Claims. (Cl. 55—107.)



1. In combination with a vehicle of a suitable type having a drive shaft, a beet topper having means including a tubing by which it is affixed to the vehicle, a topping disk, means by which it is driven from the drive shaft, said means including a line shaft occupying said tubing and constituting the source of power of said topper and gauge means contacting the ground and beets in advance of the disk to support the disk in a cutting position.

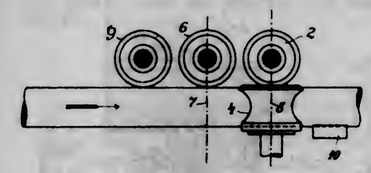
4. In combination with a suitable vehicle having a driving member and a frame, a bearing structure removably attached to the frame, transmission mechanism including a housing having bushings resting in the bearing structure for vertical swinging, means by which the driving member drives the transmission mechanism, and a beet topper mechanism including a housing containing topper driving means, a tubular member by which the housing is extended from the transmission mechanism, and an element contained by said tubular member transferring power from the transmission mechanism to said driving means.



5. A beet topper comprising a gear housing, a fixed frame extending therefrom, a frame movably mounted upon the fixed frame, a topping disk carried by the housing, gearing in said housing operating the disk, means constituting a belt carried by the movable frame contacting the ground and driven by said gearing, and means to adjust the movable frame in respect to the fixed frame to vary the cutting plane of the disk.

1,578,284. FASTENING MEANS FOR GARMENTS. THOMAS HARDY, Manchester, England, assignor to T. Hardy and Company Limited, Manchester, England. Filed Mar. 10, 1924. Serial No. 698,070. 1 Claim. (Cl. 24—228.)

As a new article of manufacture detachable fastening means for aprons and the like formed from two pieces of wire, the mid portion of one of which is shaped to form an eye, while the mid portion of the other is shaped to form a complemental hook, and having the free ends of both pieces of wire overlapped, parallel and in spaced relation relatively to each other, providing a free passage leading to the interior of each member whereby a garment loop may be readily slipped through the passage, hereby quickly attaching or detaching the fastening to or from the garment.

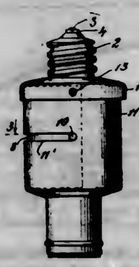


1,578,285. SOUND BOX FOR TALKING MACHINES. MAURICE ARTHUR HARDYMAN, Charlton, London, England, assignor to John Harling Bailey, London, England. Filed Apr. 11, 1922. Serial No. 551,653. 2 Claims. (Cl. 274—25.)

2. In a talking-machine sound-box the combination of a diaphragm, a back-plate behind the diaphragm having in it an opening for passage of sound emanating from the diaphragm, a tubular tone-arm socket whose sound inlet is disposed opposite the opening in the back-plate, and a hollow cavity-member of wood interposed between the back-plate and the tone-arm socket so as to provide a sound cavity behind the back-plate and between it and the tone-arm socket-inlet, the interior of which cavity member is so dimensioned that the cavity is substantially equal in diameter to the operative portion of the diaphragm and substantially equal in depth to three times the depth of the space between the diaphragm and the back-plate, substantially as described.

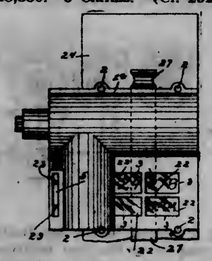
1,578,286. PRODUCING PIPES BY ELECTRICALLY WELDING. JOHANN HARMATTA, Budapest, Hungary. Filed Aug. 15, 1924. Serial No. 732,188. 5 Claims. (Cl. 219—4.)

1. The herein described method of manufacturing electrically welded pipes in continuous operation, which consists in conducting the current from an electrode-roller provided outside the pipe and touching the two edges to be welded together to two electrode-rollers provided one on either side of the pipe to be manufactured, said



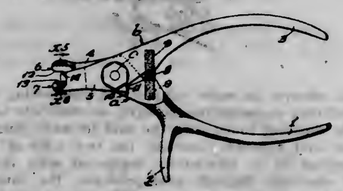
two rollers being displaced in the longitudinal direction of the pipe with respect to the first mentioned electrode-roller and pressing together said two edges of the welding seam.

1,578,287. ELECTRODE FOR JET-WAVE COMMUTATORS AND INTERRUPTERS. JULIUS FREDERIK GEORG POUL HARTMANN, Copenhagen, Denmark. Filed May 19, 1925. Serial No. 31,350. 6 Claims. (Cl. 175—363.)



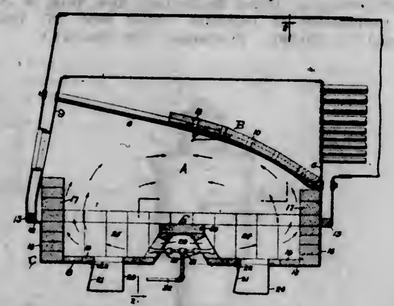
4. An electric jet-wave commutator, comprising means for producing a conductive jet-wave, an electrode adapted to be in constant touch with the said jet-wave during its motions, and a double-electrode, the two sides of which are adapted to be alternately connected with the first named electrode through said jet-wave, the innermost part of each side of said double-electrode consisting of at least one conductive liquid jet, the said double-electrode being so arranged that the interruption between the jet-wave and each side of the said double-electrode takes place at said liquid jet.

1,578,288. LAMP-SOCKET ATTACHMENT DEVICE. CLINTON W. HOUGH, Boonville, N. Y., assignor, by mesne assignments, to Wired Radio Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 27, 1922. Serial No. 590,797. 12 Claims. (Cl. 250—41.)



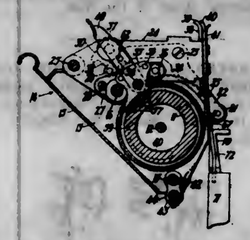
1. In a lamp socket attachment device, a plug adapted to be inserted in a lamp socket, a multi-plate, variable condenser, having at least one plate electrically connected with said plug, said plug and condenser being combined to form a rigid, self-contained unitary structure.

1,578,289. CHECK-PROTECTING DEVICE. CLARENCE R. MARTINEAU, Albany, N. Y. Filed May 6, 1925. Serial No. 28,330. 5 Claims. (Cl. 292—287.)



1. In a device of the class described, and in combination, an enclosure provided with an inspection opening, and with an inlet passageway and an outlet passageway at opposite ends of a path for a check through the enclosure past said inspection opening; check-feeding and mutilating means operable in one direction only in said path of the check; and means within the enclosure automatically moved by the movement of the check-feeding mechanism to obstruct said inlet passageway.

1,578,290. SAFETY FRUIT CLIPPER. GUILFORD W. SHORT, Pomona, Calif. Filed Dec. 11, 1922. Serial No. 606,274. 2 Claims. (Cl. 30—24.)

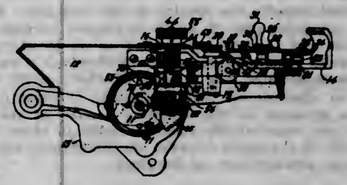


1. A pair of fruit clippers of the character described having jaws the free ends of which are offset and terminate in a semi-spheroidal bump flattened on one side.

1,578,291. FURNACE. CHESTER A. SIEGEL, Arlington, N. J., assignor to American Arch Company, a Corporation of Delaware. Filed Aug. 2, 1921. Serial No. 489,328. 7 Claims. (Cl. 158—8.)

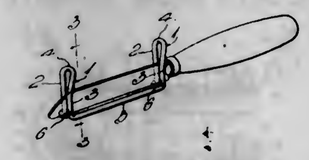
1. In a locomotive furnace, the combination of a fire arch extending from one end of the fire box toward the other; a fire pan for said fire box with a flash wall at either end thereof; and burners in said fire pan directed fore and aft toward said flash walls, so that their fuel streams shall be retroverted by said flash walls and meet in the upper portion of the combustion chamber defined by said fire arch.

1,578,292. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 9, 1923, Serial No. 623,824. Renewed May 1, 1925. 16 Claims. (Cl. 197—135.)



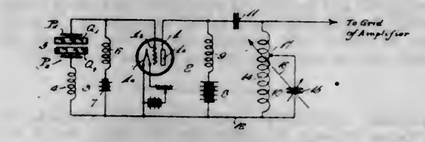
1. In a typewriting machine, a platen, means to rotate the platen, means to predetermine the position to which the platen is rotated, feed-rolls to run on the platen, and feed-roll cast-off means rendered effective at the conclusion of the rotation of the platen to said predetermined position by said rotating means.

1,578,293. TRIMMING MACHINE. CHARLES B. SPALSBURY, St. Louis, Mo., assignor to Johnson, Stephens and Shinkle Shoe Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 9, 1924. Serial No. 685,115. 26 Claims. (164—47.)



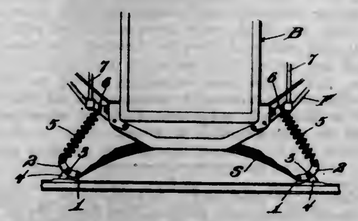
1. A trimming machine comprising a downwardly extending frame part, a stationary cutting block secured to the lower end of the frame part and having an extended cutting edge, an actuator extending downwardly toward and terminating above said block, a knife attached to said actuator between said cutting block and said frame part, and mechanism for operating said actuator to impart horizontal reciprocating movements to said knife.

1,578,294. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Rutherford, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 14, 1923, Serial No. 662,609. Renewed Aug. 15, 1925. 47 Claims. (Cl. 197—114.)



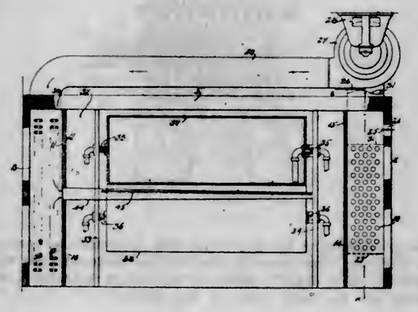
1. In a typewriting machine, in combination, a revoluble platen and line-spacing mechanism therefor, comprising a line-space lever, a horizontal rack on the line-space lever, and a pinion in mesh with the rack, the pinion being mounted for rotation about a vertical axis and having teeth of sufficient length to permit case shifting of the pinion relatively to the rack without disengaging the rack and pinion.

1,578,295. KNIFE GUARD. VIRGIL D. SWIHART, Chicago, Ill. Filed Dec. 29, 1924. Serial No. 758,758. 3 Claims. (Cl. 30—20.)



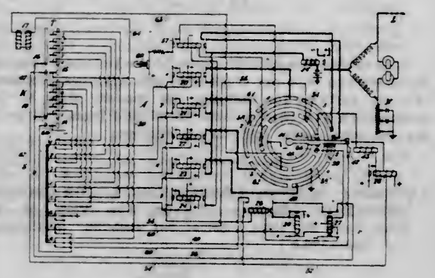
1. A knife guard comprising a pair of spaced arches adapted to straddle and yieldingly grip the front and rear ends of a knife blade with their crowns disposed at the back of said blade, said arches being of a length substantially double the width of the blade with which the guard is used, the halves of said arches adjacent their crowns being wider than the thickness of the blade to free the latter when moved into said halves, and a straight guard bar for parallel disposition with respect to the blade, the ends of said bar being jointed to two of the legs of said arches, the other two legs being free.

1,578,296. MULTIFREQUENCY CRYSTAL-CONTROLLED OSCILLATOR. ALBERT H. TAYLOR, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 2, 1925. Serial No. 60,065. 10 Claims. (Cl. 250—36.)



7. In a frequency control or stabilizing system a multiplicity of piezo electric crystals of different frequency characteristics and means for selectively sustaining the oscillations of any one of said crystals at its characteristic frequency.

1,578,297. VEHICLE SPRING. JESSE A. TIDMORE, Bellamy, Ala. Filed Sept. 11, 1924. Serial No. 737,133. 6 Claims. (Cl. 267—17.)

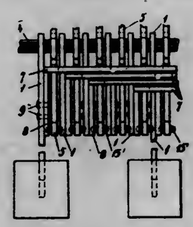


1. In combination with the body of a vehicle and an axle therebeneath, a cross spring carried by the body, upstanding brackets carried by the axle, levers pivotally supported substantially midway their ends by the brackets, the extremities of the spring being secured to the inner ends of the levers, and retractile coil springs secured to the opposite end portions of the levers and to the side portions of the body.

1,578,298. PROCESS OF AND APPARATUS FOR DRYING FABRIC WEBS. JOSEPH H. WALSH, Boston, Mass., assignor to Johns-Manville, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 14, 1922. Serial No. 552,723. 15 Claims. (Cl. 34—48.)

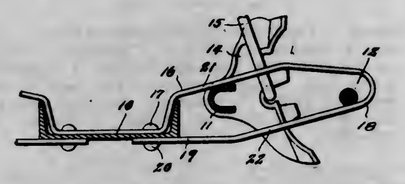
1. That process of drying webs of textile fabric which comprises passing such a web through a heat insulated housing and during its passage alternately subjecting the web to the drying action of a blast of heated gaseous fluid of substantially uniform intensity transversely of the web and to that of a heated solid with which the web is caused directly to contact.

1,578,299. PRINTING-TELEGRAPH SYSTEM. GILBERT S. VERNAM, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed June 10, 1918, Serial No. 239,257. Divided and this application filed Mar. 28, 1922. Serial No. 547,592. 11 Claims. (Cl. 179—23.)



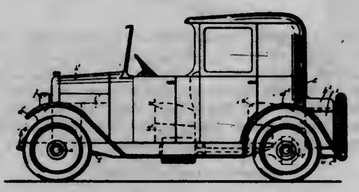
1. In a signaling apparatus, an intermittently operating distributor, means to set said distributor into operation, means responsive to all received impulses of a group regardless of their character, and a relay energized when the last impulse of a group is of one character only, said first mentioned means being under the joint control of said responsive means and said relay.

1,578,300. TYPEWRITER. KAREL VONDRA, Kysperk nad Orlici, Czechoslovakia. Filed Nov. 17, 1924. Serial No. 750,379. 2 Claims. (Cl. 197—11.)



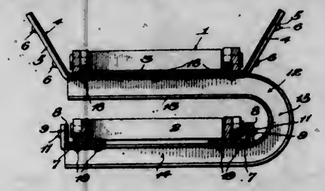
1. In a typewriter, a shaft, a plurality of type control levers arranged on said shaft, key levers arranged on said shaft alternately with the type control levers, a thrust member connected to each type control lever so as to cooperate with adjacent key-levers for operating

the type control lever, each thrust member being arranged so as to require the depression of both key levers adjacent to it for operating its type control lever, bridge



pieces connecting the key levers into intermeshing groups so that any type control lever can be operated by a depression of a definite group of key levers, and an actuating key for each group of key levers.

1,578,301. BRAKE-BEAM SUPPORT AND SAFETY DEVICE. EDWARD T. WALKER, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 12, 1924. Serial No. 737,252. 12 Claims. (Cl. 188—210.)

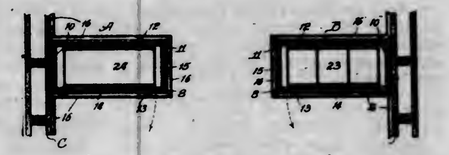


1. A safety support and guide for brake beams adapted to be secured to a car truck part and having a plurality of track portions for engaging the opposite sides of the compression and tension members of said beam and guiding the latter in its operative movements.

1,578,302. CHASSIS CONSTRUCTION FOR MOTOR VEHICLES. MAURICE WALTER, New York, N. Y. Filed June 21, 1923. Serial No. 646,736. 5 Claims. (Cl. 280—106.5.)

1. In motor vehicle frame construction, longitudinal side frame members, a storage battery support connecting the front ends of said side members, a storage battery support secured to the rear ends of said side members, and means secured to the supports for supporting the frame from the axles.

1,578,303. APPARATUS FOR USE IN THE CONSTRUCTION OF FRAMEWORK SUPPORTS FOR CONVEYERS. RAYMOND A. WALTER, New York, N. Y., and WALTER M. DAKE, Franklin, Pa. Filed Feb. 4, 1924. Serial No. 690,513. 8 Claims. (Cl. 198—1.)

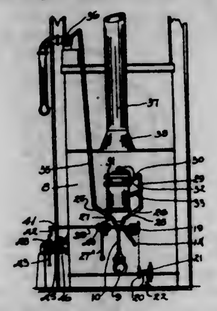


1. In a conveyer framework, an upper supporting platform, lower supporting guides, and supports therefor comprising unitary structures having horizontally disposed arms.

1,578,304. FERRULE. WILLIAM WERNER, Corsicana, Tex., assignor to Mexia Planing Mill Company, Mexia, Tex., a Corporation of Texas. Filed May 21, 1924. Serial No. 714,987. 6 Claims. (Cl. 16—109.)

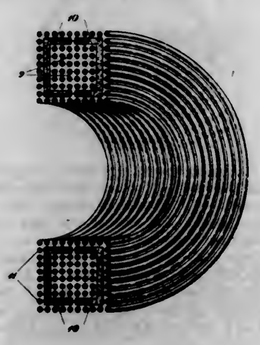
6. A clamping ferrule in the form of a split band provided near one edge with tongues formed by partially cutting out and bending up portions of said bands transversely thereof, said bands having openings on the other edge to receive said tongues, and spirally disposed internal ribs on said bands for the purpose as described.

1,578,305. BUILT-IN CHINA CLOSET. CHARLES C. WHITE, Chicago, Ill. Filed Dec. 19, 1921. Serial No. 523,358. 1 Claim. (Cl. 20—1.11.)



The combination with a built-in wall having a baseboard, of a china closet consisting of a factory-built unit having relatively narrow ends and wide sides and a closed top, one of the ends being unfinished and fitting against said wall, and the other finished, the sides being finished and one of them having a door with a window therein, and a base-board extending around the finished ends and sides, forming a continuation of the baseboard of the wall, the closet forming, when secured against the wall, a built-in structure.

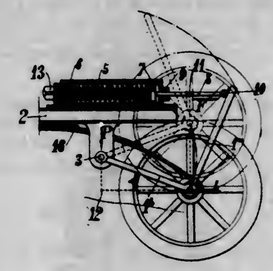
1,578,306. WATER-GAS APPARATUS. HERBERT WOOD, Mortlake, near Sydney, New South Wales, Australia. Filed Nov. 14, 1922. Serial No. 600,936. 2 Claims. (Cl. 48—83.)



1. Water gas apparatus including a water gas generator having an air blast valve, a steam admission valve, a stack valve and a gas outlet valve; in combination, operating mechanism comprising a manually controlled shaft, a pinion on the shaft, a rack operated by the pinion, said rack directly controlling the air blast valve and controlling the steam, stack and gas outlet valves through pivotally connected rods connected to the rack,

said shaft having an extension, ash extractor rolls having interengaging gears, a gear wheel engaging certain of said interengaging gears, to operate the ash extractor rolls, a crank arm on said shaft extension; a pair of pivotally

interconnected rods, one pivotally connected to said crank arm and the other to the shaft of said gear wheel, and a pawl, to rotate said gear wheel, said pawl being connected to one of said last named pair of rods.

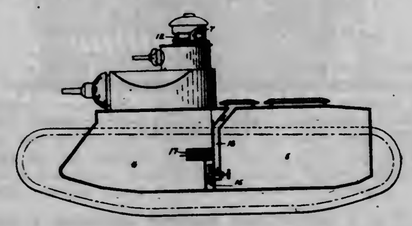


1,578,307. INDUCTANCE COIL. MANUEL K. ZINN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 8, 1925. Serial No. 49,127. 10 Claims. (Cl. 175—356.)

1. A coiled bundle of wire forming an annulus in which electric currents in individual coils of wire flow circumferentially with respect to the annulus, a core comprising a casing of magnetic material in the general form of a hollow ring surrounding and enclosing the annular bundle of wire, and an outer layer of wires surrounding the core and so wrapped with respect thereto that the current flowing in the individual turns of the wire flows circumferentially with respect to the annulus.

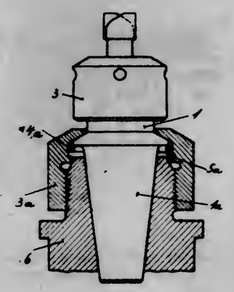
1,578,308. SUSPENSION FOR VEHICLES. CHARLES AMBERG-MANNHEIM, Paris, France. Filed Aug. 31, 1922. Serial No. 585,495. 2 Claims. (Cl. 267—16.)

1. In a suspension for vehicles, a frame, an axle, a two branched lever, a pivot connecting the end of one of the branches of the lever to the frame, a pivot connecting the lever at its middle part to the axle, a rod guided in the frame, an abutment carried by the rod, a coil spring bearing on the frame and on the abutment,



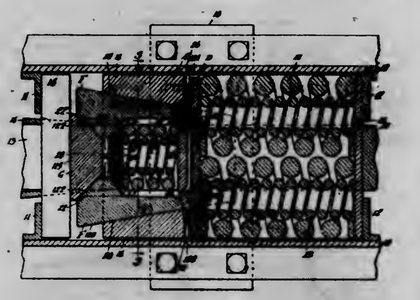
a roller on the rod for contacting with the other branch of the lever, and a leaf spring interposed between the axle and the frame.

1,578,309. BELT BUCKLE. ALWIN H. BECK, Rochester, N. Y., assignor to Hickok Mfg. Company, Inc., Rochester, N. Y. Filed June 11, 1923. Serial No. 644,540. 2 Claims. (Cl. 24—191.)



1. A buckle comprising a frame having a clamping surface, a clamping member for ocoperating with said clamping surface, and an anchoring member pivotally supported on the frame and having the clamping member slidable thereon, said clamping member and anchoring member having surfaces extending throughout the greater portion of the cooperating clamping member transversely of the buckle to support said clamping member substantially throughout its length.

1,578,310. VEHICLE OF THE TYPE KNOWN AS A TANK. LEVIN H. CAMPBELL, Jr., U. S. Army, and EMIL F. NORELIUS, Davenport, Iowa. Filed Dec. 8, 1925. Serial No. 74,146. 2 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

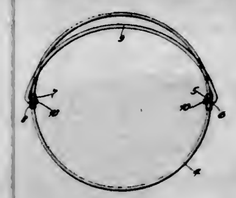


1. In a tank, a conning tower having apertures for normally ventilating the tank, an apparatus adapted to deliver chemically purified air to the tank under pressure, and a dished cover adapted to be readily secured to the conning tower to close its apertures, when said apparatus is to be operated.

1,578,311. SCREW JOINT. PAUL GROSSERT, Altona-Ottensen, Germany. Filed Oct. 18, 1924. Serial No. 744,408. 1 Claim. (Cl. 279—91.)

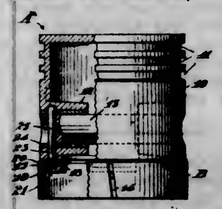
The combination with a flanged conical member, a body having a correspondingly conical seat in one end for the reception of said conical member therein, and a cap nut screwed over said body and engaging over the flange of said member, said nut having an inner annular recess therein, a springy split ring fitting in said recess so as to form an inner projection in said nut and to bear against the underside of the flange of said member, substantially as and for the purpose set forth.

1,578,312. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Feb. 9, 1924. Serial No. 691,578. 12 Claims. (Cl. 213—26.)



1. In a friction shock absorbing mechanism, a combination with a friction shell having interior friction surfaces; of friction shoes coacting with said shell friction surfaces; a yoke receiving the actuating force and transmitting force to the shoes, said yoke having wedge means thereon coacting with said shoes; and means for yieldingly resisting movement of said shoes, said means including a spring element coacting with said yoke.

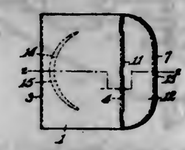
1,578,313. APPARATUS AND METHOD FOR REGULATING THE TEMPERATURE OF SUPERHEATED STEAM. KARL HENCKY, Leverkusen, near Cologne, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne, Germany. Filed Nov. 7, 1924. Serial No. 748,499. 6 Claims. (Cl. 122—487.)



1. A method of regulating the temperature of superheated steam which consists in passing steam downwardly at high velocity over a downwardly-flowing thin film of water of extended area.

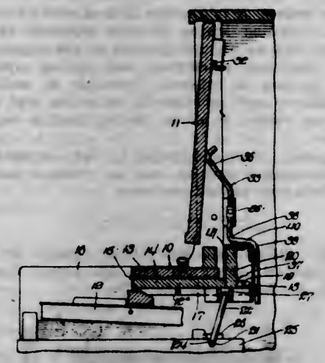
1,578,314. COMBINED COFFEE SACK AND HOLDER. ARTHUR G. HEROLD, St. Louis County, Mo. Filed Mar. 14, 1924. Serial No. 699,351. 1 Claim. (Cl. 53—3.)

A device of the character described comprising a split resilient ring the ends of which are held close together by the resiliency of the ring, a tubular part rigid with and extending beyond one end of the ring forming telescoping connection with the opposite end of the ring and holding the two ends of the ring approximately in abutting contact and in circular alinement, a bail, and means forming pivot connection for one end of the bail with that end portion of the ring with which said tubular part is rigid and the opposite end of the bail diametrically opposite.



1,578,315. PISTON. WILLIAM R. HEALEWOOD, Los Angeles, Calif. Filed Apr. 30, 1925. Serial No. 26,941. 6 Claims. (Cl. 74—108.)

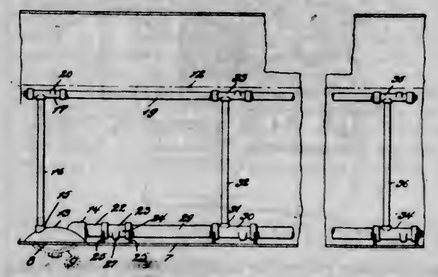
1. A piston comprising a piston body, having a series of spaced outwardly extending shoulders on its lower end, and an expansion ring formed with a series of spaced



inwardly extending flanges adapted to be positioned to extend into the spaces formed above said shoulders, and means engaging the flanges on said expansion ring for clamping the latter in place on the piston body.

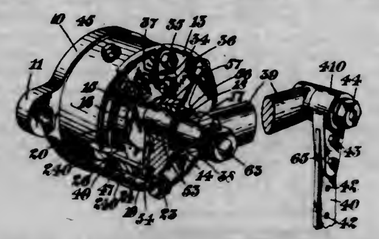
1,578,316. COMBINED MATCH-BOX CASE AND ASH RECEIVER. WAINO ILMA and MATT SAARI, Weirton, W. Va. Filed Apr. 18, 1925. Serial No. 24,020. 2 Claims. (Cl. 206—38.)

2. A holder divided intermediate its ends into two compartments, one of said compartments constituting an open-ended case for match boxes and the other a container for ashes and the like, said holder comprising parallel top and bottom walls and a side wall, said bottom having greater length than said top, an upright compartment wall formed at the front edge of said bottom and having its ends turned back to form end walls for said container, a transverse division wall disposed parallel to the said side wall of the case and attached to the end walls of the container, and a cover for said container hinged to the front edge of the top wall.



1,578,317. FALL-BOARD AND MUSIC-DESK CONSTRUCTION. THURE A. JOHANSON and FRANCIS C. SOCIN, St. Charles, Ill., assignors to The Cable Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 6, 1923. Serial No. 610,990. 14 Claims. (Cl. 84—178.)

7. The combination, with the keys, key-bed, and fall-board of a piano, of means for mounting said fall-board for inward and outward parallel motion above said keys, comprising a rock-shaft arranged to extend transversely beneath said keys below the upper surface of said key-bed and having a pair of upwardly extending arms, one at each end of said rock-shaft beyond the range of said keys and connected with said fall-board, whereby said rock-shaft and the said upwardly extending arms thereof do not interfere with the bodily removal of the entire range of said keys.

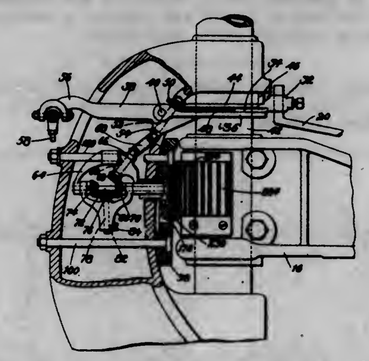


9. A piano fall-board and music-desk construction comprising a fall-board mounted for inward and outward movement, a music-desk mounted for inward and outward movement, and means whereby inward movement of said fall-board will cause outward movement of said music-desk and will lock said music-desk in its outer position; said means comprising a rock-arm pivotally supported between its ends to swing vertically, the upper end-part thereof acting directly upon said music-desk and the lower end-part thereof engaging with said fall-board, such lower end-part of said rock-arm being provided with a shoulder, and said fall-board being provided with an abutment movable underneath and cooperating with said shoulder to hold said rock-arm in position to hold said music-desk in its outer position.

1,578,318. BOILER CLEANER. EDWARD B. JOHNSON, St. Louis, Mo. Filed July 6, 1925. Serial No. 41,785. 1 Claim. (Cl. 122—381.)

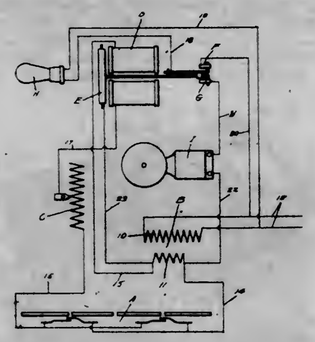
The combination with a boiler of a cleaner therefor, said cleaner comprising a shell positioned over the blow-off opening of a boiler, a vertical and a horizontal pipe in fluid communication with said shell, sediment collectors connected in series in said horizontal pipe, a second horizontal pipe, a skimmer connecting said vertical pipe and said second horizontal pipe, additional skimmers connected in series in said second horizontal pipe, and additional vertical pipes placing all additional skimmers and sediment collectors in fluid communication.

1,578,319. SHOCK ABSORBER. ERNEST WILLIAM JOHNSON, London, England, assignor of one-half to Donald Coleman Defries, London, England, and one-half to Colin Defries, Hove, Sussex, England. Filed July 18, 1925. Serial No. 44,464. 21 Claims. (Cl. 188—89.)



1. A shock absorber comprising a casing constituting a main working chamber for the reception of a working liquid, a vane and a co-operating abutment enclosed in said chamber, a casing constituting a recuperator chamber and so arranged relatively to the other said casing that the one chamber is nested in the other, and means for automatically keeping the working chamber charged with working liquid from the recuperator chamber.

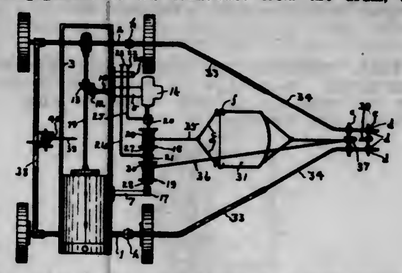
1,578,320. PRESS. FRANK BYCROFT KRALL, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 12, 1922. Serial No. 567,690. 23 Claims. (Cl. 164—23.)



1. In a machine of the character described, a work supporting bed, a presser member movable toward and

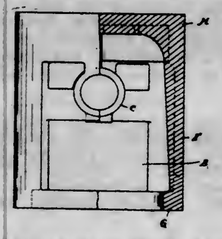
from the bed in pressure applying operations and also laterally of the bed into and out of operative relation to work located on the bed, power means for moving the presser member laterally over the bed, a manually operable member movable with the presser member and

also relatively thereto for controlling said power means, and connections between the power means and the manually operable member for causing the power means to bring the presser member to rest simultaneously with the relative movement of the manually operable member and the presser member into alinement.



1,578,321. FOUL-LINE INDICATOR. AUGUST J. KEMPIEN, St. Paul, and THOMAS C. FORBES, Minneapolis, Minn.; said Forbes assignor to said Kempien. Filed Feb. 10, 1922. Serial No. 535,548. 28 Claims. (Cl. 273—50.)

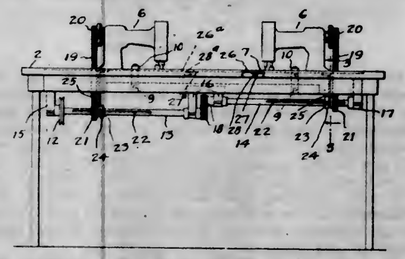
1. A foul indicator comprising a signal device, means for operating said signal device including a member positioned in the floor of the bowling alley, and means for rendering said operating means inoperative when the floor member is momentarily actuated.



1,578,322. CARRIER MECHANISM. GEORGE E. KERNES, Omaha, Nebr. Filed Oct. 29, 1923. Serial No. 671,313. 2 Claims. (Cl. 192—18.)

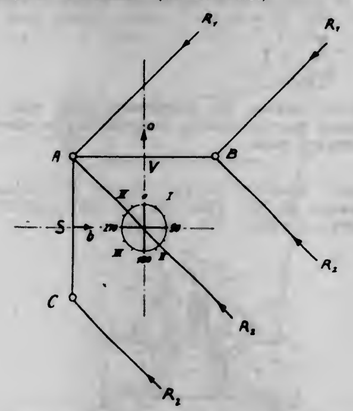
1. In carrier mechanism, a rotatable shaft, a brake-shoe, a clutch keyed on the shaft, a link loosely engaging the clutch and having an arm secured to the brake-shoe, a drum journalled on the shaft intermediate the clutch and brake-shoe, said link being movable in one direction to cause coincident engagement of the clutch with and disengagement of the brake-shoe from the drum, and

being movable in an opposite direction to cause coincident disengagement of the clutch from and engagement of the brake-shoe with said drum.



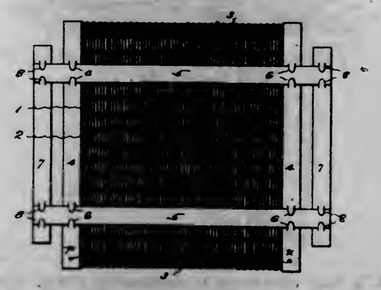
1,578,323. METHOD OF MAKING PISTONS. CHARLES H. KIRBY, Detroit, Mich. Filed May 21, 1923. Serial No. 640,565. 14 Claims. (Cl. 29—156.5)

1. The method of fabricating pistons which consists in forming a casting having a head, segments extending therefrom, and an annular portion at the opposite ends of said segments, machining said casting while said annular portion is integral therewith to maintain a rigid structure and subsequently removing said annular portion to obtain a piston having flexible segmental portions.



3. A piston blank comprising a head, segmental portions projecting therefrom and an annular portion at the opposite ends of said segments.

1,578,324. HEMMING MACHINE. DAVID W. KLAU, New York, N. Y. Filed Feb. 26, 1925. Serial No. 11,636. 1 Claim. (Cl. 112—155.)

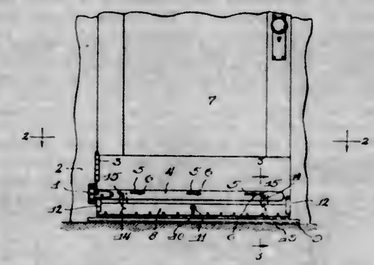


A machine of the character described, comprising a table having a transverse slot and bordering guides, two opposed sewing machines mounted on said table, relatively shiftable along said guides, transverse driving means beneath the table comprising two parts rotating on parallel axes, meshing gears on the said parts causing them to rotate in opposite directions, means for driving one of the parts, and similar positive driving connections comprising sprocket chains between the respective sewing machines and the respective parts below the table, said sewing machines being tiltable endwise toward said sprocket chains.

1,578,325. METHOD AND DEVICE FOR DETERMINING THE DIRECTION OF SOUND. WILLY KUNZE, Bremen, Germany. Filed Sept. 20, 1921. Serial No. 502,014. 3 Claims. (Cl. 181—0.5.)

1. A method for determining without ambiguity the direction in apparatuses working according to the binaural hearing method with the use of several measuring bases standing at an angle the one to the other consisting in adjusting at the measuring with the first basis, the distances between the two receivers and the ears of the operator to the same length and not altering the same, and in further operating a selecting mechanism, according to whether at this zero position the source of sound is perceived as being situated at the right or at the left of the straight direction, without alteration of the sound paths, so that at the reversing upon the second basis only that scale becomes visible upon which the correct measuring result is indicated and altering the length of the sound paths whereby the listener at the ear pieces will receive the middle impression binaurally.

1,578,326. RESISTOR. WERNER J. LARSON, West Hartford, Conn., assignor to The States Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 7, 1925. Serial No. 13,742. 7 Claims. (Cl. 201—63.)

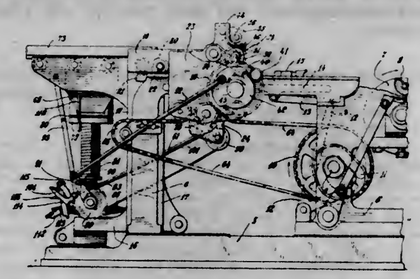


1. A resistor consisting of a fabric of woven resistance wire and insulating yarn, binding strips extending parallel with the resistance wire at the ends of the woven fabric and clamping the ends of the insulating yarn, insulating strips extending across the resistance wire and binding strips, supporting strips spaced from and parallel with the binding strips and attached to the ends of said insulating strips, and means fastening said strips together.

1,578,327. METHOD OF MANUFACTURING COLORED PRESSED ARTICLES. BRUNO LAUCKNER, Marienberg, Germany. Filed Apr. 3, 1925. Serial No. 20,559. 1 Claim. (Cl. 18—61.)

The method of manufacturing articles having a colored pattern or decoration from plastic masses such as pulverulent celluloid, horn- flour or -dust, or the like, which consists in giving to the article essentially its final shape by a preliminary moulding or shaping process while subjecting it to a relatively slight pressure, thereupon applying the coloring substances to the then relatively soft surface of said article, and thereupon subjecting said article with the coloring substances applied thereto to a further final pressing operation at a pressure which is essentially higher than that applied during said preliminary moulding or shaping process.

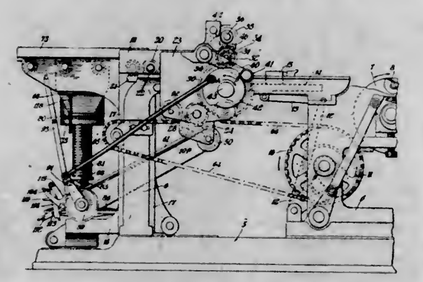
1,578,328. AUTOMATIC WEATHER STRIP. JOHN F. LESSING, St. Joseph, Mich. Filed Aug. 31, 1925. Serial No. 53,468. 3 Claims. (Cl. 20—68.)



1. The combination with a door or other outside closure, of an automatic weatherstrip for the lower edge thereof, comprising instrumentalities for causing the weatherstrip to automatically move up and down when the door is opened and closed, said instrumentalities comprising a hinge connection between the door and the doorway, comprising a member having movement horizontally and endwise relatively to the door, when the door is opened or closed, said member having a camming action with the weatherstrip, whereby said endwise movement causes the weatherstrip to rise when the door is opened, and causes the weatherstrip to move downward when the door is closed.

1,578,329. FEEDING MECHANISM FOR PRINTING PRESSES. MORRIS LIPTON, Rutherford, LOUIS HAENLEIN, East Rutherford, and FREDERICK W. HILL, Rutherford, N. J., assignors to The Fuchs & Lang Manufacturing Company, a Corporation of New York. Filed June 21, 1922. Serial No. 570,002. 18 Claims. (Cl. 271—62.)

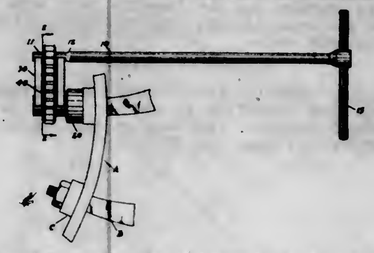
1. A feeding mechanism adapted for use in connection with a printing press, comprising a support adapted to receive thereupon a stack of work-sheets, means for successively feeding said sheets into the printing press, intermittently actuated means for imparting a step-by-step movement to said support in an upward direction, whereby said sheets are placed successively in feeding positions, control means for discontinuing the intermittent actuation of said intermittently actuated means, reversing means for reversing said intermittently actuated means to return said support to its lowermost position,



means adapted to cooperate with said control means for automatically limiting the movement of said support in an upward direction after said support has

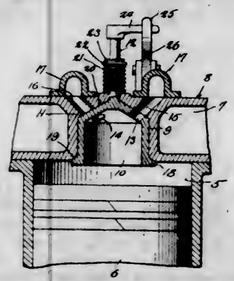
reached a predetermined elevation, and means adapted to cooperate with said reversing means for automatically discontinuing the downward movement of said support after said support has reached a predetermined position

---



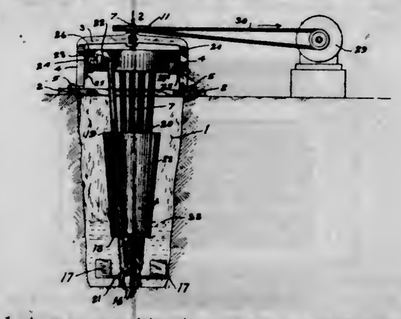
1,578,330. FEEDING MECHANISM FOR PRINTING PRESSES. MORRIS LIPTON, Rutherford, LOUIS HAENLEIN, East Rutherford, and FREDERICK W. HILL, Rutherford, N. J., assignors to The Fuchs & Lang Manufacturing Company, a Corporation of New York. Original application filed June 21, 1922, Serial No. 570,002. Divided and this application filed Dec. 6, 1923. Serial No. 678,802. 15 Claims. (Cl. 271—54.)

1. The combination with a printing press having an impression cylinder provided with work-sheet gripping fingers, of a feed-mechanism comprising a feeding finger adapted to be operated in a fixed time relation with respect, to said impression cylinder, a bodily movable feeding device adapted to transfer work-sheets to a position intermediate said impression cylinder and feed finger, and means, so actuated upon the bodily movement of said feeding device as to change its period of operation with respect to that of said feed finger and impression cylinder.



1,578,331. THRASHING-MACHINE-CYLINDER WRENCH. REUBEN D. LITWILLER, Seward, Nebr. Filed Sept. 30, 1924. Serial No. 740,840. 1 Claim. (Cl. 81—54.)

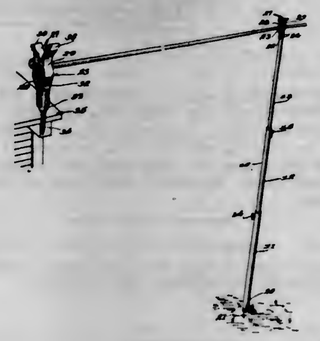
A thrashing machine cylinder wrench comprising a supporting block, a handle member, a socket member, and a sprocket chain, said supporting block including two spaced plates having arcuate bearings in their extremities open at one side, said handle member and said socket member each having their sole bearings in the arcuate bearings of said supporting block, said handle member and said socket member each having a single circle of sprocket teeth projecting radially therefrom and integral therewith, and said sprocket chain having a single row of links and passing between said plates and over the sprocket teeth of both said handle member and



said socket member, the arrangement being such that the wrench may be entirely disassembled by removing said sprocket chain.

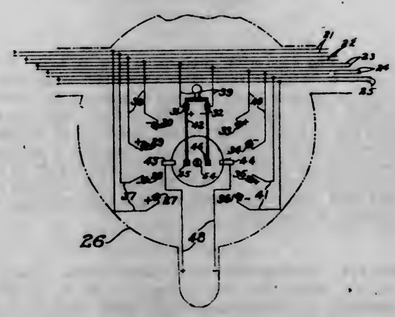
1,578,332. ENGINE VALVE. JAMES R. MCCUMBER, Kingwood, W. Va. Filed Dec. 10, 1924. Serial No. 754,984. 1 Claim. (Cl. 123—80.)

In an engine construction, an engine head having a recessed portion and having inlet and exhaust openings formed therein, a valve including a circular body portion, having a peripheral flange, said flange having an inclined upper edge, the lower edge of the wall of the recessed portion being beveled to receive the inclined upper edge of the flange to provide a fluid-tight connection between the valve and recessed portion in which the valve operates, and means for operating the valve.



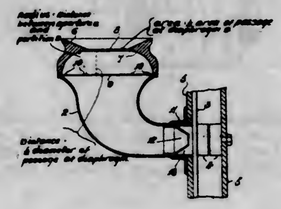
1,578,333. ROTARY PUMP. HUGH MCNIFF and HAROLD E. THOMPSON, Denver, Colo. Filed Mar. 7, 1925. Serial No. 13,736. 3 Claims. (Cl. 103—100.)

1. A pump comprising, in combination, a shaft mounted with its axis substantially perpendicular and adapted to be rotated, a bearing for the lower end of said shaft, a second bearing for the upper end of the shaft, means



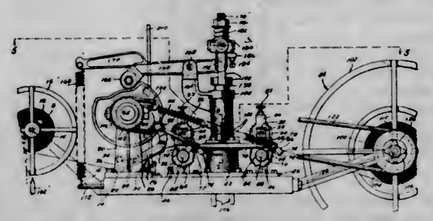
for rotating the shaft, a plurality of equidistantly spaced pipes secured to the shaft so as to be rotated therewith, the lower ends of said pipes being closer to the axis of rotation than the upper ends, whereby any water that may be in the pipes will be subjected to a centrifugal force, one component of which will tend to make it flow upwardly, and means within said pipes for making the water travel in a spiral path within the pipes.

1,578,334. CLOTHESLINE-SUPPORTING DEVICE. CARSON MCREYNOLDS, Pontiac, Mich., assignor to David L. Bond, Pontiac, Mich. Filed Mar. 9, 1925. Serial No. 14,155. 1 Claim. (Cl. 68—12.)



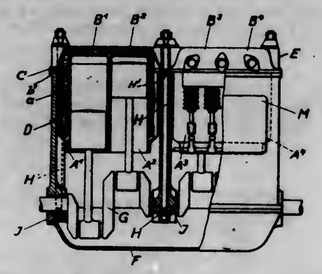
A clothes line support comprising a member having a slot in its upper end, inner and outer sets of plates, the said plates at one end entering the said slot and being in close contact with each other, the outer plates being outwardly bowed at points between their ends and having outwardly curved outer extremities, the inner plates being in close contact with each other along their inner portions and having outwardly curved outer end portions the extremities of which are provided with return bends and merging into flanges which bear against the outer surfaces of the extremities of the first mentioned plates, the end edges of the first mentioned plate being normally spaced from the inner surfaces of the return bends of the second mentioned plates.

1,578,335. ELECTRIC BAKE OVEN. JACOB U. MANISCHEWITZ, Cincinnati, Ohio. Filed Feb. 4, 1921. Serial No. 442,409. 5 Claims. (Cl. 219—35.)



1. In an oven having an electrically heated chamber, electric heating elements in the chamber, a positive terminal and a negative terminal on each heating element, a multiple throw two pole switch for each heating element, an electrical connector connecting the terminals of the heating elements with the poles of the switch, a plurality of electrical main supply lines of different voltages, disposed without the oven, pairs of contacts about the switch for receiving the poles thereof, each pair of contacts being electrically connected with one of the main lines for selectively connecting an electrical current of a given voltage to a heating element.

1,578,336. SOUND-TRANSMITTING INSTRUMENT. ALEXANDER MARR, Manchester, England. Filed Apr. 5, 1921. Serial No. 458,810. 10 Claims. (Cl. 179—187.)

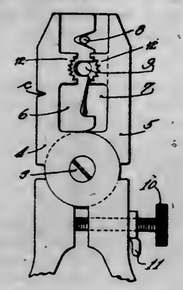


1. A sound wave concentrator comprising a mouth piece having a constricted opening for the entrance of sound waves and walls, first divergent from the opening and then convergent towards the exit end, a partition having a substantially flat surface arranged across the interior of the mouth piece at the junction of the divergent and convergent walls, said partition being imperforate at its central portion and apertured at its outer annular portion, the area of said opening at the entrance end being approximately one-fourth the area between the walls at the junction of the divergent and convergent walls.

1,578,337. MACHINE FOR USE IN THE MANUFACTURE OF BOBBINS FOR SEWING MACHINES. HENRY J. MARX and WALTER O. HARVEY, Holyoke, Mass., assignors to The American Thread Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 5, 1925. Serial No. 48,222. 13 Claims. (Cl. 18—19.)

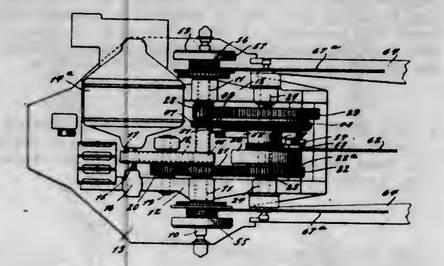
1. A machine of the class described having, in combination, means for intermittently feeding a strip, devices operable during the periods of rest of said feeding means comprising a punch and die for forming an aperture in the strip and means acting while said punch is inserted through said aperture to form a circular bump in the strip having its outer edge arranged substantially concentrically with said aperture, and actuating means for said devices.

1,578,338. INTERNAL-COMBUSTION ENGINE. KARL MAYBACH, Friedrichshafen-on-the-Bodensee, Germany, assignor to the firm: Maybach Motorenbau-Gesellschaft mit beschränkter Haftung, Friedrichshafen-on-the-Bodensee, Germany. Filed May 5, 1921. Serial No. 467,193. 6 Claims. (Cl. 121—194.)



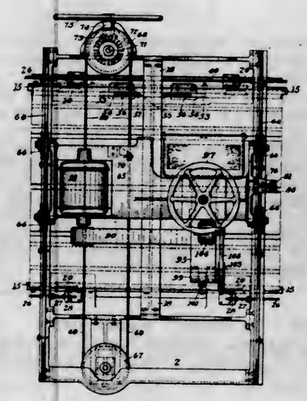
1. In an internal combustion engine in combination a crank case and a cylinder and cylinder head cast in one piece and freely suspended from the upper edge of said crank case with the head only projecting above the case.

1,578,339. PRODUCTION OF AVAILABLE PHOSPHATE. HERBERT H. MEYERS, Pittsburgh, Pa., assignor to Armour Fertilizer Works, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 20, 1922. Serial No. 595,825. 4 Claims. (Cl. 71—7.)



1. The process of rendering the phosphate of phosphate rock available, consisting in sintering a mixture containing ground phosphate rock and an alkali metal salt thereby effecting a partial conversion of the phosphate, crushing such sintered mixture into porous lumps, and calcining such lumps at a sufficient temperature and for a period of time to complete the conversion of the phosphate into available phosphate.

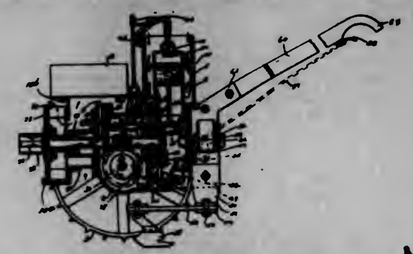
1,578,340. PLIERS. KENNETH T. MILLER, Springfield, Mass. Filed July 3, 1925. Serial No. 41,419. 3 Claims. (Cl. 81—9.5.)



1. Pliers of the class described comprising a pair of pivoted handles and jaws operated thereby, blades having complemental cutting notches carried thereby and arranged to cut on opposite sides of the covering of a cable, means for limiting the closing movement of said handles so that the said cutters will not cut through the wire of said cable, and complemental gripping members carried by the jaws at the rear of the blades, and in alinement with the cutting notches thereof for embracing opposite sides of the covering of the cable and arranged to firmly embrace the covering for a twisting action thereof.

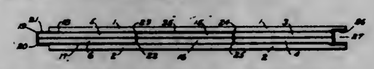
1,578,341. HOISTING ENGINE. THOMAS SPENCER MILLER, South Orange, N. J.. Filed Dec. 23, 1924. Serial No. 757,588. 11 Claims. (Cl. 254—185.)

1. In a winding engine, a main drum, a drive shaft, means for driving said drum from said drive shaft in a forward direction, a sleeve mounted on said drive shaft, means for rotating said sleeve on its shaft at a higher rate of speed than the shaft itself, and means operable from said sleeve for driving said drum in the reverse direction.



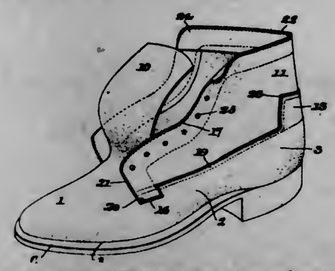
1,578,342. GRINDING APPARATUS. JAMES T. MOLTRUP, Beaver Falls, Pa. Filed June 5, 1924. Serial No. 718,047. 14 Claims. (Cl. 51—38.)

1. Grinding apparatus, comprising a work table, tracks at opposite sides of said table extending longitudinally thereof, a carriage having wheels engaging said tracks, a grinding wheel mounted on said carriage with its axis extending at right angles to the direction of movement thereof, means for reciprocating said carriage to move said wheel back and forth over said table, and a pair of electric motors mounted on said carriage for rotating said wheel and imparting axial reciprocation thereto, substantially as described.



1,578,343. POWER-DRIVEN CULTIVATOR. JAMES A. MOULD, Milwaukee, Wis., assignor to M. B. M. Manufacturing Co., Milwaukee, Wis. Filed Sept. 21, 1922. Serial No. 589,563. 5 Claims. (Cl. 180—19.)

1. In a power driven, hand guided cultivator, the combination with an axle shaft having tractor wheels secured thereon, of an internal combustion engine having power transmitting mechanism for operating said axle shaft and clutch mechanism for putting said mechanism into or out of connection with the power shaft,



a casing enclosing said power transmitting and clutch mechanism, a fly wheel for said engine positioned to the front of said axle shaft, and a fuel tank supported from the casing above the axle shaft and fly wheel.

1,578,344. REENFORCED COMPOSITION BOARD. TREADWAY B. MUNROE, Chicago, Ill., assignor to Dahlberg & Company, Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 4, 1925. Serial No. 54,530. 9 Claims. (Cl. 154—45.9.)

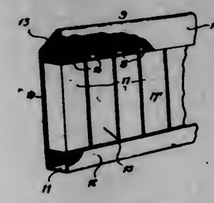
3. A reenforced composition board comprising a plurality of strata of heat insulating material secured together, said board provided on one extremity with a reenforcing tongue of metallic material and on another extremity with a groove of reenforcing metallic material and said board further provided internally with metallic reenforcing material.

1,578,345. SHOE AND BLANK THEREFOR. HENRY F. NELSON, Danville, Ill. Filed Oct. 6, 1924. Serial No. 741,924. 2 Claims. (Cl. 36—45.)

1. A shoe upper formed of two pieces of material, one comprising the vamp, tongue, sides and counter and having its edges stitched together at the rear and having upward extensions from the counter, and the other forming the quarters and upper part of the shoe and having a cut-out portion which registers substantially with the upward extensions of the counter but is of smaller size, the two pieces being stitched together only along the lower edge of the second piece.

1,578,346. BOILER. OLLIE T. NELSON, Waukegan, Ill. Filed Nov. 19, 1920. Serial No. 425,076. 3 Claims. (Cl. 122—106.)

3. A double-wall boiler structure comprising a continuous plate forming one of the walls and extended to form upper and lower portions of the other wall, and a series of plates welded to one another and to the continuous



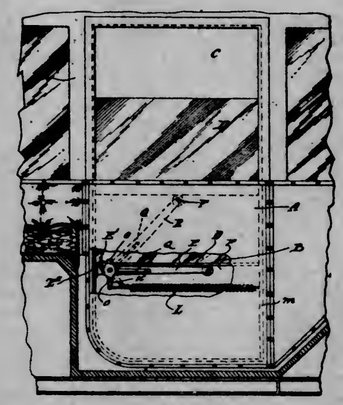


plate and extending between said upper and lower portions and having flanges welded to the inner face of the continuous plate.

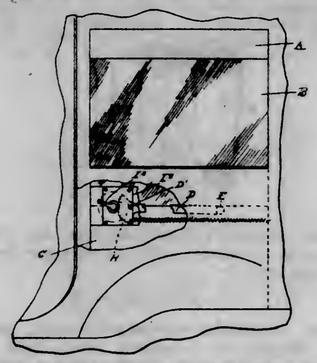
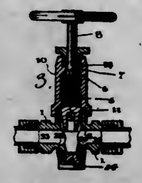
1,578,347. VEHICLE WINDOW-CONTROL MECHANISM. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Sept. 4, 1920. Serial No. 408,849. 8 Claims. (Cl. 192—8.)



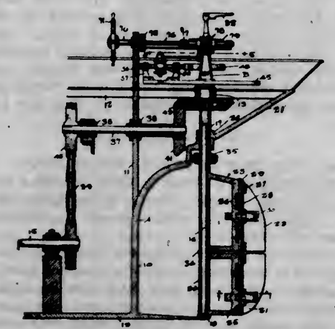
1. In a window control mechanism, the combination of a bracket providing a journal bearing for the control arm of the control mechanism, a gear member carried by said bracket, an actuating member for the arm pivoted to the latter upon an axis transverse of the pivot axis of the arm, gear teeth provided upon the actuating member diametrically opposed with relation to the two intersecting pivotal axes, and spring means normally rocking the actuating member to a position engaging the gear teeth thereof with those of said bracket member, said actuating member being rockable to disengage said teeth and being thereupon actuable to shift the arm.

1,578,348. WINDOW-CONTROL MECHANISM. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 16, 1922. Serial No. 529,486. 8 Claims. (Cl. 192—8.)



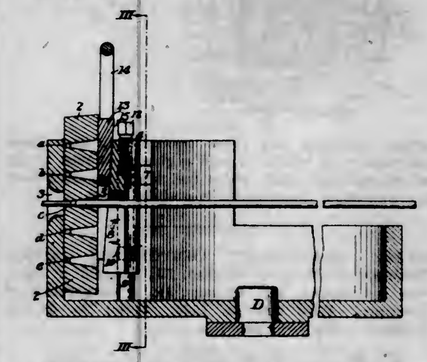
1. In a device of the character described, the combination with a mounting plate, of a stamped sheet metal pivot member, and a latch bolt formed of stamped sheet metal, of substantially the same thickness as said pivot member, the mounting plate being formed with a notched opening to receive the pivot member and the latter being radially slotted to mount the latch bolt, a spring urging the latch bolt into engagement with the notched

periphery of said opening, a drive member connected to said pivot member at one side of the mounting plate,



a driving member at the other side of the mounting plate, having a lost motion connection to the pivot member for retracting said bolt.

1,578,349. VALVE FOR WATER, STEAM, AIR, GASES, OILS, AND OTHER FLUIDS. HORACE C. NIXON, Saskatoon, Saskatchewan, Canada. Filed Mar. 3, 1919. Serial No. 280,508. 8 Claims. (Cl. 251—155.)



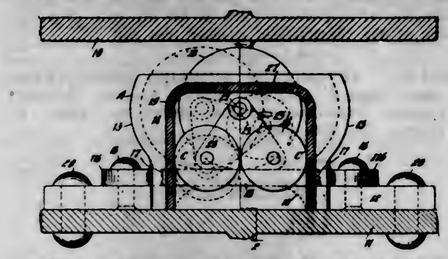
5. In combination, a valve casing, a frusto-conical valve chamber therein, a frusto-conical hollow valve in said chamber, an internally threaded barrel mounted on said casing, a threaded hollow stem rigidly attached to said valve and in cooperative engagement with said threaded barrel, means associated with said hollow stem for rotating said valve in said barrel, and a removable sand pocket below the valve and in communication with the space in the valve.

1,578,350. SHIP STEERING AND PROPELLING MECHANISM. JOHN R. NOCK, Brooklyn, N. Y. Filed Sept. 30, 1925. Serial No. 59,625. 17 Claims. (Cl. 115—29.)

1. A ship propelling mechanism comprising a pair of superimposed driving vanes formed to provide guiding grooves mounted for oscillatory movement, means for oscillating said vanes in opposite directions relative to one another, the vanes being mounted upon vertical pivots and resilient means engaging in said guiding grooves and normally holding the vanes in a predetermined position.

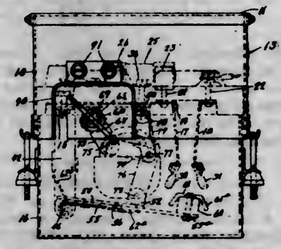
1,578,351. DIE HOLDER FOR WIRE-DRAWING BLOCKS. FRANK H. NULLMEYER, Struthers, Ohio. Filed Mar. 24, 1925. Serial No. 17,861. 10 Claims. (Cl. 205—25.)

1. Wire drawing means, comprising a die holder open at its top, a die of substantially uniform thickness adapted to be inserted and removed through the opening in the top of the holder, and means for clamping said die against a face of the holder, said means comprising a vertically adjustable wedge having a face parallel with the face of the holder which is to engage the die, said face of the holder engaging one face of the die and the parallel face of the wedge engaging the opposite face of the die, substantially as described.



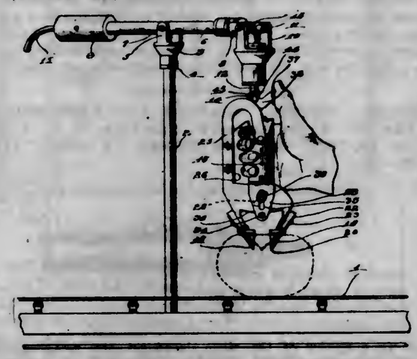
1,578,352. SPRING SHACKLE. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Mar. 16, 1923. Serial No. 625,460. 8 Claims. (Cl. 213—208.)

1. In a resilient shackle, the combination of two oppositely arranged yoke members, each having an extension by which it is adapted to be connected to a vehicle, each said member having abutment shoulders at one end and a rigidly associated follower at the other end, the two members being angularly offset 90°; of a pair of washers within said members, each normally in engagement with the abutment shoulders of one of said members and operable by the follower of the other of said members; and cushioning means between said washers.



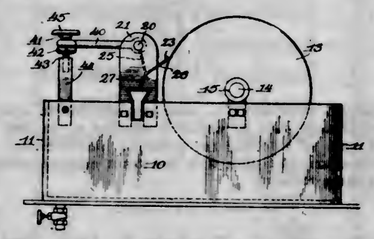
1,578,353. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Jan. 18, 1924. Serial No. 686,944. 8 Claims. (Cl. 308—226.)

1. In an anti-friction bearing, the combination with a bearing surface; of an anti-friction element proper, arranged to move on said bearing surface to either side of normal position; means connected to said element, said means including a plurality of independent anti-friction means disposed to operate as counterbalancing



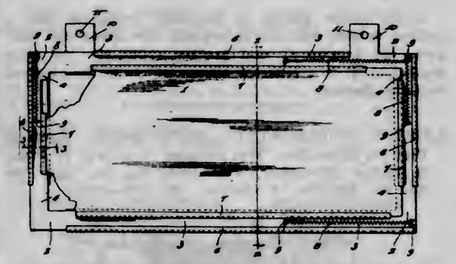
weights; and means cooperating with said anti-friction means for unbalancing the same during movement of said element.

1,578,354. ELECTRIC SWITCH. GEORGE W. O'KEEFFE, Dorchester, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed July 3, 1922. Serial No. 572,536. 20 Claims. (Cl. 200—42.)



1. In an electric switch, a movable switch member including a pivoted arm, a spring connected with said arm arranged to urge said arm to switch-closed position, and means to open the switch including a toggle member connected with said arm, and means to straighten said toggle whereby to hold the switch open, including an operating shaft having a crank arm, and a link connecting said crank arm and toggle.

1,578,355. APPARATUS FOR REMOVING THE STEM OR BLOW ENDS FROM FRUIT, VEGETABLES, OR THE LIKE. BURT C. OLNEY, Rochester, N. Y., assignor to New York Canners, Inc., Rochester, N. Y. Filed Apr. 28, 1924. Serial No. 709,336. 9 Claims. (Cl. 146—52.)



1. An apparatus for removing the stem or the blow ends of fruit, vegetables or the like comprising removing means for the stem or the blow ends, and means for movably supporting said removing means, a hand grip connected with said removing means for bringing the removing means into and out of cooperation with the articles, and means positioned adjacent the hand grip and controllable by a hand while on said grip for effecting the operation of the removing means.

1,578,356. REAGENT FEEDER. TOM M. OWEN, Wallace, Idaho. Filed May 9, 1924. Serial No. 712,111. 6 Claims. (Cl. 221—97.)

1. In a feeder device, a receptacle, elevating means provided with a surface affording adhesion thereto of liquid material, members mounted adjacent and extending into contact with said elevator surface at an inclined angle to divert a portion of material therefrom, and a trough beneath said contact members adapted to receive material by gravity from said contact members, said trough being horizontally adjustable relative to said contact members to register with varying numbers thereof.

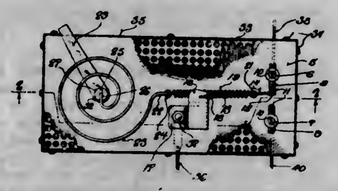
1,578,357. ADJUSTABLE FRAME. ERNIE L. PARKINS, Craigmont, Idaho. Filed Sept. 1, 1925. Serial No. 53,879. 3 Claims. (Cl. 40—155.)

1. A frame comprising corner sections each having arms extending at right angles to each other and extending in longitudinal overlapping relation to co-operating arms of other corner sections, certain of the arms of said sections having inner and outer side flanges extending inwardly and engaging the co-operating arms in spaced relation to each other and serving to guide sliding movement of the sections towards and away from each other, said inner flanges having their free side portions bent back upon themselves to provide auxiliary flanges to engage the edge portions of a card enclosed by said sections, lugs extending from said sections intermediate the side of their arms, and springs extending longitudinally of the arms between said inner and outer flanges and anchored to said lugs and serving to yieldably hold the sections against movement away from each other.

1,578,358. ELECTRIC LAMP FOR CINEMATOGRAPHIC APPARATUS. EMILE CHRISTIAN PENIN, Joinville-le-Pont, France, assignor to Pathe Cinema, Anciens Etablissements Pathe Freres, Paris, France. Filed Feb. 23, 1924. Serial No. 694,532. 1 Claim. (Cl. 176—16.)

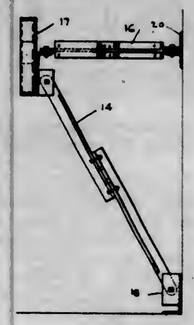
A lighting device for projection apparatus comprising an ordinary glow lamp, a ring secured to the cap of said

lamp, a lug secured on said ring and extending longitudinally on said cap towards the lower part of said cap, an enlarged part or boss provided on said lug and a lamp-socket on the upper edge of which is adapted to rest the lower edge of said ring, said lamp-socket having



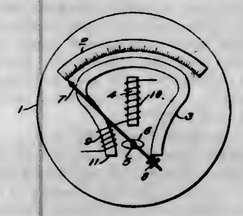
longitudinal slots so as to form tongues and an opening in one of said slots in which is adapted to fit said enlarged part of said lug for ensuring automatically the exact position in height and the exact angular position of the lamp filament.

1,578,359. INSOLE. FREDERICK H. PERRY, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 5, 1918. Serial No. 248,236. 16 Claims. (Cl. 36—22.)



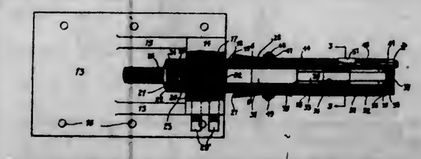
1. An insole having a marginal sewing-rib and a feather outside said rib throughout the shank and forepart, the portion of said feather about the toe being molded to lie in a different plane relative to the adjacent portions thereof.

1,578,360. THERMOSTATIC INSTRUMENT. HUGH G. PHELPS, Milwaukee, Wis., assignor of one-half to Frank O. Phelps, Milwaukee, Wis. Filed Jan. 24, 1924. Serial No. 688,325. 3 Claims. (Cl. 200—139.)



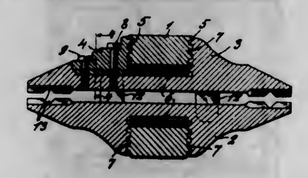
8. In an instrument of the character described, a panel member, a stationary contact carried by the panel, a terminal member secured to the panel member and spaced from said contact member, a pair of spaced projections carried by said terminal member and having their edges adjacent said stationary contact notched, a substantially H-shaped movable arm having the outer ends of the legs thereof notched to receive the notches of the terminal projections, a contact fixed to the outer end of the vertical portion of the H and adapted to electrically engage said stationary contact, a thermostatic member mounted on the panel member and having one end free and arranged to be moved by expansion or contraction of said thermostatic member, and a spring connecting said thermostatic member free end and the transverse portion of said movable arm to retain said arm in pivotal engagement with the terminal, movement of the thermostatic member free end beyond an imaginary line drawn longitudinally through said movable arm and its pivotal connection with the terminal resulting in a quick movement of said movable arm in the direction of movement of the thermostatic member free end.

1,578,361. AUTOMOBILE SHIPPING DECK. KENNETH GEORGE ARUNDEL PHILP, Toronto, Ontario, Canada. Filed Dec. 10, 1925. Serial No. 74,654. 8 Claims. (Cl. 105—368.)



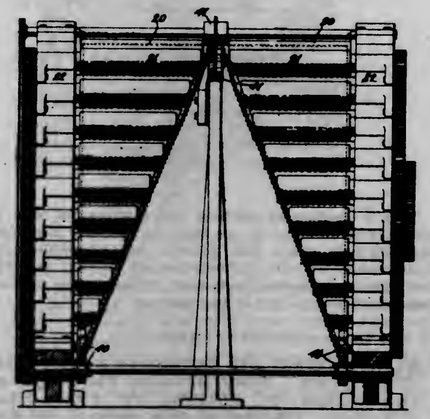
1. In an automobile shipping deck, a bearing block forming a support for an axle end or wheel hub of the automobile, and a support and braces of adjustable length hingingly secured to said block for supporting and bracing said block from the wall and floor of the railway car transporting said automobile.

1,578,362. IRON-VANE INSTRUMENT. RAYMOND T. PIERCE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 15, 1921. Serial No. 477,855. 8 Claims. (Cl. 171—95.)



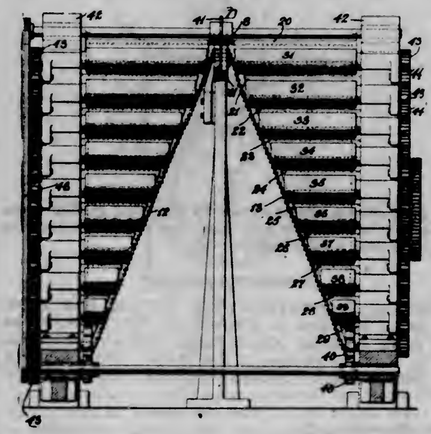
4. An electrical measuring instrument comprising a permanent magnet, a movable magnetizable member disposed adjacent to the poles thereof and biased to a predetermined position thereby, a coil disposed in predetermined inductive relation to the permanent magnet and an actuating coil for the movable magnetizable member.

1,578,363. BEARING SHAVING AND BURNISHING DEVICE. PETER RADOSEVIC, New York, N. Y. Filed Oct. 16, 1923. Serial No. 668,942. 14 Claims. (Cl. 29—90.)



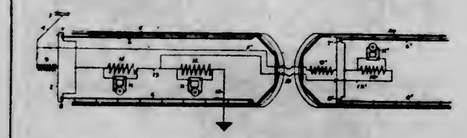
5. In a device of the class described, the combination with a tapering body having a plurality of feathers extending lengthwise thereof, of a plurality of longitudinal tool strips grooved for sliding upon said feathers, a reciprocating element arranged adjacent the smaller end of said tapering body, connections between said tool strips and said reciprocating element permitting a limited outward movement of the former, means connecting the opposite ends of said tool strips and permitting relative outward movement thereof, and means for actuating said reciprocating element.

1,578,364. COMBINED TOOL AND CLAMP. HENRY A. RECEN, Breckenridge, Colo. Filed Apr. 22, 1925. Serial No. 25,015. 3 Claims. (Cl. 81—128.)



1. In a device of the class described, in combination, a pair of aligned jaw members adapted to be moved towards or away from each other, said jaws having each a notch with parallel opposed surfaces provided with spiral threads and a nut having its opposite sides provided with spiral threads adapted to engage the spiral threads in the walls of said notches whereby when the nut is rotated with respect to the jaws, the latter will move towards or away from each other with a parallel movement, one of said jaw members having a removable portion, one end of which forms one of the opposing surfaces of the notch.

1,578,365. METHOD OF MAKING EXPANDED METAL. EDWARD T. REDDING and LEONARD W. CROSS, Swissvale, Pa., assignors to Consolidated Expanded Metal Companies, a Corporation of Pennsylvania. Filed June 27, 1922. Serial No. 571,226. 5 Claims. (Cl. 164—6.6.)

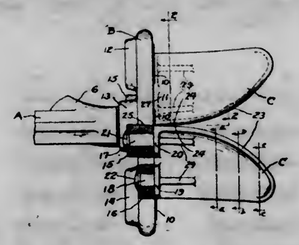


1. The herein described process of making deployed expanded metal which comprises slitting a blank, moving it along guide means engaging one selvage and thereby sustaining it, and expanding the metal transverse the plane of the blank by progressively and successively deploying from said plane portions further and further from the edge supported as aforesaid.

1,578,366. APPARATUS FOR THE PRODUCTION OF EXPANDED METAL. EDWARD T. REDDING and LEONARD W. CROSS, Swissvale, Pa., assignors to Consolidated Expanded Metal Companies, a Corporation of Pennsylvania. Filed June 27, 1922. Serial No. 571,227. 9 Claims. (Cl. 164—6.6.)

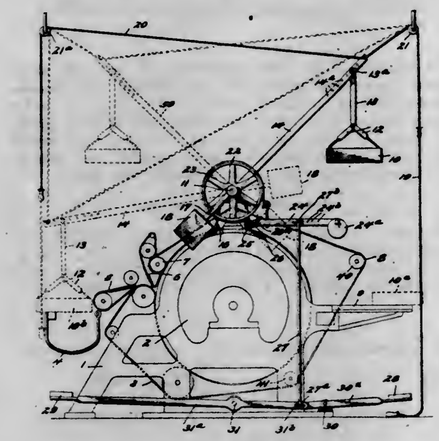
1. Apparatus for the production of expanded sheet metal comprising means for progressively and successively drawing portions nearer and nearer an outer unslit margin of a slit sheet out of their original plane, to deploy the sheet and open up its mesh, and means for engaging the adjacent unslit margin and thereby sustaining the pull exerted in deploying the sheet.

1,578,367. HIGH-VOLTAGE SIGNALING SYSTEM FOR ELECTRICALLY-OPERATED STREET CARS. CHRISTIAN REINKER, Lakewood, Ohio. Filed May 16, 1921. Serial No. 469,913. 1 Claim. (Cl. 177—352.)



In a high voltage signaling system for electrically operated trolley and trailer cars connected therewith, composed of open trolley circuits in said cars, each circuit including a plurality of resistances in series, one of which has in parallel therewith a signal, a second resistance having parallel therewith a second signal, the last said resistance and signal being positioned within the trolley car and included in both circuits, manually actuated means carried within each car for completing each of said circuits, and the last said signal adapted to function upon the completion of either of said circuits.

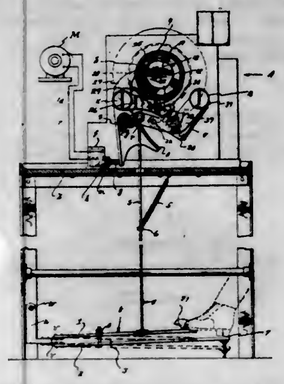
1,578,368. AUTOMATIC TRAIN-PIPE CONNECTER. JOSEPH V. ROBINSON, New York, N. Y. Filed Mar. 10, 1920, Serial No. 364,843. Renewed Aug. 18, 1925. 12 Claims. (Cl. 285—24.)



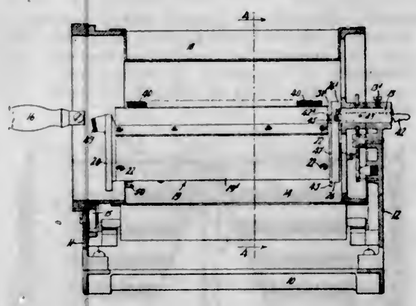
12. An automatic train pipe coupling head, comprising in combination, a base having a flat coupling face arranged substantially at right angles to the longitudinal axis of the head, lugs integrally connected with said

base and diagonally disposed on opposite sides thereof, each of said lugs having a front face lying in substantially the same plane as the coupling face of the base,

a forwardly extending outwardly diverging guiding prong mounted on each of said lugs and means for securing said prongs to said lugs.



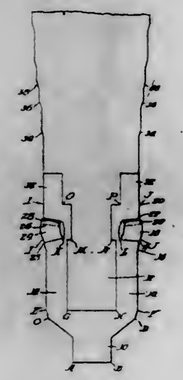
1,578,369. CLOTHES-RETURN DEVICE FOR IRONERS. FRANKLIN R. ROBISON, Gloversville, N. Y., assignor to Asher Manufacturing Company, Irvington, N. J., a Corporation of New Jersey. Filed Sept. 12, 1922. Serial No. 587,802. 9 Claims. (Cl. 68—9.)



1. The combination with an ironer, of a device for transferring clothes from one side of the ironer to the other, including a pivoted support extending above the ironer, and a carrier freely suspended from said support.

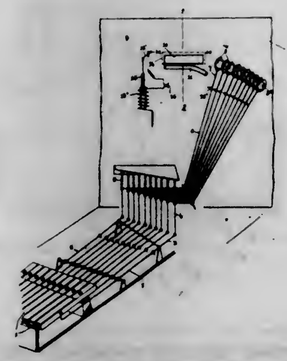
1,578,370. MACHINE CONTROL. FREDERICK N. ROSS, Pontiac, Mich., assignor, by mesne assignments, to The Patent Button Company, a Corporation of Connecticut. Filed Apr. 26, 1923. Serial No. 634,711. 2 Claims. (Cl. 192—27.)

1. In a power control, the combination of a source of power, driven mechanism, a clutch between the driven mechanism and the source of power and provided with a stop shoulder, a pivoted clutch finger yieldingly held in engagement with said stop shoulder, and a tripping mechanism including a trip finger yieldingly held in engagement with said clutch finger whereby movement of said tripping mechanism serves to actuate the trip finger for retracting the clutch finger and disengaging the same from the stop shoulder for the purpose of releasing the clutch, said trip finger arranged to rotate about a center remote from the pivot of said clutch finger, said trip and clutch fingers separating in diverging paths when moved, whereby the trip finger disengages from the clutch finger with the releasing of the clutch to allow the clutch finger to again position itself so as to engage the stop shoulder to throw out the clutch at the completion of one revolution.



1,578,371. STENCILING MACHINE. EDWARD G. ROWLEY, Belleville, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 30, 1924. Serial No. 709,966. 23 Claims. (Cl. 101—119.)

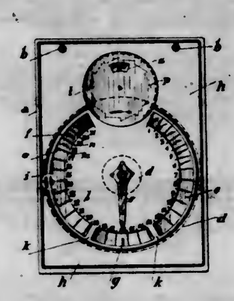
1. In a duplicating machine, the combination with a revoluble cylinder, of an ink-fountain rotatably shiftable upon its axis within said cylinder, and releasable stop means associated with said ink-fountain effective to limit the degree of angular movement thereof when shifted from one position to another position.



1,578,372. HOSIERY AND METHOD OF MAKING THE SAME. JULIUS C. RUEDT, Milwaukee, Wis., assignor to Phoenix Hosiery Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 15, 1924. Serial No. 699,430. 6 Claims. (Cl. 66—184.)

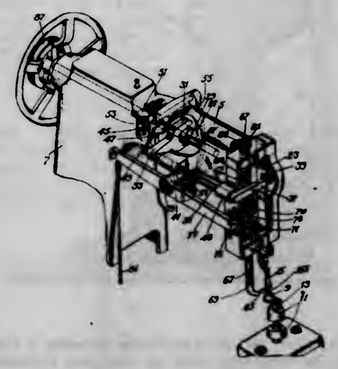
1. The method of knitting a stocking blank which comprises setting up the fabric as a narrow toe strip, widening at appropriate places to form a fashioned toe and foot portion, reinforcing the toe and the sides of the foot portion with an additional thread, interrupting all but a few needles at one side and knitting a narrow strip, uniting the end of said strip with the body to form a fabric loop by knitting clear across, interrupting all but a few needles at the other side and knitting another narrow strip, uniting the end of said strip with the body

by knitting clear across, reinforcing both strips throughout, knitting the ankle, calf and leg portions, and reinforcing the outer edges of the angle portion part way up.



1,578,373. KEY INSTRUMENT FOR EXECUTING COLOR MUSIC. WILHELM SCHMEER, Nuremberg, Germany. Filed Oct. 27, 1924. Serial No. 746,229. 1 Claim. (Cl. 240—1.)

A key-instrument for the execution of color-music, comprising, in combination, a wall and a slot therein; means for closing said slot; transparent colored bodies arranged to appear singly or in groups behind said slot; means for transmitting motion from the depressed key or keys to the appertaining color-bodies, and means for opening the slot automatically when a color-body arrives behind it, these means being actuated by the respective color-body carrier or carriers.



1,578,374. PERPETUAL CALENDAR. FRIEDRICH SCHULTZ, Glauchau, Germany. Filed July 3, 1925. Serial No. 41,415. 1 Claim. (Cl. 40—113.)

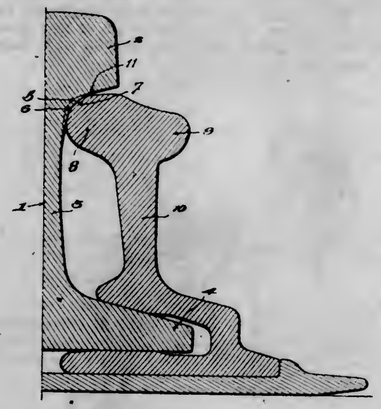
In a perpetual calendar, the combination with a base plate, an integral cover for the same having a recess therein and on which the numerals for the dates of a month are arranged in circular fashion, a turnable circular ring partly covered by said cover and having the uncovered names of the consecutive week days written thereon, a revoluble hand pivoted to the centre of the circular arrangement of the numerals and adapted to be adjusted to any one of said dates, and a turnable disc

with the names of the consecutive months thereon arranged underneath said cover of which the recess mentioned presents always the name of one month only; of a ratchetlike circumference with twelve teeth on said disc located within the path of said revoluble hand whereby said disc is turned one tooth once in every complete revolution of said hand, substantially as set forth.

1,578,375. CUTTING MACHINE. EUGENE SEHL, St. Louis, Mo., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 28, 1923. Serial No. 683,183. 13 Claims. (Cl. 164—49.)

1. A machine for cutting panels from the upper of a shoe having, in combination, a work support adapted to enter a shoe so as to support the upper from the inside thereof and to permit the shoe to be moved with respect to it, a cutter having a portion adapted to pierce a panel, and means for separating the cutter and support sufficiently to permit the shoe to be moved so as to bring a panel into operative position with respect to the cutter preparatory to the piercing operation.

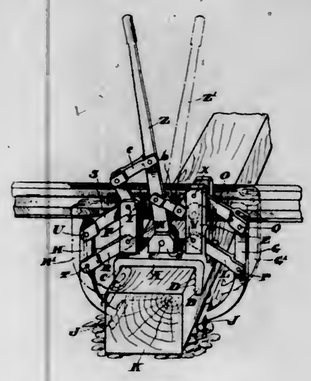
1,578,376. METHOD FOR THE PRODUCTION OF COKE AND TAR FROM COAL. FRITZ SEIDENSCHNUR, Freiberg, Germany. Filed Oct. 6, 1924. Serial No. 741,286. 1 Claim. (Cl. 202—8.)



A method for the production of coke and tar from coal, which consists in subjecting mineral coal in the form of a continuously downwardly travelling column in counter-current to the action of gases free from oxygen at a rate of at least 80–96 cubic feet of gas per pound of mineral coal and at a temperature of the gas of about 500° C.

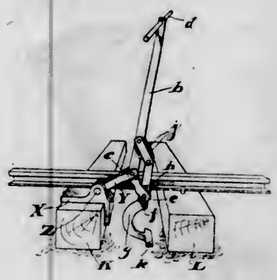
1,578,377. AIRPLANE. MARION W. ADKINS, Kansas City, Mo. Filed Aug. 13, 1925. Serial No. 49,869. 10 Claims. (Cl. 244—5.)

1. In an airplane, an airplane wing, a channel bar fastened to the upper side thereof, a gas container mounted on said channel bar and overlapping the channel of said bar, and releasable means for fastening the container to said bar.



1,578,378. RAIL ANCHORAGE FOR HEAD-FREE RAIL JOINTS. VICTOR C. ARMSTRONG, Hackensack, N. J., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Nov. 3, 1925. Serial No. 66,593. 3 Claims. (Cl. 238—125.)

1. A head-free rail joint structure including a rail provided at its head fillet with an abnormal projection of metal formed with a rounded bearing surface, and the joint bar having its inner head projection engaging said bearing surface.

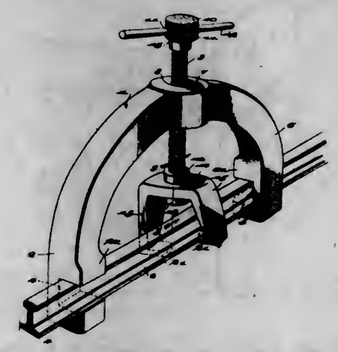


1,578,379. MECHANICAL TIE TAMPER. WILLIAM H. ARMSTRONG, Plainfield, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 19, 1925. Serial No. 69,951. 6 Claims. (Cl. 104—13.)

3. Tamping apparatus comprising a pair of tamper bars adapted to be placed at opposite sides of a tie, a lateral swinging lever, a shoe adapted to be placed on said tie to pivotally support said lever and said tamper

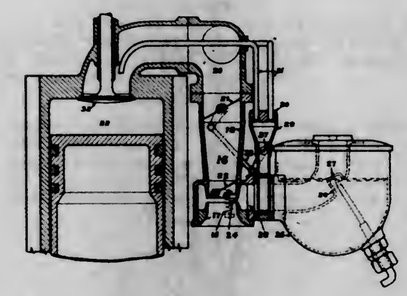
bars, and means operatively connecting said lever with said tamper bars to force said bars downwardly and toward each other under the tie.

1,578,380. MECHANICAL TIE TAMPER. WILLIAM HAROLD ARMSTRONG, Plainfield, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 19, 1925. Serial No. 69,952. 3 Claims. (Cl. 104—13.)



2. A tamping apparatus comprising a shoe having angularly disposed portions to grip a tie, and a bar pivotally mounted on said shoe for independent swinging and vertical movements adapted to tamp material under an adjacent tie.

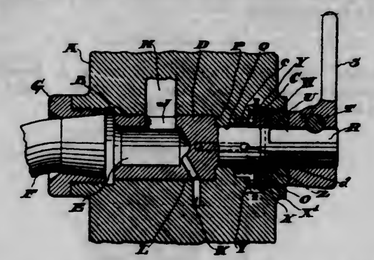
1,578,381. RAIL STRAIGHTENER. LLOYD WARREN BAKER, Blue Rapids, Kans. Filed Aug. 20, 1925. Serial No. 51,416. 3 Claims. (Cl. 153—38.)



1. A rail-bending device comprising a body of substantially inverted U-shape, the arm portions of said body having lateral seats adjacent to their extremities at opposite sides of the body for the reception of spaced portions of a rail, said body having a threaded opening through the web portion thereof intermediate the ends of said arms, a screw in threaded engagement with the wall of said threaded opening, a puller head of inverted U-shape having an opening in the web portion there-

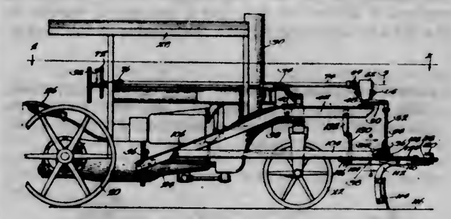
of through which the lower end portion of said screw extends, means on said screw preventing axial movement of the web of the puller head on the screw, the

arms of said puller head having inwardly turned lower end portions adapted to extend from opposite sides of the rail underneath the base flange of the rail.



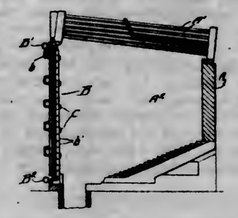
1,578,382. CARBURETOR. BRYANT BANNISTER, Pittsburgh, Pa., assignor to Bannister Motor Appliance Company, a Corporation of Pennsylvania. Filed Apr. 23, 1921. Serial No. 463,802. 6 Claims. (Cl. 123—119.)

1. In a carburetor comprising an air supply system having a throttle valve therein and an induction tube; a chamber in communication with the induction tube and into which fuel is induced by a pressure differential created by air flow through the induction tube, connections arranged to receive fuel from said chamber and deliver it directly to the separate cylinders of the engine with which the carburetor is employed, and automatically operating valve means in the induction tube arranged to maintain a pressure differential for insuring passage of the total fuel charge at all times through said chamber and connections.



1,578,383. THROTTLE VALVE FOR ROCK DRILLS. LEWIS C. BAYLES and FRED M. SLATER, Easton, Pa., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 28, 1925. Serial No. 33,821. 4 Claims. (Cl. 251—168.)

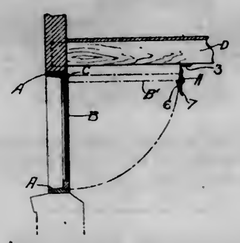
1. In a throttle valve for rock drills, the combination of a head block, a valve in said head block, a stem carried by said valve, a ratchet ring on said stem, a slidable ratchet on the stem and cooperating with the ratchet



ring and the head block for holding the valve in located position, and means on the ratchet and ring to limit rotative movement of the valve.

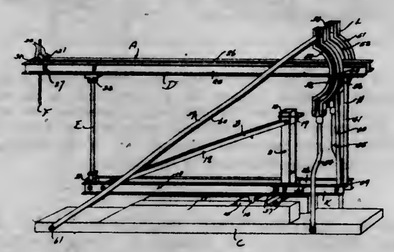
1,578,384. ROAD-ROLLER MAINTAINER WITH REVERSIBLE BLADE. WILLIAM T. BRATTY, Flossmoor, FRANK S. DAVIS, Homewood, and FRED D. WILSON, Harvey, Ill.; said Davis and said Wilson assignors to Austin Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 5, 1923. Serial No. 672,727. 20 Claims. (Cl. 37—146.)

1. In mechanism of the class described, a road roller, a laterally shiftable support for a maintainer at an end of the roller, and a maintainer blade pivoted on the support adjustable to two different positions in which it selectively moves material engaged by it to different sides of the longitudinal axis of the machine.



1,578,385. SOOT-BLOWING PROVISION. JOHN E. BALL, Brooklyn, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Sept. 17, 1923. Serial No. 663,108. 3 Claims. (Cl. 122—390.)

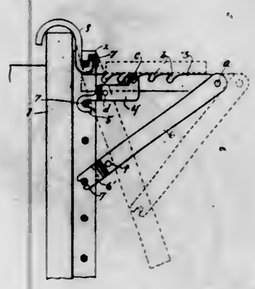
1. In a fluid heating apparatus comprising parallel tubes encased by metal sections uniting to form a wall-like structure having a smooth heat absorbing face, the improvement which consists in enlargements of the tube receiving passages of some of said sections, whereby each such enlargement forms a channel in the corresponding section about the tube passing through that section, con-



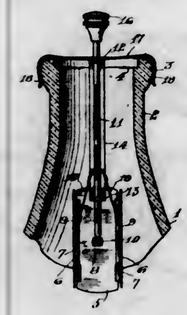
nections for supplying cleaning fluid to said channels, and nozzle provisions connected to said channels for discharging the cleaning fluid over the heat absorbing surface of the apparatus.

1,578,386. WINDOW LATCH. WILLIAM A. BINGHAM, Cleveland, Ohio. Filed Apr. 19, 1924. Serial No. 707,590. 1 Claim. (Cl. 292—219.)

A lift window latch comprising a depending bar, a latch member having its lower end portion loosely hooked into the bar and having an inclined intermediate portion and having at its upper end a tongue extending through the opening in the bar, said tongue having an opening through it beyond the bar, and a leaf spring secured to the bar and extending through the opening in the tongue.



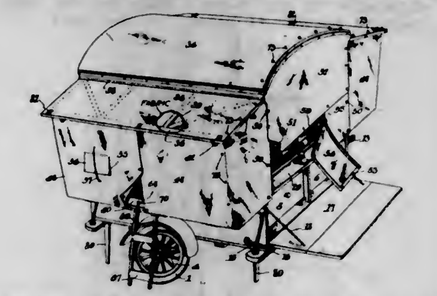
1,578,387. PUMPING JACK. JOHN A. BIRTCIEL, Tulsa, Okla., assignor of one-half to Tidal Oil Company, a Corporation of Oklahoma. Filed Dec. 1, 1924. Serial No. 753,293. 16 Claims. (Cl. 74—5.)



1. In combination a reciprocating polish rod, a base, a beam pivotally supported on the base intermediate its ends, a main beam, a pitman connecting the first mentioned beam at one side of the pivot axis thereof with said main beam intermediate the ends of said main beam, a connecting rod connecting the first mentioned beam with the main beam at the opposite side of the pivot axis of the first mentioned beam with respect to said pitman connection, and means connecting the polish rod with said main beam to the opposite side of the pitman connection with the main beam with respect to said connecting rod connected with said main beam.

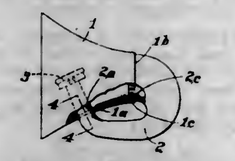
1,578,388. LADDER BRACKET. ANDREW BOWER, Rockford, Mich. Filed Apr. 1, 1925. Serial No. 19,772. 1 Claim. (Cl. 304—34.)

In a bracket for supporting a platform upon a ladder, a supporting bar, a brace pivotally connected at one end to the bar and having its other end provided with notches to engage a ladder rung, the bar having forwardly inclined notches in its upper edge, a second bracket formed of two parallel bars spaced apart and having their front ends bent upwardly, a pin connected with said ends holding them together and positioned to enter any one of said inclined notches, a second pin connecting the middle portions of said parallel bars and positioned to pass under said supporting bar rearwardly of the first mentioned pin, the rear ends of said parallel bars being bent outwardly, then rearwardly, then downwardly to form hooks to engage the ends of a ladder rung.



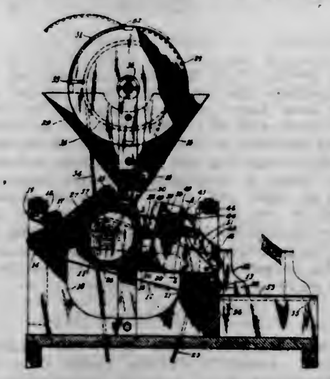
1,578,389. SEPARATOR. EDWIN O. BRANINGTON, Rochester, N. Y., assignor of one-half to Oscar A. Peters, Rochester, N. Y. Filed Feb. 15, 1924. Serial No. 693,141. 6 Claims. (Cl. 210—51.5.)

1. A device of the character described comprising, in combination, a foldable separator plate formed of three hingedly connected sections, an operating rod having pivotal connection with the center one of said sections, a guide on which said operating rod is axially movable, a support for said guide, and links connected to the other of said sections and to said guide, said links being the means for effecting turning of the center section about its pivotal connection and swinging of the side sections about their hinged connections on axial movement of the operating rod.



1,578,390. CAMP TRAILER. JULIUS MINOR BROWN, Dodsonville, Tex., assignor of one-half to Thomas Jefferson Stewart, Dodsonville, Tex. Filed June 24, 1920. Serial No. 391,491. 5 Claims. (Cl. 296—23.)

1. A camp trailer having a body portion divided into chest end compartments and a transversely extending water compartment positioned between the adjacent ends of the chest compartments, an inlet for supplying water to the water compartment, a delivery pipe leading from the water compartment and having a control valve located at one end of the trailer body, and a convertible end door

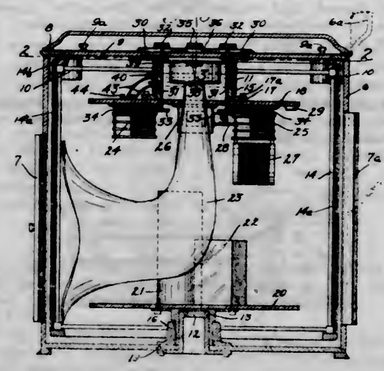


and table shelf located at the end of the trailer body where the delivery pipe from the water compartment is provided with its control valve.

1,578,391. SOUND AMPLIFIER. GEORGE W. BULLEY, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 2, 1925. Serial No. 41,197. 3 Claims. (Cl. 181—27.)

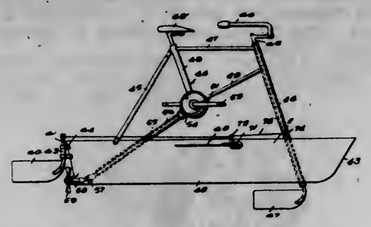
1. A horn or sound amplifier for radio receiving sets, having the neck thereof projected through one wall of the bell portion and terminating in the bell portion, and adapted to carry the loud speaker unit.

1,578,392. APPARATUS FOR ARRANGING LOOPED ARTICLES. CHARLES C. CADDEN, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 10, 1924. Serial No. 749,099. 14 Claims. (Cl. 214—1.)



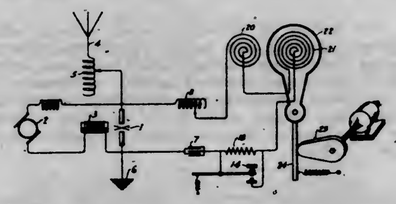
1. Apparatus of the character described comprising a conveyor screw and external journal means therefor, the screw and journal means being adapted to permit through passage along said screw of looped articles engaged by their loops thereon.

1,578,393. METHOD AND APPARATUS FOR ARRANGING LOOPED ARTICLES. CHARLES C. CADDEN, Akron, and LLOYD L. LANTZER and BENJAMIN A. EVANS, Cuyahoga Falls, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 17, 1924. Serial No. 750,259. 20 Claims. (Cl. 241—1.)



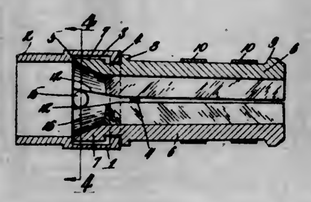
1. The method of arranging looped articles which comprises collecting said articles in file formation by engaging a collecting member in their loops, and sliding them in succession from said member to divide them into individual assemblages of determinate weight, the articles being weighed while in file formation to determine the points of division between successive assemblages.

1,578,394. RADIOCABINET. HOWARD E. CARLSON, Minneapolis, Minn. Filed May 8, 1924. Serial No. 711,839. 12 Claims. (Cl. 250—14.)



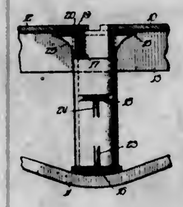
1. In a radio set, a stationary frame, a coil pivoted within said frame and means for mounting a plurality of pieces of apparatus within the figure generated by the revolution of said coil.

1,578,395. WATER BICYCLE. GLEN E. CHAPIN, San Antonio, Tex. Filed June 18, 1925. Serial No. 38,089. 2 Claims. (Cl. 115—27.)



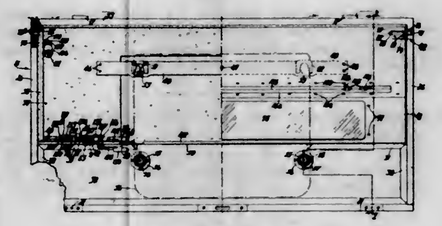
1. In a boat of the character described, a single longitudinally extending pontoon, a propeller carried by the rear end of the pontoon, means for operating the propeller, a steering and balancing rudder carried by the front end of the pontoon, flat balancing planes rockably carried by the pontoon at a point intermediate its ends normally arranged in a horizontal plane and means for operatively connecting the balance planes with the rudder.

1,578,396. RADIO SIGNALING SYSTEM. GEORGE H. CLARK, Brooklyn, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Apr. 26, 1921. Serial No. 464,555. 9 Claims. (Cl. 250—19.)



1. The method of signaling which comprises generating high frequency oscillations, supplying the energy thereof alternately to two tuned circuits, radiating signal waves from one thereof, absorbing energy in the other thereof, and controlling the alternation therebetween by mechanical variation of the impedance elements at an audio rate.

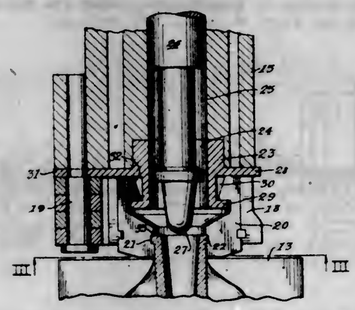
1,578,397. STOCK PUSHER. FRANK L. CONN, Windsor, Vt. Filed Feb. 3, 1923. Serial No. 616,690. 10 Claims. (Cl. 29—62.)



1. A device of the class described comprising a sleeve, a plurality of stock-engaging elements extending outwardly of said sleeve and formed at one end to interfit one end of said sleeve and means for urging such elements inwardly to grip stock extending therebetween and through said sleeve.

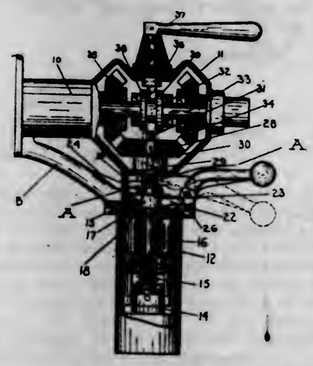
1,578,398. KING-POST FOR TRUSS BOLSTERS. EUGENE S. COOPER and CHRIS BAKER, Hammond, Ind., assignors to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 19, 1923. Serial No. 669,635. 14 Claims. (Cl. 105—229.)

2. A king post for a truss type of bolster, comprising a plurality of adjacently arranged tubes for resisting vertical and transverse strains and having directly associated therewith a hollow cylindrical portion for the reception of a king pin, said hollow cylindrical portion having a plurality of spaced arcuate projections adapted to pass into a non-circular opening in the associated compression member to prevent relative movement therebetween.



1,578,399. TYPEWRITING MACHINE. CORNELIUS B. CORCORAN, New York, and ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignors to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 30, 1922. Serial No. 609,793. 25 Claims. (Cl. 197—186.)

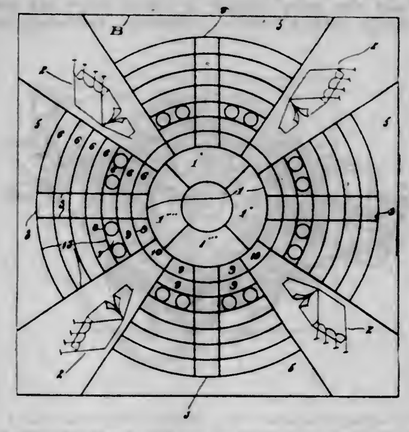
1. A casing, for a typewriting machine, of a fixed length sufficient for movement therein of the carriage on the main frame of the machine in the operation of the latter, and of a width sufficient to receive the keyboard extension as well as the rest of the machine; the casing having body and cover portions, and the body-portion having a longitudinal partition therein which forms the front wall of an interior sound-deadening chamber for the main frame and carriage of the machine; such partition having an opening therein through which the keyboard extension of the machine may protrude for accessibility to the operator when the cover-portion of the casing has been moved.



1,578,400. MACHINE FOR BLOWING GLASS ARTICLES. ALBERT N. CRAMER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 21, 1923. Serial No. 676,135. 3 Claims. (Cl. 49—18.)

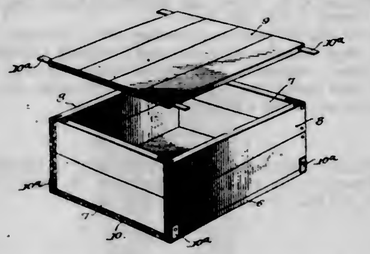
1. The combination of a mold comprising arms hinged to swing about a common axis and a thimble comprising separable sections carried respectively by said arms, an adapter arranged to be surrounded by the thimble when the mold is closed, said adapter having a supporting surface in a plane perpendicular to said axis, said

thimble sections being formed to engage said supporting surface and thereby support the thimble sections during their opening and closing movements.



1,578,401. REMOVABLE WRINGER MECHANISM. HARRY J. CRINER, Bloomington, Ill. Filed July 20, 1921. Serial No. 486,157. 4 Claims. (Cl. 74—101.)

1. In a safety wringer mechanism, in combination, a bracket member including a horizontally disposed shaft having loosely mounted thereon two gears, a clutch mounted between said gears, means for throwing said clutch into engagement with either gear, a vertically positioned and tensioned shaft disposed below said first named shaft and having its upper end shaped in such manner that it is capable of engagement with the clutch mounted thereabove, a gear slidably mounted on the upper end of said vertically positioned shaft and having engagement with the first named gears, a collar surrounding said vertical shaft, said collar having an outwardly and downwardly projecting lug member, a key member in the vertical shaft just above said collar, and a lever pivoted to said bracket member and having such connection with the collar that movement of said lever is capable of raising or lowering the vertically positioned shaft.

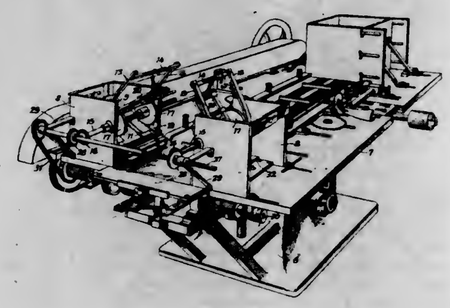


1,578,402. GAME. CHARLES C. CROSS, Philadelphia, Pa. Filed July 11, 1925. Serial No. 42,886. 2 Claims. (Cl. 273—134.)

1. A game apparatus including a board bearing a diagram provided with camp areas, neutral grounds between the outer ends of said camp areas, radial tunnel paths from said neutral grounds to the center of said board, a plurality of separate fort areas in the central

portion of said board and a radially inward trail area on one side of each camp area and a radially outward trail area on the other side of each camp area.

1,578,403. SHIPPING BOX OR CASE STRUCTURE. ERNEST STUART DANIELS, Washington, D. C. Filed Nov. 12, 1924. Serial No. 749,543. 1 Claim. (Cl. 217—69.)

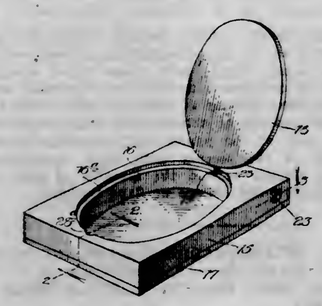


A wooden section forming the top, bottom, end or side of a packing box or case, comprising a plurality of joined panels of equal length, said panels being compositely united by a corrugated metallic strip pressed into the transverse edges thereof at opposite ends of the section, said strips running at substantially right angles to the grain in each of the panels and extending throughout the width of the section with their respective ends projecting slightly beyond the margins of said section to provide fastening clamps or flaps therefor.

1,578,404. SPLINE-FEEDING HOPPER AND STACKER. ERNEST STUART DANIELS, Washington, D. C. Filed Jan. 13, 1925. Serial No. 2,177. 6 Claims. (Cl. 144—245.)

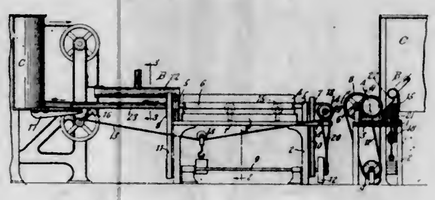
1. An article feeding device comprising a receiver of box-like form having interior inclined slideways; guide-plates dependingly secured at the lower ends of said slideways in spaced relation to the front wall of the receiver to form a trough therewith; upwardly extending guide-bars secured with their lower end portions in parallel spaced relation to said slideways and forming a constricted passage-way therewith; a driven shaft journaled in the walls of said receiver; opposed discs rotat-

ably mounted on said shaft with their peripheries above the level of said slideways and provided with spaced radially projecting pins of different lengths, the longer of said pins being adapted to engage below and momentarily prevent articles successively descending the



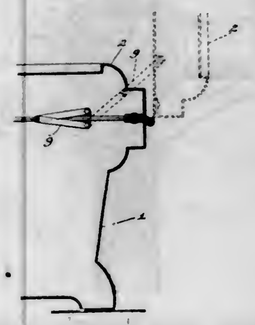
slideways beneath said discs and the shorter of said pins being adapted to prevent overcrowding of articles into said constricted passageway; a pivot shaft; a yoke rockingly mounted thereon; and cam elements intermittently engageable with said yoke for actuating the same.

1,578,405. PROCESS OF HYDRATION IN PAPER MAKING USING FRICTION. JUDSON A. DE CEW, Mount Vernon, N. Y. Filed Jan. 20, 1925. Serial No. 3,597. 1 Claim. (Cl. 92—20.)



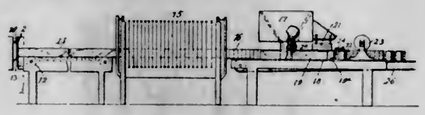
A method of preparing cellulose fibres for paper making, which consists in beating and jordaning the cellulose in water containing cold dilute soluble caustic alkali and then sizing the fibres by a special series of operations in which the alkalinity is neutralized.

1,578,406. MEDALLION MOUNTING. JOSEPH A. DEDOUCH, Oak Park, Ill. Filed Mar. 25, 1925. Serial No. 18,135. 5 Claims. (Cl. 217—57.)



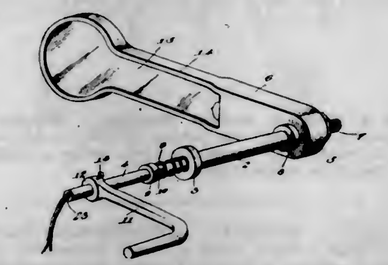
4. In a mounting for medallions and the like, a base, an opening therein, a cover having a ball secured thereto and lying on an axis thereof, a hole in said base adjacent said opening, and means in said hole for yieldably gripping said ball to enable said cover to be folded into said opening and to stand at any angle at which it is placed.

1,578,407. METHOD OF CONDITIONING CAN COVERS FOR SEALING. BRADLEY DEWEY, Cambridge, Mass., and THEODORE T. MILLER, Orange, N. J., assignors to Dewey & Almy Chemical Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Feb. 17, 1925. Serial No. 9,823. 6 Claims. (Cl. 173—80.)



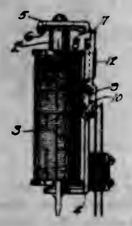
1. The method of conditioning a can cover for sealing which consists in successively applying liquid lining material to the cover in the form for sealing, drying the material on the covers, and thereafter curling the peripheral edge of the cover preparatory to sealing.

1,578,408. HINGE. JESSE N. DIDAY, Columbus, Ohio, assignor to The Belmont Casket Company, Columbus, Ohio, a Corporation of Ohio. Filed May 18, 1925. Serial No. 30,897. 1 Claim. (Cl. 16—172.)



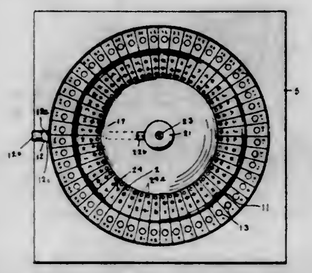
Hinging devices for the top of a receptacle in which the top is capable of dropping by gravity consisting of a plurality of hinges for the top, each hinge comprising a pair of leaves, one of said leaves having a pair of spaced-apart knuckles and the other leaf having a knuckle registering with the space betwen the knuckles of the other leaf, a pintle for said knuckles, said single knuckle being laterally offset with relation to its leaf and open at one side to permit it to be lifted from said pintle when the lid is in open position, the opposing leaves being formed to prevent the disconnection of said open knuckle from said pintle during the normal swinging movement of said top, means for limiting the normal swinging movement of said top but capable of being released to permit the top to make an abnormal movement for the purpose of disconnecting the open knuckle from said pintle, the offset relation of said open knuckle with respect to its leaf permitting the top to close tightly against the receptacle while permitting the hinge members to remain locked during normal movement of the top and to be disconnected by a lifting movement of the top from the receptacle after an abnormal movement of the top.

1,578,409. PROCESS OF FORMING FACE BRICK. SPENCER M. DUTY, Cleveland, Ohio, assignor to The Medal Brick and Tile Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 29, 1924. Serial No. 758,623. 11 Claims. (Cl. 25—1.)



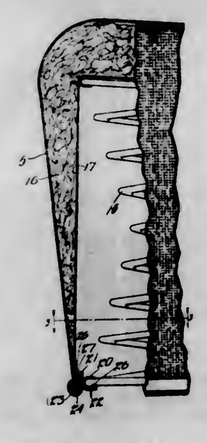
1. The process of producing face brick, which comprises forming a brick body of wet plastic material, applying to the surface thereof relatively dry and finely divided material having plastic qualities, and burning the bricks so as to cause a uniform and substantially homogeneous structure between the body and surfacing material.

1,578,410. TRAFFIC SIGNAL. CALVIN ELDER, St. Joseph, Mo., assignor to Mary M. Elder, St. Joseph, Mo. Filed Feb. 14, 1925. Serial No. 9,224. 1 Claim. (Cl. 116—54.)



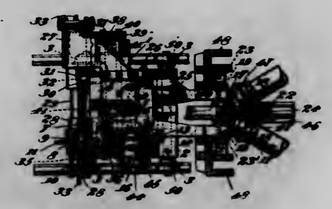
In a traffic signal adapted to be supported on a post, a bearing sleeve adapted to be mounted on the post, collars fitted on the end of the sleeve and adapted to engage the post, a shaft rotatably fitted in the bearing sleeve, a semaphore fixed on one end of the shaft and engageable with one of the collars, a coil spring having one end engageable within the collar, a collar fixed on the shaft and engaging the other end of the coil spring, and a handle independent of the collar and adjustably fixed on the shaft and turning the same.

1,578,411. ELECTROMAGNETIC RELAY. JOHN ERICKSON, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 1, 1920. Serial No. 414,103. 14 Claims. (Cl. 175—338.)



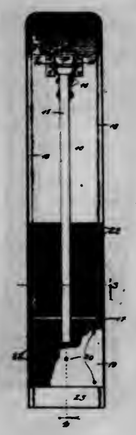
1. In an alternating current relay, an armature, and a friction brake for steadying the armature in attracted position as long as the relay is energised.

1,578,412. GAME DEVICE. JULIUS EWIG, Springfield, Mass. Filed Jan. 2, 1923. Serial No. 610,848. 4 Claims. (Cl. 273—142.)



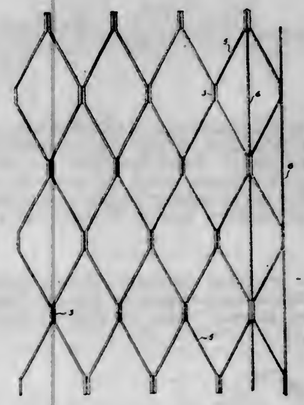
1. A game device consisting of a member provided with a series of selector positions, a spinner rotatively mounted in the member and carrying a series of individual card value indexes representative of a complete standard card deck of fifty-two cards, and means cooperating with the spinner whereby various plays may be produced by rotating the spinner.

1,578,413. UPHOLSTERY STRIP. WILLIAM H. EYSTER, Indianapolis, Ind. Filed Feb. 7, 1924. Serial No. 691,242. 4 Claims. (Cl. 155—180.)



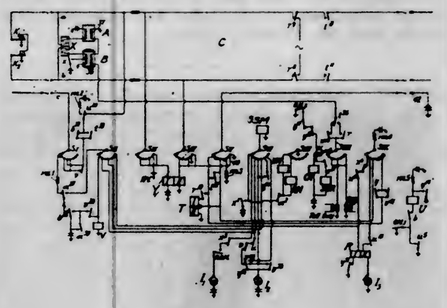
1. In combination a frame member, upholstering material having an edge adjacent to said frame member, a fastening strip having a body lying between the lower edge of said strip and the frame member, and sets of tongues at opposite sides of the body member the tongues of one of said sets being bent reversely upon themselves respectively about said edge of the upholstery and the tongues of the opposite set being bent reversely upon themselves, substantially as set forth.

1,578,414. MANIPULATOR. BENJAMIN F. FAUNCE, Westmont Borough, Pa. Filed Apr. 29, 1922. Serial No. 557,245. 16 Claims. (Cl. 80—16.)



16. The combination with a wheel mill, of a manipulator provided with a pair of arms adapted to be relatively opened and closed and turned on an axis extending in the general direction of their lengths when closed, a mandrel rotatably mounted in the ends of said arms, adapted to rotatably hold a wheel blank, head-blocks on said mill provided with liners of suitable thicknesses adapted to hold and guide the ends of said arms at the level desired during the rolling of the blank, means for advancing said arms, and for permitting the automatic retraction thereof as the blank increases in diameter.

1,578,415. COASTING DEVICE. HOWARD J. FERRIS, Harvard, Ill., assignor to Hunt, Helm, Ferris & Company, Harvard, Ill., a Corporation of Illinois. Filed Feb. 1, 1924. Serial No. 689,930. 4 Claims. (Cl. 280—22.)



4. A coasting device comprising an elongated, flat, flexible, resilient toboggan member having an up-curved front end and having near its lateral edges depressed ribs affording runners, a tongue pivotally connected with the medial portion of said up-curved front end and adapted to warp said resilient member, and a foot-board disposed on the upper surface of the rear portion of said resilient member and secured thereto and serving as a stiffening member for the rear portion of the device.

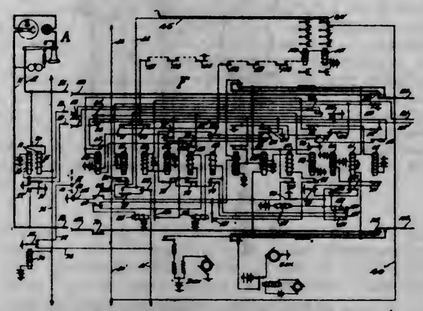
1,578,416. STRUCTURAL MATERIAL. HURXTHAL FIELD FARBAER, Canton, Ohio. Filed Aug. 28, 1923. Serial No. 659,716. 8 Claims. (Cl. 72—117.)

5. A structural material including a plurality of strands and spaced bonds joining adjacent strands, some of the strands and intervening bonds having a plurality of continuous lateral folds.

1,578,417. AUTOMATIC TELEPHONE-EXCHANGE SYSTEM. GEORG FRÜSING, Berlin-Wilmersdorf, Germany, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Filed Sept. 1, 1921. Serial No. 497,679. 14 Claims. (Cl. 179—27.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

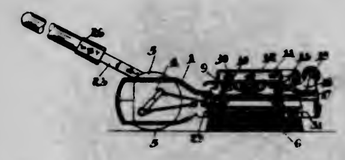
5. In a telephone system, a toll connector directively controlled by an operator for selecting a desired line, means in said connector for testing the selected line, means for preventing the operation of said testing means when the line is selected, and operator controlled means for causing the testing operation to take place at any desired time thereafter.

1,578,418. DISPENSER FOR GRANULAR MATERIAL. JOSEPH J. GANNON, Port Huron, Mich., assignor to Diamond Crystal Salt Company, St. Clair, Mich., a Corporation of Michigan. Filed May 26, 1924. Serial No. 715,989. 4 Claims. (Cl. 221—21.)



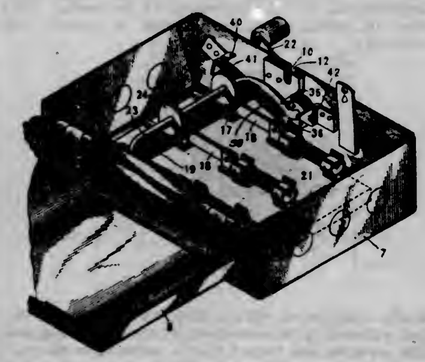
1. The combination of a container having a wall provided with slits and an opening between said slits, a closure member adapted to have its ends inserted in the wall slits so that said closure member may close the wall opening, and a discharge spout carrier by said closure member adapted to aline with the wall opening.

1,578,419. COMBINED DISCHARGE AND CLOSURE DEVICE. JOSEPH J. GANNON, Port Huron, Mich., assignor to Diamond Crystal Salt Company, St. Clair, Mich., a Corporation of Michigan. Filed May 26, 1924. Serial No. 715,990. 1 Claim. (Cl. 221—11.)



A combined discharge and closure device for a container having a wall opening, comprising a trough-like member pressed from a blank to form a trough tapering inwardly from its receiving end to its discharge end and providing side walls and a connecting wall, said trough-like member being mounted in the wall opening, said member having its side walls terminating in lugs extending under the connecting wall of said member and co-operating therewith in pivotally supporting the receiving end of said member and means for limiting the opening movement of the discharge end of said member.

1,578,420. AUTOMATIC TELEPHONE SYSTEM. JOHN E. GARDNER, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 11, 1921. Serial No. 507,016. 34 Claims. (Cl. 179—18.)

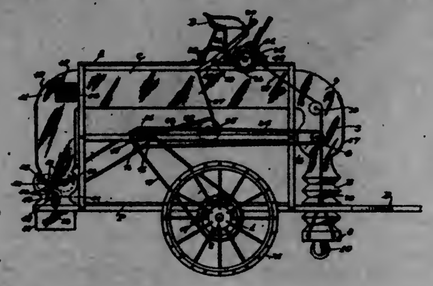


17. In a telephone system, a combination connector switch and finder switch, a combination line switch and finder switch, and a trunk line permanently linking said switches together.

1,578,421. FLOOR WAXER AND POLISHER. JOHN T. GARTON, Toronto, Ontario, Canada. Filed Aug. 21, 1923. Serial No. 658,626. 16 Claims. (Cl. 91—37.)

1. For use in a floor waxer, a waxing pad of soft flexible material having its under surface provided with a layer of substantially non-porous material, on the outer surface of which non-porous material the wax is carried; and a porous covering over the wax-coated surface.

1,578,422. INCLOSED QUICK-MAKE AND QUICK-BREAK SWITCH. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Jan. 13, 1923. Serial No. 612,460. 9 Claims. (Cl. 200—67.)

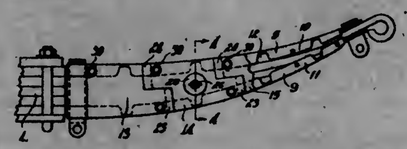


1. In an electric switch, a casing, a switch in the casing, operating means for the switch, a switch throwing spring operably connected at one end with the operating means, a guide bar for said spring and an abutment for one end of said spring, said abutment having an open ended slot to detachably receive said guide bar and having a projection adjacent said slot extending over the end of said spring to retain said spring in operative position.

1,578,423. INSECT DESTROYER. GEORGE W. GIBSON and HARVEY L. STEWART, Humphrey, Ark. Filed Jan. 7, 1924. Serial No. 684,828. 1 Claim. (Cl. 43—140.)

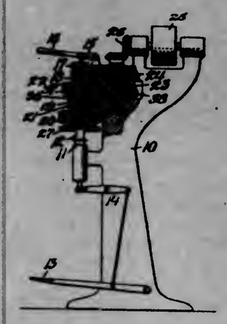
An apparatus of the class described comprising, in combination, a portable structure, a conduit supported thereby and extending in the direction of travel of the structure, a casing depending from one end portion of the conduit and in communication therewith, an expansible member depending from and in communication with the casing, means within and supported by the casing for creating a suction through the expansible member and forcing a blast through the conduit, a shaft supported by the structure and disposed transversely of the conduit, drums on the shaft, means for rotating the shaft, a flexible member operatively engaged with each

of the drums and with the lower portion of the expansible member, a guide pulley for each of the flexible members carried by a side wall of the conduit above



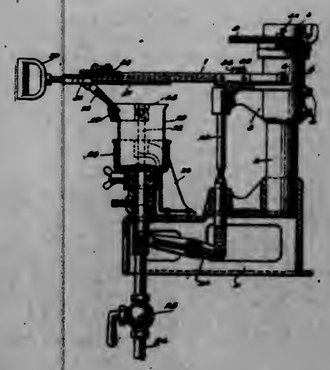
the depending casing, and a nozzle carried by the lower portion of the expansible member and in communication therewith.

1,578,424. MEANS FOR SECURING TOGETHER AGAINST ROTATION THE PARTS OF GEAR CASINGS. CLARENCE A. GODSHALK, Philadelphia, Pa., assignor to Fox Automotive Products Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 16, 1922. Serial No. 601,867. 3 Claims. (Cl. 287—53.)



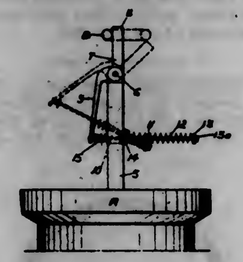
3. The combination with a case and a cover therefor having screw-threaded connection therewith, the end wall of the cover having formed in it a screw-threaded opening with which registers a groove formed in the skirt of the cover constituting a partial pin seat, of means for preventing rotation of the cover relative to the case, comprising a plug seated in the screw-threaded opening in the end of the cover, and a headed pin passing through the said plug and having a smooth portion adapted to enter the groove in the skirt of the cover and having its end adapted to cut a kerf in the wall of the case opposite the said groove as the pin is driven into the groove.

1,578,425. VEHICLE SPRING COVER. ALBERT R. GOLDRICK, Cleveland, Ohio, assignor, by mesne assignments, to Albert E. Hodgins, Cleveland, Ohio. Filed Mar. 15, 1923. Serial No. 625,189. 18 Claims. (Cl. 267—37.)



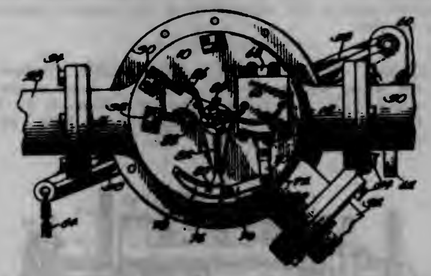
1. In a vehicle spring cover of the character described, the combination of a top member extending substantially one-half the length of the spring, a bottom member similarly extending along the spring and interengaging relatively movable side members pivotally connected to the top and bottom members, the pivotal connections being in staggered relation, whereby said top member may shift longitudinally of the spring relative to said bottom member.

1,578,426. MACHINE FOR CRIMPING POLYGONAL CANS. JAMES H. GORDON, Irvington, N. J. Filed Apr. 11, 1924. Serial No. 705,743. 3 Claims. (Cl. 113—24.)



1. A machine for crimping the edges of cans of polygonal shape comprising a can holder, a support, a rotatable head in the support, an eccentric in the head, a pinion on the eccentric, a gear fixed against rotation and with which the pinion is in mesh, and a crimping tool supported from the eccentric so that when the head rotates, the crimping tool follows a polygonal path.

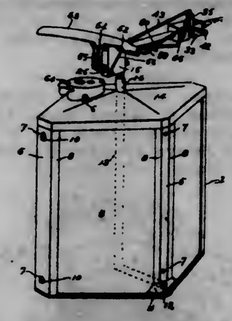
1,578,427. APPARATUS FOR SHAPING GLASS ARTICLES. DAVID E. GRAY, HARRY R. BOALS, and JAMES BAILEY, Corning, N. Y., assignors to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Dec. 10, 1923. Serial No. 679,765. 9 Claims. (Cl. 49—7.)



2. A glass shaping machine comprising, in combination, ware retaining means, means for heating the ware, a mold shiftable with respect to said ware retaining means, and laterally operable means for giving the ware the shape of the mold.

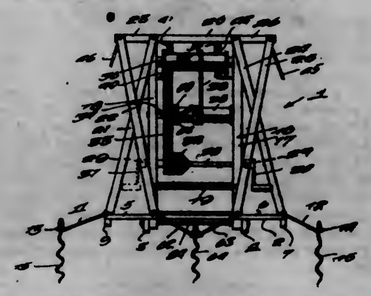
1,578,428. MAKE-UP POST FOR ROTARY-DRILLING APPARATUS. EDGAR B. GREVE, Bellevue, Pa. Filed Feb. 28, 1923. Serial No. 621,795. 1 Claim. (Cl. 255—35.)

A make-up post for rotary well drilling apparatus comprising a post, a two-armed lever pivotally carried at the top of the post, one arm of said lever being a tong engaging arm, means engaging the other arm for yieldably holding the tong engaging arm in a normal tong engaging position, said means including a spring, means for adjusting the effective action of the spring, and cushioning means for cushioning the rebound movement of said lever when suddenly released from an abnormal position.



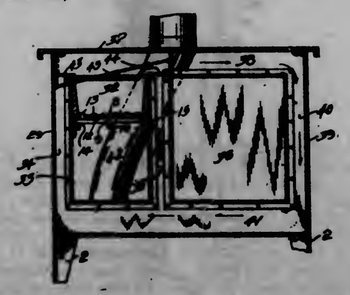
1,578,429. SWITCHING VALVE. AUBREY J. GRINDLE, Chicago, Ill., assignor to Grindle Fuel Equipment Company, Harvey, Ill., a Corporation of Illinois. Filed Feb. 15, 1923. Serial No. 619,318. 3 Claims. (Cl. 137—139.)

1. In mechanism of the class described, a valve case having a port, a pivotal valve in the case swingable over and off from said port, automatic means for so swinging it in one direction, means for selectively moving it in the opposite direction, an arm outside the case swinging in unison with the valve, a latch device, an electric solenoid adjacent to said arm, a core for said solenoid acting by gravity to force said latch device to lock said arm in each extreme position of the valve and means selectively applying current to said solenoid to lift the core.



1,578,430. CIGAR LIGHTER. SAMUEL E. GUINN, Johnson City, Tenn., assignor to S. E. Guinn Manufacturing Co., Cincinnati, Ohio, a Corporation of New York. Filed Apr. 8, 1922, Serial No. 550,877. Renewed July 30, 1925. 10 Claims. (Cl. 67—4.1)

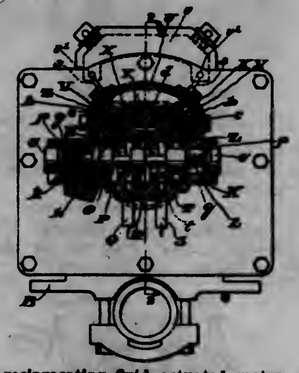
1. A cigar lighter, including a casing having a forward face presenting panel receiving advertising spaces, a gas conduit passing through the casing and extending above the same, a valve casing mounted upon the upper end of the conduit, a gas conduit passing through the valve casing, a gas pipe leading from said conduit and extending beyond the valve casing, a pyrophoric igniter supported on said pipe, a valve in the valve casing for



controlling the gas passage therethrough, and a handle mounted on the valve casing for operating the valve and pyrophoric igniter.

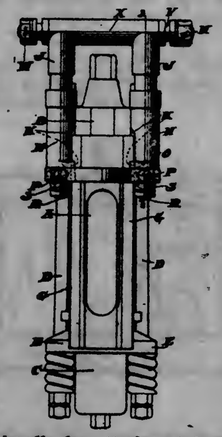
1,578,431. HAY-STACKING DEVICE. WENDELIN HAMAN, Berwick, N. Dak. Filed Feb. 14, 1925. Serial No. 9,098. 5 Claims. (Cl. 254—139.)

1. A stacking device including an upright, a series of horizontal shafts mounted thereon, a relatively large cog wheel fixed to one of said shafts, means for operating said wheel, and means whereby the rotation of the wheel will lift a load of hay from a wagon, the said means including a rope, one end of which is adapted to be removably attached to said cog wheel.



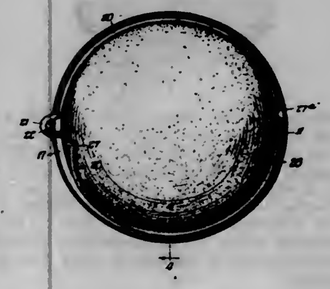
1,578,432. STOVE. HENRY C. HAMILTON and GEORGE W. BAILEY, Spokane, Wash. Filed June 9, 1924, Serial No. 718,727. Renewed Jan. 25, 1926. 1 Claim. (Cl. 126—1.)

The combination with a stove body of an oven and a spaced fire-box casing within the stove forming vertical side flues within the walls of the stove and an inter-



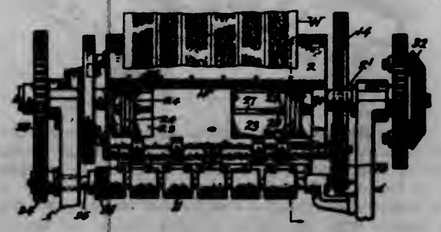
mediate vertical flue between the oven and casing and extending from top to bottom thereof, said stove having a top smoke flue, a lower base flue extending the full width of the stove beneath the oven and casing, a smoke pipe communicating with the base flue and dampers for controlling the passage of smoke through one side flue and the intermediate flue.

1,578,433. OILING DEVICE FOR FLAT-PISTON MOTORS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 23, 1924. Serial No. 694,513. 2 Claims. (Cl. 184—55.)



1. In a reciprocating fluid actuated motor, a cylinder head, a valve chest on said cylinder head, an oil reservoir formed integrally with said cylinder head, an oiling chamber within said reservoir communicating with a port in said valve chest, a pair of cartridges closing the ends of said oiling chamber adapted to be impregnated by oil from the reservoir and to deliver such oil to the motive fluid pulsating into the said oiling chamber from said valve chest, a rod extending through said cartridges and springs about said rod for maintaining said cartridges in position.

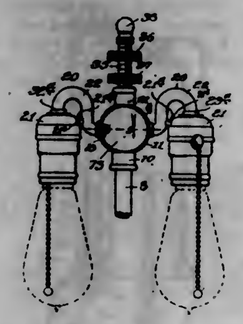
1,578,434. SPRING SINKER HANDLE FOR DRIFTERS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 5, 1925. Serial No. 60,403. 3 Claims. (Cl. 121—36.)



1. A spring handle for attachment to a fluid operated percussive rock drill of the drifter type, comprising handle brackets having grooves adapted to engage the usual ribs or slides on the cylinder of the rock drill, a cross brace between the said brackets, lugs on said brackets corresponding to the back head lugs of the rock drill, for attaching the said brackets to the cylinder by means of the usual side bolts, a handle attached to said brackets, and spring means within said brackets for absorbing the vibration of the rock drill.

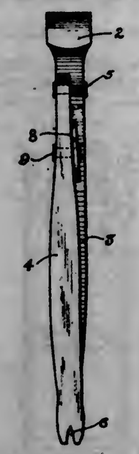
1,578,435. VANITY CASE. CHARLES A. HEDDEN, Oak Park, Ill., assignor to Armour & Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 21, 1925 Serial No. 76,572. 6 Claims. (Cl. 132—83.)

1. A vanity case comprising base and cover members hinged at one side, a compact-retaining ring disposed resiliently within the base and overlying the compact margin, one terminal of the ring formed to serve as a cover-retaining catch and the other terminal movable radially of the base to clear the compact margin and permit removal and replacement of the compact relative to the ring.



1,578,436. SHEET-CONTROL MECHANISM. FREDERICK HERB, Brooklyn, N. Y., assignor, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y., a Corporation of New York. Filed May 12, 1924. Serial No. 712,519. 10 Claims. (Cl. 270—76.)

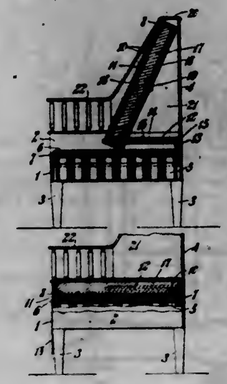
4. The combination of a rotary cylinder having sheet taking devices, a co-operating abutment between which and the cylinder a product passes, recesses in the cylinder, holders movable widthwise in the recesses, and bearer segments mounted in the holders.



1,578,437. ELECTRIC-LAMP-SUPPORTING STRUCTURE. MAX HERSKOVITZ, Chicago, Ill., assignor to Peerless Light Company, Chicago, Ill., a Corporation of Maine. Filed Feb. 6, 1922. Serial No. 534,349. 4 Claims. (Cl. 240—78.)

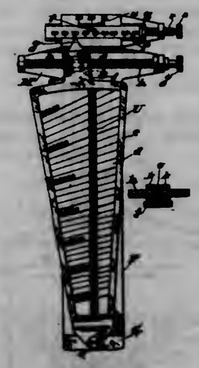
1. In an electric-socket-equipped structure, the combination of a hollow supporting member made of sections, said member containing an opening in a side wall thereof, an electric-bulb-receiving socket having a portion extending into and rotatable in said opening for movement into different angular positions relative to said member, said

socket containing a groove located within said opening, and a screw engaging said sections and extending into said groove.



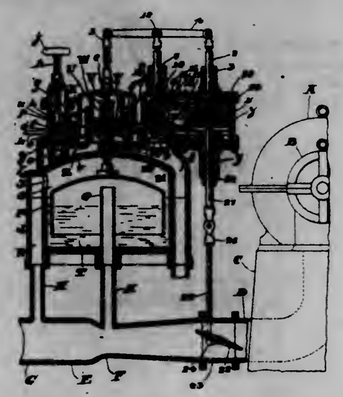
1,578,438. PINCERS. HERMAN R. HINTZ, Massillon, Ohio. Filed Mar. 5, 1921. Serial No. 449,666. 3 Claims. (Cl. 12—103.)

3. A pair of cobbler's pliers for removing heel lifts and the like comprising a pair of handle members pivoted together and opposed, substantially C-shaped jaws upon the handle members, each jaw terminating in a wide sharp edge arranged to meet the edge of the other jaw in the same line, and a plurality of teeth upon the sharp edge of each jaw, the teeth upon each jaw being staggered relative to the teeth upon the other jaw.



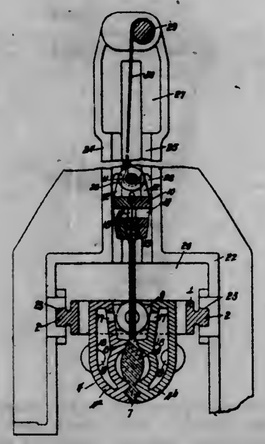
1,578,439. SETTEE BED. GUSTAVE J. HODISTER and KARL L. SCHREIBER, Leavenworth, Kans. Filed June 23, 1925. Serial No. 38,950. 5 Claims. (Cl. 5—43.)

1. In a combined bed and settee, the combination with a base frame, and a spring section supported thereon, and forming the seat portion when the device is used as a settee, of a springless movable back frame, adapted to be supported in a substantially vertical position, and provided with flexible material on its front face, and with means for supporting a mattress, in rear of said back frame and the flexible back material carried thereby, said back frame being adapted to be turned forward into horizontal position and to be supported throughout its entire extent by the seat spring section, when the device is used



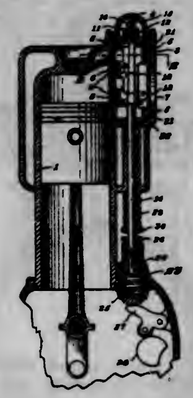
as a bed, and means for retaining the back frame in operative relation with the base frame in both of its positions, said last named means permitting free vertical movement of said back frame upon the spring seat.

1,578,440. VOLUME-REGULATOR GAUGE. PAUL HOFFMAN, East Orange, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 8, 1923. Serial No. 661,549. 4 Claims. (Cl. 73—31.)



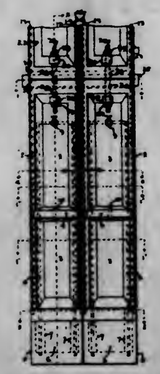
4. In a volume regulator gauge for compressors, a support, a frame having a fluid volume scale calibrated in fluid volumes under standard conditions pivoted to said support, a stationary barometric scale member, a temperature scale member adjustable with respect to said barometric scale, means for adjusting said fluid volume scale relative to said temperature scale member, and a tube for containing a liquid column said liquid column being adapted to be controlled by variations in the intake pressure of the compressor and adapted to cooperate with said fluid volume scale for indicating the fluid volume supplied to the compressor.

1,578,441. CONSTANT-VOLUME REGULATOR. LESLIE R. HUFF, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 3, 1925. Serial No. 66,628. 5 Claims. (Cl. 103—40.)



1. A constant volume regulator for a motor driven turbo blower comprising an intake conduit for the blower, a valve in the conduit, and means actuated by the air passing through the conduit for automatically adjusting the position of the valve whereby the intake volume of air to the blower may be controlled.

1,578,442. MANUFACTURE OF GLASSWARE. AUGUST KADOW, Toledo, Ohio, assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 27, 1922. Serial No. 547,011. 24 Claims. (Cl. 49—17.)

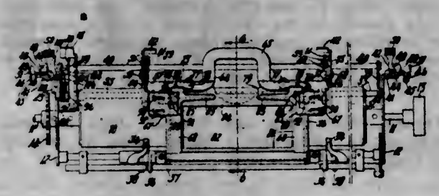


1. The method of forming glassware, which consists in gathering from a source of supply a quantity of molten glass into a gathering member, removing the charged gathering member from the source of supply, holding one portion of the glass in the gathering member and applying a stretching pull to another portion of the glass to draw it in predetermined form from the gathering member.

1,578,443. VALVE. LOUIS I. KEITZ, Cincinnati, Ohio. Filed Dec. 22, 1923. Serial No. 682,279. 6 Claims. (Cl. 123—188.)

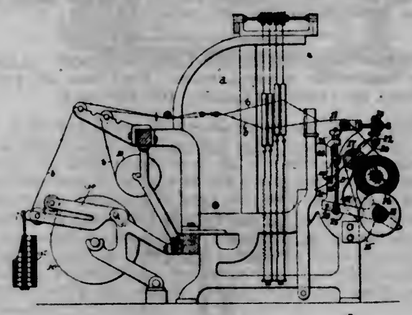
1. In a valve as specified, a ported valve sleeve, a sliding valve therein, a locking stem movable relative to the sleeve and sliding valve, said valve and locking stem provided with inclined co-engaging surfaces whereby the locking stem will wedge the valve into clamped locking engagement with the interior of said sleeve at predetermined times.

1,578,444. SHEET PILING. HERBERT M. KNIGHT, Montclair, N. J. Filed Aug. 10, 1921. Serial No. 491,226. 13 Claims. (Cl. 61—59.)



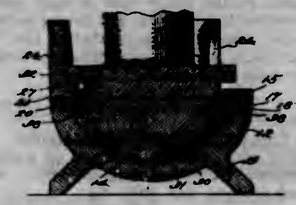
1. A pre-cast sheet-pile having a multiple of pockets in the face thereof.

1,578,445. GAME. JOHN G. KOEGLE, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed May 28, 1920. Serial No. 384,803. 14 Claims. (Cl. 273—93.)



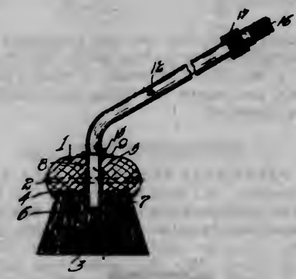
7. In a game device, two rotary members having surfaces to frictionally lock in contact with each other, means including a portion pivotally supporting one of said members, and a cushion portion normally supporting the other member out of contact with said first named member.

1,578,446. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 6, 1923. Serial No. 666,907. 19 Claims. (Cl. 197—135.)



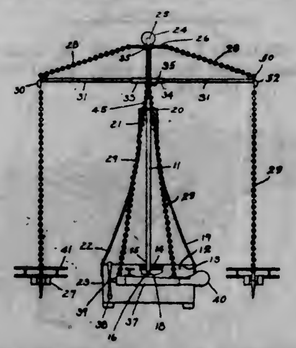
1. In a typewriting machine, a cylindrical platen, a card-holder curved over the face of the platen, means for pivotally supporting the card-holder behind the platen, a segmental ratchet fast to the machine-frame, a pawl-carrying arm for line-spacing the ratchet with the card-holder, and mechanism for line-spacing the platen comprising means for actuating the line-space-arm of the card-holder.

1,578,447. METHOD OF AND APPARATUS FOR PRODUCING CURVILINEAR FABRICS. OSCAR S. LAWTON, New Bedford, Mass., assignor of one-third to Arthur L. O'Leary, Fairhaven, Mass., and one-third to Harold W. O'Leary, Newton, Mass. Filed Sept. 17, 1921. Serial No. 501,435. 5 Claims. (Cl. 139—97.)



1. The method of making a curvilinear fabric with a loom having a tapered take-up roll, which consists in arranging the warp threads before they are fed into the loom in a predetermined relation to one another to form a tapered warp of the material thickness and so as to establish between the number of warp threads on opposite sides of the center of said tapered warp a ratio corresponding to the ratio between the diameters of the take-up roll on opposite sides of its center, and maintaining said warp threads in said established arrangement and under the same tension while passing through the loom.

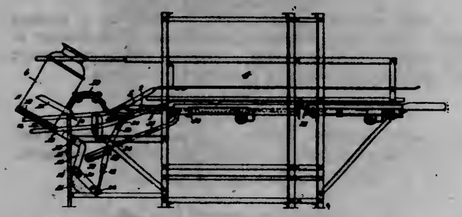
1,578,448. METHOD OF PRESSING GLASS. STATES LEE LEBEY, Corning, N. Y. Filed July 16, 1925. Serial No. 44,075. 3 Claims. (Cl. 49—85.)



1. The method of preventing "sucks" in a pressed glass blank which comprises confining the shrinkage of the blank to a zone having unpressed walls and forming an optically non-essential portion of the blank.

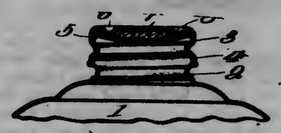
1,578,449. BRUSH. ANTON A. LERAAS, Spokane, Wash. Filed May 18, 1925. Serial No. 31,036. 3 Claims. (Cl. 15—128.)

1. The combination with a brush head having a distributing sleeve therein, of a locking bushing having a head plate and a pair of opposed, arcuate, overhanging flanges on said plate, a tubular handle having a pair of complementary flanges for frictional co-action with the plate-flanges, and a set bolt for said complementary flanges.



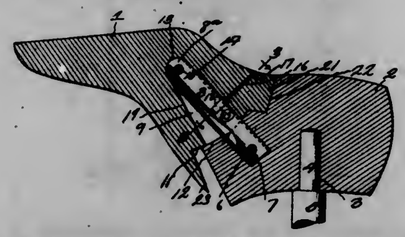
1,578,450. AERO SWING. JOHN LEVANDER, Forestville, Conn. Filed Apr. 18, 1923. Serial No. 632,830. 4 Claims. (Cl. 272—31.)

1. In an aero swing, a box-like base structure having shaft supporting means, a shaft connected to said means and extending upwardly from said structure, means for guiding the upper end portion of said shaft, an ornamental tip on the top end of said shaft, a tension plate



mounted on said shaft adjacent said tip and a thrust plate also mounted thereon and spaced below said tension plate, thrust rods extending outwardly from said thrust plate, hangers at the outer ends of said rods, having each an upwardly directed loop, and having each a pair of pendant hooks, tension chains connecting said loops and said tension plate, and a set of gondola devices hung individually from said hooks.

1,578,451. CAN-DELIVERING MECHANISM. CHARLES F. MCEWAN, Chicago, Ill., assignor to Harry D. Lathrop, Chicago, Ill. Filed Feb. 27, 1925. Serial No. 11,926. 10 Claims. (Cl. 214—1.)

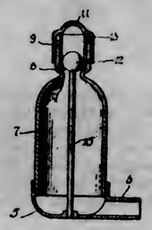


1. Mechanism of the class described comprising a pivoted platform characterised by having means for effecting the delivery of a can placed thereon, a counterweight for said platform, and means for tilting said platform, substantially as described.

1,578,452. VALVE-SEAT SEAL CAP. JOHN F. MCGARRAHAN, Riverside, Ill., assignor to Atlas Can Company, Geneva, Ill., a Corporation of Illinois. Filed May 23, 1924. Serial No. 715,418. 6 Claims. (Cl. 220—46.)

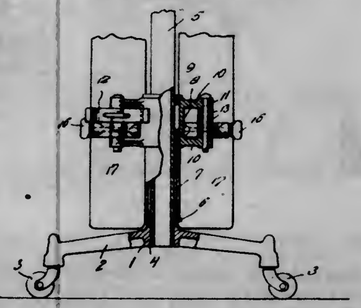
1. A container having an opening, a deformable annular flange, straight in cross section, defining the boundary of said opening, and a closure for said container, said closure being provided with an annular bead adapted to exert force against said flange at a region spaced slightly from the boundary of said opening and adapted to bend said flange inwardly to provide a conical seat.

1,578,453. DIVIDED LAST. JOHN M. MADIGAN, Haverhill, Mass. Filed Nov. 14, 1924. Serial No. 749,884. 5 Claims. (Cl. 12—136.)



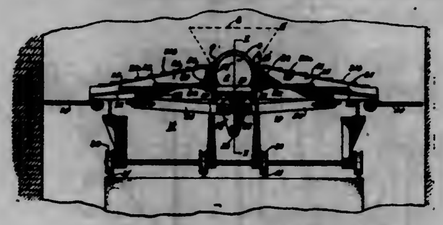
1. The combination with a shoe last, said last comprising a heel section, a fore section, of a cylindrical member carried by the heel section and extending into a tapered recess, said cylindrical member being pivotally mounted in the recessed inner end of the tapered recess and engaging the side walls of said recess, and a U-shaped spring member carried by one side of the tapered recess and cooperating with opposite sides of the cylindrical member for holding the same adjacent opposite sides of the recess.

1,578,454. MANUFACTURE OF ACETIC ANHYDRIDE AND ACETALDEHYDE FROM ETHYLIDENE DIACETATE. MELVILLE J. MARSHALL and GEORGE S. SHAW, Shawinigan Falls, Quebec, Canada, assignors, by mesne assignments, to Canadian Electro Products Company, Limited, Montreal, Canada. Filed Jan. 26, 1920. Serial No. 354,225. 9 Claims. (Cl. 260—128.)



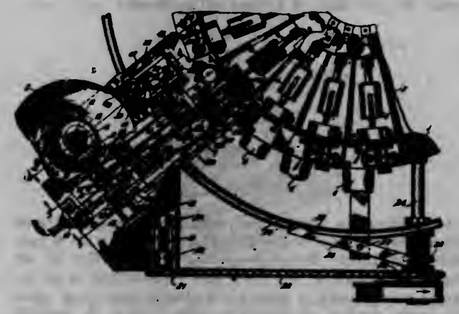
1. A process for the manufacture of acetic anhydride and acetaldehyde from ethylidene diacetate, in which phosphoric acid is added to the diacetate as a catalyst to facilitate decomposition of the diacetate by heat.

1,578,455. RADIATOR AIR VALVE. JOHN MARTENS, Chicago, Ill. Filed Oct. 8, 1923. Serial No. 667,187. 5 Claims. (Cl. 137—122.)



4. In a radiator air valve of the class described, a chamber, a neck portion extending from said chamber, said neck portion having an inwardly turned head forming an internal shoulder at the lower part thereof, a sleeve in said neck portion resting on said internal shoulder, a cap fitted over the top of said neck portion, a vent in the top of said cap, a ball check valve confined within said sleeve, and means for supporting the said ball check valve within the sleeve, said ball check valve being adapted to remain unseated while air is being discharged from the said vent and to close the said vent when vapor reaches the ball valve.

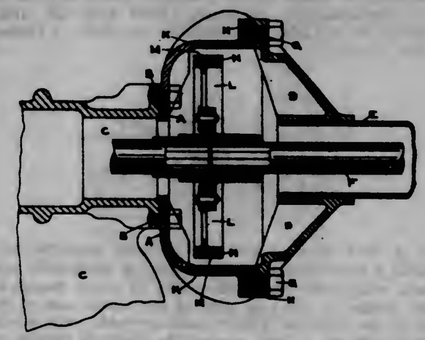
1,578,456. ANÆSTHETIZER-TANK BRACKET. LLOYD M. MASSMORE, Olympia, Wash. Filed Mar. 31, 1925. Serial No. 19,643. 3 Claims. (Cl. 248—20.)



1. In combination, a supporting structure, a standard rising from the supporting structure, a sleeve resting on the supporting structure and disposed about the standard, a cylinder threaded to the upper end of the sleeve, a pair of arms projecting from the cylinder in vertical spaced relation, a pin extending through the ends of the arms, a pair of jaws pivoted to the pin, and a bolt engageable with the jaws for clamping them about a tank.

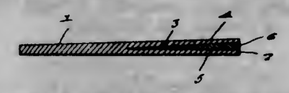
1,578,457. STOKER. REGINALD B. MILDON, Lansdowne, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 27, 1920. Serial No. 420,015. 15 Claims. (Cl. 110—47.)

1. In an underfeed stoker structure, the combination with a main retort having continuous side walls, of auxiliary retorts disposed beyond said side walls and arranged to receive fuel from said main retort.



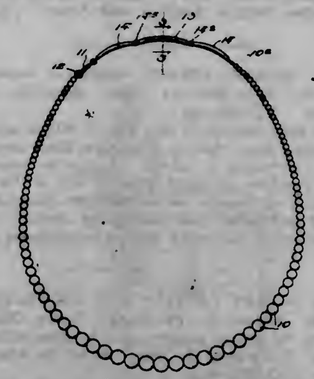
1,578,458. AUTOMATIC FEED FOR GAUGING APPARATUS. GEORGE LEE MILLER and HARRY F. HAINES, Canton, Ohio, assignors, by mesne assignments, to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Feb. 11, 1924. Serial No. 692,019. 13 Claims. (Cl. 209—72.)

1. A feeding device of the character described, including a sliding gate, a stationary plate above the gate, a movable member spaced from the end of the stationary plate adjacent to the end of the sliding gate, means for depositing a taper roller upon the gate and means for withdrawing the gate from beneath the roller and moving the movable member into engagement with the large end of the roller to bind the same between the end of the stationary plate and the movable member, permitting the roller to swing into vertical position with the small end downward.



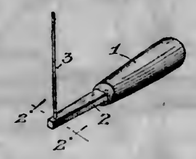
1,578,459. BRAKE MECHANISM FOR MOTOR ROAD VEHICLES. JOHN ALEXANDER MILLER and WILLIAM DOUGLAS MILLER, Brighouse, England. Filed Dec. 2, 1922. Serial No. 604,477. 3 Claims. (Cl. 188—77.)

1. In brake mechanism for motor propelled vehicles the combination with the propeller shaft, a brake-pulley thereon, and a brake-band surrounding said pulley and cooperating therewith, of a casing having openings therein inserted in a cut torque tube encasing the said shaft, said casing wholly surrounding the brake-pulley and comprising two separate sections, one section being secured to one part of the cut tube and the other section secured to another part thereof, both sections being suitably bolted together and cranked ends upon the aforesaid brake-band projecting through an opening in the said casing to which is secured the brake-operating rod, whereby the casing serves as a continuation or



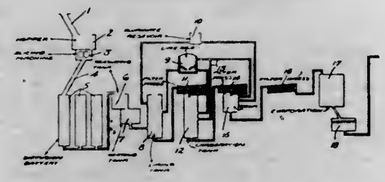
part of the torque tube, and gives access to the interior through one of the openings of which the brake-band may be dismantled, removed therefrom, or replaced upon the pulley.

1,578,460. SHOE SOLE. J. S. MITCHELL, Stuttgart, Ark. Filed Jan. 28, 1925. Serial No. 5,272. 1 Claim. (Cl. 36—30.)



An outer sole for shoes, the outer edge thereof being slit longitudinally for its entire length, said slit extending inwardly to the longitudinal center of the sole, a leather wedge inserted in said slit between the divided portions formed thereby and cemented therein whereby the portion of the sole disposed adjacent the outer edge of a shoe is of greater thickness than the remaining portion of the sole, the portion of said wedge adjacent the toe portion of the sole tapering gradually toward the end of the wedge.

1,578,461. NECKLACE. HARRY MORRIS, Chicago, Ill., assignor to Morris, Mann & Reilly, Chicago, Ill., a Corporation of Illinois. Filed Aug. 2, 1924. Serial No. 729,743. 5 Claims. (Cl. 63—2.)



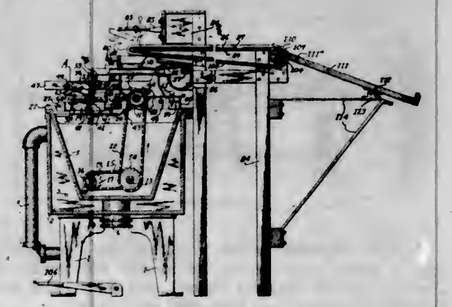
5. A necklace comprising a major flexible portion consisting of a string of beads; a minor curved stiff clasp portion having its inner side concaved; and means for detachably securing one end of the flexible portion to one end of the curved stiff portion.

1,578,462. HOOK-FORMING DEVICE FOR ELECTRODE SUPPORTS. ELMAN B. MYERS, Wayne, Pa., assignor to Radio Audion Company, Jersey City, N. J., a Corporation of Delaware. Filed Sept. 28, 1921, Serial No. 503,820. Renewed Jan. 23, 1926. 2 Claims. (Cl. 81—15.)

1. A hook forming tool for electrode supports comprising a shank and a handle thereon to manipulate said shank, said shank being formed with an orifice therein at right angles to the long axis of the shank and of the size of the electrode support, and provided with a side surface adapted to bear against the electrode support to determine the amount of curvature imparted thereto in forming the hook, and one edge of the shank being beveled at the edge thereof first adjacent the curved portion of the electrode support.

1,578,463. PROCESS OF MANUFACTURING BEET SUGAR. EDWARD E. NICHOLSON and RALPH B. BEAL, Minneapolis, Minn. Filed Oct. 6, 1924. Serial No. 741,872. 5 Claims. (Cl. 127—48.)

1. The process of manufacturing sugar which comprises extracting the juice from the raw products, treating said juice with an excess of caustic lime, adding a quantity of water soluble aluminate to precipitate portions of the excess of lime and other hydroxides present, for producing floccular and granular precipitates, filtering the resulting mass and treating the filtrate with carbon dioxide, then further filtering said juice.

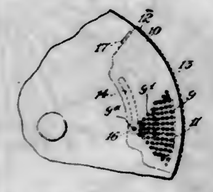


1,578,464. ENAMEL FINISH. GEORGE J. NIKOLAS, Chicago, Ill. Filed Mar. 11, 1920. Serial No. 365,100. 1 Claim. (Cl. 91—68.)

A solid body having its face coated with a smooth and hard multiple layer coating of uniform finely speckled appearance, including a colored lacquer-like coat having lustrous particles of solid pigment set in its face, a medial layer of transparent lacquer-like material blended integrally therewith and containing similar particles, and a protective outermost coat of transparent material.

1,578,465. CANDY COATING AND DECORATING MACHINE. ANGELO D. PANOULIAS, Jersey City, N. J., assignor, by mesne assignments, to Panayiotis D. Panoulias. Filed July 21, 1921. Serial No. 486,558. 32 Claims. (Cl. 91—3.)

3. In a machine of the character described, a receiving apron having one free end, means for smoothing said apron, together with means for advancing said apron.

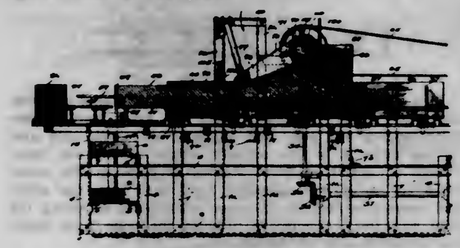


12. A method of coating caramels or other confections with chocolate or other coating material consisting of introducing a row of confections into a horizontally flowing stream of coating material, vibrating said confections while immersed in the stream of coating material, vibrating the row of confections after withdrawal from the coating stream, and simultaneously projecting a current of air on said coated confections.

13. In a confectionery coating machine, the combination with the kettle, of a row of narrow endless elevator belts therein for raising the coating material.

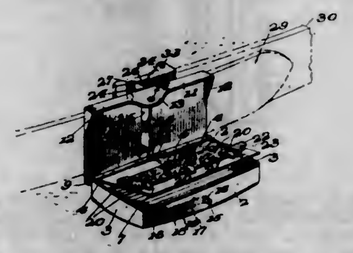
15. In a confectionery coating machine, a movable blower nozzle and means for moving the same across the coated confections.

1,578,466. STRAINER FOR POT COVERS. HERMAN PEARL, Morris Park, N. Y. Filed May 27, 1924. Serial No. 716,255. 1 Claim. (Cl. 53—8.)



In combination with a pot cover having a plurality of spaced perforations in its wall and provided with a continuous marginal flange projecting downwardly at an angle to the body of the cover and terminating in an inwardly turned bead, a slide plate closely contacting upon the upper surface of the cover and having an opening therein through which a greater or less number of said perforations may be exposed, said plate also having an angularly disposed flange on one edge extending the entire length of said plate and closely overlying the flange on said cover, the edge of the flange on said plate extending inwardly upon the bead of the cover flange, said plate adjacent its inner edge having a longitudinally extending slot therein, and guide means on the cover engaged through said slot to limit the sliding movement of said plate and to retain the flange on said plate in contact throughout its length with the flange on said cover.

1,578,467. CONCRETE-BLOCK-MAKING MACHINE. JAMES M. PHILLIPS and HENRY D. PHILLIPS, Stanford, Ky., assignors of one-tenth to Matt R. Hargan, one-tenth to J. Welch Rochester, one-tenth to C. Hays Foster, one-tenth to Logan R. Hughes, and one-tenth to Kendrick S. Alcorn, all of Stanford, Ky. Filed Apr. 25, 1924. Serial No. 708,980. Renewed May 26, 1925. 35 Claims. (Cl. 25—99.)



1. In a concrete block moulding machine, a rotating member, a tamping head having one end eccentrically connected to the rotating member to cause oscillation of the head, the working face of said tamping head being corrugated, each corrugation comprising a rib having curved inclined sides, with the side facing rearwardly being of greater extent than the other side.

9. In a continuous block moulding machine, an endless sectional conveyor, each section comprising a base plate, a pallet spaced above the base plate and swingably connected with the base plate.

17. In a continuous block moulding machine, a combined endless sectional conveyor and mould boxes, each section comprising a base member, arms pivotally mounted adjacent their ends at one side edge of the base member, a pallet spaced above the base member, a sleeve and bolt for connecting the arms with the pallet and maintaining the same in spaced relation, said pallet and arms adapted to be tilted relative to the base member, said arms being provided with curved ends adapted to engage the base member for limiting tilting movement of the pallet.

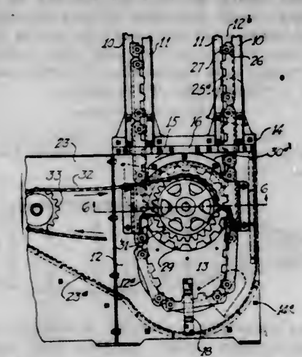
1,578,468. COMBINED MATCH BOX AND BELT BUCKLE. JULIAN RANKIN, Louisa, Ky. Filed June 10, 1925. Serial No. 36,161. 4 Claims. (Cl. 24—163.)

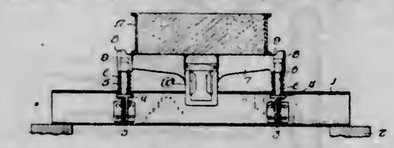
3. In a device of the character described, a case consisting of a hollow body, a lid hinged to the body, an angular fastening member pivotally supported on said lid, said fastening member comprising a jaw portion and a handle portion and being operable to clamp the end portion of a belt between said jaw portions and said lid, and a second fastening member comprising angularly related jaw and handle portions, said second fastening member being pivotally supported on the handle of the first named fastening member and being operable to clamp the second end of the belt between the jaw portion of the second named fastening member and the handle of the first named fastening member.

1,578,469. ELEVATOR. GEORGE B. READ, Bloomington, Ill. Filed Aug. 26, 1922. Serial No. 584,392. 11 Claims. (Cl. 198—189.)

1. In an elevator, in combination, a boot member, its side portions provided with a travel way therein, a head member provided with a travel way therein, side members connecting the head and boot, provided each with travel ways therein registering with the travel ways, respectively, in the head and boot members, a plurality of disconnected cog units disposed within the continuous travel way formed by the connected boot head and side members, buckets connected at intervals of the reach, formed by the abutting cog units, a sprocket wheel, cooperating with the cog unit train, adapted to cause the same to be advanced within the travel way.

9. In an elevator, a frame provided with a continuous travelway therein, a plurality of non-connected abut-





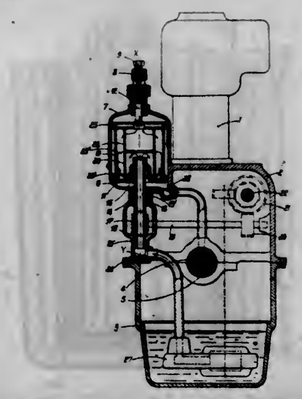


table carrying units constituting a train therein, grain supporting members mounted on selected pairs of units of said train, and means for advancing said train.

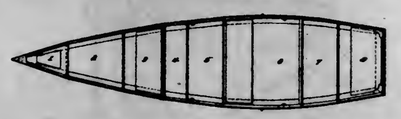
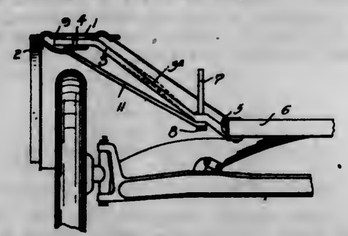
1,578,470. FLASK SHAKE OUT. ALEXANDER ROBERTSON, LUTHER S. RESSER, and HARRY E. WHEELER, Alliance, Ohio, assignors to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 23, 1925. Serial No. 25,356. 6 Claims. (Cl. 22—45.)

1. A flask shakeout comprising relatively rigid supporting means, flask carrying means, resilient means between said supporting means and said flask carrying means, and reciprocating blow communicating means carried by said flask carrying means adapted to communicate a blow to said flask carrying means at each end of its stroke.



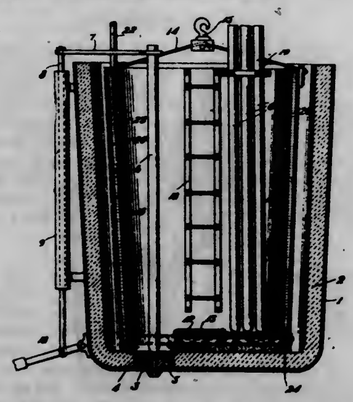
1,578,471. LUBRICATION OF INTERNAL-COMBUSTION ENGINES. LÉON SAIVES, Billancourt, France, assignor to Louis Renault, Billancourt, France. Filed Apr. 1, 1924. Serial No. 703,390. 1 Claim. (Cl. 184—6.)

An oil purifying apparatus for internal combustion engines comprising a base constituting an extension of the engine crank case, a vertical shaft bearing integral



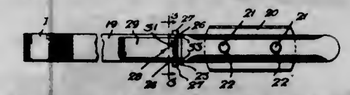
with the base, an oil supply pipe connecting the lower part of said bearing with the oil reservoir in the crank case, a hollow shaft journalled in said bearing, a rotor detachably connected to the upper open end of said shaft, a casing removably secured to said base, delivery pipes connected to said base, and gearing connecting said hollow shaft with a rotating part of the engine.

1,578,472. SECTIONAL BOAT. JAMES M. SAWYER, Chaplin, Conn. Filed July 7, 1924. Serial No. 724,616. 2 Claims. (Cl. 9—2.)



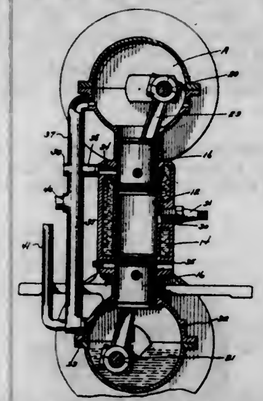
1. A boat comprising a plurality of sections having at their edges recesses, flanges provided with angular extensions seated and fixed in the recesses, and bolts for holding the flanges together.

1,578,473. FENDER BRACE. RUDOLF A. SCHIMANSKI, Spokane, Wash. Filed July 21, 1924. Serial No. 727,250. 1 Claim. (Cl. 280—152.)



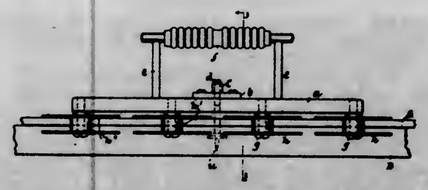
The combination in a fender support with an arched brace bar having its inner end secured to a fixed support, and a lamp post in said brace bar, of an auxiliary brace bar having its inner end secured on said post to the first brace bar, and an angular bracket at the outer end of the auxiliary brace bar for engagement with a fender.

1,578,474. LADLE CAGE. WALTER W. SHAWL, North Industry, Ohio, assignor of one-half to John W. Woodruff, Canton, Ohio. Filed June 19, 1925. Serial No. 38,240. 8 Claims. (Cl. 22—85.)



1. A protective cage adapted to be placed within a steel pouring ladle, and having an opening through which a workman may reach the interior of the ladle.

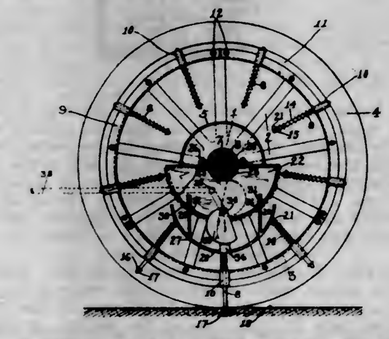
1,578,475. RAZOR-BLADE SHARPENER. REUBEN SIDMAN, San Francisco, Calif. Filed Sept. 24, 1924. Serial No. 739,625. 1 Claim. (Cl. 30—25.)



In a device for holding razor blades, a clamp comprising arms, a yoke extended about the arms, and a lever fulcrumed on the yoke and engaging one arm, said arm having notches in its opposite edges which are large enough to permit relative movement between the arms, when the lever is disengaged from said arm, the other arm being provided in its edges with seats receiving the yoke and small enough to prevent the yoke from shifting longitudinally of the device.

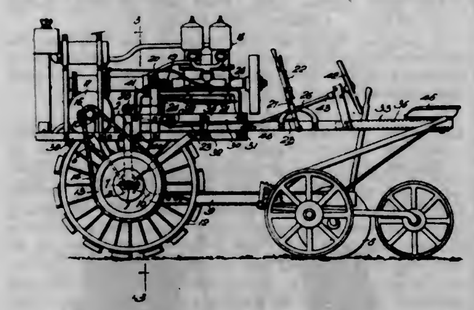
1,578,476. INTERNAL-COMBUSTION ENGINE. DANIEL C. SLAGHT, Easton, Pa. Filed Apr. 9, 1924. Serial No. 705,326. 2 Claims. (Cl. 123—51.)

2. In an internal combustion engine, a cylinder, a pair of oppositely disposed pistons reciprocally mounted within the cylinder, a crank case disposed at each end of the cylinder, a crankshaft disposed at each end of the cylinder, connecting rods for operatively connecting the pistons to the crank-shafts, a gear wheel keyed to one terminal of each crankshaft, a stub-shaft carried by the engine frame disposed at a point intermediate the ends of the cylinder, a bolt for connecting the stub-shaft to the engine and extending eccentrically through the stub-shaft, an idle gear rotatably mounted upon the stub-shaft meshing with the gears keyed to the crankshafts.



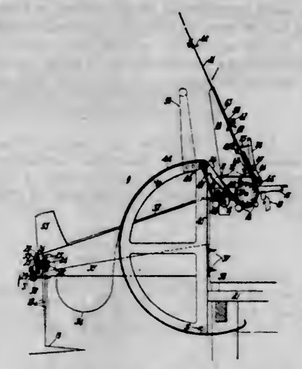
1,578,477. SHEET-ROCK CUTTER. NORMAN SMITH and FRED W. GALLAGHER, Lincoln Park, N. J. Filed July 11, 1925. Serial No. 43,054. 5 Claims. (Cl. 164—78.)

1. In an implement of the class described, the combination of a frame having a basal portion, a set of peripherally grooved freely revoluble guiding wheels arranged in alinement with each other on said portion, the frame including also another portion projecting rigidly



from the basal portion in angular relation to the set of wheels, and a tool-head adjustable on the latter portion toward and from the basal portion.

1,578,478. ANTISKID DEVICE. ROY G. SPRACHA, New York, N. Y. Filed Aug. 18, 1924. Serial No. 732,831. 6 Claims. (Cl. 301—48.)



4. In combination with a vehicle wheel including a rim, an axle and a housing for said axle, a casing adapted to be removably secured to said housing between said axle and the traction surface, a reciprocatory plunger adapted to be mounted on said rim in a plane offset from the plane of said casing, a substantially semi-circular cam shoe mounted in said casing having an external bearing member, an eccentric cam within said casing, a cam shaft parallel with said axle and extending into said casing, said cam being rigidly secured to said cam shaft, means adapted to be located in proximity to the operating parts for said vehicle for producing rotation of said cam shaft and cam for projecting said cam shoe beyond the lower limit of said casing, and a plurality of spring pressed guides in said casing for causing said cam shoes to return to normal inoperative position, said bearing member having a portion adapted to extend beyond the side of said casing to a point substantially in the vertical plane of said plungers, whereby the cam shoe when projected may engage said plunger and cause the plunger to penetrate the traction surface.

1,578,479. TRACTOR. HENRY ALONZA STEWART and FRANK LENARD HOLT, Tullahoma, Tenn. Filed Apr. 1, 1925. Serial No. 19,978. 4 Claims. (Cl. 180—12.)

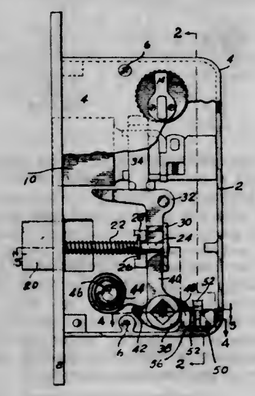
1. A tractor comprising an axle having an arch, wheels on the ends of the axle, a framework applied to the arch, a coupling bar, means including a king bolt by which said bar is pivotally attached to the arch for horizontal turning of the framework, and a yoke included in said framework having members situated both above and below said coupling bar permitting said horizontal turning but tending to prevent the tractor from tilting over forwardly.

1,578,480. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Rutherford, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 6, 1923. Serial No. 643,657. 8 Claims. (Cl. 197—126.)

1. In a web-manifolding typewriting machine, the combination with a revoluble platen, of means at the intake side of the platen for anchoring at their rear ends carbons interleaved with the plies of work-web, a carbon-stripper between the platen and said anchoring means in the form of a lifter movable upwardly from normal idle position to distend the composite web sufficiently to pull the web-plies forwardly to an extent to strip the carbons to position for the next form on the web; said stripper normally in such position that a loop of composite web forms between said anchoring means and the platen; and a clamp mounted to fasten the leading end of the web preparatory to the stripping operation.

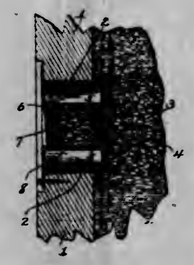
1,578,481. PAVING BLOCK AND BUILDING MATERIAL. GEORGE B. STRYKER and FRANK A. MANTEL, Memphis, Tenn., assignors to The Stryker Kot-N-Wood Products Company, Memphis, Tenn., a Corporation of Tennessee. Filed May 3, 1922. Serial No. 558,274. 2 Claims. (Cl. 106—31.)

1. A paving block or building material comprising in parts by volume vegetable fiber 70 to 80 per cent, ashes 10 to 20 per cent, and a bituminous binder 10 to 20 per cent, substantially as set forth.



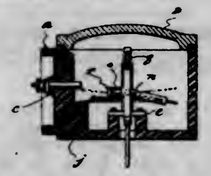
1,578,482. SPRING ROD FOR UNDERREAMERS. FRED SWAN, Marietta, Ohio. Filed Oct. 20, 1924. Serial No. 744,590. 3 Claims. (Cl. 255—75.)

1. In a well drilling tool, a body provided with tapering ways, cutters slidable in said ways into and out of expanded position, a spring for sliding the cutters upon the ways into expanded position, a spring rod connecting



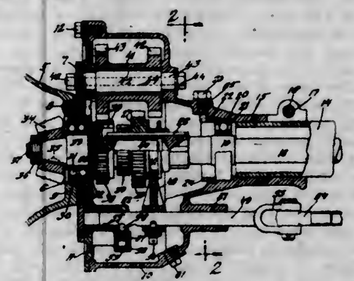
the cutters and the spring and means for engaging the spring rod to hold the cutters in contracted position against the force of the spring comprising trips carried by the tool body, and a slide carried by the spring rod provided with projections to be engaged by the trips, said slide being so mounted on the spring rod as to permit the spring rod to move relative to said projections against the force of the spring by which the spring rod is operated, and yielding means carried by the spring rod for resisting relative movement of the slide and spring rod.

1,578,483. LOCK. ERNEST L. TEICH, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Aug. 4, 1925. Serial No. 48,039. 3 Claims. (Cl. 70—16.)



2. A lock having, in combination, a lock case, a latch bolt, knob shanks arranged end to end, a hub mounted on each of said shanks and arranged to retract said bolt upon turning movement of the shank associated therewith in one direction, and a stop member removably mounted in the lock case and adapted to be positioned to co-operate with a part of either of said hubs to prevent turning movement of either of said hubs in said direction, said lock case having an abutment preventing longitudinal movement of said stop member.

1,578,484. ROSIN SAMPLER. FREDERICK WILLIAM THOMAS, Savannah, Ga. Filed Oct. 27, 1925. Serial No. 65,254. 3 Claims. (Cl. 220—85.)

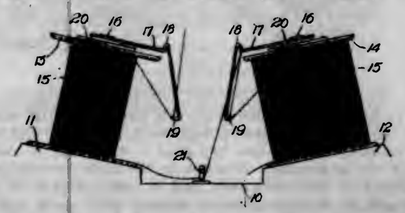


1. A sampler comprising a shell to be housed in the wall of a portable container and in communication with the interior of the container whereby to receive a portion of the contents of the container, and means removably held within the shell to hold and withdraw the receive portion of the contents of the container.

1,578,485. ELECTRIC SWITCH. SAMUEL H. TODD, Highland Park, Mich. Filed May 6, 1922. Serial No. 558,854. 3 Claims. (Cl. 200—67.)

1. In an electric switch, the combination of a standard, a pair of arms pivoted to swing on opposite sides of the standard, a spring between the two arms for resisting movement of the arms from one side to the other of a straight line position, a pair of contacts engaged by one arm, and a yoke-like slide slidably secured on the standard and a pair of levers connecting the yoke-like member with the other arm to actuate the same.

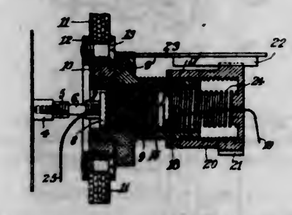
1,578,486. SPEED-CHANGING MECHANISM. JOHN G. UTZ, Detroit, Mich., assignor to The Warford Corporation, New York, N. Y., a Corporation of New York. Filed June 27, 1925. Serial No. 39,953. 4 Claims. (Cl. 74—56.)



1. In combination, a housing having an opening therein, a member secured to said housing, an opening in said member larger than and aligned with said first opening, a transmission mechanism housing secured to said member and having a portion fitted in said first opening.

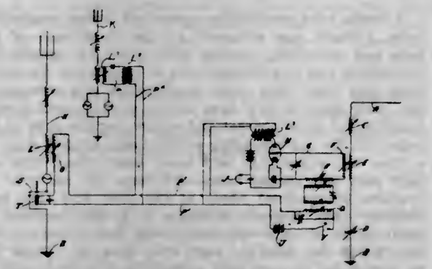
1,578,487. CLEANING COMPOUND. CHARLES J. WAGNER, Fort Lupton, Colo. Filed Mar. 8, 1922. Serial No. 542,112. 1 Claim. (Cl. 87—5.)

A cleaning compound consisting of the following ingredients in substantially the following proportions:—carbonate of soda three-fifths part, sulphur one-fifth part, turpentine one-tenth part, bluing one-tenth part.



1,578,488. APPARATUS FOR HANDLING STRANDS. HOWARD GEORGE WALKER, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 8, 1923. Serial No. 637,445. 12 Claims. (Cl. 242—128.)

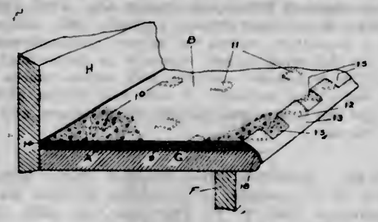
9. In an apparatus for handling strands, a plurality of spools containing strand material, a flier associated with each spool, each of said fliers having a strand guide and



one of said fliers having a projection over which the strand may be looped, the outer end of strand material on one spool being connected to the inner end of strand material on another spool, and said fliers so constructed and arranged as to permit uninterrupted feed of strand material from said spools.

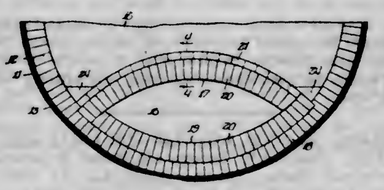
1,578,489. MICROPHONE. WILLIAM L. WALKER, New York, N. Y., assignor to Walker Signal & Equipment Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 12, 1921. Serial No. 491,715. 12 Claims. (Cl. 177—386.)

10. A microphone comprising, a series of conductive current varying elements in the form of successive plates, opposed conducting plates having a series of sharp points contacting with the outer elements of said series, a resilient member contacting with one of said plates, a non-resilient insulating connector for uniting the other of said plates with the diaphragm of the microphone, an insulating tube in which said elements, plates and resilient member are supported, a screw threaded cap engaging said tube and adapted to determine the compression of said resilient member to fix the pressure between said elements and means for holding said cap in various positions axially.



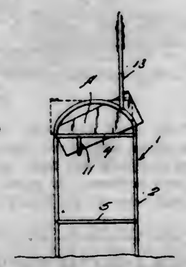
1,578,490. APPARATUS FOR PREVENTING INTERFERENCE IN RADIOSIGNALING. ROY A. WEAGANT, New York, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Apr. 30, 1920. Serial No. 377,764. 2 Claims. (Cl. 250—9.)

2. In radio signaling systems the combination of a receiving station and a transmitting station means for generating two radio frequency currents adapted to give a beat frequency and a circuit extending from one station to the other for conveying said beat frequency currents to the receiver, and means for utilizing said beat frequency currents from said circuit to balance similar currents collected by the receiving station due to radiation from the transmitting station.



1,578,491. STAIR TREAD. HAROLD A. WELCOME, Lowell, Mass., assignor to American Mason Safety Tread Company, Lowell, Mass., a Corporation. Filed Mar. 6, 1924. Serial No. 697,357. 1 Claim. (Cl. 20—79.)

In a stair tread, the combination of a sheet metal base having locking members, and a front edge from which integral spaced front lugs extend upwardly; with a non-slipping composition which covers the locking members

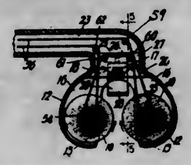


and extends with a smooth top over the whole of the base and between the front and top faces of the front lugs.

1,578,492. HOT-BLAST STOVE. FREDERICK H. WILLCOX, Chicago, Ill., assignor to Freyn, Brassert & Company, Chicago, Ill., a Corporation of Maine. Filed May 17, 1924. Serial No. 713,965. 3 Claims. (Cl. 72—91.)

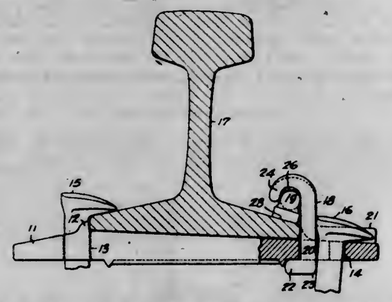
1. In a hot blast stove arch wall construction a plurality of courses, each course comprising a face portion formed of bricks segmental in plan whereby each brick is held against inward movement by engagement with the adjacent bricks and a backing portion formed of straight bricks.

1,578,493. STAND. WALTER D. WINTON, Visalia, Calif. Filed Jan. 13, 1925. Serial No. 2,159. 1 Claim. (Cl. 211—14.)



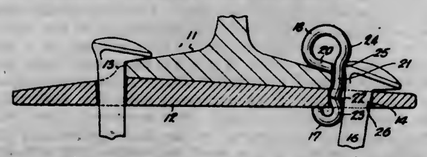
A stand for supporting a box in an inclined position comprising a pair of inverted U-shaped standards vertically disposed in spaced relation, a front horizontal cross bar extending between the forward portions of the standards and adapted to be abutted by the front of a box supported in the stand, a second horizontal cross bar disposed between the standards adjacent the front thereof, to the rear of the front horizontal cross bar, and below the horizontal plane of said front horizontal cross bar, and adapted to be abutted by the front portion of the bottom of the box, and a third horizontal cross bar disposed between the rear portions of the standards above the horizontal plane of the front horizontal cross bar and to the rear of the second horizontal bar for the purpose of supporting the rear portion of the bottom of said box.

1,578,494. PROTECTIVE COATING FOR BATTERY TERMINALS AND METHOD OF MAKING SAME. PAUL ARTHUR WOLFF, St. Joseph, Mo. Filed July 28, 1924. Serial No. 728,643. 2 Claims. (Cl. 134—1.)



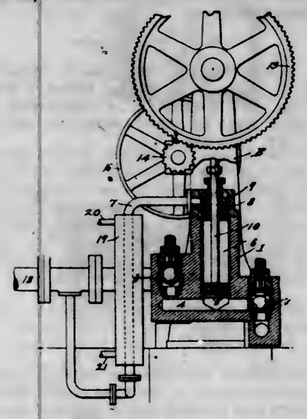
1. A protective coating for battery terminals comprising the following named elements in proportions substantially as follows:—paraffin wax sixteen ounces, beeswax one ounce, carbonate of soda four ounces, glycerine one and one half ounces, paraffin oil one ounce, and resin two ounces.

1,578,495. TOOTHBRUSH. STANLEY ZAVS, Richmond Hill, N. Y., assignor of two-fifths to John Karalus, Richmond Hill, N. Y. Filed Aug. 31, 1925. Serial No. 53,475. 7 Claims. (Cl. 15—25.)



1. A tooth brush comprising a pair of rotatable brushes, arranged on spaced parallel axes, manual means for rotating said brushes co-incidently in reverse directions, and means for normally constraining said brushes towards each other.

1,578,496. ANCHOR AND CLIP FOR RAILS AND THE LIKE. FRANCIS W. COOPER and HENRY STEADWORTHY, Montreal, Quebec, Canada. Filed Aug. 11, 1922. Serial No. 581,158. 35 Claims. (Cl. 238—354.)



1. A device of the class described, comprising a member hooked at its upper and lower ends to engage under a tie plate and to overlie a rail base, and a resilient key adapted to be driven between the upper hook end of the member and the rail base to yieldingly connect the plate and rail.

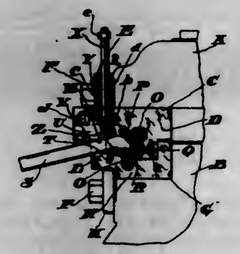
1,578,497. ANCHOR AND CLIP FOR RAILS AND THE LIKE. FRANCIS W. COOPER and HENRY STEADWORTHY, Montreal, Quebec, Canada. Filed Oct. 2, 1922. Serial No. 591,877. 39 Claims. (Cl. 238—353.)

2. Means to yieldingly clamp together a rail and a device located thereunder comprising, a resilient clamping member engageable at one end under such device and at the other end with the upper surface of the rail base.

1,578,498. PUMP. PAUL DISBRENS, New York, N. Y., assignor to Worthington Pump & Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Oct. 29, 1924. Serial No. 746,469. 5 Claims. (Cl. 103—153.)

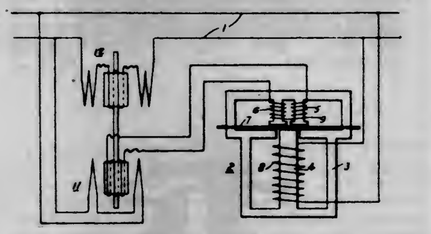
1. A pump for hot liquids, comprising a plunger bore, a single-acting plunger arranged to work in said bore and actuating means for said plunger, a surge chamber on the dead side of the plunger, and a connection to the pump arranged to maintain cool liquid in said chamber.

1,578,499. DRAFT YOKE. GEORGE W. DITMORE, Albany, N. Y., and CLIFTON W. SHERMAN, Hamilton, Ontario, Canada. Filed Sept. 6, 1924. Serial No. 736,210. 1 Claim. (Cl. 213—67.)



A draft yoke comprising upper and lower longitudinal bars, vertical lugs arranged at the front ends of said bars and projecting toward each other, an upright stop connecting the longitudinal bars at a distance rearwardly from said lugs, thick inner longitudinal ribs arranged on the inner sides of said bars at one pair of corresponding longitudinal edges thereof and connecting the ends of said lugs with the corresponding vertical edge of said stop, and a thin web connecting said inner longiutdinal ribs with said stop and spaced from said lugs, the space at the opposite longitudinal edges of the bars and stop being entirely open, thereby forming a pocket between the front parts of said bars, lugs, stop, inner ribs and web into which the enlarged butt of a draw bar shank may be introduced through said entirely open side thereof and engaged with its front and rear shoulders against the opposing sides of said lugs and stop, said inner ribs reinforcing said lugs and stop, said web holding said bars against spreading, and the space in front of said web permitting a tool to be engaged with said butt for driving the same laterally out of said pocket.

1,578,500. FORGING MACHINE FOR COAL-CUTTER PICKS. JESSE DITSON, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 26, 1925. Serial No. 58,722. 3 Claims. (Cl. 76—5.)

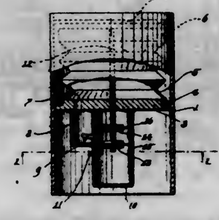


1. In a machine for forging a pick, the combination of a stationary main cylinder with a reciprocatory cross head, a top die holder on the cross head, a top forming die carried by said die holder, a bottom die holder secured

to the main cylinder, a bottom die secured to the bottom die holder, an eccentric member pivoted on the bottom die holder for clamping a pick immovably on the bottom

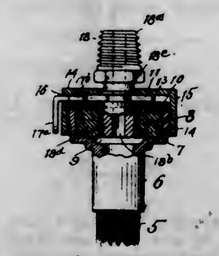
die, and a lifter controlled by the cross head for holding the eccentric member in clamping position and for rocking the eccentric member to releasing position.

1,578,501. ELECTRICAL MEASURING INSTRUMENT. LEO DORFMAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 7, 1920. Serial No. 428,877. 5 Claims. (Cl. 171—309.)



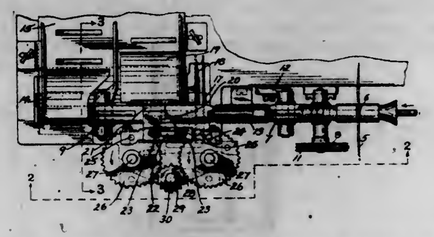
1. A volt-ampere meter for an alternating-current circuit comprising a movable indicating member, meter windings for actuating the same, one of which is energized in accordance with one of the factors of the apparent energy of the circuit, an induction regulator having a primary winding connected to the circuit and a secondary winding connected to the other meter winding, and a torque motor device responsive to only one quantity of the circuit for actuating said regulator.

1,578,502. HAND TOOL. ERNEST O. ESTWING, Rockford, Ill., assignor to Estwing Manufacturing Company, Inc., Rockford, Ill., a Corporation of Illinois. Filed July 17, 1924. Serial No. 726,433. 3 Claims. (Cl. 145—2.)



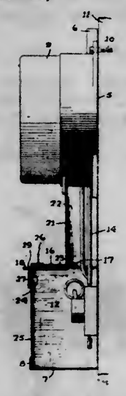
3. A hand striking tool comprising a forged one-piece striking head and handle, the handle having substantially from end to end a cross-section elongated in a plane parallel with the plane of the head to secure the maximum strength in the plane in which most stresses occur in striking with the tool and also being so proportioned in cross-section that greater strength is thrown toward the head end of the handle where the striking strain tends to concentrate while lightening the handle as the strain diminishes, the tool being heat treated to permit maximum reduction in cross-section for lightness while retaining strength.

1,578,503. TALKING-TOY MECHANISM. FRED EVANS, Summit, N. J., assignor, by mesne assignments, to Voices Incorporated, a Corporation of Delaware. Filed Mar. 21, 1923. Serial No. 626,499. 7 Claims. (Cl. 46—46.)



1. A device of the class described having in combination a casing, a bellows therein having two heads, one being weighted and movable toward and from the other by gravity, a chamber secured to one of said heads and communicating with the interior of the bellows by a passage through the head, a second chamber secured to the same head and a reed pipe connecting said two chambers, said last mentioned chamber having a side opening to the atmosphere and a piston valve movable in said last mentioned chamber past said side opening to control the issuance of sound from the reed pipe to the atmosphere.

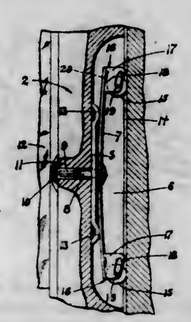
1,578,504. COUPLING. ADELBERT E. BRONSON and ERNEST L. FULLER, Cleveland, Ohio, assignors to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 7, 1921. Serial No. 435,725. 2 Claims. (Cl. 285—170.)



2. A detachable coupling for conduit sections, comprising interlocking plug and socket members at the ends of the sections to be joined, said socket member comprising an enlarged externally threaded end member having a cup shaped recess, a packing member fitting in the recess and projecting beyond the outer end of the end member, said packing member having a central opening, a cap adapted to be screwed on the end member, said cap having an opening aligned with the opening in the packing member, a plate overlying said packing member and having an opening aligned therewith, said plate being supported by the packing out of contact with the end member clamping means carried by the plate and lying between the plate and cap and an actuating member for said clamping means carried by the cap, said plate being unattached and free to rotate with the cap, said plug member being insertable into the socket through the openings in the cap and plate and having a recessed portion engaged by said clamping means.

1,578,505. CIGARETTE MACHINE CATCHER. THEODORE FETZER, Brooklyn, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed May 22, 1924. Serial No. 715,017. 14 Claims. (Cl. 131—39.)

1. A cigarette machine catcher comprising means for continuously forwarding cutoff cigarettes, means at the delivery end of said forwarding means for receiving a part of the forwarded cigarettes, means at one side of said forwarding means for receiving a part of the cut-off cigarettes, and means for pushing alternate cigarettes off said forwarding means to the receiving means at one side thereof.



1,578,506. METER MOUNTING. SVEN A. GAFVERT, New York, N. Y. Filed Sept. 16, 1922. Serial No. 588,735. 4 Claims. (Cl. 247—2.)

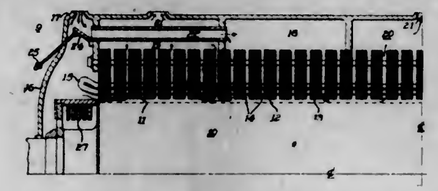
4. A meter mounting including a plate, side and end walls attached to said plate and extending outwardly therefrom, a casing arranged upon said plate, an outwardly extending portion forming a part of said casing and adapted to lie flush against one of said end walls, a cover for the space enclosed by said walls and adapted to overlap said outwardly extending portion, a downwardly extending portion forming a continuation of said outwardly extending portion and being provided with an opening, and means carried by said plate and adapted to extend through said opening and cover for retaining the whole in applied position.

1,578,507. WEIGHTLESS WINDOW-SASH SUPPORT. JOSEPH A. GANAHL, Los Angeles, Calif. Filed Sept. 30, 1924. Serial No. 740,762. 7 Claims. (Cl. 292—77.)

1. In a weightless window sash support, the combination of a roller, a roller-carrier supporting the roller, with means for supporting the carrier in the stile of the sash and for pressing the roller against the side of the window casement, said roller-carrier having means for guiding the roller along a line converging toward the casement in an upward direction, and a shoe associated with the roller carrier for engaging the face of the roller remote from the casement and cooperating with the roll-

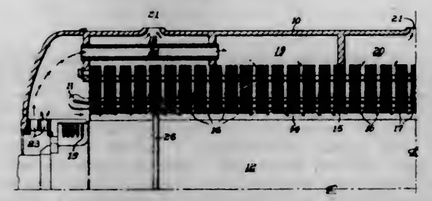
er when the sash is moved downwardly to effect a relative movement of the roller upwardly in the guiding means and out of engagement with the shoe, thereby increasing the pressure on the casement to support the sash.

1,578,508. INSULATOR. HARRY L. GARBUTT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1919. Serial No. 295,418. 6 Claims. (Cl. 173—318.)



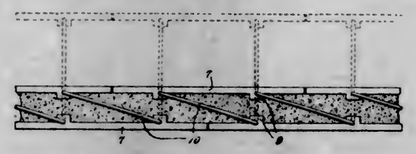
5. A suspension insulator comprising a body structure having a terminal-receiving portion, and a terminal structure having clamping portions removably cooperating with said receiving portion, the construction and relation of the terminal structure to said terminal-receiving portion tending to move said clamping portions into closer clamping relation to the insulator in proportion to the load forces on the insulator and widely distributing the load forces between the body and terminal structures.

1,578,509. FLUID-PRESSURE CONTROL OF TURBO VENTILATION. RALPH E. GILMAN, Pittsburgh, DONALD BRATT, Irwin, and CARL J. FECHHEIMER, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 20, 1923, Serial No. 652,670. Renewed Dec. 1, 1925. 10 Claims. (Cl. 171—252.)



1. A dynamo-electric machine having a rotor and a stator with an air-gap therebetween, said stator embodying a ventilating system comprising a plurality of groups of radially extending ventilating spaces surrounding the air-gap, one or more groups of intake chambers surrounding one or more groups of radial spaces for conducting a cooling fluid radially inwardly,

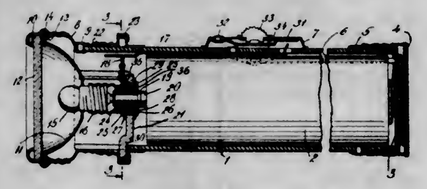
discharge means surrounding the remaining groups of radial spaces, entrance chambers for cooling fluid at the two ends of the air gap, and fluid-pressure means for maintaining such different relative pressures in said



intake chambers and said entrance chambers that all groups have substantially the same minimum radial velocities and the same maximum radial velocities of the cooling fluid.

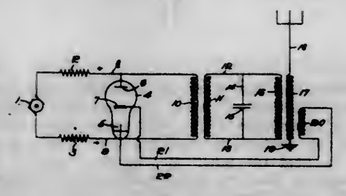
1,578,510. TURBO VENTILATION. RALPH E. GILMAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 5, 1923. Serial No. 666,699. 5 Claims. (Cl. 171—252.)

1. A dynamo-electric machine comprising a stator member and a rotor member separated by an air-gap, said stator member being provided with a plurality of radial ventilating spaces surrounding said air-gap, means for introducing a ventilating fluid and causing the same to move radially inwardly in certain radial spaces, radially outwardly in others and axially in the air-gap, and baffle means disposed within said air-gap for equalizing the distribution of radial velocities of the ventilating fluid.



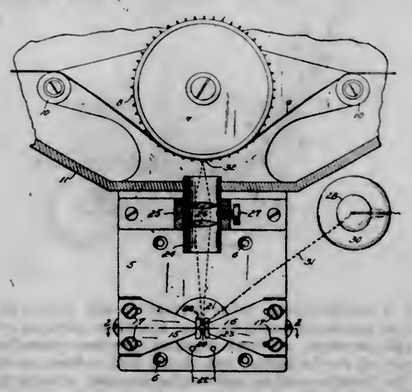
1,578,511. WALL CONSTRUCTION. FREDERIC E. GLADWIN, Los Angeles, Calif. Filed Feb. 8, 1923. Serial No. 617,827. 2 Claims. (Cl. 72—30.)

1. A wall construction of spaced, opposed tile courses, ties obliquely connecting the tiles in their respective courses, the sapce between the courses being concrete filled.



1,578,512. FOCUSING HANDLAMP. JULIAN S. GRAVELY, Wytheville, Va., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed Jan. 7, 1924. Serial No. 684,700. 12 Claims. (Cl. 240—10.)

1. In a hand lamp, the combination of a metal lamp socket, a reflector, means for supporting said reflector at its outer edge and means for supporting the lamp socket having portions extending through the hand lamp casing whereby the position of said socket with respect

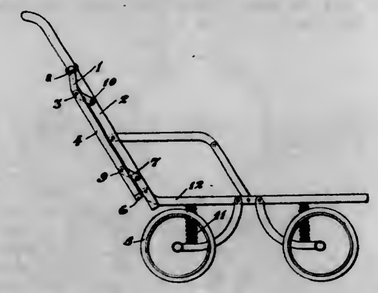


to said reflector can be changed, the said reflector being entirely out of contact with the lamp socket and the lamp socket support.

1,578,513. SYSTEM AND METHOD OF PRODUCTION OF CONTINUOUS OSCILLATIONS. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Mar. 31, 1914, Serial No. 828,605. Renewed July 1, 1921. Serial No. 481,930. 15 Claims. (Cl. 250—36.)

6. Means for producing sustained high frequency oscillations comprising an oscillatory circuit having two electrodes, a second circuit having a conducting body interposed between said electrodes and an open aerial circuit arranged to be controlled by said first mentioned circuit and to control said second mentioned circuit.

1,578,514. PHOTOGRAPHIC MEANS FOR RECORDING SOUND. RUSSELL HART, Los Angeles, Calif. Filed May 18, 1925. Serial No. 31,251. 12 Claims. (Cl. 179—100.1.)

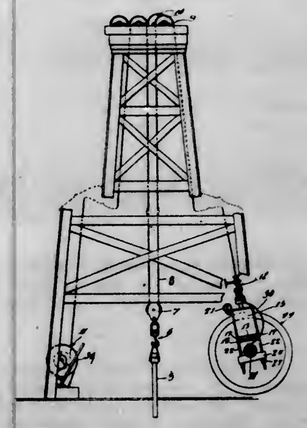


1. Photographic sound recording means comprising; a uniformly movable photo-sensitised film; a light source; and a cylindrical mirror, vibratile to sound, whereby an attenuated image of said source may be thrown upon said film transversely to its direction of motion.

1,578,515. PROPELLING PENCIL. TOKUJI HAYAKAWA, Tokyo, Japan. Filed July 11, 1923. Serial No. 650,740. 4 Claims. (Cl. 120—18.)

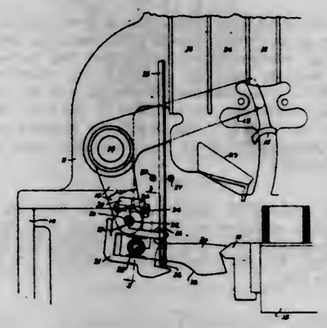
1. A device of the character described, comprising, in combination, an outer casing, an inner tube within said casing, a guide tube within said inner tube, and a removable clip frictionally engaging said tubes and casing thereby to hold the inner tube against rotation in the casing and to lock the guide tube against longitudinal movement while permitting rotation thereof relative to said inner tube.

1,578,516. PERAMBULATOR, BABY CARRIAGE, AND LIKE VEHICLE. FREDERICK HAGGER HEADLEY, Birmingham, England, assignor to Tan Sad Limited, Birmingham, England, a Corporation of Great Britain. Filed Aug. 18, 1922. Serial No. 582,727. 4 Claims. (Cl. 280—47.)



1. A perambulator, baby carriage or like vehicle having a handle member, a link arranged adjacent the handle member, a wheel engaging member operatively connected to the bottom end of the link, a lever pivoted to the handle member and to the top end of said link and adapted to be brought over a dead center position to retain said wheel engaging member in engagement with the wheel, and means mounted on the handle and adapted to engage the bottom end of the link to guide the wheel engaging member into engagement with the wheel.

1,578,517. VALVE PISTON AND BARREL CONSTRUCTION FOR HYPODERMIC SYRINGES. GEORGE N. HEIN, San Francisco, Calif. Filed Dec. 23, 1924. Serial No. 757,655. 2 Claims. (Cl. 128—220.)



1. A hypodermic syringe including a syringe barrel provided with a discharge outlet, an outwardly opening check valve controlling the fluid passage therethrough and provided adjacent the inner end of the barrel with a fluid inlet, an inwardly opening check valve controlling the fluid passage therethrough, a tubular piston reciprocably mounted within the barrel, an inwardly opening check valve controlling the passage of fluid into the barrel through the piston and constituting a piston packing, and means for interrupting the fluid flow through either or both of said barrel or piston inlets.

1,578,518. APPARATUS FOR INDICATING THE PRESSURE OF THE DRILL BIT OR CASING ON THE FORMATION. HOLMES H. HENSHAW, Hollywood, and WILLIAM H. TAYLOR, Pomona, Calif. Filed Feb. 4, 1924. Serial No. 690,608. 6 Claims. (Cl. 265—47.)

1. An apparatus of the character described comprising a pulley block, means to connect the pulley block to a part in the well, drums, a cable rove through the pulley block and connected at its opposite ends with the respective drums, two members in telescopic relation, a fluid cushion between said members, a gage to indicate the pressure of said members on the fluid cushion, means to anchor one of said members, and means to releasably connect the other member to the cable between the pulley block and one of the drums.

1,578,519. YIELDABLE TRANSFERRER ARM FOR AUTOMATIC LOOMS. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 19, 1924. Serial No. 727,077. 6 Claims. (Cl. 139—243.)

1. In a weft replenishing mechanism for looms, a lay, a pivoted transferrer arm, a latch, a support for the latch pivoted to and moving with the transferrer arm and movable to a position to be engaged by the lay, said pivotal connection being formed in part by a breakable member sufficiently strong under normal conditions to effect transfer but weak enough to be broken under conditions of abnormal transfer to disconnect the latch from the transferrer arm to render subsequent transfer impossible.

1,578,520. INSECTICIDE-FUNGICIDE AND PROCESS FOR MAKING THE SAME. EDWARD C. HOLTON, Olmsted Falls, Ohio, assignor to The Sherwin-Williams Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 8, 1924, Serial No. 697,712. Renewed Feb. 5, 1926. 12 Claims. (Cl. 167—6.)

2. In methods for the production of a product for the purposes specified, the step which consists in reacting upon an aqueous solution of a polysulfid of barium with fluorhydric acid, using a protective substance to prevent crystallization, and thereby producing a coprecipitate of finely divided sulfur and substantially amorphous barium fluoride.

12. As a new product or article of manufacture for insecticidal and fungicidal purposes, a dry powdered mixture of which the major portion is barium fluoride in substantially amorphous form and the minor portion is finely divided sulfur.

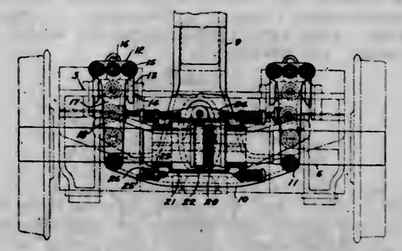
1,578,521. INSECTICIDE-FUNGICIDE AND PROCESS FOR MAKING THE SAME. EDWARD C. HOLTON, Olmsted Falls, Ohio, assignor to The Sherwin-Williams Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 8, 1924. Serial No. 697,713. 8 Claims. (Cl. 167—6.)

3. In methods for the production of a product for the purposes specified, the step which consists in reacting upon a polysulfid of an element of the alkaline earths group with a suitable acid substance for producing hydrogen sulfid and a coprecipitate of finely divided sulfur and a substantially insoluble toxic substance, and reacting upon the hydrogen sulfid with sulfur dioxide to form an additional amount of finely divided sulfur.

8. As a new product or article of manufacture, for the purposes specified, a dry powder of which the minor part consists of chemically precipitated sulfur and the major part consists of a substantially insoluble compound of an element of the alkaline earths group co-precipitated with the sulfur.

1,578,522. INSECTICIDE-FUNGICIDE AND PROCESS FOR MAKING THE SAME. EDWARD C. HOLTON, Olmsted Falls, Ohio, assignor to The Sherwin-Williams Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 12, 1925. Serial No. 1,737. 12 Claims. (Cl. 167—6.)

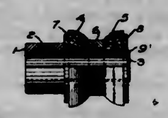
1. In methods for the production of a product for the purposes specified, the step which consists in reacting upon a polysulfid of calcium with hydrosilicofluoric acid for producing a coprecipitate of finely divided sulfur and calcium silicofluoride.



12. As a new product or article of manufacture for insecticidal and fungicidal purposes, a dry powdered mixture of which the major portion is calcium silicofluoride in substantially amorphous form and the minor portion is finely divided sulfur.

1,578,523. INSECTICIDE-FUNGICIDE AND PROCESS FOR MAKING THE SAME. EDWARD C. HOLTON, Olmsted Falls, Ohio, assignor to The Sherwin-Williams Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 12, 1925. Serial No. 1,738. 7 Claims. (Cl. 167—6.)

1. In methods for the production of a product for the purposes specified, the step which consists in reacting upon a polysulfid of barium with hydrosilicofluoric acid for producing a coprecipitate of finely divided sulfur and barium silicofluoride.

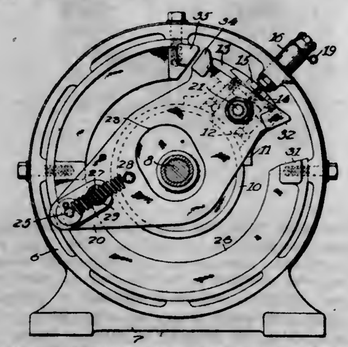


6. As a new product or article of manufacture, a mixture of finely divided sulfur and barium silicofluoride in substantially amorphous form.

1,578,524. REVERSIBLE TRUCK. HAROLD A. HOUSTON and FRANK L. ALBEN, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 26, 1923. Serial No. 634,872. 5 Claims. (Cl. 105—174.)

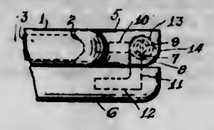
1. In a radial truck, the combination of means for providing positive steering or trailing of the truck relative to the centerpin connection, and automatic means for adjusting said connection to idle and to positive positions, said steering means comprising a plurality of swing links suspended from the supporting frame of said truck which are adapted to carry a swing bolster, and said automatic changing means comprising a screw-and-nut mechanism which is operatively connected to said links.

1,578,525. FRICTION WHEEL. MORRIS IRELAND, Cleveland, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 8, 1920. Serial No. 409,039. 2 Claims. (Cl. 74—26.)



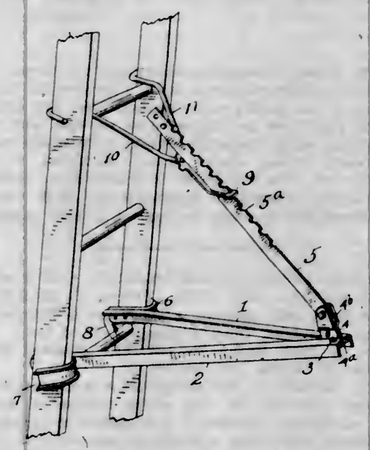
1. A friction wheel comprising a wearing portion of rubbery leather material in the form of a pair of discs mounted on a hub, a spacer member between said discs, end plates for said discs, and means for securing the same to said hub.

1,578,526. INSULATOR. RAY P. JACKSON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,217. 8 Claims. (Cl. 173—318.)



1. A suspension insulator comprising an insulating member of substantially S-shape having an integral surface-creepage portion intermediate its ends.

1,578,527. ELECTRIC SWITCH. REESE T. KINTZING, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1921. Serial No. 463,113. 6 Claims. (Cl. 200—6.)

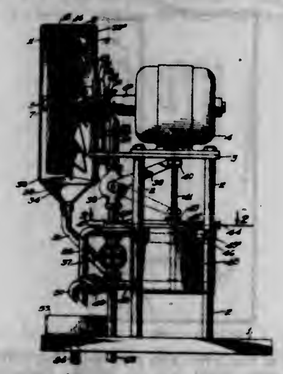


5. In a switch mechanism, a base member, a rotatable member, and a movable contact member having a limited oscillatory movement with respect to said base member and frictionally bearing against the periphery of said rotatable member, the construction being such that said oscillatory contact member bears harder against said rotatable member at one end of its oscillatory movement than at the other.

1,578,528. OPHTHALMIC MOUNTING. GUSTAV E. KÖHLER, Rocheater, N. Y. Filed Apr. 1, 1925. Serial No. 19,780. 8 Claims. (Cl. 88—53.)

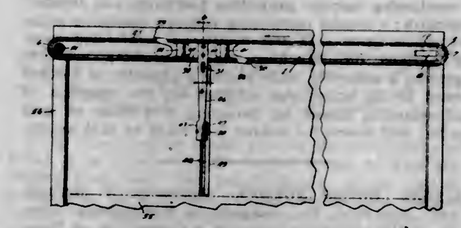
1. In an ophthalmic mounting, a lens enclosing rim and a lug on the rim of non-metallic material, and a metallic hinge member embedded in said lug between the surfaces thereof, one face of said hinge member being exposed to a pocket formed in the lug and the opposite face being covered by the material of the lug, the inner and outer end faces of the lug being rounded at their juncture and cut away to form an arcial slot opening into said pocket.

1,578,529. LADDER JACK. CARL E. KRAMER, Cleveland, Ohio, assignor to The Cleveland Wrought Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 4, 1921. Serial No. 505,233. 4 Claims. (Cl. 304—34.)



3. A ladder-jack having a pair of side members, a support to which the side members are pivoted at one of their ends, ladder rail engaging members at the opposite ends of the side members, a bar pivotally secured to said support, said bar being provided with notches, a retainer member having a slot through which said bar extends and having a portion adapted to engage with a selected notch, pivoted hook members carried by said retainer member, said hook members being adapted to engage with the side rails of a ladder.

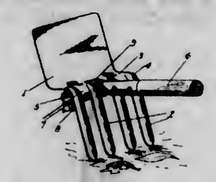
1,578,530. VENTILATING, HEATING, COOLING, HUMIDIFYING, AND EVAPORATING APPARATUS. ROBERT J. KRAUSE, Los Angeles, Calif. Filed Feb. 2, 1925. Serial No. 6,496. 14 Claims. (Cl. 219—42.)



9. In an apparatus of the class described, a casing, a supporting means revolubly mounted therein, and a plurality of concentric drums supported on said means in staggered relation relatively to each other, the one

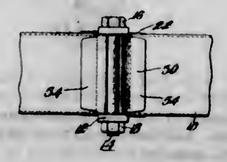
end of said drums projecting beyond the adjacent ends of the adjacent drums and revoluble in the same direction therewith, whereby a liquid discharged against the inner

face of the innermost drum is conducted to the outermost drum in zigzag passages in the form of thin films and fine sprays.



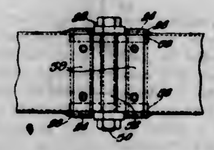
1,578,531. WINDSHIELD-CLEANING APPARATUS. CHARLES F. LAGANKE, Cleveland, Ohio. Filed Dec. 15, 1923. Serial No. 680,792. 21 Claims. (Cl. 74—14.)

1. In apparatus adapted for attachment to a windshield or the like for cleaning the surface thereof, the combination of a driving element movable through an orbital course and arranged to be supported adjacent said surface, means for moving said element constantly in a given direction, a tram supported within the plane, and wholly inside the orbital course of movement, of the driving element, and an instrumentality supported by and reciprocable along the tram crosswise of the surface and adapted to carry a wiper in contact with said surface, said instrumentality incorporating spaced abutments, wherewith said driving element is arranged to contact in alternation, each abutment moving beyond the reach of said element before the element contacts with the other.



1,578,532. COMBINATION GARDEN TOOL. JOHN L. LAGORIO, Stockton, Calif. Filed Nov. 12, 1923. Serial No. 674,192. 3 Claims. (Cl. 306—2.)

1. A combination tool including two opposed working elements, each disposed in a plane offset from the other, an interconnecting web between the adjacent edges thereof, a handle having a cross head adapted to extend lengthwise of the web, and curved elements con-



nected to the web in spaced relation to each other and projecting outwardly from one side thereof to form, with said web, bearing means for the crosshead.

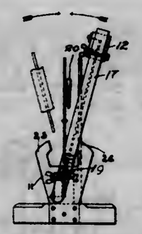
1,578,533. CLOSURE MEMBER FOR SPRING COVERS. CARLISLE A. LINCOLN, Buffalo, N. Y., assignor to The Houdaille Company, Buffalo, N. Y., a Corporation of Delaware. Filed Nov. 27, 1923. Serial No. 677,212. 1 Claim. (Cl. 267—37.)

A closure member for spring covers comprising a resilient plate extending about the bottom and sides of the spring beneath the spring clip, a second plate extending across the top of the spring beneath the tie bolt, each of the plates having a groove or depression to cause it to be locked to the spring clip, and oppositely directed flanges which bear upon the adjacent portions of the spring cover when the closure is locked in place between the clip and the body of the spring.

1,578,534. CLIP FOR VEHICLE SPRINGS. CARLISLE A. LINCOLN, Buffalo, N. Y., assignor to The Houdaille Company, Buffalo, N. Y., a Corporation of Delaware. Filed Nov. 27, 1923. Serial No. 677,213. 3 Claims. (Cl. 267—37.)

1. A clip for vehicle springs comprising, a yoke member surrounding the bottom and sides of the spring, a bolt connecting the top ends of the yoke across the top of the spring, and a tubular sleeve surrounding the bolt and having oppositely extending flanges of sufficient width to permit attachment of a flexible spring casing thereto.

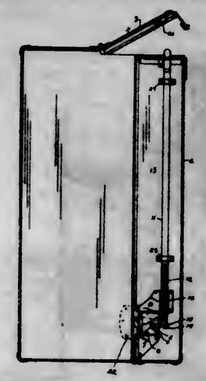
1,578,535. COMBINATION SPRING COVER. CARLISLE A. LINCOLN, Buffalo, N. Y., assignor to The Houdaille Company, Buffalo, N. Y., a Corporation of Delaware. Filed Nov. 27, 1923. Serial No. 677,214. 4 Claims. (Cl. 267—37.)



1. A spring cover comprising a casing of flexible material extending lengthwise of the spring and having an

opening therein for the reception of the upper portion of a spring clip, a closure member extending about the upper portion of the spring clip and connected to the

latter in a manner to prevent displacement, and flanges upon the closure member adapted to engage with the casing about the opening.

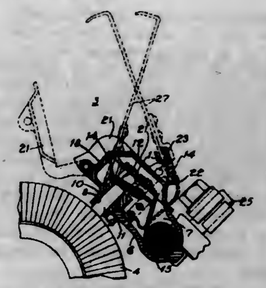


1,578,536. METHOD OF AND MEANS FOR PRODUCING REED FABRIC AND THE LIKE. MARSHALL BURNS LLOYD, Menominee, Mich., assignor, by mesne assignments, to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed June 5, 1920. Serial No. 386,832. 6 Claims. (Cl. 139—17.)

1. An apparatus for producing reed fabric and the like embodying therein means for gripping the ends of a plurality of stakes thereby holding them in spaced relation, means for gripping the opposite ends of desired stakes, said last mentioned gripping means being mounted for swinging movement, and means for "breaking" a group of stakes that are swung by said swingable means.

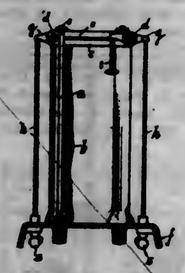
1,578,537. LOCKING DEVICE FOR TRUNKS. MILTON H. LUCE, Kansas City, Mo., assignor to Wheary-Burge Trunk Company, Racine, Wis. Filed Jan. 17, 1923. Serial No. 613,136. 11 Claims. (Cl. 292—198.)

1. Trunk locking mechanism comprising the combination with the meeting margins of two trunk sections, of a locking lever fulcrumed to the wall of one section, the adjacent margin of the section being recessed and said lever having an offset portion adapted for swinging movement in said recess, a locking device carried by the



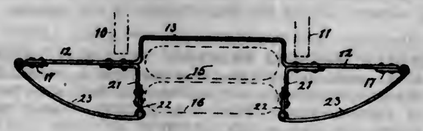
offset portion of the lever, and a co-operating catch carried by the registering wall member of the opposing trunk section.

1,578,538. KNIFE. ELLSWORTH L. MCCAIN, Detroit, Mich. Filed Feb. 18, 1924. Serial No. 693,538. 3 Claims. (Cl. 30—9.)



1. A knife of the class described comprising a handle; a reenforcing member projecting therefrom and integral therewith; a second reenforcing member, extending along and spaced from said first mentioned reenforcing member; means for attaching said reenforcing members together; a separable blade having a plurality of notches formed in its upper edge adapted for the reception of said attaching means for mounting said blade on said handle; and means for locking said blade on said handle.

1,578,539. BRUSH HOLDER. FREDERICK W. MCCLOSKEY, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 24, 1924. Serial No. 722,039. 5 Claims. (Cl. 171—324.)

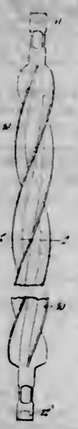


2. A brush holder for holding a brush in contact with a current-collecting device of an electric machine, comprising a housing enclosed on its side, end and bottom walls and having an opening in its top wall, and a cap member removably closing said opening, said holder containing a brush box and a spiral spring mechanism for operatively supporting a brush.

1,578,540. VALVE-GEAR CONNECTION IN INTERNAL-COMBUSTION ENGINES. FRANZ LOUIS MADLER, Berlin-Charlottenburg, Germany, assignor to Maedler Engine Corporation, a Corporation of Maryland. Filed Apr. 6, 1921. Serial No. 459,191. 3 Claims. (Cl. 123—90.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

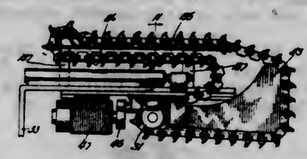
3. In an internal combustion engine, a support for valve-operating mechanism comprising a plurality of tubular members resting on the crank case of the engine, and bolts passing through said tubular members and holding said valve-operating mechanism firmly on top of said tubular members independently of the engine cylinder, whereby the cylinder is relieved of all stresses incident to the actuation of said mechanism.

1,578,541. MOTOR-VEHICLE FENDER GUARD. VERNER P. MATHEWS, Cleveland, Ohio, assignor to The Eaton Axle and Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 29, 1925. Serial No. 46,706. 3 Claims. (Cl. 293—55.)



1. In motor vehicle fender guards, the combination of a bar to be attached to the vehicle frame, an arm projecting from said bar longitudinally of the vehicle, brackets at the outer ends of said bar and said brackets having vertically spaced yieldable arms with aligned eyes therein, three vertically aligned bars having eyes at their ends arranged in vertical alignment with the first-mentioned eyes, and bolts extending through said aligned eyes and whereby said three bars are secured to said brackets.

1,578,542. MULTICOLOR INCRUSTING ON STONES. GEORGE MERLE, Jr., Maspeth, N. Y., assignor of one-sixth to George Merle, sr., one-sixth to William C. Merle, one-sixth to Henry C. Merle, and one-sixth to John Merle, all of Brooklyn, N. Y. Filed Mar. 5, 1925. Serial No. 13,062. 2 Claims. (Cl. 41—35.)



1. An article of manufacture comprising a stone, on which is incrusted sheet aluminum of such structure as to retain lustre when subjected to the elements, and sheet gold of a color contrasting to that of the aluminum in predetermined arrangement in the production of a predetermined design on said stone.

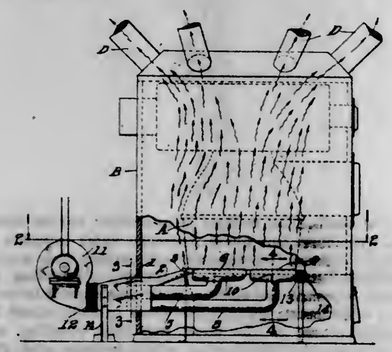
1,578,543. METHOD OF MAKING DEEP-WELL AUGER STEMS. GUSTAVUS A. MONTGOMERY, Titusville, Pa., assignor to Titusville Forge Company, Titusville, Pa., a Corporation of Maryland. Filed Aug. 8, 1924. Serial No. 730,796. 3 Claims. (Cl. 76—95.)

1. The method of making a tool stem having radial wings extending lengthwise thereof, which consists in forging a billet of rectangular cross-section into a stem substantially cruciform in cross-section, positioning the resulting wings of the stem between dies shaped to twist one set of diametrically opposite wings helically about the longitudinal axis of the stem, and then rotating said stem to bring the other set of wings between said dies.

1,578,544. MINING MACHINE. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Oct. 11, 1922. Serial No. 593,727. 28 Claims. (Cl. 262—28.)

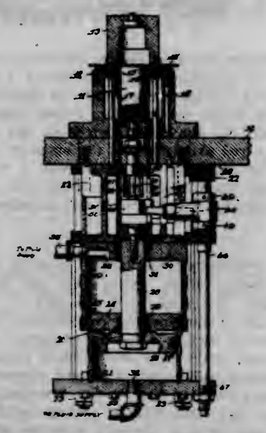
1. In a mining machine, the combination with a frame adapted to be attached to the frame of a mining machine having a flexible chain cutter, of superposed guideways on said frame for receiving a new chain cutter to be substituted for the chain cutter on the mining machine, and curved extensions at the opposite ends of said guideways for directing the chain with a reverse bending movement upon itself to facilitate the substitution of a new chain for the chain on the machine.

1,578,545. PRESSING DEVICE. LORENZ F. MUTHER, Newton Center, Mass. Filed Oct. 28, 1922. Serial No. 597,519. 2 Claims. (Cl. 12—55.)



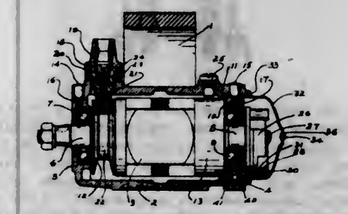
1. In a folding machine, the combination of means for feeding material having a binding attached to the edge thereof, a plow for turning said binding around the edge of said material and means arranged forward the plow and in close proximity thereto for pressing said turned binding upon the body-portion of said material; said pressing means comprising a pivotally mounted arm provided with a transverse end-piece having a longitudinal slot therethrough and a longitudinal groove in its lower face, a work-engaging portion having a longitudinal tongue

fitting said groove and a screw located in said slot and having its end threaded in the said work-engaging portion



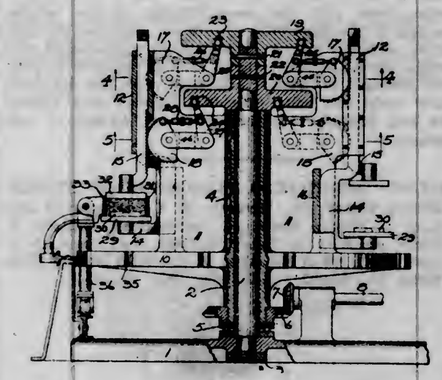
for securing said work-engaging portion in adjusted position on said end-piece, said work-engaging portion having a toe-portion encircling the nose of said plow.

1,578,546. AIR-CIRCULATING ATTACHMENT FOR HOT-AIR FURNACES. LEON G. MYERS, Clinton, Ill. Filed July 12, 1924. Serial No. 725,606. 5 Claims. (Cl. 126—99.)



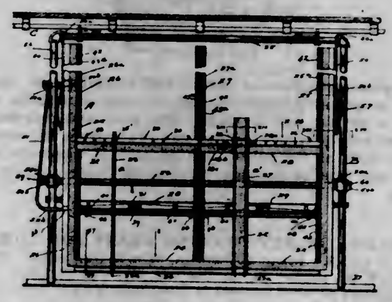
1. An air circulating attachment for hot-air furnaces, comprising a head unit provided with a plurality of cool air conducting passage-ways of substantially equal area, and a plurality of conductors connected to said head unit and arranged to discharge air at different points therefrom, each conductor having communication with a distinct passage-way in said head unit and provided at their discharge ends with upwardly directed contracted vents.

1,578,547. BLANK-HOLDING MEANS. FRANK C. B. PAGE, New York, N. Y., assignor to E. W. Bliss Company, a Corporation of West Virginia. Filed Nov. 26, 1924. Serial No. 752,369. 13 Claims. (Cl. 113—46.)



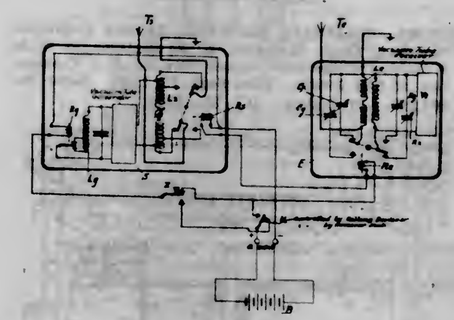
1. A draw press including a plunger, a plurality of blank holding means adapted to successively cooperate with the plunger to clamp the work, means for positively locking one of the said blank holding means against operation during the operation of the other blank holding means, the second recited means including cooperating elements relatively reciprocable and also rotatable one with relation to the other to lock and unlock the respective blank holding means, an actuator separate from the said locking means, and means operating automatically to operate said actuator to impart such relative rotary movement to the said elements at predetermined times in the cycle of operation of the press.

1,578,548. MAGNETO. ADOLPH ROSNER, Springfield, Mass., assignor to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed Dec. 7, 1921. Serial No. 520,701. 2 Claims. (Cl. 171—209.)



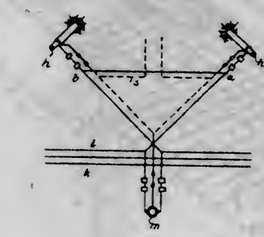
1. A magneto comprising a permanent magnet, a rotor cooperative with the magnet, an interrupter cooperative with the rotor, a frame, a bearing member fastened in the frame for supporting one end of the rotor, and means for angularly adjusting the bearing member in the frame, the cam element of the interrupter being fastened rigidly to the bearing member, whereby adjustment of the bearing member adjusts the edge distance of the magneto.

1,578,549. MOLDING MACHINE. MOSES SAAD, Detroit, Mich., assignor of forty-three per cent to Gustandy Otallah and five per cent to Walter S. Ostrander, both of Detroit, Mich. Filed Oct. 2, 1925. Serial No. 59,985. 12 Claims. (Cl. 22—21.)



1. In a molding machine, a bed, an upright thereon, a sleeve around said upright, means for rotating said sleeve, guides on said sleeve, at least one pattern rack and one platten rack adapted to move vertically, in said guides, and means for actuating said racks as said sleeve rotates.

1,578,550. APPARATUS FOR STRETCHING LAUNDERED ARTICLES FOR DRYING. ALBERT O. SCHRAMM, Los Angeles, Calif., assignor to Schramm Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 17, 1921. Serial No. 508,240. 5 Claims. (Cl. 45—24.)

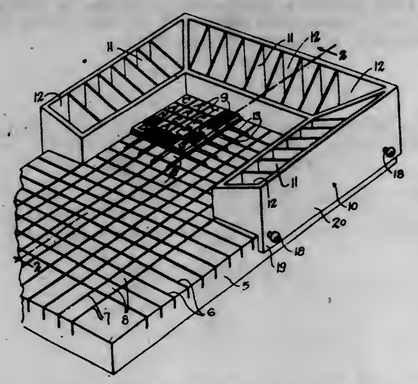


1. A device of the character described, comprising a pair of spaced end members, a rack in connection with the inner side of each of said end members, a rigid side member in connection with said end members, a movable side member, a rotary shaft supported by said movable side member, pinions on said shaft meshing with said racks, a locking element on said movable member, a part on said shaft to engage said locking element, and means carried by said movable side member for bending said shaft against rotation independently of said pinions.

1,578,551. RELAY ARRANGEMENT FOR CHANGING THE TUNING OF WIRELESS APPARATUS. CARL SCHWARZ, Charlottenburg, near Berlin, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 31, 1921. Serial No. 511,828. 4 Claims. (Cl. 250—9.)

4. In a radio sending system, a radiating circuit, an oscillating circuit, switching means for changing the tuning of each of said circuits, a pair of relays for operating said switching means, and a device for operating the relay associated with the oscillating circuit independently of the other relay whereby the tuning of the oscillating circuit and the radiating circuit may be made to differ from each other when desired.

1,578,552. INDUCTIVE ARRANGEMENT FOR SIGNALING OVER POWER LINES. CARL SCHWARS, Charlottenburg, near Berlin, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 31, 1921. Serial No. 511,833. 4 Claims. (Cl. 177—352.)



2. In a power-transmission line comprising a number of line wires, means for supporting one of said line wires at separated points, supporting means at one side of the transmission line, a loop in said wire, extending between said separated points and supported in part by said supporting means at one side of the line, a looped antenna and auxiliary supporting means for maintaining said looped antenna in proximity to said line wire loop.

1,578,553. SECTIONAL SPRING COVER. JAMES N. SCULLY and CARLISLE A. LINCOLN, Buffalo, N. Y., assignors to The Houdaille Company, Buffalo, N. Y., a Corporation of Delaware. Filed Nov. 27, 1923. Serial No. 677,229. 3 Claims. (Cl. 267—237.)

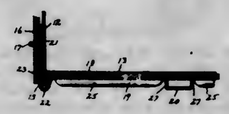
1. A spring cover comprising a casing of flexible material wrapped about the body of a spring, and a closure member partially surrounding the spring adjacent the clip and bearing upon the casing at opposite sides of the clip to substantially seal the latter in the region of the clip.

1,578,554. GAME APPARATUS. MEYER SELIGMAN, New York, N. Y. Filed Dec. 20, 1924. Serial No. 757,242. 6 Claims. (Cl. 35—9.)

1. A game apparatus consisting of a game board having squares delineated thereon, interlocking removable separators between said squares, and game pieces adapted to be placed on said squares and held in position thereon by said separators.

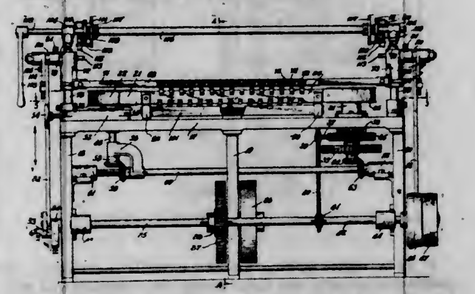
1,578,555. SHEET-METAL CAN. ISAAC E. SEXTON, Winchester, Mass. Filed Jan. 22, 1924. Serial No. 687,713. 2 Claims. (Cl. 220—59.)

1. A can comprising a cylindrical sheet metal body having an inwardly projecting cover seat, an end portion of the body projecting above the seat and forming a flexible continuous cylindrical annular curb, the upper edge of which is of the same diameter as the cylindrical body, a circular cover having an annular seating portion formed to bear on the seat, and a marginal upwardly projecting annular cylindrical flange bearing on the lower portion of the curb, the upper portion of the curb projecting above the cover flange, and a plurality of inwardly projecting flange-confining bosses formed by inwardly bending the projecting upper portion of the curb, including the upper edges thereof, after the cover is deposited on the seat, said bosses having inclined inner sides overhanging the cover flange, the lower portions of said inclined sides engaging the upper edge of the cover flange to confine the cover on the seat, the inclination of said sides rendering the bosses flexible and permitting a prying lever inserted between the cover flange and the boss, and fulcrumed on the flange, to exert outward pressure on the boss and bend its inclined side and upper edge outward, thus releasing the corresponding portion of the cover and permitting it to be raised from the seat.



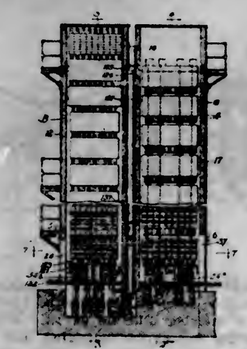
1,578,556. CAN NOZZLE. ISAAC E. SEXTON, Winchester, Mass. Filed July 9, 1925. Serial No. 42,456. 2 Claims. (Cl. 220—40.)

1. A can nozzle for use with a flanged closing cap having a packing layer on its top and inwardly projecting lugs on its flange, said nozzle comprising a tubular sheet metal body formed at its inner end for attachment to an apertured can top, and provided at its outer end with an outwardly turned neck constituting a continuous annular seat for said packing layer, and with a continuous flange depending from the seat, surrounding the body, and spaced by the seat from the body, said flange reinforcing and stiffening the seat against deformation by pressure of the cap against it, and having transverse



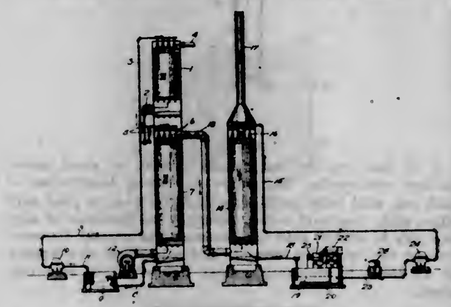
indentations extending across and stiffening the flange, and constituting guides for the cap lugs, each guide having a shorter and a longer side wall, and cam-shaped lower edge portions inclined downward from the shorter side walls of the guides, and adapted to cooperate with the cap lugs in pressing the packing layer against the seat.

1,578,557. JACKET-SECURING MEANS FOR JACKETED CANS. ISAAC E. SEXTON, Winchester, Mass. Filed July 9, 1925. Serial No. 42,457. 3 Claims. (Cl. 220—11.)



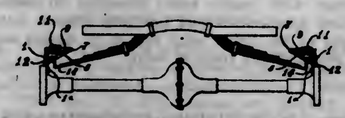
1. In a jacketed shipping can which includes a cylindrical body, and a bottom off-set inward from the lower end of the body to form a recess, the body projecting below the bottom and having an external upwardly facing shoulder adjacent to and parallel with its lower end, the jacket including a discoidal body member contained in said recess and covering the can bottom; bottom-member securing means comprising inner and outer crossed sheet metal strips, each having upstanding ears at its opposite ends provided with detents adapted to engage said shoulder, the inner strip contacting with the bottom member, while the outer strip contacts with the central portion of the inner strip, the can being provided with means for confining the ears with their detents in engagement with the shoulder.

1,578,558. POLISHING MACHINE. THOMAS CORNELIUS SHEEHAN, Upper Montclair, N. J., assignor to Wade & Butcher Corporation, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 22, 1923. Serial No. 664,269. 27 Claims. (Cl. 51—138.)



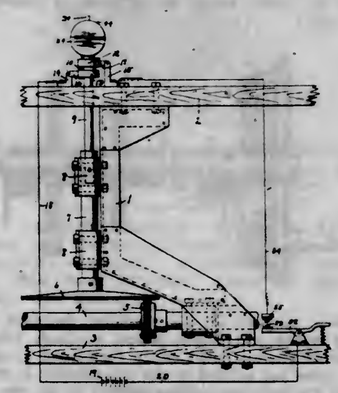
1. A polishing machine comprising a flat polishing medium, means for presenting articles to said medium, means for reciprocating said presenting means in parallelism with said medium, and means for moving said medium in a direction transverse to the movements of said presenting means.

1,578,559. CONTINUOUSLY-OPERATED KILN. CLAUDE SMITH, Chicago, Ill. Filed Feb. 23, 1923. Serial No. 620,574. 21 Claims. (Cl. 25—143.)



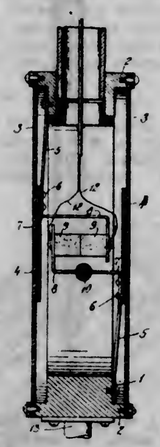
1. In a kiln for burning and drying brick, etc., a vertical drying shaft and a vertical burning shaft, means for conveying material up the drying shaft, a firebox communicating with the burning shaft and a flue connecting the shafts near their respective tops.

1,578,560. PROCESS AND APPARATUS FOR ELIMINATING THE SULPHURETED HYDROGEN IN FUEL GAS. FREDERICK W. SPERR, Jr., Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 6, 1924. Serial No. 718,253. 21 Claims. (Cl. 23—225.)



1. A process of the kind referred to for the elimination of hydrogen sulphide from coal gas, characterized by washing the air, after it has acted in the regeneration stage, with a liquid containing a freshly precipitated iron compound, to eliminate the hydrogen sulphide from said air.

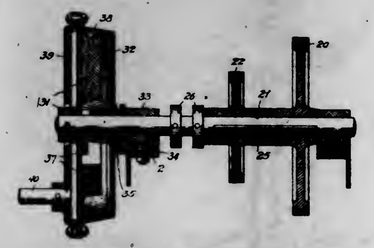
1,578,561. SHOCK ABSORBER. AUGUST STEINMANN, Chicago, Ill., assignor to Andrew Christ, Jr., Chicago, Ill. Filed July 11, 1923. Serial No. 650,763. 1 Claim. (Cl. 267—17.)



In a shock absorber, a vertical standard, an inclined bar pivoted at its lower end to the lower portion of said standard, horizontally disposed bars connected respectively with the upper ends of said standard and inclined bar and in telescopic relation as to each other, and a spring encircling said latter bars and adapted to exert a compression resistance against downward movement of the vehicle body.

1,578,562. POLE-PIECE-FINISHING MACHINE. CARL C. TALBEN, Detroit, Mich., assignor to William J. Hartwig, Detroit, Mich. Filed Nov. 8, 1920. Serial No. 422,720. 5 Claims. (Cl. 175—367.)

1. A holder for irregular work consisting of a cylindrical body having a diametrical recess, a core within the recess with its sides parallel to a diameter of the cylinder, and having one end terminating in the cylindrical surface of the body, a coil on said core, and a ring surrounding the outer end of the core and having its outer end conforming to the cylindrical surface of the body.

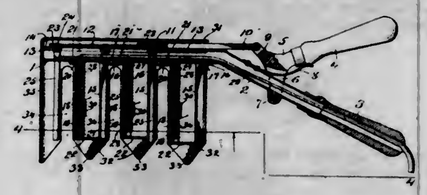


1,578,563. CIRCUIT CLOSER. JOHN W. THOMAS, Fullerton, Pa., assignor to Fuller-Lehigh Company, a Corporation of Pennsylvania. Filed Jan. 19, 1921. Serial No. 438,516. 5 Claims. (Cl. 200—83.)

1. A circuit closer actuated by variations in pressure comprising the combination of a pair of diaphragms placed face to face and exposed to the same actuating pressure these diaphragms being arranged to be given a simultaneous relative movement by variations in the

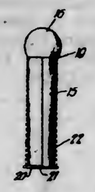
pressure from a selected value, and a contact member associated with each diaphragm and movable thereby, these contact members being disposed between the diaphragms and being arranged to cooperate and to be given a relative movement of separation when the diaphragms are subjected to a pressure in excess of the normal value.

1,578,564. WASHING-MACHINE-OPERATING MECHANISM. WILLIAM H. VOSS, Davenport, Iowa. Filed Dec. 10, 1920. Serial No. 429,615. 2 Claims. (Cl. 192—66.)



1. In a machine of the character described, having driving means and driven means, a clutch adapted to connect said means, said clutch comprising a cup member, a cross bar secured to the cup member, a crank pin fixed to the cross bar, a cone member in the cup member and co-operable therewith for clutching operation, a driving shaft secured to the cone member, and means for shifting the cone member and the shaft, for clutching and unclutching the cup and cone members.

1,578,565. MECHANICAL PENCIL. JOHN C. WAHL, Chicago, Ill., assignor to The Wahl Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 26, 1923. Serial No. 676,876. 10 Claims. (Cl. 120—18.)

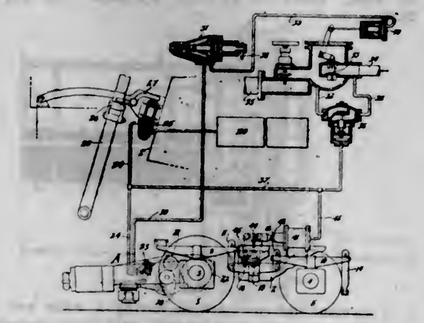


1. In a pencil a casing, a lead magazine slidable into and out of said casing, an opening in the side of the lead magazine of less length than the length of a lead, and movable means associated with said lead magazine which in one position will hold both ends of the leads in the magazine out of registry with the slot and in another position will permit one end of a lead to project out of said slot.

1,578,566. HAIR-WAVING INSTRUMENT. CHARLES N. WATSON, St. Joseph, Mo. Filed Oct. 16, 1925. Serial No. 62,748. 8 Claims. (Cl. 132—36.)

6. In a hair waving instrument, a supporting member having a hollow hair forming tooth, heating means in said tooth, a member slidable on said supporting member and having means for engaging and pressing hair against said tooth, a lever pivoted to said supporting member, and a link pivoted to said slidable member and to said lever.

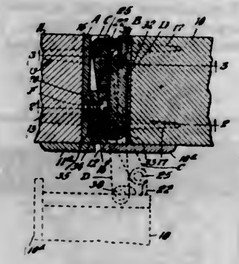
1,578,567. DUST CAP. ARTHUR H. WICKS, Woodstock, Ill. Filed Sept. 26, 1923. Serial No. 664,895. 4 Claims. (Cl. 152—12.)



2. A dust cap having a body portion of sheet metal having overlapping free edges extending lengthwise of said cap, said body portion being distortable so that said edges slide over each other, whereby the diameter of said cap may be varied, said cap decreasing in normal diameter toward the open end thereof, and said edges overlapping at all times to maintain a dust tight joint at said free edges.

1,578,568. MANUFACTURE OF CONVERSION PRODUCTS OF STARCH. JOHN M. WIDMER, Cedar Rapids, Iowa, assignor to Penick & Ford, Ltd. Incorporated. Cedar Rapids, Iowa, a Corporation of Delaware. Filed May 23, 1923. Serial No. 641,004. 6 Claims. (Cl. 127—36.)

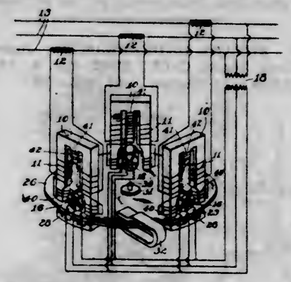
6. The improved method of making glucose from starch which comprises; conversion of the starch in the presence of a hydrolyzing acid to the glucose stage; neutralization of the hydrolyzing acid in the presence of phosphoric acid; filtration of precipitated impurities; treatment of the liquor with tannic acid; filtration to remove the coagulated albumenoids and insoluble mineral salts; and treatment of the liquor with carbon to remove excess of tannic acid and any trace of color.



1,578,569. LOCOMOTIVE-BOOSTER APPARATUS. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed June 18, 1923. Serial No. 645,952. 9 Claims. (Cl. 105—48.)

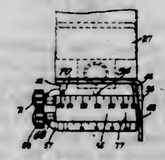
1. The method of operating a locomotive unit including the usual main driving wheels and at least one pair of normally idle weight carrying wheels and a booster motor for driving idle wheels to supplement the main drivers

in starting and at slow speed, which consists in increasing the weight on the wheels driven by the booster motor when the latter is operated.



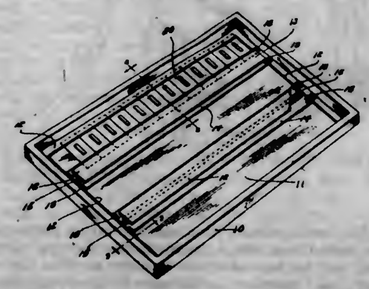
1,578,570. CONCEALED DOOR HINGE. JOHN W. ANDERSON, Chicago, Ill., assignor of one-half to Clarence Poffenberger, Chicago, Ill., and one-half to Corber Company, Aurora, Ill., a Corporation of Illinois. Filed Apr. 25, 1921. Serial No. 464,195. 16 Claims. (Cl. 16—164.)

1. In a hinge of the character described, the combination with two members adapted to be secured to the opposed edges of a stationary door frame and a door respectively; of a pair of connecting links between said members, one set of ends of said links being pivotally connected to one of said members and the remaining set of ends being pivotally connected to the other member, and the pivotal connections at opposite ends of one of said links being offset in the same direction laterally of the door with reference to the corresponding pivotal connections at the opposite ends of the other link, when the door is closed.



1,578,571. VOLT-AMPERE METER. DONALD J. ANGUS, Indianapolis, Ind., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 27, 1922. Serial No. 532,070. Renewed June 23, 1925. 11 Claims. (Cl. 171—309.)

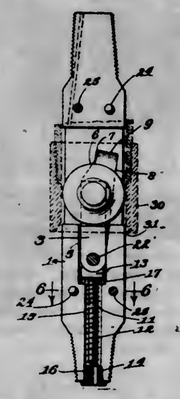
8. A volt-ampere meter, comprising means for producing two magnetic fields responsive respectively to the voltage and to the current of an alternating-current circuit, one of said fields being advanceable and retardable to compensate for variations in the power-factor of said circuit; a meter element in position to be acted on by



both said fields; and means for substantially preventing said meter element from being acted on by two fluxes from the same field in quadrature with each other.

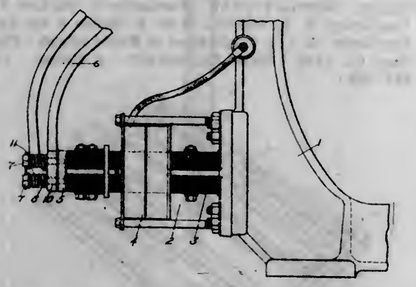
1,578,572. CIRCUIT BREAKER. WALTER M. AUSTIN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1922. Serial No. 588,529. 4 Claims. (Cl. 200—108.)

1. The combination with a tripping mechanism for a circuit breaker, of a magnetically-actuated core member for operating the said mechanism, a segmental suction surface on the under-side of the core member, a dash-pot for supporting the core member and provided with a segmental suction surface for co-operation with the first named surface, a supporting bracket, an overload calibration member having screw-threaded connection with the said bracket and serving as a support for the dash-pot, a ring supported by the dash-pot and having non-rotatable connection with the bracket, and clamping means carried by the dash-pot and the said calibration member respectively, whereby either of the last named members may engage the said ring to be thereby held against rotative movement.



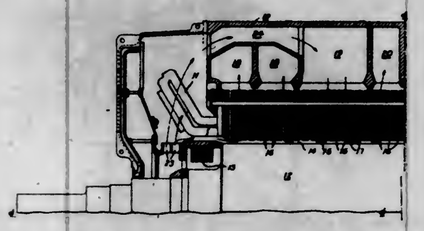
1,578,573. DISPLAY TRAY. FREDERICK A. BALLOU, Jr., Providence, R. I., assignor to B. A. Ballou & Co. Inc., Providence, R. I., a Corporation of Rhode Island. Filed June 21, 1923. Serial No. 646,805. 4 Claims. (Cl. 211—28.)

1. A display tray comprising a frame, a readily removable and adjustable cross bar having gripping means at each end engaging portions of said frame, the sides of



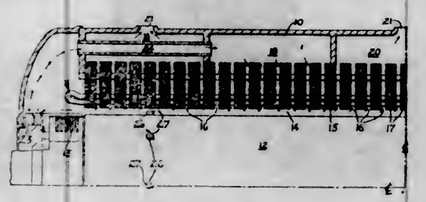
said bar being undercut longitudinally to receive holder cards and retain the edges of the holder cards mounted therein.

1,578,574. ROTARY UNDERREAMER. JOHN M. BATEMAN, Long Beach, Calif. Filed Apr. 4, 1923. Serial No. 629,849. 13 Claims. (Cl. 255—76.)



1. In an underreamer, the combination of a body, a pair of tool-carriers movably mounted in the body so as to be capable of shifting upwardly in the body, a cutter disc carried by each tool-carrier and disposed in a substantially vertical plane so as to roll down the inner side of the casing, a spring for shifting the tool-carriers upwardly and operating to hold the edges of the discs against the casing when the underreamer is being lowered within the casing, said body having means cooperating with the tool-carriers in the upward shifting movement effected by the spring after the cutters pass out of the lower end of the casing, to project the upper ends of the tool-carriers outwardly with the edges of the discs projecting beyond the periphery of the body and beyond the casing.

1,578,575. ELECTROMAGNETIC BRAKE. EDGAR M. BOUTON, Wilkinsburg, and MILTON G. THOMPSON, Ardmore, Braddock Township, Allegheny County, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 8, 1919. Serial No. 322,316. 15 Claims. (Cl. 175—338.)



1. The combination with a magnet having substantially plane pole faces and a magnetizable member actuated thereby and having substantially plane portions for coacting with said pole faces, of a supporting element for said member yieldingly secured thereto whereby limited universal movement of said magnetizable member is permitted.

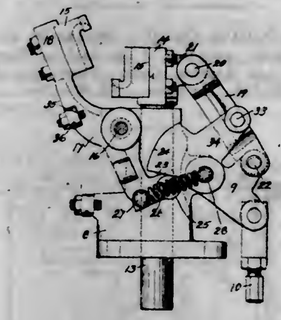
1,578,576. TURBO VENTILATION. DONALD BRATT, Irwin, and CARL J. FECHHEIMER, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 26, 1923. Serial No. 647,779. 9 Claims. (Cl. 171—252.)

1. A dynamo-electric machine having a rotor and a stator with an air-gap there-between, said stator embodying a ventilating system comprising a plurality of groups of radially extending ventilating spaces surrounding the air-gap, intake chambers surrounding one or more groups of radial spaces for conducting a cooling fluid radially inwardly, and discharge means surrounding the remaining groups of radial spaces, the cross-sectional areas of the air-gap and radial spaces, the numbers of radial spaces in the respective groups, and the configurations of the ventilating paths being such that all groups have substantially the same minimum radial velocities and the same maximum radial velocities of the cooling fluid.

1,578,577. TURBO VENTILATION UTILIZING BAFFLES IN AIR GAP. DONALD BRATT, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 26, 1923. Serial No. 647,784. 7 Claims. (Cl. 171—252.)

4. A dynamo-electric machine comprising a stator member and a rotor member separated by an air-gap, said stator member being provided with a plurality of radial ventilating spaces surrounding said air-gap, means for introducing a ventilating fluid and causing the same to move axially in said air-gap and radially in said radial spaces, and a plurality of bolts disposed in a circle about said rotor member and within said air-gap, the length of the bolts being such as to admit of their removal from the air-gap.

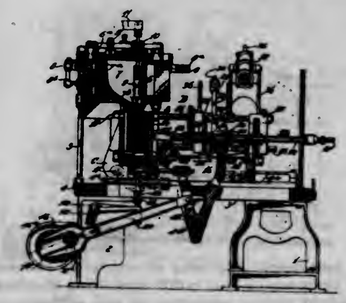
1,578,578. LIGHTNING ARRESTER. EDGAR W. BERSCH, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 15, 1922. Serial No. 543,855. 13 Claims. (Cl. 175—30.)



1. In a lightning arrester, a container comprising a housing, a plurality of insulating spacers of fibrous material and a hardened binder, a plurality of electrodes comprising the flat strips of conductor material and end

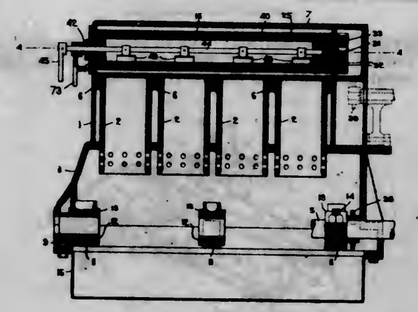
blocks in the ends of said housing, said end blocks having terminal screws secured thereto in central alignment with said electrode.

7. A discharge-gap device comprising a plurality of interlocking insulating spacers constituting a self alining column and discharge electrodes held by said spacers.



1,578,579. SINGLE-ACTUATOR CIGAR-BUNCH SHAPER. WILHELM B. BRONANDER, Brooklyn, N. Y., assignor to International Cigar Machinery Company, a Corporation of New Jersey. Filed Nov. 26, 1923, Serial No. 676,977. Renewed Sept. 29, 1925. 10 Claims. (Cl. 131—39.)

1. A cigar bunch shaping mechanism comprising a single cam-controlled actuator, a plurality of shaping members, and interposed operating connections including a cam device operating a part of said shaping members.

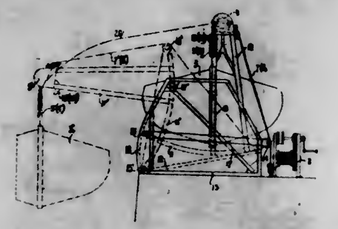


1,578,580. DIE-CASTING MACHINE. ERIC CARLSON, Chicago, Ill., assignor to Stewart Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed Sept. 11, 1922, Serial No. 587,264. Renewed Dec. 7, 1925. 9 Claims. (Cl. 22—69.)

6. In a die casting machine in combination with a frame structure comprising a substantially horizontal bed, a downwardly discharging metal pot mounted at elevated position thereon overhanging the bed, a die carrier mounted for movement longitudinally of the bed from a position clear of the pot to a position under the same; means for operating the carrier to so move the die; means for elevating and upholding the die for registration of the die inlet with the pot discharge nipple; means for shutting off and for forcing discharge of the metal from the pot; a power shaft and cams thereon for

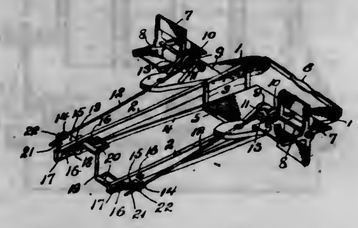
operating in predetermined time relation the die-advancing and uplifting movements and the metal shut-off and the metal discharge means.

1,578,581. INTERNAL-COMBUSTION ENGINE. CHARLES J. CAANA, Quincy, Mass., assignor of one-fourth to Alfred P. J. Pinel and one-fourth to Alfred Pinel, both of Quincy, Mass. Filed Apr. 29, 1922. Serial No. 557,460. 2 Claims. (Cl. 123—190.)



1. In an internal combustion engine, the combination with a cylinder having a piston therein and also having an inlet port, of a rotary tubular valve controlling said port, a tubular control member within said valve, a shaft extending axially of the valve and having a radial arm, a throttle member carried by said arm and engaging the inner wall of the control member, said control member being turnable about its axis and co-operating with the throttle member to vary the time of cut off.

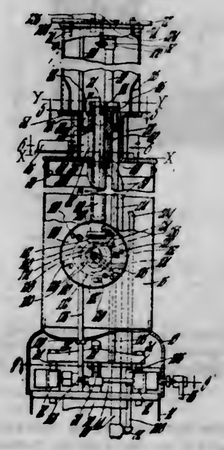
1,578,582. INGREDIENT FOR PRINTING INKS. JOHN H. CAUGHLAN, Oakland, Calif. Filed May 19, 1924. Serial No. 714,501. 1 Claim. (Cl. 134—36.)



The process of producing an ingredient for printing ink which consists of mixing substantially 15 pounds of rosin, 2½ pounds of caustic soda and water boiled together and precipitated with a solution of aluminium sulphate, whereby aluminium resinate and gelatinous aluminium hydrate are formed and which when washed and pressed is ground while still wet with 24 pounds of #00 lithographic varnish.

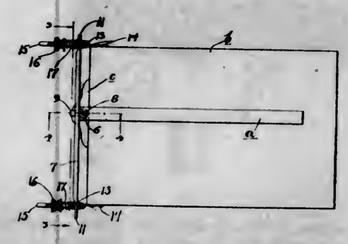
1,578,583. DAVIT. JAN CHELEN, Rotterdam, Netherlands, assignor to Rotterdamsche Machinefabriek "Braat," Rotterdam, Netherlands, a Company of Netherlands. Filed July 14, 1923. Serial No. 651,641. 2 Claims. (Cl. 9—22.)

1. A boat davit comprising an outwardly inclined stationary track-way, a boat tackle supporting standard having a curved portion supported on and normally occupying a position adjacent the upper end of the inclined track-way and adapted to roll downwardly thereon, said standard being adapted, subsequent to its rolling movement, to swing outwardly on an axis coinciding with one end of the curved portion thereof, stops arranged to arrest the outward swinging movement of the standard, a boat fall, a windlass having the boat fall attached thereto and secured to a fixed part of the ship, and means adjacent the opposite end of said curved portion for guiding the boat fall during the upward movement of the last mentioned end, the tension of the boat fall acting against the guiding means producing an outwardly directed force against and tending to maintain the standard in outboard position.



1,578,584. SWIMMING APPARATUS. IRVING J. CROMER, Kansas City, Mo. Filed Sept. 16, 1925. Serial No. 56,634. 6 Claims. (Cl. 9—18.)

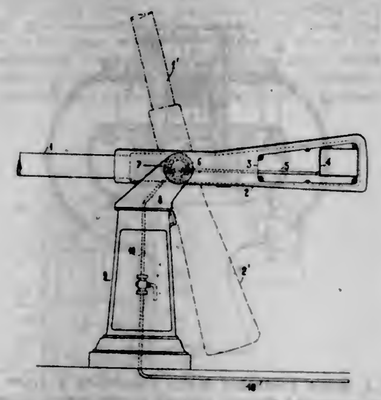
3. In a swimming apparatus, two floats, a body supporting member intermediate of and supported by said floats, two rearwardly extending bars secured to said floats, two bearing members respectively forwardly and rearwardly adjustable on said bars, a transverse shaft rotatable in said bearing members and having two oppositely disposed cranks adapted to be engaged and turned by the feet of a person lying on said body supporting member, two propelling wheels respectively carried by said floats, and means actuated by said shaft for rotating said propelling wheels.



1,578,585. LIQUID-DISPENSING APPARATUS. JOHN B. DAVIS, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, a Corporation of Massachusetts. Filed Nov. 7, 1921. Serial No. 513,368. 16 Claims. (Cl. 221—100.)

1. In a liquid dispensing apparatus, a reservoir, a reciprocating piston pump for forcing liquid into said reservoir, means including a movable member operatively connected with the pump piston for actuating said pump, a slidable discharge pipe associated with said chamber and movable to various positions therein to permit discharge of different measured quantities of

liquid therefrom, and mechanism operable by movement of said pipe into any of said positions to lock said member to prevent operation of the pump actuating means.

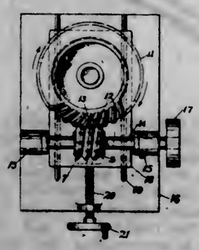


1,578,586. T-SQUARE GUIDE. THOMAS M. DAVIS, Los Angeles, Calif., assignor of one-half to Edward W. McKinney, Los Angeles, Calif. Filed Apr. 4, 1925. Serial No. 20,716. 4 Claims. (Cl. 33—76.)

1. A T-square guide comprising arms adapted to be secured to and project from a drawing board, a rod having its opposite ends slidably engaging the arms respectively, a T-square having a shoulder, and springs on the arms yieldingly holding the rod engaged with the shoulder to urge the T-square against an edge of said board.

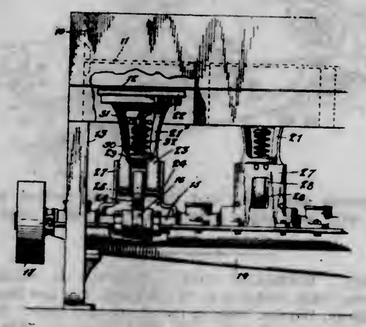
1,578,587. AUTOMATIC GATE FOR RAILWAY CROSSINGS. GERARDO DE AGOSTINI, Compoiattaro, Italy. Filed Apr. 5, 1924. Serial No. 704,839. 8 Claims. (Cl. 246—125.)

1. A railway gate, including a bar rotatable about a horizontal pivot and terminating in a counterweight, a receptacle in said counterweight, means for pumping a liquid into and out of said receptacle, means for locking



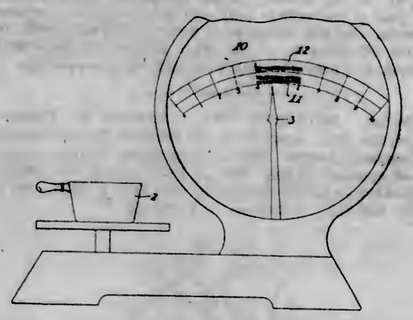
the pumping means upon the liquid being forced into said receptacle, and means for releasing said locking means to evacuate said receptacle.

1,578,588. MANUFACTURE OF VISCOSE. HENRY DREYFUS, London, England. Filed Jan. 28, 1922. Serial No. 532,505. 10 Claims. (Cl. 260—100.)



10. Process for the manufacture of viscose having in its constitution a molecule of carbon disulphide combined with several cellulose molecules, said process comprising subjecting a cellulosic body in association with caustic alkali to the action of carbon disulphide in benzol, the quantity of caustic alkali associated with the cellulosic body being not more than one molecule per molecule of cellulose, and the quantity of carbon disulphide being between about one-fifth and one-half a molecule per molecule of cellulose.

1,578,589. METHOD OF CHAMFERING GEARS. SCHUYLER H. EARL, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Aug. 5, 1925. Serial No. 48,231. 10 Claims. (Cl. 90—1.)

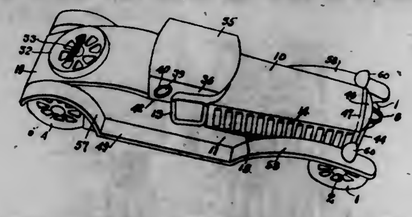


1. The method of chamfering gears which consists in selecting a tool provided with a continuous thread, one side of which is adapted to engage the side face of the teeth of the gear to be chamfered, and with a cutting portion whose effective cutting edge is so arranged relatively to said thread as to engage the opposite side face of the gear teeth, rotating said tool in engagement with the gear and rotating said gear solely by its engagement with the tool.

1,578,590. PAPER-PULP SCREEN. CLARENCE FANCHER, Hudson Falls, N. Y. Filed July 16, 1925. Serial No. 44,052. 6 Claims. (Cl. 92—32.)

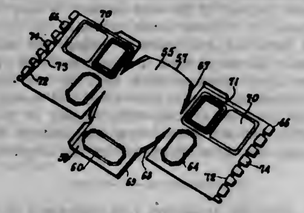
3. A paper pulp screen having a flexible diaphragm, a hanger connected to said diaphragm, an axially rotatory circular shoe journalled in said hanger, a cam shaft, a series of cams of different sizes arranged on said shaft, one of said cams being adapted to engage the said roller shoe to vibrate the diaphragm, the length of the periphery of the shoe being greater than that of the cams and practically incommensurable therewith, and means whereby the cams may be shifted with respect to the roller shoe in order that a different cam may engage the shoe to change the length of vibration of the diaphragm.

1,578,591. ART OF MAKING ICE CREAM. ERNEST D. FEAR, Seattle, Wash. Filed Mar. 29, 1921. Serial No. 456,776. 4 Claims. (Cl. 73—51.)



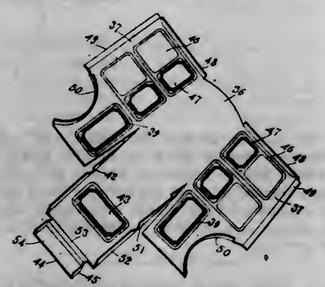
1. In the art of making ice cream, the method of standardization thereof which consists in giving each of several actual mixes of random weights per unit volume an overrun, and in stopping the overrun when the weight per unit volume of each actual mix equals the weight per unit volume of a selected standard mix at a selected standard overrun.

1,578,592. WHEELED TOY. CLARENCE E. FLOKEY, Dayton, Ohio, assignor to The Schieble Toy and Novelty Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 3, 1922. Serial No. 598,902. 14 Claims. (Cl. 46—48.)



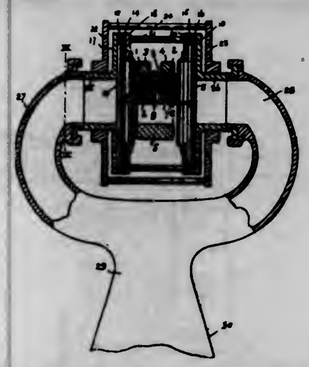
1. An automobile comprising three separable portions each cut and shaped from a single piece of metal, first, a body portion comprising a hood portion and sides, the

sides terminating in rearwardly extending arms, second, a rear deck, seat, and floor portion with the rear deck extending over said arms and the seat and floor extend-



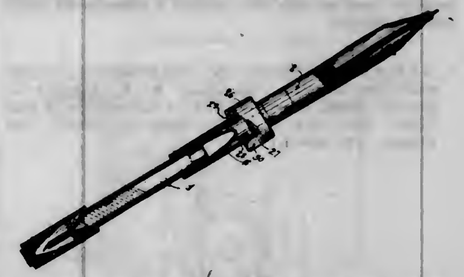
ing between said sides, and third, a top portion interfitting with said other portions and extending over the seat.

1,578,593. WHEELED TOY. CLARENCE E. FLORKEY, Dayton, Ohio, assignor to The Schieble Toy and Novelty Company, Dayton, Ohio, a Corporation of Ohio. Original application filed Nov. 3, 1922, Serial No. 598,902. Divided and this application filed Oct. 8, 1923. Serial No. 667,378. 4 Claims. (Cl. 46—48.)



1. A blank for the bodies of toy vehicles formed from a single piece of sheet metal and comprising a central portion having its main portion shaped to conform to the top of the toy vehicle, an end extension shaped to form the rear of the vehicle body and provided with a window opening, and side wings each formed integrally with the center of one side of the main portion of the central portion and provided with door and window openings.

1,578,594. WHEELED TOY. CLARENCE E. FLORKEY, Dayton, Ohio, assignor to The Schieble Toy and Novelty Company, Dayton, Ohio, a Corporation of Ohio. Original application filed Nov. 3, 1922, Serial No. 598,902. Divided and this application filed Oct. 8, 1923. Serial No. 667,379. 3 Claims. (Cl. 46—48.)

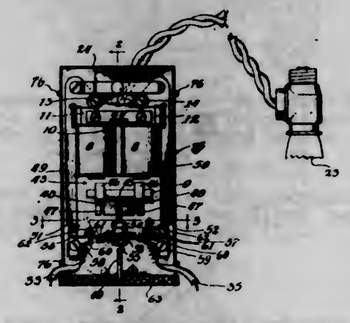


1. A blank for the bodies of toy vehicles formed from a single piece of sheet metal and comprising a central portion having its main portion shaped to conform to the top of the toy vehicle and an end extension shaped to form the rear of the vehicle body and provided with a window opening, and side wings each formed integrally at one end of the main portion of the central portion and provided with door and window openings.

1,578,595. SOUND-PRODUCING DEVICE. EMILE FRANTZ, San Francisco, Calif. Filed Feb. 3, 1925. Serial No. 6,669. 3 Claims. (Cl. 179—116.)

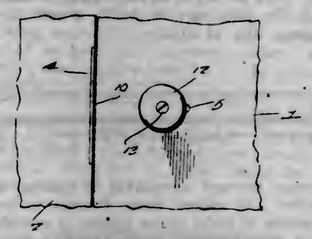
1. A sound producing device comprising a frame and means supported thereby adapted to establish a magnetic field, a circuit adapted to vary said field, an armature within said field, a plurality of diaphragms gripped in said frame and link means between said diaphragms and said armature hereby said diaphragms are constrained to vibrate in synchronism with said armature in response to the variations of said field, resilient rings about the peripheries of said diaphragms and screw actuated means constructed and adapted to variably compress said rings against said diaphragms and including an outside and inside plate for each diaphragm and a plurality of compression struts between said inside plates and a plurality of tension members between said outside plates.

1,578,596. ATTACHMENT FOR FOUNTAIN PENS AND THE LIKE. LEWIS FRITZ, Chicago, Ill. Filed Dec. 5, 1921. Serial No. 519,997. 1 Claim. (Cl. 120—84.)



In a device of the character described, having a barrel, a resilient ring adapted to be fitted concentric with said barrel, intermediate its length and to lie in close engagement therewith, said ring having uniform, plain cylindrical side walls, and having a rabbeted portion concentric with and communicating with the bore at each end of the ring, whereby the thickness of said ring adjacent its peripheral edge is greater than that portion adjacent to the bore.

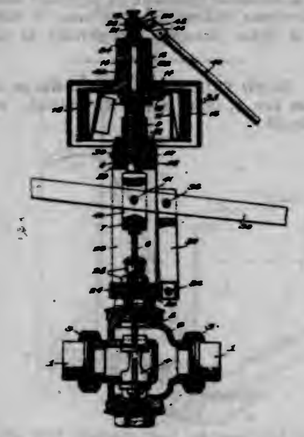
1,578,597. CONTROL SWITCH FOR TOY ELECTRIC RAILWAYS AND THE LIKE. ALBIN FROHNE, Chicago, Ill., assignor to American Flyer Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 11, 1922. Serial No. 574,182. 3 Claims. (Cl. 200—87.)



1. An electric control switch comprising in combination a vertical panel board, an electromagnet mounted

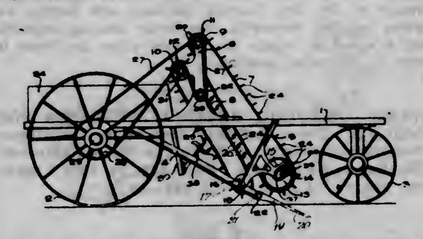
thereon with a vertical core, an armature beneath said core, a bracket on the panel board for normally supporting said armature, means for adjusting the bracket vertically on the panel board, a downwardly depending pin carried by the armature, stationary contacts projecting forwardly at the sides of the panel board, a pair of forwardly extending brackets secured to the panel board beneath said contacts, contact members pivotally mounted on said brackets and having their outer ends in position

to engage the stationary contacts when tilted on the brackets, counter balance weights normally rocking the contact members on the brackets to carry their outer ends downwardly away from the first mentioned contacts, an insulating collar on the pin located above the inner ends of the contact members and adapted to depress said inner ends when the armature and pin are lowered, and means for adjusting the position of said collar on the pin, substantially as described.



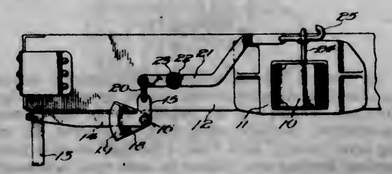
1,578,598. CLOSURE LATCH. CLARENCE E. GIDNEY, Sawtelle, Calif. Filed Apr. 14, 1925. Serial No. 23,020. 2 Claims. (Cl. 292—175.)

1. In a closure fastener of the class described, a casing and a spring pressed plunger slidable in said casing, said plunger comprising a head provided with a central stem screw threaded at its free end, a tongue having a screw socket in its inner end into which said threads are tapped, and a coiled spring surrounding said stem and bearing against said tongue at one end, said casing being provided with a stop with which the other end of the spring is engaged.



1,578,599. SAFETY DEVICE. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Mar. 12, 1923. Serial No. 624,648. 4 Claims. (Cl. 158—42.2.)

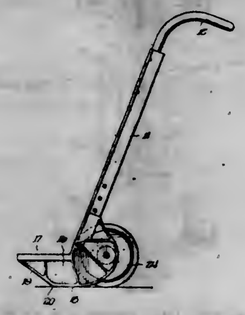
1. In combination with a fuel conduit and a source of fluid under pressure, an axially movable seating valve in said conduit, a chamber having an axially flexible wall, a permanent direct connection between said wall and said valve, connections between said chamber and said source of fluid under pressure, means adapted to move said flexible wall and close said fuel valve upon a predeter-



mined drop in said fluid pressure, a valve in said connections, and means operated by said means for closing said fuel valve for closing said valve in said connections.

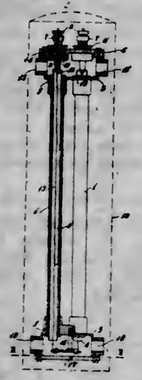
1,578,600. COMBINED STONE AND ROOT GATHERER. HENRY GRATRIX, Niagara Falls, Ontario, Canada. Filed Aug. 29, 1923. Serial No. 659,993. 5 Claims. (Cl. 55—138.)

1. An apparatus of the character described comprising a frame, bearings carried thereby, a digging blade provided at its ends with stub shafts journalled in said bearings and spring means coacting with said bearings and stub shafts to yieldably maintain the blade at an angle to the vertical, said blade being movable against resistance of said spring means upon encountering an obstruction.



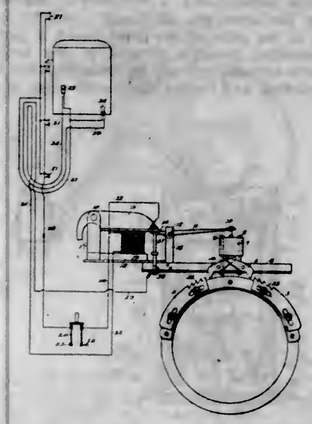
1,578,601. COUPLER RELEASE RIGGING. WILLIAM B. HALL, Chicago, Ill., assignor to Union Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 7, 1925. Serial No. 13,694. 10 Claims. (Cl. 213—164.)

1. In a coupler release rigging in combination with the vertically movable locking pin, a pivoted pin-operating lever having its inner end so connected with the pin as



to impart vertical movements thereto, and a pivoted hand lever having its inner end standing in substantially right angle relation to the outer end of the pin-operating lever and so connected therewith as to impart vertical pin lifting movements thereto by a movement of the operating lever in either direction, substantially as described.

1,578,602. HAND TRUCK. WALTER A. HEATH, Chicago, Ill. Filed Dec. 8, 1924. Serial No. 754,543. 2 Claims. (Cl. 280—56.)



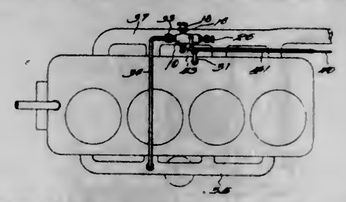
1. In a hand truck, a truck body, wheels secured to the truck, rocker members secured to the lower portion of the truck and a toe-plate extending across the rocker members, the rocker members having bearing portions adapted to engage the ground in advance of the wheels to support the truck together with the wheels while the truck is in a loading position, with the toe-plate horizontal, and additional bearing surfaces located in advance of the first bearing surfaces and having an angular relation therewith, the latter bearing surfaces being adapted to engage the ground when the truck is swung to unloading position.

1,578,603. ELECTRIC HEATING APPARATUS FOR LIQUIDS. KAREL FREDERIK HENNEMAN, The Hague, Netherlands, assignor of one-half to Pieter Kerkhoven, The Hague, Netherlands. Filed Aug. 14, 1924. Serial No. 732,116. 4 Claims. (Cl. 219—38.)

1. An electric heating apparatus for liquids, comprising a plurality of tubes arranged side by side and forming the sole conduit for the passage of the liquid, means for connecting the said tubes with each other, an insulating layer coating each tube, a heating element having an exposed heating wire located in each tube, said heating wires being connected at one end to the current supply means and being connected at the other ends in a starpoint.

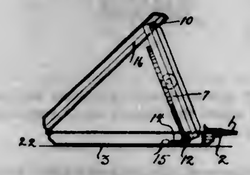
1,578,604. ELEVATOR SAFETY DEVICE. HENRY GEORGE HILLMAN, New York, N. Y. Filed Apr. 8, 1922. Serial No. 550,756. 3 Claims. (Cl. 187—48.)

3. A safety device for elevators having a control member, a magnet, door-operating switches and circuits connecting the switches with the magnet, said magnet adapted to be operated when a door is opened, said devices comprising pivoted members normally tending by reason of their balance in response to gravity to engage the control member and lock it in an inoperative position, a slidable member responsive to gravity and adapted normally to hold said pivoted members in their disengaged position, and means associating the slidable member with the magnet whereby when the magnet is energized the slidable member will be released from the pivoted members whereby said pivoted members will drop into their normal position of engagement with the control member.



1,578,605. PAPER FASTENER. FRED J. KLINE, New York, N. Y. Filed May 26, 1924. Serial No. 715,798. 11 Claims. (Cl. 24—153.)

1. A paper fastener embodying a member having a main portion and spaced apart tongues to be pushed through papers at right angles thereto, a retaining member having slots through which the projecting tongue portions can then be passed and bent down on said member, and means for holding a covering member, a tongue covering member adapted to be held by said means, and means whereby the tongue covering member is secured in position on the retaining member by relative movements between said members and which movements include a laterally gyrating one and a limited longitudinal movement.



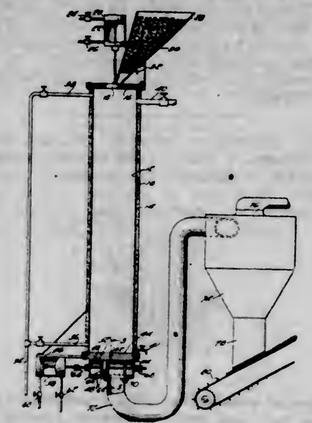
1,578,606. HUMIDIFIER FOR INTERNAL-COMBUSTION ENGINES. FRED W. LEUTHESSER, Oak Park, Ill. Filed Oct. 29, 1921. Serial No. 511,468. 2 Claims. (Cl. 123—25.)

1. In a humidifier for internal combustion engines, the combination of a casing provided with a longitudinal bore, a transverse bore and a vapor inlet passage connecting with the longitudinal bore, a valve plug rotatably mounted in the transverse bore and provided with a longitudinally extending air inlet passage intersecting a transverse plug passage, the latter being adapted, by rotative adjustment of the plug, to be brought into register with the longitudinal passage in

the casing, a valve for controlling the admission of vapor into the longitudinal passage in the casing, and means for rotating the plug, substantially as described.

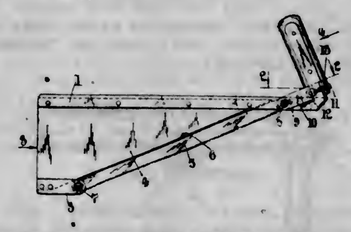
1,578,607. WATCH. MACK H. LEVY and HERMAN WANDER, New York, N. Y. Filed Mar. 11, 1924. Serial No. 698,376. 5 Claims. (Cl. 58—88.)

1. A watch comprising a first watch case member, a movement carrier pivoted to said first watch case member adjacent the front thereof by means of a hinge located within said first watch case member, and spaced from the front wall of said first watch case member, a second watch case member connected to said first watch case member by means of a hinge located at the rear of the said first watch case member, spring means comprising a spiral spring associated with the first mentioned hinge and adapted to cause said movement carrier and said second watch case member to be moved away from said watch case member to an open position of said watch, and retaining means independent of said spring means and adapted to hold said movement carrier and said second watch case member together in the open position of said watch.



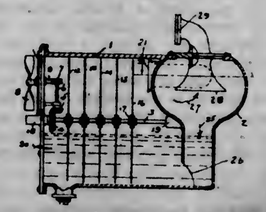
1,578,608. APPARATUS TO DEADEN THE NOISE OF TYPEWRITERS. HANS RUDOLF LUTZ-RUSSELL, Zurich, Switzerland. Filed Oct. 21, 1924. Serial No. 744,945. 3 Claims. (Cl. 197—147.)

1. A platen for typewriting machines, comprising a cylindrical roller formed of semi-resilient material, removable heads secured in each end thereof and provided with trunnions for application to a typewriting machine, and inflatable means confined within the cylinder and adapted to bear against all points on the inner wall thereof to eliminate the noise of impacting type bars.



1,578,609. PROCESS AND APPARATUS FOR DISINTEGRATION OF WOOD AND THE LIKE. WILLIAM H. MASON, Laurel, Miss. Filed Sept. 24, 1924. Serial No. 739,748. 21 Claims. (Cl. 92—1.)

1. The process of disintegrating ligno-cellulose material, which consists in subjecting same in substantially its natural state except for mechanical subdivision in a closed high pressure chamber to penetration by elastic



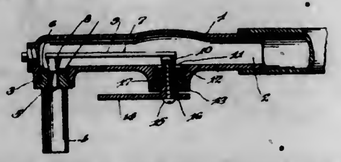
fluid under high pressure, and progressively forcing said material out through a relatively constricted opening in said chamber.

1,578,610. HACK AND LIKE FRAME SAW. EDWARD CHARLES FREDERICK OAKLEY, Norbury, England, assignor of one-half to Arthur Collier, London, England. Filed Mar. 6, 1925. Serial No. 13,590. 4 Claims. (Cl. 145—81.)

1. A hack saw comprising a bar, a handle mounted on one end thereof, a spacing web rigidly mounted on said bar, the thickness of which is not greater than the saw blade, a second bar rigidly mounted on said web, a saw blade mounted between said bars so that it lies in the same plane as the web and in angular relation to the bars, and means for tensioning said blade.

1,578,611. AIR CLEANER. AUGUSTUS M. SANBORN, Porterville, Calif. Filed Apr. 14, 1925. Serial No. 22,995. 2 Claims. (Cl. 183—9.)

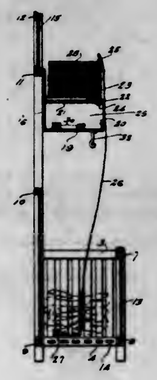
1. An air cleaner comprising a chamber having a lower portion adapted to contain a liquid, a plurality of discs having small perforations mounted on a shaft and adapted to rotate within and in close proximity



to the upper portion of said chamber, means for rotating said discs whereby their upper portions are continually retained wetted by said liquid, an inlet to said chamber for air that passes through said wetted portions, an annular receiver having a substantially tangential entering passage for said air a central outlet for said air and a passage from said receiver into said lower portion of said chamber.

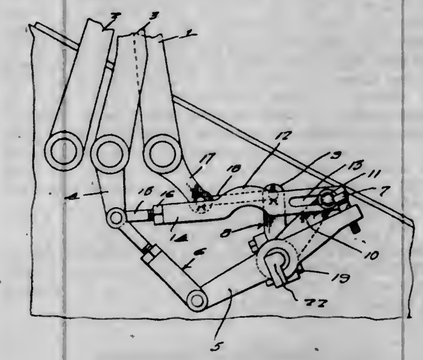
1,578,612. ANCHORING DEVICE. MARCELLUS J. SCANLAN, Hermosa, S. Dak. Filed May 27, 1924. Serial No. 716,174. 2 Claims. (Cl. 189—90.)

1. A ground anchor comprising a bar having an entering lower end, and provided with an opening near its upper end, and an anchoring hook comprising spaced hook members and a connecting portion extending between the inner ends of the same and fitting pivotally in the said opening, said hook members having bills curved toward the connecting portion of the hook and lying at opposite sides of the bar, the hook, between its connecting portion and the bills of the hook members, being of less length than the distance between the opening in the bar and the upper end of the bar.



1,578,613. FAUCET. WESLEY A. SMITH, Sioux City, Iowa. Filed June 6, 1924. Serial No. 718,365. 4 Claims. (Cl. 226—128.)

1. A device of the class described comprising in combination an elongated body member having a longitudinally extending liquid passage, there being a liquid inlet connection at one end of said passage and a spout opening reaching into the other end of said passage and substantially at right angles to the direction of the passage, an outwardly facing shoulder in said spout opening, a valve seat removably entered into said spout opening and against said shoulder, a spout removably entered into the spout opening and clamping the valve seat against the shoulder, another opening in the wall of the body member at a position intermediate between the inlet connection and the spout, a flexible diaphragm in said opening lying substantially parallel to the direction of the passage through the matter, a rock arm extending longitudinally through the liquid passage, means in conjunction with said arm extending through the diaphragm in liquid tight fashion to the outside of the device, means in conjunction therewith for rocking the arm, and a valve member on the free end of the arm movable towards and from the valve seat aforesaid, substantially as described.



1,578,614. TOWEL CABINET. JAMES S. SULLIVAN, Birmingham, Ala. Filed July 17, 1925. Serial No. 44,140. 3 Claims. (Cl. 45—32.)

1. A towel cabinet of the character described, comprising a stand having a shelf with its forward edge portion hinged to fold over upwardly, and a lock means adapted to receive an individual towel post and carrier mounted in the forward hinged edge portion of the

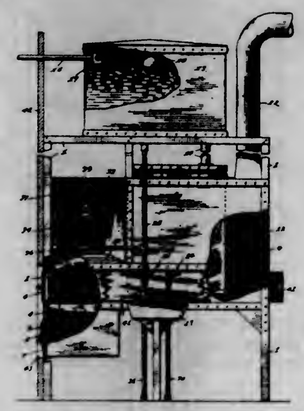
shelf, said lock means having a bottom key hole adapted to be exposed when the hinged shelf edge and post are folded rearwardly.

1,578,615. CLUTCH-PEDAL-RELEASE MECHANISM. CURTIS G. TOOTLE, Atlanta, Ga. Filed July 14, 1925. Serial No. 43,553. 3 Claims. (Cl. 74—89.)

1. In combination, a clutch shaft, a brake pedal, a clutch pedal, a connection between the brake pedal and clutch shaft, a connection between the clutch pedal and the first named connection, said second connection being slidably connected with the first connection, an oscillatory lever mounted on said shaft, and connecting means between the lever and clutch pedal.

1,578,616. COMBINATION BATH APPARATUS. MICHAEL TROOTNEFF and JOHN GROMENKO, San Francisco, Calif. Filed June 22, 1925. Serial No. 38,801. 9 Claims. (Cl. 4—1.)

1. A combination bath apparatus comprising a furnace adapted to be installed within a compartment; a boiler mounted in connection with the furnace and arranged to be heated thereby; a cold water supply tank mounted above the boiler to maintain a supply of water therein to be heated; pipes connected to the boiler and the supply tank for delivering water therefrom for washing and bathing purposes; a crown plate mounted above the furnace; and means for delivering water onto the crown



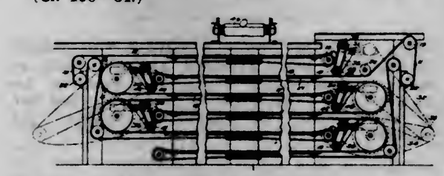


plate for generating steam for heating the compartment containing the apparatus, said steam being liberated within the compartment to form a steam bath.

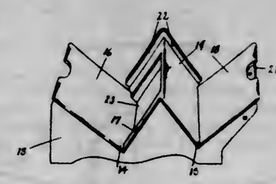
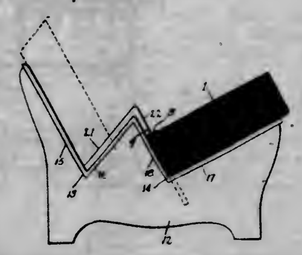
1,578,617. DOUGHPROOFING CABINET. FRANK H. VAN HOUTEN, Beacon, N. Y., assignor to Dutchess Tool Company, Beacon, N. Y., a Corporation of New York. Filed Apr. 18, 1922. Serial No. 555,519. 9 Claims. (Cl. 198—84.)



1. In a conveyor, an endless carrying belt adapted to be engaged by one face of an article, a second lower endless belt having a carrying reach positioned to receive the articles discharged from above by the first mentioned belt and adapted to be engaged by the opposite face of said articles, and an auxiliary belt free to swing about a horizontal axis positioned beyond the discharge end of the first mentioned belt in proximity to and above the second belt to guide said articles from one belt to the other, said articles being received on the lower belt bottom side up whereby said belts will be engaged by opposite faces of the articles.

3. In a conveyor, an endless belt having a substantially horizontal carrying reach, a second belt having a carrying reach below the carrying reach of said first mentioned belt and adapted to receive articles discharged therefrom, and an auxiliary belt having a substantially vertical guiding surface positioned beyond the discharge end of the first mentioned belt and extending into proximity with the carrying reach of said second belt.

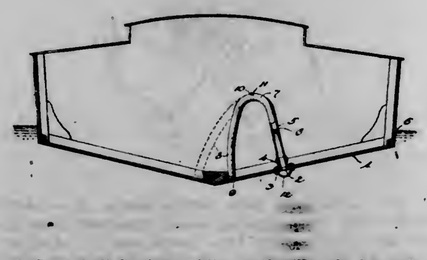
1,578,618. RECOVERY OF METALS FROM THEIR ORES. HARRY V. WELCH, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 12, 1923. Serial No. 674,283. 14 Claims. (Cl. 75—135.)



1. The process of treating ores containing copper together with gold or silver which consists in extracting gold, silver and copper from such ores by the action of a suitable cyanide solution, and subjecting the solution to the action of a precipitating agent to precipitate the gold or silver and copper therefrom and to regenerate a soluble cyanide in the solution for cyclic use thereof, the cyanide content of the solution being so adjusted that the solution during the precipitation of the copper contains in excess of four mols of cyanide, calculated as sodium cyanide, for each mol of copper present in the solution.

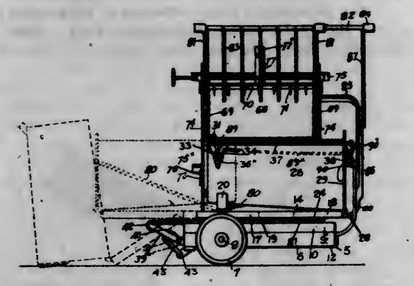
1,578,619. LOOSE-SHEET DEVICE. GEORGE P. WIGGINTON, LEON L. ALLYN, and NICHOLAS H. STUART, Kalamazoo, Mich., assignors to Kalamazoo Loose Leaf Binder Company, Kalamazoo, Mich. Filed Feb. 6, 1925. Serial No. 7,293. 17 Claims. (Cl. 129—1.)

1. The combination with record sheets, of a binder provided with sheet binding means removable from the cover whereby the sheet body bound together as a unit by such binding means may be removed from or placed in the cover as a unit, and a sheet support comprising a pair of sheet holders having side and end members disposed so that the sheets may be arranged on the side members with their side edges abutting said end members, said end members projecting beyond the side members at one end and having sheet alining guides on the projecting ends positioned so that the binding edges of the alined sheets project beyond the side members permitting the engagement and disengagement of the binding means therewith while in the holder, one of said end members having a recess therein to receive the projecting ends of sheets disposed between the record sheets.



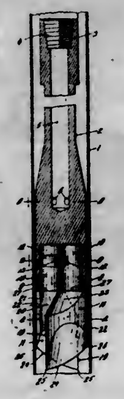
1,578,620. LOOSE-SHEET DEVICE. GEORGE P. WIGGINTON, Kalamazoo, Mich., assignor to Kalamazoo Loose Leaf Binder Company, Kalamazoo, Mich. Filed Jan. 2, 1925. Serial No. 164. 16 Claims. (Cl. 129—1.)

1. The combination with sheets having notches in their binding edges and holes adjacent their binding edges, of independent post bars provided with sheet binding posts and having notches alined with the notches of said sheets, a sheet support comprising a pair of holders having side and end members disposed so that the sheets may be arranged on the side members with their binding edges abutting the end members, the side and end members of one holder being disposed at right angles to each other and the side and end members of the other holder being



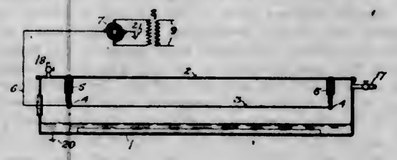
arranged at acute angles to each other, the side members having slots at their inner ends through which a post bar may be inserted or removed from below the holder, said side and end members having hand hold recesses in their inner edges opening to said slots facilitating the manipulation of the post bars and of the sheet body, and guide members disposed on said end members to coact with the notches of said sheets and post bars, the guides on the end member disposed at right angles to its coacting side member being extended below the side member facilitating the guiding of the post bar to the sheet body.

1,578,621. AUTOMATIC BAILER. GARFIELD A. WOOD, Detroit, Mich. Filed Oct. 4, 1924. Serial No. 741,553. 3 Claims. (Cl. 114—185.)



1. In a hull having a bilge outlet therein beneath the water-line thereof, an automatic bailer comprising a bilge pipe of inverted U-shaped formation extending upwardly from said opening to a point substantially above the water-line of said hull and then bent downwardly so that its free end is proximate to a part of said hull subject to the accumulation of bilge water, said bilge pipe having a vent opening in the upper part thereof.

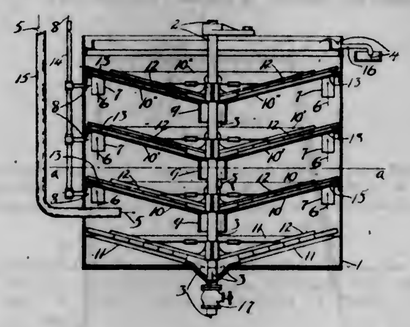
1,578,622. GRAIN STOOKER. ISAAC NEWTON YOUNT, Drinkwater, Saskatchewan, Canada. Filed Aug. 16, 1920. Serial No. 403,967. 15 Claims. (Cl. 56—424.)



1. In a stooker, the combination with a stooker carriage and means for connecting the carriage to a binder, of a sheaf receiver turnably mounted upon the carriage, means for turning the receiver in a horizontal plane to carry the butts from a forwardly presented position to a rearwardly presented position, means for permitting the butt holding end of the receiver to swing downward to the ground upon reaching the aforesaid position, and connecting means between the receiver and the carriage adapted to allow of the up-ending of the receiver as it is brought into contact with the ground.

1,578,623. ROTARY WELL DRILL. JOHN A. ZUBLIN, Los Angeles, Calif. Filed Dec. 1, 1922. Serial No. 604,388. 18 Claims. (Cl. 255—76.)

1. A rotary well drill comprising a body, and a pair of coengaging cutters longitudinally and eccentrically journaled on the lower end of the body to swing transversely from closed overlapping positions to extended positions for forming an enlarged bore.

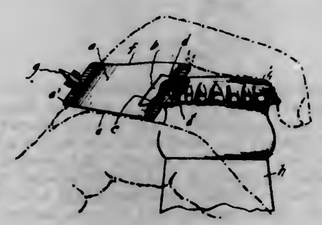


1,578,624. PROCESS FOR ELECTRICAL TREATMENT OF LIQUIDS. EVALD ANDERSON, Alhambra, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 20, 1923. Serial No. 675,819. 10 Claims. (Cl. 204—31.)

1. The process which consists in subjecting a colloidal suspension consisting of a material dispersed in a poorly conducting liquid to the action of a silent electrical discharge produced in a gaseous medium in contact with such liquid to cause separation of the suspended material from the liquid.

1,578,625. MULTIPLE-DECK PULP THICKENER. CLEMENT W. ANKENY, Colorado Springs, Colo., assignor to The Dorr Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 26, 1922. Serial No. 556,816. 6 Claims. (Cl. 209—208.)

1. A settling apparatus comprising a plurality of superposed settling compartments having central openings for the downward discharge of settled solids, and having openings connecting adjacent compartments for the upflow of supernatant liquid, and scraping means passing over the bottom of each compartment and immediately

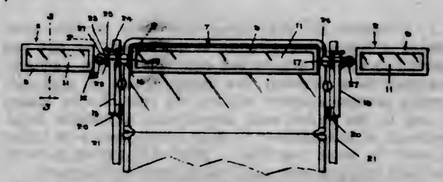


adjacent thereto to impel settled solids toward the solids discharge opening, said scraping means passing over the openings for upward flow of supernatant liquid.

1,578,626. BARGE. CARL J. BAER, St. Louis, Mo. Filed Apr. 7, 1924. Serial No. 704,864. 16 Claims. (Cl. 114—26.)

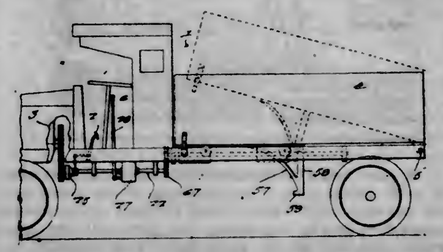
1. A boat of the scow or barge type comprising a hull and a superstructure including side and end sections adapted to be collapsed onto the deck of the hull, said hull and superstructure elements each constituting a separate water-tight pontoon-like member.

1,578,627. BOTTLE OPENER. JOHN C. BAUMGARTEN, Portland, Oreg. Filed Apr. 28, 1924. Serial No. 709,500. 5 Claims. (Cl. 65—46.)



1. A bottle opener in ring form to be worn upon the finger and having a comparatively broad peripheral surface, the rear edge of such surface having a bearing portion on the outer side of the ring as worn in rear of the bearing portion at the inner side of the ring as worn, the inner peripheral surface of the ring being formed with an opening having its rear edge formed to present a lip disposed wholly in the plane of such peripheral edge.

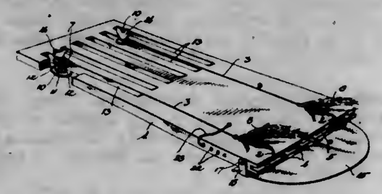
1,578,628. DUST-DISTRIBUTING CAR. ROBERT D. BEATTY, Birmingham, Ala. Filed Dec. 29, 1924. Serial No. 758,750. 2 Claims. (Cl. 169—2.)



1. In a device of the class described, a wheel-mounted frame, a body carried by the frame, a blast conduit supported by the frame, means for producing a blast in the conduit, a conveyor in the body and discharging into the conduit, means for operating the conveyor, and mechanism for regulating the flow of material from the body to the conveyor, said mechanism being movably under the control of an operator and including a rake adapted to move along the bottom of the body.

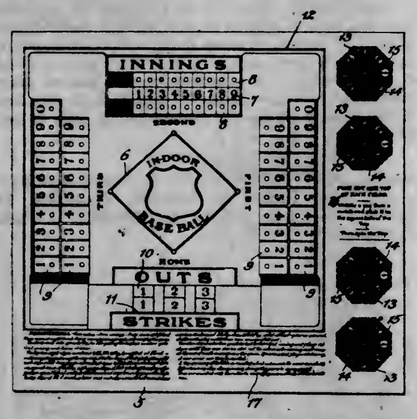
1,578,629. ADJUSTABLE REFLECTOR. DORA FAUER BEAUCHAMP, Forest Hills, N. Y., assignor of thirty one-hundredths to Dorothea Calhoun, New Orleans, La. Filed Mar. 22, 1924. Serial No. 701,106. 3 Claims. (Cl. 45—97.)

3. A rear sight device for vehicles, comprising an elongated central reflector to extend transversely between opposite sides of a vehicle, side reflectors to project from the opposite sides of the vehicle beyond the ends of the central reflector, two brackets between said reflectors having means for securing them to supports of the vehicle at opposite sides of the vehicle, each bracket having a longitudinally split T-head composed of separable sections and having sockets at the opposite ends thereof, one section of each head being fixed to the corresponding bracket, the reflectors having balls at their adjacent ends fitted in the corresponding sockets of said bracket heads, and means for securing together the sections of each head to simultaneously clamp the corresponding balls in said sockets.



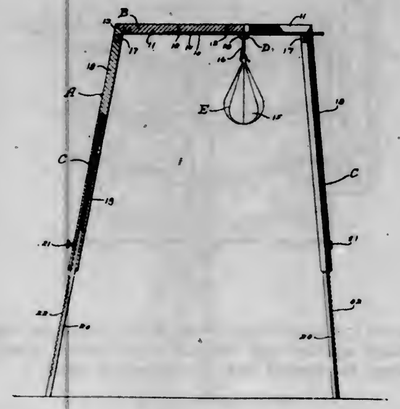
1,578,630. DUMP TRUCK. JOHN H. BOLDT, SAMUEL A. RANSON, and ALFRED W. MELLON, Blairsville, Pa. Filed Nov. 19, 1924. Serial No. 750,821. 1 Claim. (Cl. 298—21.)

A dumping apparatus for motor vehicles comprising in combination with the chassis of the vehicle and the motor, a dump body hinged on the rear end of the chassis, means operable by the motor for raising the forward end of the dump body to a dumping position,



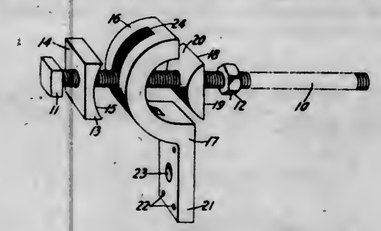
said means comprising a pair of longitudinally extending tracks secured in spaced relation on the bottom of the body, cam portions formed on the rear ends of the tracks and extending downwardly from the bottom of the body, a pair of spaced cross bars extending between the sides of the chassis, a rotatable screw extending between the cross bars and having its ends journaled therein, a block adapted for longitudinal movement on said screw, a transverse rod carried by said block, and rollers on the outer ends of said rod adapted for engagement with said tracks, said body adapted to be swung upwardly to a tilting position, when the rollers are in engagement with the cam portions of the tracks.

1,578,631. FISHHOOK. GEORGE W. BOLTON, Highland Park, Mich. Filed Nov. 18, 1924. Serial No. 750,668. 7 Claims. (Cl. 43—32.)



1. A holder for fish hooks and their leaders, comprising a supporting member having means at one end thereof to receive the barbed point of a hook, and nut-equipped bolts adjacent the opposite end of said supporting member adapted to have the nuts thereof engage a loop in the leader, said means being adjustable longitudinally of said support to exert a pull upon said leader to hold the same taut and to hold said barbed point of the hook engaged with said means upon the support.

1,578,632. GAME. EMIL BOMMER, Brooklyn, N. Y., assignor to Emil Bommer Playgrounds Foundation, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 6, 1925. Serial No. 48,452. 5 Claims. (Cl. 273—93.)



1. A game board of comparatively heavy material having parts spaced from a marginal edge of the board and each bounded by relatively weak portions of the board structure integrally connecting the part with the contiguous structure of the game board and normally retaining said part in fixed relation to the game board, but readily yielding to pressure applied against one side of said part whereby said part may be projected from the plane of the board and separated therefrom for use as a playing piece.

1,578,633. EXERCISING APPARATUS. JOHN E. BONDS, Providence, R. I., assignor of one-half to Joseph Edward Dailey, Providence, R. I. Filed May 29, 1924. Serial No. 716,781. 3 Claims. (Cl. 272—78.)

3. In a collapsible support for striking bags, a platform comprising a striking disc and three radially extending arms, said arms having their inner ends abutting at the axial center of the striking disc and extending radially therefrom in equal angular relation to one another past the marginal edges of the disc, vertically adjustable supporting legs hingedly connected to the outer end of each arm and capable of being folded inwardly beneath and across the axial center of said disc in crossed relation to one another, and means for detachably supporting a striking bag axially beneath said disc.

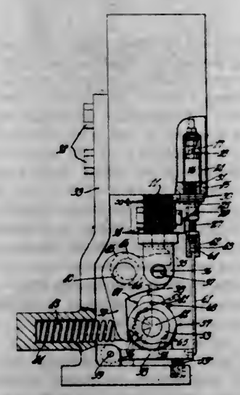
1,578,634. CLAMPING AND SUPPORTING DEVICE. CHARLES BORGMANN, Great Neck, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1925. Serial No. 47,377. 2 Claims. (Cl. 189—36.)

1. A supporting device for retaining a structure situated at one level with respect to a structure situated at a different level comprising a flat portion adapted to be adjustably clamped to a surface in any desired position, curved portions integral with said flat portion, each having a slot therethrough and a bolt passing through said slot, means for firmly positioning said bolts in said slots and for easily shifting said bolts as desired.

1,578,635. CAMERA. CARL A. BOENMANN, Binghamton, N. Y., assignor to Ansco Photoproducts, Inc., Binghamton, N. Y. Filed May 13, 1925. Serial No. 29,978. 1 Claim. (Cl. 95—46.)

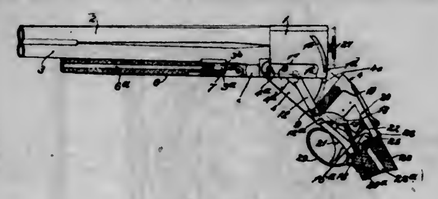
A camera including a support, provided with a recess along one edge thereof, a rail mounted on said support and overhanging said recess, a camera element movable

on said rail and provided with guiding means engaging the same, an independent split plate also carried by said



element and embracing said rail on the top and bottom thereof, and a set screw passing through said plate for drawing the same into locking engagement with said rail.

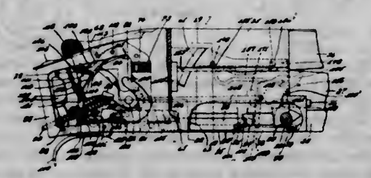
1,578,636. SEPARABLE FASTENER. CHARLES H. BRADLEY and FRANK D. ALLEN, Cleveland, Ohio. Filed Mar. 27, 1924. Serial No. 702,215. 7 Claims. (Cl. 24—109.)



1. A separable cuff button comprising button members provided with hollow bell-shaped shanks and mating base portions including stud and socket members, said socket members being provided with oppositely arranged spring latching elements movable toward and from each other in said socket and said stud member being provided with inclined sides and intermediate rounded flanges having latch receiving recesses.

1,578,637. MAGNETO. PHELPS BROWN, Springfield, Mass. Filed Feb. 25, 1924. Serial No. 695,096. 24 Claims. (Cl. 123—149.)

1. In a magneto, of the type wherein a reciprocating armature is movable toward and away from a stationary magnetic pole to vary the reluctance of a magnetic circuit, means for varying the reciprocating movement of said armature to vary the degree to which the armature approaches to said pole.

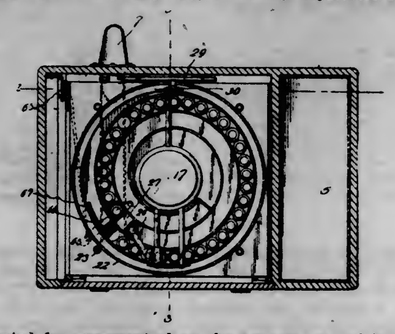


1,578,638. FIREARM. JOHN M. BROWNING, Ogden, Utah. Filed Oct. 15, 1923. Serial No. 668,575. 68 Claims. (Cl. 42—42.)

32. In a firearm of the over and under type, a receiver, a top lever post therein, hammers pivoted to said receiver rearwardly of said post, and a cocking lever having a pair of side members straddling said post and adapted to cooperate with the respective hammers.

58. In a firearm of the over and under type, firing mechanism having a pair of hammers, a single trigger operatively associated with said hammers to successively actuate the same on repeated pulls, means actuated by the "kick" of the gun for preventing "involuntary pull" of the trigger, and means associated with said last mentioned means for aiding movement thereof into and out of operative position.

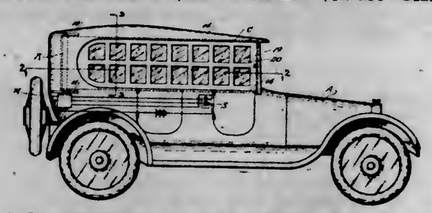
1,578,639. FIREARM. JOHN M. BROWNING, Ogden, Utah. Filed Sept. 29, 1924. Serial No. 740,454. 43 Claims. (Cl. 42—42.)



8. In a firearm of the over and under type, a breech piece, a receiver pivotally connected thereto, a hammer pivoted on said receiver, a reciprocable locking bolt carried by said receiver and adapted for locking engagement with said breech piece when the gun is closed, means for reciprocating said bolt, a pivoted cocking lever for cocking said hammer when the gun is broken, and interengaging means on the forward end of said bolt and said cocking lever whereby the cocking lever holds the locking bolt in inoperative position when the gun is open.

30. In a firearm, a receiver, a barrel section pivoted thereto, firing mechanism including a hammer, means for cocking the hammer when the firearm is broken, an extractor associated with the barrel for withdrawing shells therefrom, an actuator movably mounted on said receiver adapted to retract said extractor during the operation of breaking the firearm, a spring normally urging the actuator in a direction to retract said extractor, and means adapted to hold said actuator in operative position, said hammer being arranged to retain said means in holding position when the hammer is uncocked and during the major portion of the breaking operation of the firearm, said hammer being free of said means when the former is in cocked position.

1,578,640. VENDING MACHINE. MONROE BUNN, Lenox, and BUBBER C. ROBERTSON, Dyersburg, Tenn. Filed June 9, 1924. Serial No. 718,932. 4 Claims. (Cl. 211—8.)



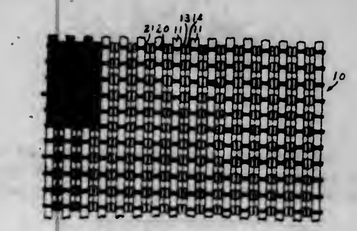
1. In a vending machine, a platform, a chute depending therefrom, a helical flange mounted upon the platform

and having its convolutions spaced from each other to provide a bottle passageway, a radially adjustable block

mounted for movement along the passageway and having a hooked flange which surrounds one of the bottles.

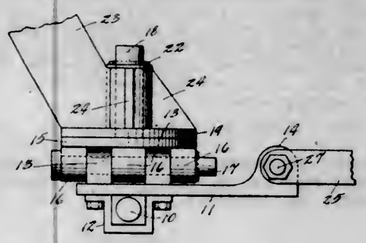
1,578,641. SIDE INCLOSURE FOR AUTOMOBILES. NORBERT W. BYWATER, Louisville, Ky. Filed Oct. 31, 1924. Serial No. 747,003. 8 Claims. (Cl. 296—142.)

1. In combination, a curtain, slotted guides for the side edges of said curtain and elastic fingers of rubber like material projecting inwardly and perpendicularly from the sides of the guide slots and arranged to bear against the curtain adjacent its edges.



3. The combination with an automobile body having side openings extending from front to rear of each side; of housings at the rear of the body, a curtain roller mounted in each housing, upper and lower guides having opposed slots and positioned at the top and bottom of each side opening, a curtain on each roller, guide rollers arranged about the upper and lower ends of each curtain roller and arranged to guide the curtains out of the housings and into the slots of the guides, and a motor arranged to rotate in one direction to cause the curtain roller to roll the curtain up and in the other direction to cause the curtain roller to unroll the curtain and move it outwardly along the guide slots.

1,578,642. HEADBAND FOR TELEPHONE RECEIVERS. HARRY R. CLARKE, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 18, 1923. Serial No. 681,356. 4 Claims. (Cl. 179—156.)

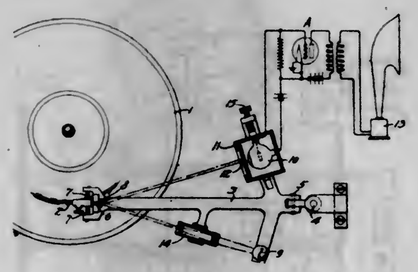


1. The combination with a head band for telephone receivers of a flexible strip folded to form a pad, and interlocking means integrally formed with said strip for retaining said pad on said band.

1,578,643. ELASTIC WEBBING. GEORGE E. CLAUSS, Ansonia, Conn., assignor to The Ansonia O & C Company, Ansonia, Conn. Filed July 22, 1925. Serial No. 45,391. 30 Claims. (Cl. 139—423.)

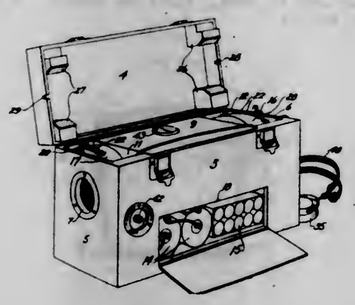
1. A web containing two layers of elastic warp cords, filling picks crossing above said cords and constituting face picks, middle filling picks between the two layers of cords, additional filling picks below the cords constituting back filling picks, warp threads binding all the aforesaid cords and filling picks together, and other warp threads held by certain of the middle filling picks and passing outside and across certain of the back filling picks in steps, each step comprising a plurality of back filling picks.

1,578,644. FIFTH-WHEEL CONNECTION. MICHAEL COLLINS, Joplin, Mo., assignor of one-half to J. L. Allhands and R. E. Davis, both of Joplin, Mo. Filed Mar. 6, 1925. Serial No. 13,603. 3 Claims. (Cl. 280—126.)



1. In a fifth-wheel, a draft table of unitary formation and having a rear turntable supporting portion and a front draft coupler portion integral therewith, a transverse axle disposed beneath and fixed to said turntable supporting portion, a turntable mounted on said turntable supporting portion to tilt laterally on a horizontal axis extending longitudinally of the draft table, and a draft element pivoted to the front draft coupler portion of the draft table to swing vertically on a horizontal axis transverse to the draft table, the said axes of the turntable and draft element being so disposed as to lie substantially in the same horizontal plane.

1,578,645. SOUND REPRODUCTION. EDWARD B. CRAFT, Hackensack, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 1, 1923. Serial No. 655,038. 4 Claims. (Cl. 179—100.1.)



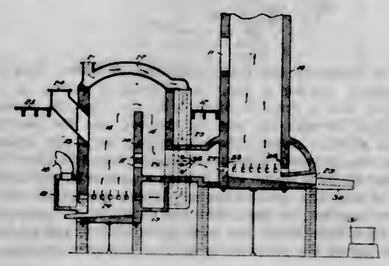
1. In a sound reproducer, a record having a record groove containing undulations representing sound, an oscillation member mounted so as to be free to oscillate about an axis, means to produce relative movement between said record and said member to bring successive portions of the sound record into operative relation with said member, and to cause oscillations of said member in accordance with the recorded sound undulations, a light-sensitive, electro-responsive element, means to throw a beam of light from said oscillation member to

said element, and to vary the illumination of said element by said beam in accordance with the actuation of the member by the sound undulations, means to make the

variations in illumination of said element independent of the position of said axis with respect to said record, and means to produce sound from the resultant electrical effects in said element.

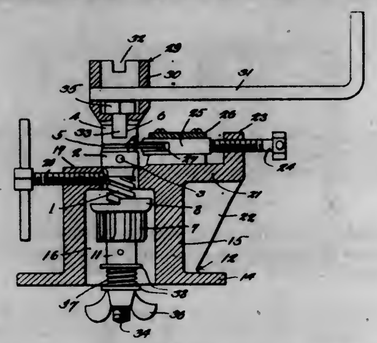
1,578,646. TELEPHONE DEVICE FOR AIDING THE DEAF. EDWARD B. CRAFT, Hackensack, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 2, 1923. Serial No. 672,320. 3 Claims. (Cl. 179—107.)

1. In a binaural telephone device for aiding the deaf, a case having widely separated openings in the walls thereof, microphones removably positioned in said case and communicating with said openings, said microphones being usable in or out of said case for the binaural reception of sounds.



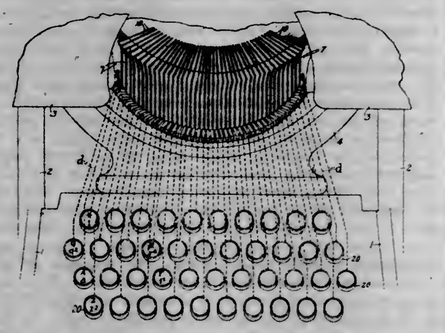
1,578,647. PROPELLING SYSTEM FOR SHIPS. GIOVANNI DE MEO, Genoa, Italy. Filed June 16, 1925. Serial No. 37,571. 2 Claims. (Cl. 115—38.)

1. Improved propelling system for the purpose of overcoming vibration in a ship or vessel, comprising propelling means arranged on each side of the vessel at or about midship, a motor to drive said propelling means arranged in close proximity thereto, each propeller being housed and arranged entirely in a recess of stream line form with which the ship is provided and situated just above the bilge portion of the keel and so that no portion of the propeller projects beyond the outline of the hull, and with the axis of the propeller shaft situated inside



the line or surface of the hull, whereby the water flowing to and through the blades will move parallel with the longitudinal axis of the propeller shaft.

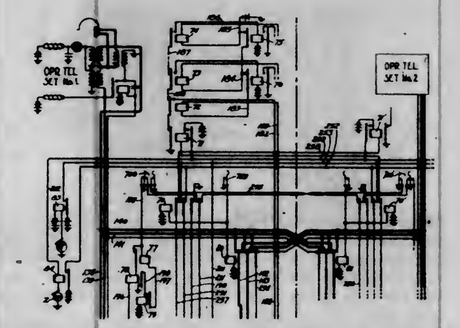
1,578,648. METHOD OF MELTING METALS. YULEE ALISON DYER, Cave Spring, Ga. Filed May 5, 1925. Serial No. 28,138. 11 Claims. (Cl. 266—14.)



11. The process of melting iron or other metals, which consists in charging one combustion chamber with a comparatively deep bed of carbonaceous material, combusting said material in the presence of a supply of air which has been preheated to a temprature of approximately 600 degrees F., but not exceeding 1900 degrees F., conveying the hot gases formed from such combustion directly to a second combustion chamber, introducing a supply of additional air to said gases at a point intermediate the two chambers, and then passing said gases and additional air under, up and through, and against the lower exposed face of the lowest thin-gauged layer of carbonaceous material above and adjacent to which is superimposed the iron or metal to be melted, the second combustion chamber being charged with either one or several layers of iron or other metal to be melted under each layer of which iron or metal to be melted is a comparatively thin-gauged layer of carbonaceous material as compared with similar layers used in the methods now in use, in cupolas and which said gases are conveyed from said first combustion chamber to the second combustion chamber under mechanical pressure of not less than one-fourth of a pound to the square inch and not exceeding one and one-half pounds to the square inch, as is desired, and which said natural air used in the combustion of said carbonaceous material in the first or primary combustion chamber is preheated by forcing such natural air directly from a blower to a wind-box which leads into a series of cast iron, steel or refractory pipes or conduits forming the dome of such primary or first combustion chamber, thereby creating a continuous recuperating unit which preheats the natural air after combustion has been set up in such first or primay combustion chamber and as the hot gases are forced to the dome of said first or primary combustion chamber in their passage from such combustion chamber to the second combustion chamber, thus materially lowering the consumption of carbonaceous material in such process by having the blast enter the tuyères of the first combustion chamber at a temperature of approximately 600 degrees F. and upward, and thus permitting of a longer period of operation by minimizing troublesome bridging in the primary combustion chamber from cold slag.

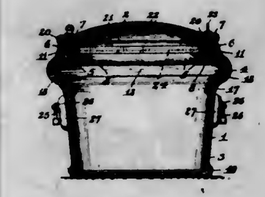
1,578,649. BENDIX DRIVE TOOL. FREDERICK WILLIS ELY, Erie, Pa. Filed Sept. 13, 1923. Serial No. 662,553. 1 Claim. (Cl. 153—9.)

In a device of the class described, a frame including a pedestal having a top, there being a recess in the pedestal, and a reduced opening in the top, the opening extending through the edge of the top and the pedestal having a side opening communicating with the opening in the top, a retainer mounted in the top and extending into the opening in the top, a slide mounted for reciprocation on the top, means for advancing the slide, and a creaser carried by the slide and adapted to cooperate with an article which has been inserted into the opening in the top of the pedestal by way of the side opening.



1,578,650. TYPEWRITING MACHINE. STEPHEN H. FARNHAM, Brooklyn, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Feb. 27, 1924. Serial No. 695,420. 3 Claims. (Cl. 197—1.)

1. In a typwriting machine, type bar blocks provided with types for printing a code system comprising a plurality of sets of characters, each set comprising one or more different lower case characters, the characters of each set distinguished by the same exponent placed to the right of and partly extending above the associate characters.

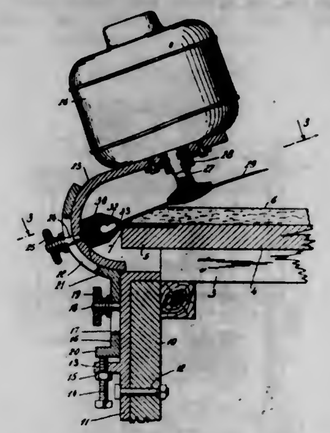


1,578,651. TELEPHONE-EXCHANGE SYSTEM. KARL M. FRITZER, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 27, 1924. Serial No. 740,211. 28 Claims. (Cl. 179—49.)

1. In a telephone exchange system, the combination of an "A" operator's position, a "B" operator's position, a plurality of trunk lines extending between said positions, means controlled by the "A" operator for seizing one of said trunk lines, a telephone set associated with the "B" operator's position, a signal also associated with said "B" position, a signaling path common to said

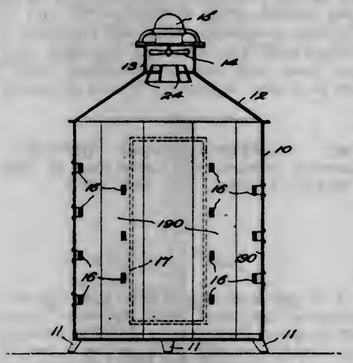
plurality of trunk lines extending between the "A" and "B" operator's positions, means controlled over said path for operating said signal and for causing the connection of the "B" operator's telephone set with the trunk line seized by the "A" operator.

1,578,652. BURIAL CASKET. ALBERT A. FISHER, Buffalo, N. Y., assignor to Universal Cement Casket Corporation, Buffalo, N. Y., a Corporation of Arizona. Filed July 28, 1921. Serial No. 488,125. 5 Claims. (Cl. 27—3.)



1. A burial casket formed of plastic material and having reinforced walls extending upwardly from the bottom thereof in straight lines, said walls having parti-tubular portions at their upper ends forming an exterior extension and an interior depression extending around the casket, thereby forming an enlargement of the interior thereof around the upper end and permitting said walls to be formed comparatively thin, said parti-tubular portions terminating in inwardly-directed flanges, and a cover supported by said flange.

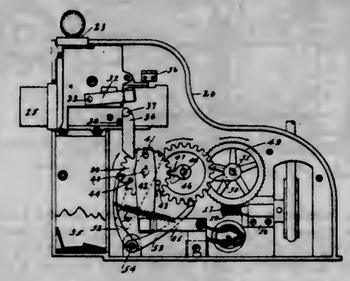
1,578,653. METHOD AND APPARATUS FOR BEVELING FELT. ALFRED HUGH GALLAGHER, Chicago, Ill., assignor to Tanners Products Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 3, 1924. Serial No. 684,152. 24 Claims. (Cl. 164—60.)



1. The method of beveling the edge of a piece of felt which comprises supporting the piece of felt on a plane surface, and progressively cutting the edge of the piece

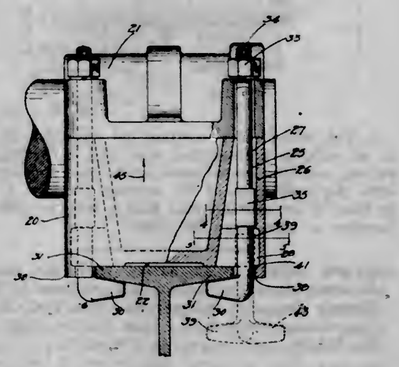
of felt with a shearing action while supporting the edge of the piece of felt on either side of the cutting mechanism and also at a point on the edge surface adjacent

the point at which the edge is cut through for preventing distortion of the felt in a direction away from the main body of felt.



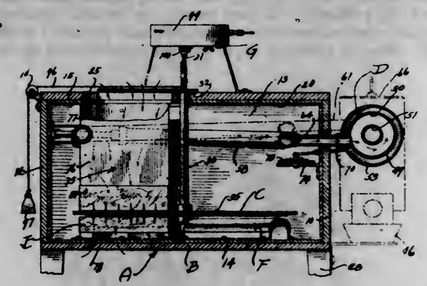
1,578,654. METHOD OF THERAPEUTIC TREATMENT. THEODORE R. N. GERDES, New York, N. Y. Original application filed Oct. 17, 1921, Serial No. 508,349. Divided and this application filed July 29, 1925. Serial No. 46,772. 2 Claims. (Cl. 174—177.)

2. The mode of therapeutic treatment which consists in enclosing the parts to be treated with a source of radiant thermal energy while causing a stream of external cooling air to pass through the enclosure over and in contact with the treated parts.



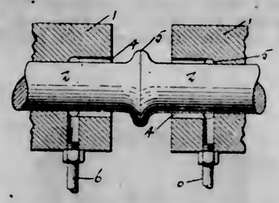
1,578,655. COIN-CONTROLLED METERING DEVICE FOR WASHING MACHINES. FRED J. GOGGINS, Los Angeles, Calif., assignor of one-half to Frank W. Kinney, Chicago, Ill. Filed Sept. 15, 1924. Serial No. 737,640. 3 Claims. (Cl. 192—142.)

1. In combination a washing machine having a support, a tub on said support, a motor, driving conections between said motor and the washing machine, a source of electric power, a switch interposed between the source of power and the motor, a movable switch operating member operated by and in invariable timed relation with said motor for breaking said switch after a uniform predetermined period of operation of the motor, a closed casing surrounding said switch and switch-operating member, means for locking said casing against unauthorized entry therein, the said switch and switch operating member being completely inaccessible and protected when the casing is closed so as to prevent unauthorized move-



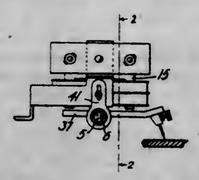
ment of either the switch operating member or the switch, the said casing being provided with a restricted opening and a guideway extending in proximity to the switch operating member, and a member adapted to enter said casing through said restricted opening and move along said guideway into a position of cooperation with said switch operating member to control the operation of the switch.

1,578,656. CROWN-BLOCK BOLT. WILBERT E. GORDON, Los Angeles, Calif., assignor to Emsco Tool Company, a Corporation of California. Filed Apr. 14, 1924. Serial No. 706,246. 13 Claims. (Cl. 189—35.)



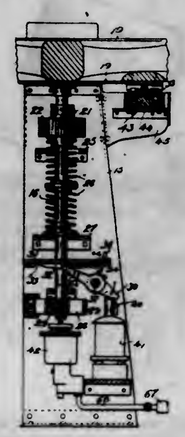
1. In means for securing together a primary member provided with an extending flange and a secondary member having a cavity extending therethrough, the combination of: a bolt extending through said cavity having a head formed on the lower extremity thereof; means for pulling said head against said flange in a manner to clamp said primary and secondary members together; means integral with said bolt engaging said secondary member for preventing the turning of said bolt in said secondary member when said head is against said flange; and means for preventing the accidental removal of said bolt from said cavity when said primary and secondary members are in contact.

1,578,657. INCUBATOR. WILLIAM EARNEST GEBBE, Enos, Okla. Filed Nov. 27, 1922. Serial No. 603,586. 12 Claims. (Cl. 119—42.)



1. An incubator comprising a housing having a heating chamber therein and an airing compartment communicating with said heating chamber, egg supporting means rotatably mounted in said housing and having a portion positioned in said heating chamber and a portion in said airing compartment, and means for rotating the egg supporting means whereby the eggs may be periodically moved through the airing compartment as the egg supporting means rotates.

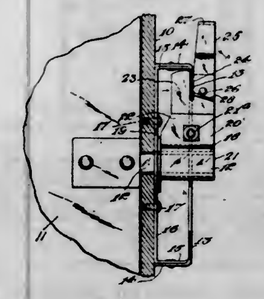
1,578,658. METHOD OF REMOVING THE BURR FORMED IN WELDING. PRESTON MARTIN HALL, Worcester, and WOLCOTT REMINGTON, Swampscott, Mass., assignors to Thomson Electric Welding Company, Lynn, Mass., a Corporation of Massachusetts. Filed Sept. 4, 1924. Serial No. 735,765. 3 Claims. (Cl. 219—10.)



2. The method of preventing the formation of a burr in an electric butt-welding operation consisting in directing upon the heated metal of the burr simultaneously with the application of the welding pressure, a stream or blast of combustion-aiding fluid in amount sufficient to consume or burn away the upset.

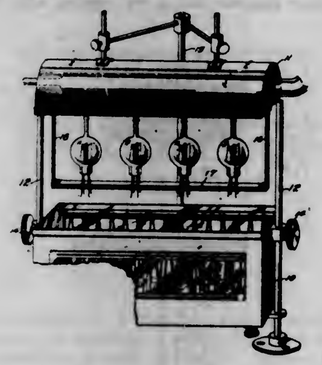
1,578,659. ELECTROMAGNETIC DEVICE. HENRY C. HARRISON, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 16, 1923. Serial No. 675,090. 6 Claims. Cl. 175—336.)

1. A mounting for oscillatory members comprising an axial member parallel to the axis of oscillation, a plurality of rods attached parallel to said axial member, a support and resilient means securing said rods to said support.



1,578,660. TURNSTILE MECHANISM. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed June 25, 1921. Serial No. 480,285. 25 Claims. (Cl. 39—2.)

1. A turnstile mechanism normally operable in opposite directions, the operation thereof in one direction being free and unrestricted, and that in the other direction being controlled or restricted, and means to control the speed of operation thereof.



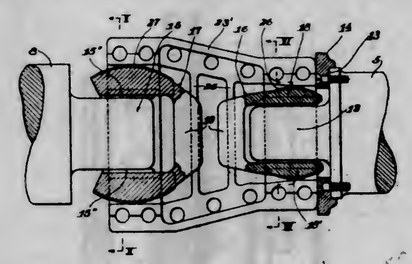
20. A turnstile mechanism including a vertically disposed shaft carrying turnstile arms, a wheel carried thereby having peripheral teeth and also having stop shoulders corresponding in position to said turnstile arms, a pawl co-operating with said peripheral teeth, a stop co-operating with said stop shoulders, and means whereby when said stop is disengaged from a stop shoulder said pawl is engaged in said peripheral teeth.

1,578,661. DAMPER-SECURING DEVICE. JOHN HRUSOVSKY, Newark, N. J. Filed Aug. 14, 1925. Serial No. 50,178. 2 Claims. (Cl. 126—295.)

1. A damper securing means comprising a flue, a damper in the flue, including a shaft extending through the wall of the flue, a ring-like bracket on the said wall, and an arm on the shaft and slidable loosely on the bracket, the arm having a slit to loosely receive the ring-like bracket, and a lever pivoted to the arm, the lever having a projecting end to form a handle and having the other end formed into a cam to bind the bracket between one edge of the slit and said cam.

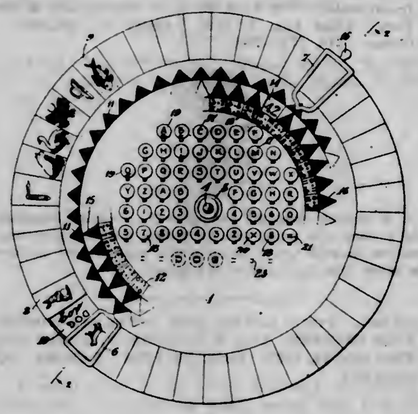
1,578,662. ELECTRIC OVEN. FREDERICK L. HUNTER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1921. Serial No. 516,308. 14 Claims. (Cl. 219—35.)

7. An electric oven comprising a casing composed of a single layer of sheet metal whereby the heat capacity of said oven is low, the inner wall of said casing presenting a heat reflecting surface, and a source of heat arranged within said casing but spaced from the wall thereof.



1,578,663. WATERPROOFING CONSTRUCTION. HARRY C. INNES, Hartwell, Ohio, assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed June 14, 1920. Serial No. 388,946. 3 Claims. (Cl. 72—127.)

1. A waterproofing construction consisting of a layer of preformed relatively rigid block like waterproofing slabs, composed of layers of bituminous saturated flexible sheets bonded together by a relatively thick layer of bituminous material and compressed into a block like slab, said slabs all arranged in the same plane with adjacent edges abutting so that corresponding sheets of flexible material in adjacent slabs will be in substantially the same plane and the corresponding layer of bituminous material in adjacent slabs will be in the same plane, a bituminous material between adjacent slabs cementing the abutting edges of adjacent slabs all so arranged that corresponding layers of flexible sheets in adjacent slabs are substantially continuous and the corresponding layers of bituminous material in adjacent slabs are substantially continuous.

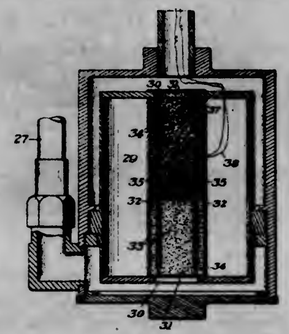


1,578,664. WABBLER. HERBERT CLYDE INSLEE, Roselle, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Mar. 26, 1924. Serial No. 701,980. 5 Claims. (Cl. 64—107.)

1. The combination of a driving shaft, a driven shaft, a yoke slidably and rockably engaging each of said shafts, a casing operatively connecting the yokes and anchoring the same against longitudinal displacement, the said yokes being mounted for rotative movement

within the said casing, and a ring fixed to one of said shafts in alignment with the said casing whereby to limit longitudinal movement thereof.

1,578,665. EDUCATIONAL DEVICE. SAL KANTOR, New York, N. Y. Filed May 13, 1924. Serial No. 712,944. 17 Claims. (Cl. 35—9.)

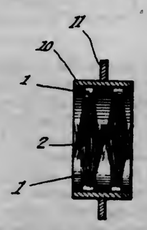


1. In an educational device the combination of a part having impressed thereon a series of illustrations a majority of which are viewable at all times, said part having an opening formed therein of sufficient size to permit the name of any object shown in any illustration to be exhibited, and a second part assembled with and relatively movable to said first part, said second part having a series of names positioned thereon to be brought into registry with said opening, said names having definite relations to objects shown in said illustrations.

1,578,666. METHOD AND APPARATUS FOR QUANTITATIVE DETERMINATION OF GASES. SIDNEY H. KATZ, Pittsburgh, Pa. Filed Mar. 12, 1925. Serial No. 14,915. 40 Claims. (Cl. 23—232.)

9. The method of quantitative determination of carbon monoxide, which includes subjecting the gas to the action of a filter, passing the gas over hopcalite and measuring the temperature increase, the filter being adapted to remove suspensoids tending to poison the hopcalite.

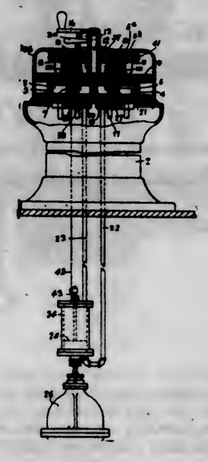
38. Apparatus for the quantitative determination of gases, including gas supply means, a drier, a purifier, a constant temperature chamber containing preheating means for bringing the gas being analyzed up to sub-



stantially the temperature of the chamber, a catalytic cell within the chamber having a catalyst therein, and electrical temperature measuring means for measuring the evolved heat.

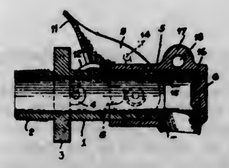
1,578,667. BINDING POST. LE ROY W. KELSAY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 3, 1923. Serial No. 655,891. 4 Claims. (Cl. 173—259.)

1. A circuit terminal comprising an eyelet insertable into a hole in a panel and a binding post adapted when inserted in said eyelet to split the wall thereof to force the same into the body of the panel.



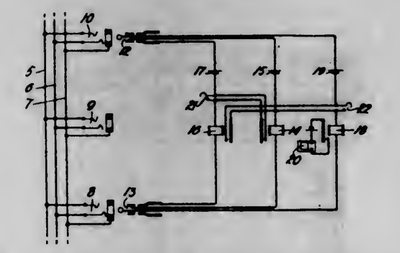
1,578,668. FUEL MIXER FOR INTERNAL-COMBUSTION ENGINES. LION H. KIRKPATRICK, Lawton, Okla. Filed Jan. 24, 1925. Serial No. 4,604. 3 Claims. (Cl. 48—180.)

1. A device of the class described comprising a gasket ring having a plurality of brushes of metal strands arranged around the primeter on the inner face thereof, the strands of said brushes extending toward each other and being intertangled and their ends left free.



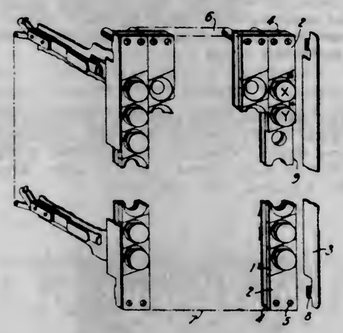
1,578,669. MULTIPLE OPERATING VALVE. FREDERICK B. LEOPOLD, Pittsburgh, Pa. Filed June 28, 1923. Serial No. 648,404. 2 Claims. (Cl. 137—144.)

1. Valve structure comprising a valve casing having a pair of valve chambers therein, a plurality of annularly arranged ports in an end wall of each of said chambers, a fluid pressure port and a drain port in the side wall of said chambers, a rotatable valve disc fitting against the end wall of each of the chambers and having a port positioned to register with said annularly disposed ports successively, each of the annularly arranged ports in one chamber having paired relation with the port in the other chamber, means for rotating said discs in



definite relative relation, a source of fluid pressure, a valve for effecting communication between said source and said pressure ports selectively, and a valve for opening and closing said drain ports selectively, means disposed exteriorly of the casing, for rotating said disc, and means disposed exteriorly of the casing for operating said valves.

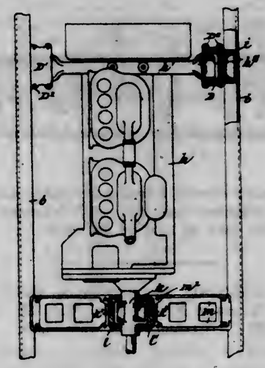
1,578,670. FAUCET. HECTOR V. LOUGH, Hartford, Conn., assignor to Lough Brothers, a Partnership consisting of Walter E. Lough and Percy F. Lough, New York, N. Y. Filed Apr. 15, 1924. Serial No. 706,633. 6 Claims. (Cl. 251—41.)



6. In a faucet, the combination of an open ended tube, adapted to be fixed in position, a sleeve slidably mounted thereon having a closed end adapted to seat against the outer end of said tube to close the same, said sleeve having a lateral discharge opening therethrough adjacent to its outer end, a hand lever pivoted to said sleeve, to move forward and back with said sleeve and to swing about its pivot from an upper position to a lower position, said sleeve having a surface against which said lever seats in its lower position, and a resilient link connecting said tube and lever at such points as to constitute a toggle with said lever, and to cause a limited movement of said lever downwards to close said tube and sleeve ends together, and a further movement of said lever to its lower seated position to swing said link past the pivot of said lever, to spring said link and resiliently press said tube and sleeve ends together.

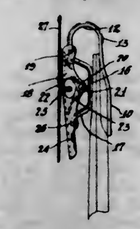
1,578,671. TESTING DEVICE. FREDERICK J. MARTIN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 19, 1923. Serial No. 646,849. 8 Claims. (Cl. 179—175.)

6. In combination, a plurality of jacks, multiple wires connecting the terminals of said jacks, and a testing device comprising a train of relays, a pair of plugs for connecting the relays to the jacks, and means for indicating the standard combination of the jacks and multiple wires.



1,578,672. DESIGNATION DEVICE. HAROLD T. MARTIN, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 23, 1924. Serial No. 733,716. 11 Claims. (Cl. 179—90.)

1. A designation plate, rhombus in shape, with a character thereon, containing a hole centrally located with respect to the sides thereof.

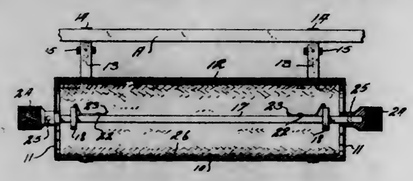


1,578,673. CUSHIONED SUPPORT FOR THE UNITS OF MOTOR VEHICLES. ALFRED F. MASURY, AUGUST H. LEIPERT, and CURT SAURER, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 18, 1921. Serial No. 476,994. 4 Claims. (Cl. 180—64.)

1. In combination with two frame members and a unit to be supported at two points thereon, rigid supporting means extending from the unit and connected thereto, housings supported by the frame members and open to receive the said supporting means, respectively, non-metallic yielding material disposed within each housing and lying generally in two vertical columns above and below the supporting means to resist yieldingly movements thereof upwardly and downwardly and horizontal columns in the plane of the supporting means to

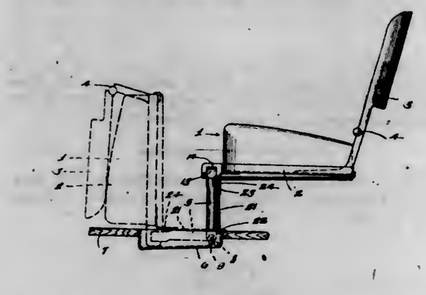
resist movements thereof horizontally, and seats for the material on the supporting means and within the housings to hold it against displacement with respect to the supporting means and housing, respectively.

1,578,674. SAFETY CLASP. ERNEST MILLER, New York, N. Y. Filed Mar. 7, 1925. Serial No. 13,813. 1 Claim. (Cl. 24—81.)



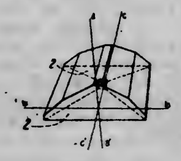
A safety-clasp of the class described, comprising a reinforced and perforated spring metal plate bent upon itself to form two parallel shanks connected by an upper bend, an inwardly extending loop or abutment formed in one of its shanks adapted to be brought closer to said other shank, a pair of clamp plates, a pin for pivotally securing and connecting the inner meeting edges of said clamp plates, knuckle members interengaging, formed at said meeting edges, above said pin, one of said clamp plates pivotally secured near its outer end to one of said shanks above the abutment formed therewith, and the other of said plates pivotally secured intermediate its ends to the same shank and acting as an operating member to break the engagement between the inner meeting edges of both clamps for varying the distance between both shanks to allow a clasping of a wallet to an inner coat pocket.

1,578,675. CURTAIN CARRIER FOR AUTOMOBILES. CLYDE B. MOON, Burr Oak, Kans. Filed Aug. 1, 1925. Serial No. 47,536. 6 Claims. (Cl. 222—29.)



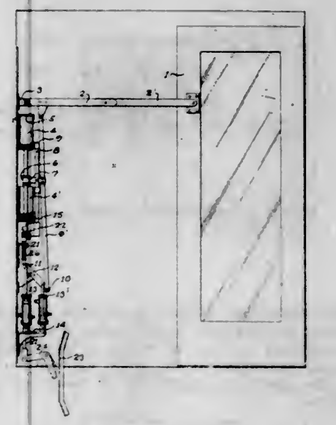
6. A curtain carrier of the character described comprising an outer case having end members, straps fastening around the case and attached to the body thereof and each formed at one point with a loop adapted to embrace

the bow of a vehicle top and said straps having means whereby they may be buckled to the case, a longitudinal shaft rotatably mounted in the ends of the case and pro-



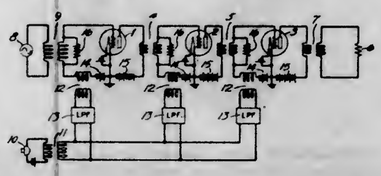
jecting outward thereof whereby the shaft may be rotated and means mounted upon the shaft whereby the margin of the curtain may be held to the shaft.

1,578,676. FOLDING AUTOMOBILE SEAT. LEWIS J. MORGAN, Syracuse, N. Y. Filed Mar. 27, 1924. Serial No. 702,383. 7 Claims. (Cl. 155—12.)



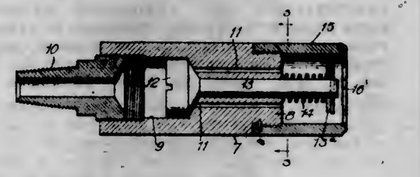
1. In a folding automobile seat, the combination of a seat body, supporting means for the body arranged when upright in a transverse plane extending at approximately a right angle to the central longitudinal plane of the vehicle body, said means being hinged at its lower end on an axis extending at an inclined angle to such central longitudinal plane of the vehicle body, and being connected at its upper end to the seat body by a combined swiveling and hinge joint, comprising a part hinged to the seat body on an axis extending at an angle to said transverse plane, and a part swivelled in the former part.

1,578,677. METHOD OF GROWING CRYSTALS. ALEXANDER M. NICOLSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1924. Serial No. 740,747. 6 Claims. (Cl. 252—1.)



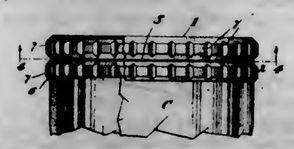
1. The method of preparing a mother liquor from which to grow hour-glass crystals of Rochelle salt, comprising dissolving Rochelle salt in water to secure complete equilibrium between the solvent and the solute, maintaining the solution at all times at a temperature not exceeding 40° C. and adjusting its density to a value between 1.37 and 1.38 (38° C./50° C.).

1,578,678. PNEUMATIC DOOR-OPERATING MECHANISM. CLIFFORD NORTON, New York, N. Y., assignor to Graham & Norton Company, New York, N. Y., a Corporation of Delaware. Filed July 7, 1923. Serial No. 650,042. 15 Claims. (Cl. 308—6.)



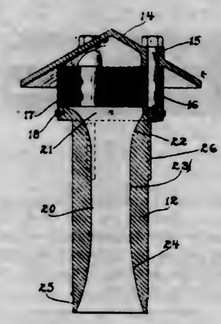
1. The combination with power actuated mechanism for imparting reciprocating motion to doors or other objects, of two dashpots each including a cylinder and a piston whose cylinders are mounted upright on their closed ends and each adapted to exert its cushioning effect as its piston descends into the lower end thereof and means connected with the door or other reciprocating object for operating said dashpot pistons in opposite directions respectively in correspondence with the opening and closing movements of the door.

1,578,679. MODULATING SYSTEM. EUGENE PETERSON, New York, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Apr. 15, 1925. Serial No. 23,232. 6 Claims. (Cl. 179—171.)



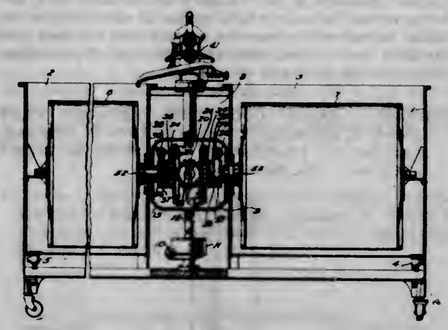
1. A modulating system comprising a plurality of space discharge amplifiers having anodes, cathodes, and control electrodes, coupling circuits for connecting said amplifiers in tandem whereby waves repeated in the space path of one amplifier are impressed upon the control electrode of the succeeding amplifier, a source of carrier waves, a source of signal waves, means for impressing simultaneously upon the control electrode of said amplifiers waves derived from both of said sources whereby the carrier wave is separately modulated in each amplifier, and means for controlling the phases of the waves in the space path of each amplifier so that the modulation products separately produced reinforce the modulation products, repeated from the preceding amplifier.

1,578,680. AUXILIARY AIR AND FUEL MIXING DEVICE. JOHN SEVILLE POOLE, Cambridge, Mass., assignor of forty-nine one-hundredths to Harold E. Garrabrant, Cambridge, Mass. Filed Feb. 9, 1924. Serial No. 691,842. 1 Claim. (Cl. 251—144.)



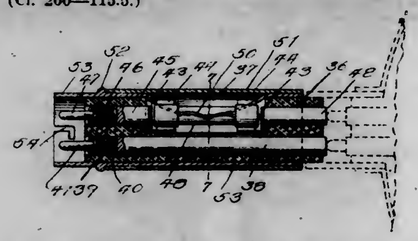
In combination with the fuel inlet manifold of an internal combustion engine, an auxiliary air introductory device, comprising a main cylindrical body portion having a central opening extending longitudinally therethrough and formed with a reduced extension on one end and a recess in its opposite end providing a valve chamber; air passages extending through said body portion substantially parallel to the central opening therein and terminating in the bottom of said recess, said passages communicating directly between said chamber and the atmosphere; a reciprocable suction-plunger normally seated within said chamber with its stem extended through said opening and adapted to open and close said air passages according to the operation of the engine; a nozzle in open communication with said valve chamber, secured to and discharging into said manifold; and an open-ended-cap secured upon the reduced extension of said body portion enclosing the extended end of the plunger stem, having an air screen secured in its open end.

1,578,681. FRICTIONAL SEALING CLOSURE. GEORGE RAMSEY, Brooklyn, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Sept. 21, 1922. Serial No. 589,584. 8 Claims. (Cl. 215—38.)



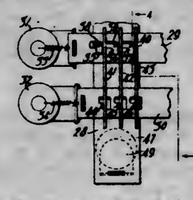
1. In a closure for containers having a substantially cylindrical sealing surface adjacent the mouth; a skirt comprising a series of corrugations extending substantially the full height of the skirt and rendering it readily expansible through a large range to size it to the individual container to which the closure may be applied, said corrugations protruding inwardly and having crests located on a circumference smaller than the sealing wall of the container for which the closure is designed whereby the corrugations grasp the sealing wall when the closure is applied; and an annular sealing bead traversing said corrugations intermediate their ends, said bead having a continuous annular crest adapted to grasp the sealing wall, said annular crest being of smaller circumference than the line of crests of said corrugations.

1,578,682. COMPRESSOR INTAKE MUFFLER. WARD RAYMOND, Easton, Pa., assignor to Pennsylvania Pump & Compressor Company, Easton, Pa., a Corporation of Pennsylvania. Filed Dec. 3, 1924. Serial No. 753,652. 6 Claims. (Cl. 137—160.)



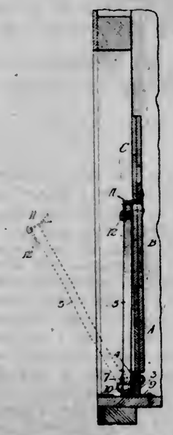
1. A compressor, an intake therefor, a conduit forming a part of said intake and having a restricted passage therethrough of material length to materially increase the velocity of the fluid entering the compressor, and velocity changing passages of varying cross section on opposite sides of said restricted passage, the restricted and velocity changing passages being circular in cross section throughout their length.

1,578,683. WASHING MACHINE. CHARLES E. REDDIG, Kew Gardens, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 4, 1921. Serial No. 512,706. 2 Claims. (Cl. 74—50.)



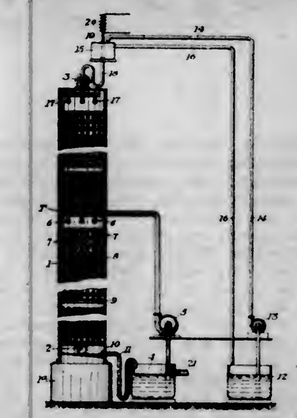
1. A device of the class described comprising a driving shaft and a pair of driven shafts, a pair of facing beveled gears loosely mounted on said driving shaft, a second pair of beveled gears meshing with said first facing gears for actuating said driven shafts, manually operated clutch members for separately disengaging said second gears, a sleeve on the driving shaft intermediate said first facing gears and rigidly secured to said driving shaft, a driving lever on said sleeve adapted to automatically alternately engage said first facing gears, and a securing device on one end of said sleeve for holding the same against vibrations, comprising spring members in said sleeve having rounded ends in contact with said lever on longitudinally opposite sides thereof, said lever having beveled edges in the portion adjacent said spring members to permit the passage of that portion of the lever between said spring members and a set screw for each spring member to regulate the tension therein.

1,578,684. FUSE PLUG. ALVA G. RICE, Danville, Iowa. Filed June 11, 1923. Serial No. 644,670. 8 Claims. (Cl. 200—115.5.)



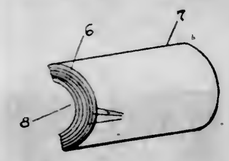
1. A fuse plug for headlights including a cylindrical member having an opening on one face, clamps disposed within said member and immediately opposite said opening, a fuse adapted to be disposed in said clamps, and electrical connections passing from the clamps through the extremities of the member.

1,578,685. ELECTRICAL SWITCHING DEVICE. CHARLES D. RICHARD, New Brighton, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 6, 1922. Serial No. 599,258. 9 Claims. (Cl. 179—27.5.)



1. The combination in a switch device of two sets of contact elements, a pair of operating members each having apertures through which certain of said contacts normally extend, and means for moving said members, said members cooperating with each other to effect engagement between said sets of contacts.

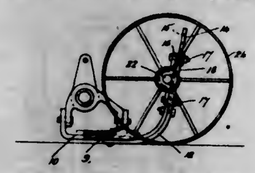
1,578,686. GRAIN DOOR FOR FREIGHT CARS. JOSEPH A. SCHMITZ, Chicago, and ADYN E. SCHUYLER, Evanston, Ill. Filed Apr. 19, 1924. Serial No. 707,573. 15 Claims. (Cl. 20—30.)



1. The combination of a lower destructible closure member for a car closure which includes horizontal door sections, said member including an intermediate splicing section and lapping end sections lightly secured to said intermediate section, and an exterior upwardly extending wrench bar secured to said splicing section, said wrench bar being detachably anchored to the car floor and detachably connected at its upper end with the car frame adjacent the side of the door opening.

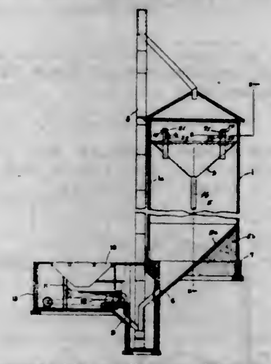
1,578,687. PROCESS FOR THE REMOVAL OF NAPHTHALENE AND ANALOGOUS HYDROCARBONS FROM FUEL GASES. FREDERICK W. SPEAR, Jr., Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 26, 1925. Serial No. 4,686. 19 Claims. (Cl. 183—114.6.)

1 The process of removing naphthalene from flowing fuel gas, which includes recirculating a solvent through the flowing gas, and subjecting the same gas to substantially uncontaminated solvent after it has passed through the re-circulating stage, substantially as described.



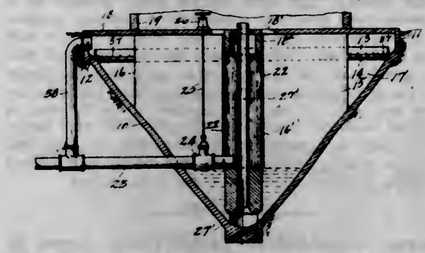
1,578,688. PLASTER-OF-PARIS BANDAGE. EDWIN A. SPIES, Pelham, N. Y. Filed Sept. 24, 1924. Serial No. 739,622. 5 Claims. (Cl. 128—91.)

1. A plaster of Paris bandage adapted to be formed into an efficient, comfortable, neat appearing and easily constructed anatomical support for various portions of the human body, comprising, in combination, a loosely woven non-selvage cotton cloth or gauze of 28/32 to 42/48 mesh sized with starch or glue and weighing 2 to 3 ounces per square yard, a uniformly distributed layer of dry plaster of Paris amounting to 6 to 7 ounces per square yard of cloth and the cloth and plaster being wound into a completed roll with a tension of 1 to 3 ounces per inch width of cloth with a core hole approximately 1" in diameter.



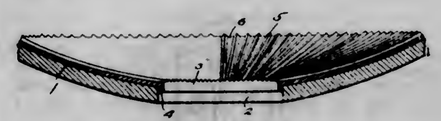
1,578,689. MOWING MACHINE. JOHN P. SPILGER, Reynolds, Ill. Filed May 18, 1925. Serial No. 31,008. 2 Claims. (Cl. 56—282.)

1. At attachment for a mowing machine provided with an inner shoe for running on the ground, and a cutter bar supported by the said shoe; said attachment comprising a bar having a curved portion between its ends, a straight upright forming one end portion of the bar, and means for securing its other end portion to the said inner shoe, an adjustable slide mounted on the said upright, a bracket provided with a loop-shaped bearing, a



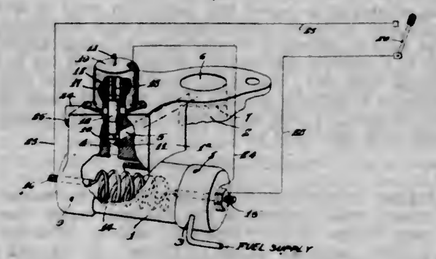
stub axle arranged in the loop-shaped bearing, means for securing the said bracket to the slide and clamping the stub axle between it and the slide, and a ground wheel mounted on one end portion of the stub axle and arranged in front of the cutter bar.

1,578,690. STORAGE BIN. EARL D. STEARNS, Cleveland, Ohio, assignor to The Stearns Conveyor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 10, 1925. Serial No. 1,525. 14 Claims. (Cl. 214—16.)



1. A storage bin or silo comprising an upright, cylindrical wall, a cross wall disposed within the lower part of the upright wall, and a conically shaped cross wall disposed within the upper part of the upright wall, the said cross walls cooperating with the said upright wall to form dead and live storage hoppers respectively, the said live storage hopper having overflow openings through which material may be discharged into the dead storage hopper.

1,578,691. SEWAGE AND WATER CLARIFYING TANK. HENRY L. THACKWELL, Dallas, Tex., assignor of one-half to Fred A. Jones, Dallas, Tex. Filed Apr. 16, 1925. Serial No. 23,442. 14 Claims. (Cl. 210—7.)

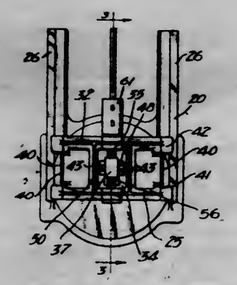


1. In a sewage and water clarifier, a tank having a sludge hopper at its bottom, means for directing the effluent radially toward the center of the tank, a filtering barrier at the center of the tank, and a clear water well within the barrier.

1,578,692. SANITARY NEST LINING. ORVILLE A. THRASHER, deceased, late of American Fork, Utah, by Mark H. Greene, administrator, Salt Lake City, Utah. Filed Aug. 5, 1925. Serial No. 48,358. 3 Claims. (Cl. 119—45.)

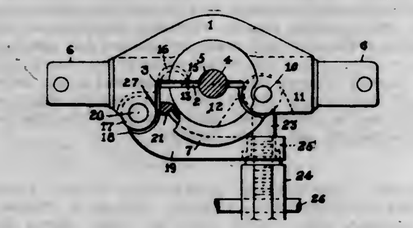
1. A dish-shaped nest lining having an opening therein with a flange surrounding it and extending outwardly, and a plurality of ribs radiating from said opening to form egg supports.

1,578,693. PRIMER FOR INTERNAL-COMBUSTION ENGINES. SERGIUS VERNET, Syracuse, N. Y., assignor to H. H. Franklin Manufacturing Company, Syracuse, N. Y., a Corporation of New York. Filed May 25, 1921. Serial No. 472,468. 1 Claim. (Cl. 123—180.)



A primer for internal combustion engines comprising a heating chamber extending in a general horizontal direction and a heating element extending lengthwise of the horizontal chamber, said chamber having a fuel inlet and an air enlet at one end of the chamber near one end of the heating element and an air inlet and a gas outlet at the other end of the chamber and near the other end of the heating element and means for controlling the flow of the mixture out of the chamber.

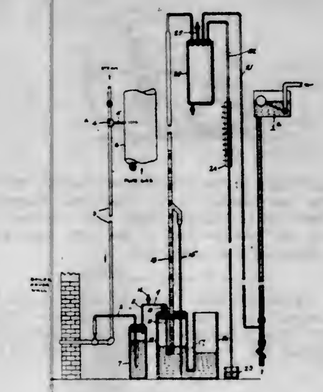
1,578,694. METHOD OF SEPARATING METAL FROM METALLIFEROUS MATERIAL. LELAND E. WEMPLE, Cleveland, Ohio. Filed Nov. 16, 1923. Serial No. 675,028. 1 Claim. (Cl. 75—17.)



A process which comprises blasting into a heated furnace chamber, a mixture of metalliferous material containing a volatilizable metal, solid carbonaceous fuel and flux, the ingredients being in proportions sufficient to wholly reduce the metalliferous material, also maintaining heating means in said chamber, separate from the blast of said mixture of fuel, flux and metalliferous material and thereby maintaining in said chamber a temperature high enough to vaporize substantially all of said vaporizable metal, causing the vaporized and fumed material to travel through a tortuous passage, while hot and while maintaining oxidizing conditions therein during a part at least of said travel, and thereafter collecting the oxidized vaporizable metal, substantially free from slag.

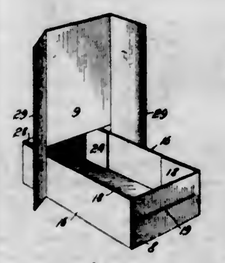
1,578,695. GATE VALVE. EDWARD D. WESTRIP, Pomona, Calif., assignor to The Pomona Manufacturing Company, a Corporation of California. Filed Jan. 16, 1923. Serial No. 613,040. 5 Claims. (Cl. 251—56.)

1. In a gate valve of the class described, the combination of: a valve seat; a carrier comprising an H-casting adapted to be moved into position in front of said valve seat; a closure element supported upon said carrier and movable thereupon between pairs of guides extending in a direction substantially perpendicular to the face of said valve seat; and means, comprising a lever actuatable by a vertically movable block, for sliding said closure element, on said perpendicular guide, into engagement with said valve seat.



1,578,696. POLISH-ROD CLAMP. CLYDE S. WRIGHT, Toledo, Ohio, assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 7, 1925. Serial No. 61,150. 2 Claims. (Cl. 24—249.)

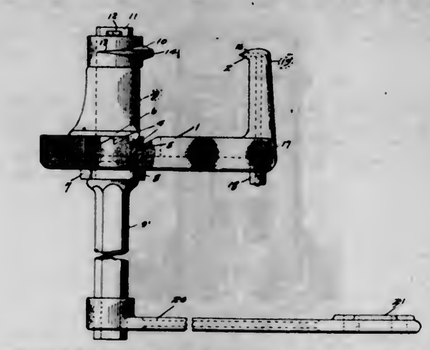
1. A body member having a rod-engaging surface, a body gate member hinged at one end to the body member at one side of said surface, a clamping gate hinged at one end to the body member at the opposite side of the said surface and having a portion close to its pivot to engage the free end of the body gate member and force the latter toward the body member and into gripping contact with a rod engaging the said surface, and power means carried by one of the said members and applicable to the free end of the clamping gate member to increase the pressure of the said portion against the body gate.



1,578,697. AUTOMATIC GAS ANALYZER AND CONTROL. LAWRENCE YOUNG and GILBERT W. RUGGLES, Youngstown, Ohio. Filed June 15, 1922. Serial No. 568,563. 18 Claims. (Cl. 23—255.)

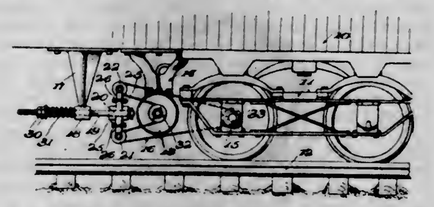
1. In an apparatus for analyzing gaseous mixtures, the combination of a vessel containing a liquid capable of absorbing a constituent of such mixture, said vessel including two parts connected below the level of such liquid, one part sealed and the other open to the atmosphere, an absorption tube rising from below the liquid level in such sealed part, a branch tube extending from the side of said absorption tube back to said sealed

vessel part, a gas supply duct discharging into the lower end of said absorption tube, and means for placing the latter under suction.



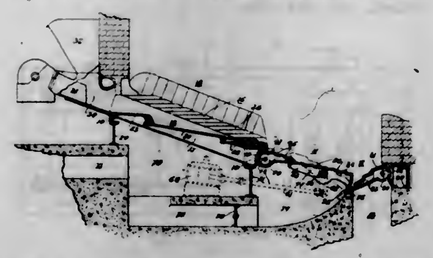
1,578,698. MERCHANDISE-DISPLAY BOX. WALTER ZAREKO, New York, N. Y. Filed June 24, 1924. Serial No. 722,001. 4 Claims. (Cl. 206—44.)

1. A merchandise display box of the character described comprising a body portion having a bottom, sides and ends, and a cover portion hinged at its rear end to the rear end of said body portion and comprising a main section adapted to cover said body portion and side wings at the side edges of said main section and carried thereby, said main section being divided by a transverse fold line into a major front display portion and a rear section and said wings being joined to said major portion and free of said rear section, and said rear section of the cover portion extending forwardly over the body portion and positioning said fold line between the ends of the body portion when the box is used and when not used for display, whereby said major portion may be turned vertically upwards on said fold line into display position with the wings and extend above the body portion between the ends thereof.



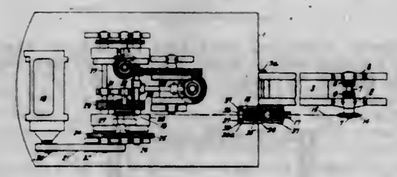
1,578,699. LEAF-SPRING LUBRICATOR. RALPH W. AMMONS, Los Angeles, Calif. Filed Nov. 19, 1924. Serial No. 750,910. 3 Claims. (Cl. 81—3.7.)

1. A leaf spring spreader comprising a bracket, a wedge jaw projecting from one side of the bracket, a shaft extending entirely through the bracket and revolvably supported thereon while projecting from both sides thereof, a spreader disk eccentrically secured to the shaft on the jaw side of the bracket adapted to cooperate with



the jaw for spreading a leaf spring, the extension of the shaft on the other side of the bracket being accessible for revolving the spreader disk.

1,578,700. BELT TENSIONING AND ADJUSTING APPARATUS. ALFRED FITZ ROY ANDERSON, New York, N. Y. Filed July 27, 1925. Serial No. 46,218. 8 Claims. (Cl. 105—103.)



1. In combination, a railway car having a supporting truck, a pair of belt tensioning pulleys carried by the car and located at the rear of an axle of said truck, a drive belt trained about the axle and each of the tensioning pulleys, and a driven pulley located between the tensioning pulley and axle, and the portion of the belt occurring between the tensioning pulleys trained about said driven pulley.

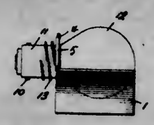
1,578,701. AGITATOR GRATE FOR UNDERFEED STOKERS. OTTO ABAM, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 4, 1923. Serial No. 643,368. 3 Claims. (Cl. 110—44.)

1. In a stoker, the combination with an underfeed grate, of an inclined overfeed grate receiving fuel therefrom and comprising two oscillating grate sections, the forward grate section being pivoted at its forward end and the rear grate section being pivoted at a central portion, said grate sections being so associated that the oscillation of the rear grate section also effects an oscillation of the forward grate section, and means for oscillating the rear grate section.

1,578,702. POWER SHOVEL. EDWIN J. ARMSTRONG, Erie, Pa., assignor to Erie Steam Shovel Company, Erie, Pa., a Corporation of Pennsylvania. Filed Apr. 5, 1924. Serial No. 704,415. 7 Claims. (Cl. 214—135.)

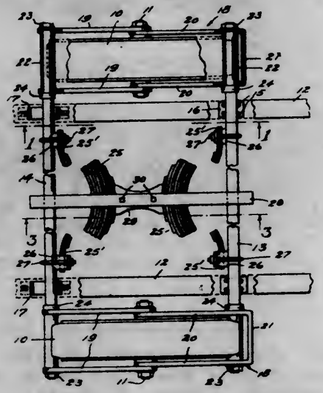
1. In an excavating machine, the combination of a platform; a boom pivotally mounted on the platform; a shaft mounted on the boom; an excavating device actuated by the shaft; a driven sprocket fixed on the shaft; a motor on the platform; a driving sprocket driven by the motor; a chain connecting the driving and driven sprockets; and guide sheaves for each reach of the chain adjacent to the pivot of the boom, said sheaves being positioned relatively to the pivoted boom to retain an approximately constant tension on the chain as the boom is swung.

1,578,703. ARTIFICIAL-FLOWER ORNAMENT. SIMON ARONSON, Brookline, Mass. Filed Aug. 14, 1925. Serial No. 50,333. 5 Claims. (Cl. 41—12.)



8. An ornament of the class described comprising a plurality of artificial flowers each having a wire stem, a narrow strip of long-haired fur bent back on itself thereby to cause the hair to assume a fan shape and to form an eye in the loop of the bent strip, a reinforcing strip to which the bent fur is secured, said fur being situated immediately behind the flowers, and the wire stem of one of the flowers being passed through the hair over the end of the reinforcing strip and then forwardly through the latter and said eye, thereby locking the fur to the flowers.

1,578,704. HEADLIGHT LAMP. WILLIAM M. ASH, Jr., Alton, Ill. Filed May 4, 1925. Serial No. 27,934. 2 Claims. (Cl. 240—48.6.)

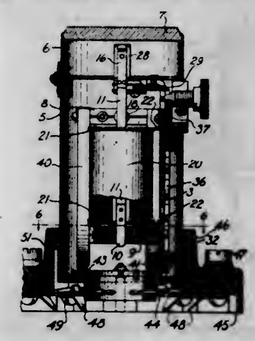


1. A shield for the purpose set forth constructed from a single sheet metal which is centrally bent upon itself

to provide right-angular sides, said member being slit from one of its ends in line with the juncture of the

sides and the metal in the terminal of the slit being bent in opposite directions on the respective sides to provide a two-ply back for the shield.

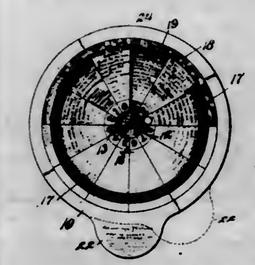
1,578,705. RUNNING GEAR FOR VEHICLES. SAMUEL G. BARNARD, Seattle, Wash. Filed Jan. 16, 1924. Serial No. 686,536. 3 Claims. (Cl. 180—106.5.)



1. In a vehicle, the combination with the vehicle wheels, the axle spindles therefor, and the frame members, of transversely arranged bars connected for relative longitudinal movements to said frame members, hanger members connecting both of said bars with the spindles of said wheels for movement concentric to the axis of the latter, and springs located between said bars acting through the medium of the latter for yieldingly holding the lower ends of the hangers of one bar in spaced apart relations with respect to the hangers of the other bar.

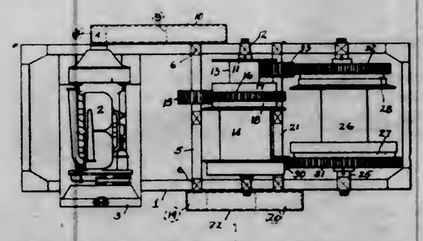
1,578,706. ENAMELING METAL. WESLEY J. BECK and JAMES A. AUPPERLE, Middletown, Ohio, assignors to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Nov. 16, 1923. Serial No. 675,207. 3 Claims. (Cl. 148—31.)

1. An article used for receiving a coating of enamel in the presence of heat, formed of open hearth or similar ingot iron refined to a stage where the manganese content is below .04% and degasification has taken place to the extent of leaving a substantially sound metal, and not to the extent of eliminating all of the oxide content, the said iron exhibiting under the microscope numerous well distributed spots of oxide in the surface and through the body thereof.



1,578,707. ELECTROMAGNETIC DEVICE. WILLIAM O. BECK, Ridgefield, N. J., assignor to Western Electrict Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 20, 1922. Serial No. 602,072. 8 Claims. (Cl. 200—93.)

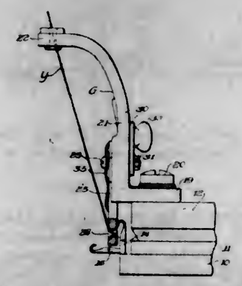
4. In an electromagnetic device, an operating coil, an armature surrounded by said coil and acted upon by flux produced by the passage of a current through said coil, a pair of stationary contacts engaged by said armature, contact carrying members, a support for said contact carrying members having a plurality of flexible



branches, and means for causing the lateral movement of said branches and accordingly the movement of said contact carrying members.

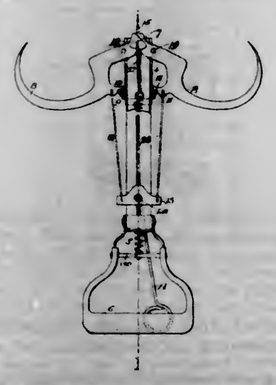
1,578,708. GAME DEVICE. GENE G. BECKHARDT, Newark, N. J. Filed Oct. 3, 1923. Serial No. 666,226. 2 Claims. (Cl. 273—141.)

1. An amusement device comprising a pair of discs pivoted at the centre, the top disc having an opening to uncover parts of the bottom disc, tabs on the edges of the discs which tabs when in register form a handle to enable the device to be used as a fan and when separated being usable as handles for the relative rotation of the discs.



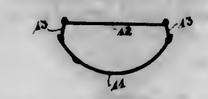
1,578,709. ENGINE FOR LOG YARDING, SKIDDING, ETC. OSCAR B. BJORGE, Portland, Oreg., assignor to Clyde Iron Works, Duluth, Minn., a Corporation of Maine. Filed Aug. 12, 1925. Serial No. 49,747. 5 Claims. (Cl. 254—185.)

1. In a yarding engine, the combination of a base, a motor unit and driving shaft mounted at one end thereof, a pair of spaced driven shafts mounted on said base, driving chain connections between said driving



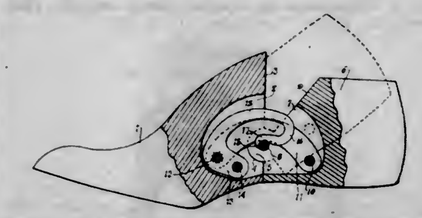
shaft and said driven shafts whereby the latter are rotated in the same direction at different speeds, a second pair of spaced shafts mounted on said base, winding drums on said last-named pair of shafts, and gears on said driven shafts and said drum shafts whereby both of said drum shafts are driven in the same direction.

1,578,710. YARN GUIDE. ARTHUR E. BYRD, Milwaukee, Wis., assignor to Phoenix Hosiery Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 24, 1925. Serial No. 45,747. 4 Claims. (Cl. 66—141.)



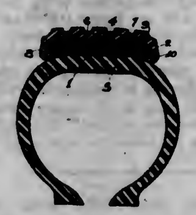
1. In a circular knitting machine, the combination of the needle cylinder and vertically reciprocating needles thereon, a bracket supported above said cylinder and having a yarn guide arm, a supporting plate vertically adjustable on the rear side of said arm, a yarn guide plate reciprocable vertically along the front of said arm and secured to said supporting plate to be adjustable therewith, the lower end of said guide plate being in front of the reciprocating needles and having a yarn guide opening therethrough through which yarn may pass to be received by the needles, and a spring anchored at its upper end to said guide plate and pressing at its lower end against said guide plate to hold it yieldably toward said needles whereby the engagement between said guide plates and needles will be yielding.

1,578,711. COMBINATION FISHING GAFF. ADELBERT E. CHURCHILL, Victoria, British Columbia, Canada. Filed Mar. 11, 1922. Serial No. 543,031. 5 Claims. (Cl. 43—5.)



1. In a fishing device of the type described, the combination of a metal sleeve enclosing a helical spring attached to the heels of two hooks which are each pivoted to the said tube, a tripping ring exterior to and sliding along said tube with recesses engaging projections on the outside of said hooks, and means for releasing the said tripping ring from said hook projections.

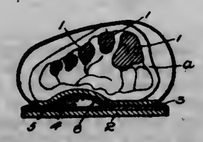
1,578,712. SECURITY DEVICE FOR CLOTHING. WILLIAM R. CLARK, San Diego, Calif. Filed Jan. 13, 1925, Serial No. 2,127. Renewed Jan. 30, 1926. 2 Claims. (Cl. 2—252.)



1. In a safety device of the class described, a main spring member of a length to fit into the opening of a pocket, a second spring member of slightly shorter length, link-members engaged between the ends of the two-spring members, and other spring members disposed between the first- and second-named spring-members in operative connection with the link-members to form a yielding tension between the said members whereby the first- and second-named members are normally pressed towards each other.

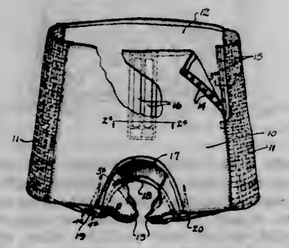
1,578,713. LAST. GEORGE CLAUSING, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed Apr. 27, 1925. Serial No. 26,034. 13 Claims. (Cl. 12—136.)

1. In a last, a toe part and a heel part adapted to move one on the other, a link joining said parts, a spring lever pivoted on one side of said parts and engaging the other of said parts, one end of said link being pivoted on said spring lever and the other pivoted on another last part than that associated with its point of pivotal connection with the spring lever, and an abutment pin carried by one of said last parts against which the end of the spring lever engages.



1,578,714. TIRE PROTECTOR. CHARLES M. CLEMENT, San Rafael, Calif. Filed Apr. 13, 1925. Serial No. 22,601. 2 Claims. (Cl. 152—17.)

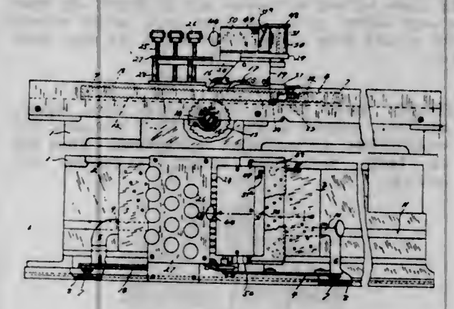
1. A tire protector comprising in combination, a metal band adapted to encircle a tire having its edges turned under, a pair of wire rings fitting inside the turned under edges of the metal band, a pair of encircling layers of



fabric located on the outside and inside surface of the metal band between the turned under edges thereof, a wire lacing extending over the layers of fabric and across the metal band, a cloth wrapping extending transversely over the metal band, wire lacing and layers of fabric, and a resilient substance attached to the outer surface of the cloth.

1,578,715. ARCH-SUPPORTING MEMBER. WILLIAM H. COOKE, Dorchester, Mass. Filed Jan. 31, 1920. Serial No. 355,352. 13 Claims. (Cl. 36—71.)

6. A shoe having an upper and an insole, and beneath the latter a laterally yieldable filler, and an arch supporting member thereon constructed and arranged to position itself laterally beneath the metatarsal arch to support the same.

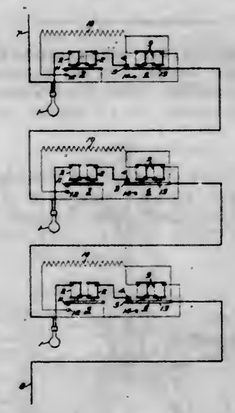


1,578,716. CORSET. KATHERINE E. CUNNINGHAM, Chicago, Ill., assignor to The H. W. Gossard Co., Chicago, Ill., a Corporation of Illinois. Filed July 23, 1925. Serial No. 45,534. 3 Claims. (Cl. 2—29.)

3. A girdle like corset shaped to closely fit the lower body below the waist to and around the upper thighs below the crotch comprising front and rear inelastic portions and longitudinal side elastic sections extending substantially the full length of the corset to effect the desired fit when stretched, the front and rear portions of the corset extending respectively across the abdomen and across the buttocks, each portion being cut away at and below the crotch, and an inner leg band on each side adjacent the crotch connecting the front and rear cut away portions, said bands having relatively wide attaching ends and narrow intermediate portions fitting the body contour whereby in conjunction with said elastic sections to laterally pull in the lower outer portions of the corset and cause the garment to completely fit from top to bottom and to normally remain in position.

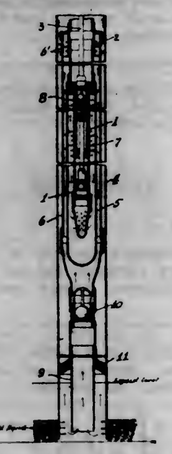
1,578,717. ERROR INDICATOR FOR TABULATION CARDS. DEWEY C. DAUDMEYER, Detroit, Mich. Filed Sept. 25, 1922. Serial No. 590,473. 14 Claims. (Cl. 73—51.)

1. In an error indicator, the combination with means for rectilinearly advancing a perforated sheet, and control devices adapted to yieldably bear upon said sheet and proportioned to enter the perforations of the sheet,



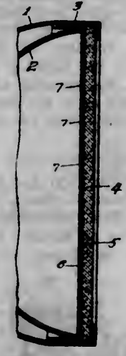
and a signal device responsive to said control devices only through simultaneous energization of a plurality thereof.

1,578,718. METHOD OF PRODUCING ALKALI-METAL SULPHIDES. GASTON DE BÉTHUNE and ROBERT VAN-RENKAMPF, Brussels, Belgium, assignors to Société Nationale d'Industrie Chimique en Belgique, Société Anonyme, Brussels, Belgium. Filed Jan. 16, 1924. Serial No. 686,669. 5 Claims. (Cl. 23—134.)



1. The process of obtaining sulphides of alkali metals which comprises creating a reducing atmosphere of hydrogen sulphide from an external source and effecting in said atmosphere a double decomposition of compounds of the alkali metals derived from mineral acids and sulphide of barium to produce a sulphydrate.

1,578,719. LIGHTING SYSTEM. ARTHUR R. DENNINGTON, East Orange, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 24, 1920. Serial No. 412,423. 3 Claims. (Cl. 176—10.)

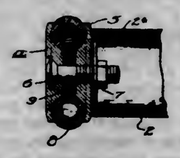


1. In a series lighting system, the combination with a lamp, a compensating resistor therefor, and an electromagnetic switch comprising a coil in series with the lamp and contact members for controlling the resistor circuit connections, of an electromagnetic relay comprising a coil responsive to the drop in potential across the lamp and contact members for controlling the circuit of the first named switch coil.

1,578,720. OIL-WELL PUMP. EARLE DERBY, San Francisco, Calif. Filed Sept. 8, 1925. Serial No. 54,888. 4 Claims. (Cl. 103—179.)

1. An oil-well pump comprising an entrance tube extending below the oil level in the well; a packer in the well above said oil level closing the well around the entrance tube; a check valve in said entrance tube; a pipe communicating at its lower end with the upper end of the entrance tube, said pipe communicating above with the well; a second pipe within and spaced from the first named pipe, said inner pipe having a closed lower end and communicating above with the outer pipe; and a pumping instrumentality within the inner pipe.

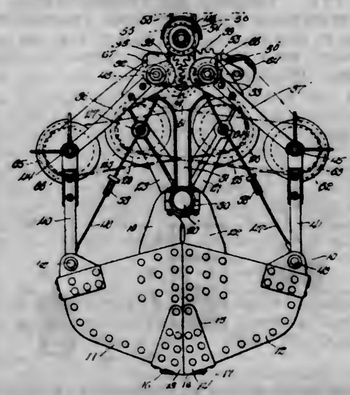
1,578,721. ANTIGLARE DEVICE FOR HEADLIGHTS. LAMBERT DIESEL, Chicago, Ill. Filed Sept. 12, 1925. Serial No. 55,900. 2 Claims. (Cl. 240—48.4.)



1. An anti-glare device for headlights, comprising two relatively thin flat discs of translucent material, said discs being placed one against the other and being substantially equal in size so as to be coextensive, one of said discs being imperforate, and the other disc having a plurality of holes distributed over the same and covered by the other disc.

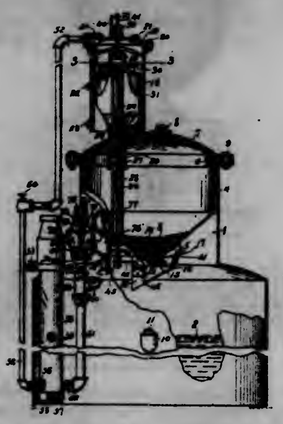
1,578,722. INDICATING INSTRUMENT. THEODORE B. DRESCHER, Rochester, N. Y. Filed Jan. 20, 1923. Serial No. 613,901. 7 Claims. (Cl. 73—52.)

7. In a device of the class described, the combination of a frame for a temperature responsive element including a base having oppositely extending arms with their free ends provided with offset portions terminating in juxtaposition and each of the arms being provided with an inwardly extending rib, a pair of crystals substantially in the form of hemispheres having their bases disposed on the opposite sides of said ribs, and in engagement with the inner faces of said arms, and means for connecting the offset portions of the arms to clamp them upon the crystals.



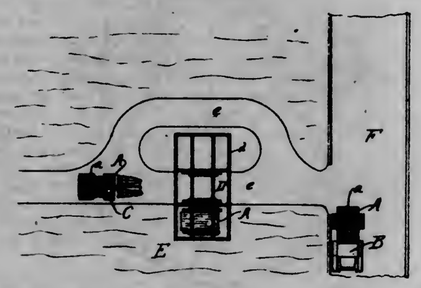
1,578,723. PNEUMATIC AND CUSHION HEAD. MEL FELLOWS, Chicago, Ill. Filed Nov. 22, 1921. Serial No. 517,088. 4 Claims. (Cl. 243—39.)

1. In a pneumatic tube system, a carrier having circular members and detachable spacing members therebetween, and an elastic washer between said members.



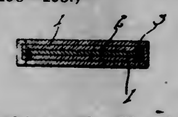
1,578,724. GRAB BUCKET. WILKS B. GREGG, Chicago, Ill. Filed May 23, 1924. Serial No. 715,346. 14 Claims. (Cl. 37—185.)

1. In a grab bucket, the combination of hinged jaws, flexible holding means engaging with the outer portions of the jaws, oppositely arranged arms coacting with the jaws, a supporting frame in which the jaws are pivotally



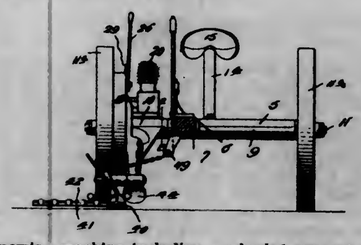
mounted, sheaves mounted on said frame and on said arms and a lifting cable roved around said pulley and having one end secured to said frame, said cable tending to swing the arms toward each other when the bucket is to be closed.

1,578,725. ACETYLENE GENERATOR. ISAAC M. HACKNEY, Wichita, Kans. Filed Aug. 6, 1920. Serial No. 401,707. 11 Claims. (Cl. 48—52.)



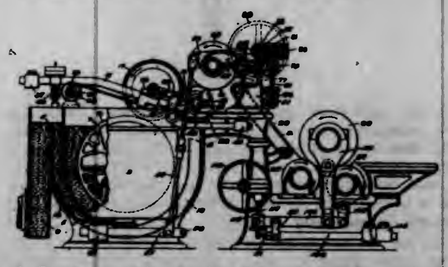
1. In an acetylene generator, a gas container having an outlet for gas, a gas generating chamber arranged to contain water, means for feeding carbide into the water, two gas conducting means connected with the generating chamber and discharging into said gas container, means for reducing the flow in one of said conducting means when the pressure in the generating chamber is below a pre-determined amount and which permits the flow when the pressure reaches said amount, the other conducting means being adapted to contain a sealing liquid, a gas bell in said liquid sealing means arranged to receive gas and to be lifted thereby and to discharge the gas so received through said sealing liquid, and means actuated by movement of said gas bell for actuating the carbide feeding means.

1,578,726. METHOD OF TRANSFERRING AND TRANSPORTING ARTICLES AND COMMODITIES. ERNEST C. HAMILTON and WILLIAM C. POE, Los Alamitos, Calif. Filed Nov. 10, 1923. Serial No. 673,932. 3 Claims. (Cl. 214—152.)



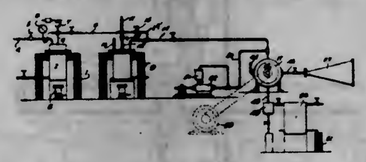
1. A continuous method of transporting products from the growing field to destination which consists first in placing the product in a bulk container on a low speed road vehicle operating in the field, moving said vehicle to a transfer apparatus located at a point adjacent a highway, then operating said apparatus to bodily transfer the loaded bulk container from the low-speed vehicle to the relatively high-speed vehicle and during the said transfer operation to place an empty container on the low-speed vehicle, and subsequently operating the relatively high-speed vehicle with its loaded bulk container to the point of destination.

1,578,727. BELT. ZELL FULTON HARSHTON, Chicago, Ill. Filed Nov. 16, 1922. Serial No. 601,800. 3 Claims. (Cl. 198—193.)



2. A belt comprising a plurality of plies constituting the core of a belt, an insulating ply disposed in said plies so as to be protected thereby, and a cover disposed around said core.

1,578,728. MOWING MACHINE. MARK HASTINGS, Ridgefield, Conn. Filed Jan. 11, 1924. Serial No. 685,681. 1 Claim. (Cl. 56—25.)

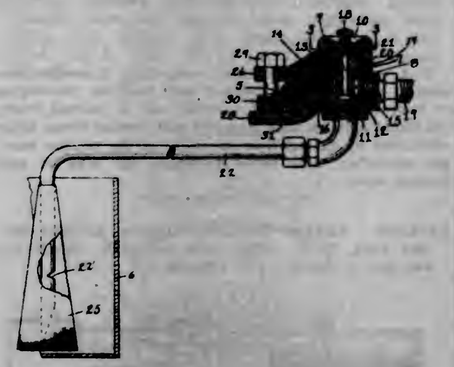


A mowing machine including a wheeled supported axle, a housing rotatably mounted upon the axle and provided with a casing section, a platform mounted upon the casing section, an engine supported on said platform, a belt wheel journaled upon the housing and disposed within the casing section, a second belt wheel operatively connected with the engine, said casing section provided with an opening, a belt trained over the wheels and extending through the opening, an extension of tubular formation provided on the housing, a cutting apparatus pivotally attached to the housing extension, a shaft in the extension connected with the cutting apparatus, and gearing operatively connecting the shaft with the first wheel.

1,578,729. METHOD OF AND APPARATUS FOR MAKING PAPER. ANTON J. HAUG, Nashua, N. H., assignor to Improved Paper Machinery Company, Nashua, N. H., a Corporation of Maine. Filed Mar. 22, 1924. Serial No. 701,118. 29 Claims. Cl. 92—43.)

1. In an apparatus for handling a moist fibre web, the combination with a train of rotary members adapted to convey the web in succession from one to another, the same comprising a cylinder mold, a couch roll, a perforated expressing roll pressed against the couch roll and a press roll pressed against the perforated expressing roll, of provision permitting relative separation of said rotary members at the three points of engagement each without affecting the relation between the remaining members.

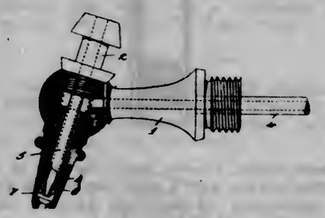
1,578,730. APPARATUS FOR TESTING OILS. ALFRED HENRIKSEN, NICHOLAS A. STEPHENS, and VALENTINE ZBYSHEVSKI, Ponca City, Okla. Filed Feb. 26, 1924. Serial No. 695,341. 6 Claims. (Cl. 265—11.)



1. In an apparatus for testing the lubricating qualities of oil for steam engines, a testing cylinder, a driven member arranged in said cylinder, and adapted to be driven at a predetermined speed, means for delivering steam to said cylinder, and means for delivering predetermined quantities of oil thereto.

1,578,731. PROCESS OF PRODUCING DIALKYL SELENIDES AND TELLURIDES. CARROLL ALONSO HOCHWALT, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 3, 1923. Serial No. 666,260. 6 Claims. (Cl. 260—11.)

1. The process of producing a dialkyl compound of a metal of the selenium type which comprises forming an alkali metal alloy with the said metal, and bringing the alloy into contact with a dialkyl sulphate.



1,578,732. SPRAYING MACHINE. E MILTON HORTON, Albion, Mich., assignor, by mesne assignments, to Union Steel Products Company, Albion, Mich., a Corporation of Michigan. Filed Aug. 7, 1924. Serial No. 730,762. 3 Claims. (Cl. 299—86.)

1. In a spray nozzle, the combination of an outer member having a cylindrical chamber therein terminating at one end in a conically tapered throat opening to a countersunk tip, an inner member threaded into the bottom of said chamber and having a longitudinally grooved cylindrical portion fitting within said chamber, and a conical portion projecting through said throat and spaced from the wall thereof and terminating in a flaring tip spaced from the countersunk tip of said outer member, said inner member having a reduced portion between its cylindrical and threaded portions, said reduced portion and longitudinal grooves coacting with the walls of the chamber providing discharge passages, said chamber having an air connection opening to said passages, said inner member having a longitudinal liquid passage with discharge orifices aligned with said grooves.

3. In an apparatus of the class described, the combination of an air supply pipe, a plurality of spray nozzles having clamp members at one side thereof, a supporting rod with which said clamp members are engaged, whereby the nozzles may be adjusted thereon, flexible conduits connecting said nozzles with said air pipe, a liquid supply tank, and liquid conduits for said spray nozzles depending into said tank.

1,578,733. ATOMIZER OR SPRAY NOZZLE. STEFAN HADINA, Prachen-Selty, Czechoslovakia. Filed Dec. 16, 1925. Serial No. 75,809. 3 Claims. (Cl. 299—140.)

1. An atomiser or spraying nozzle, comprising a nozzle tube, and a concentric pressure jet tube in the bore thereof; the jet tube having its outlet end deformed to constrict the same and to produce integral centering members which are slidably engaged with the wall of the bore of the nozzle tube.

1,578,734. PIPE JOINT. ROBERT CLAPPERTON HUMB, Coburg, Victoria, Australia. Filed Sept. 21, 1925. Serial No. 57,721. 4 Claims. (Cl. 285—114.)

1. A pipe joint for concrete lined metal pipes comprising a collar surrounding the ends of two concrete lined pipes and forming an annular space therebetween and the exterior surfaces of the pipes, each pipe having a recess in the concrete lining at the end thereof; a plastic sealing material packed into the annular space around the ends of the pipes and adapted to fill the recesses in the concrete linings; and an unyielding filling material packed within the outer portions of the annular space between the plastic material and the ends of the collar.

1,578,735. RADIOWAVE RECEIVING DEVICE. HERBERT F. HUNTER and LELAND S. HANNOLD, Swedesboro, N. J. Filed May 8, 1924. Serial No. 711,842. 7 Claims. (Cl. 250—16.)

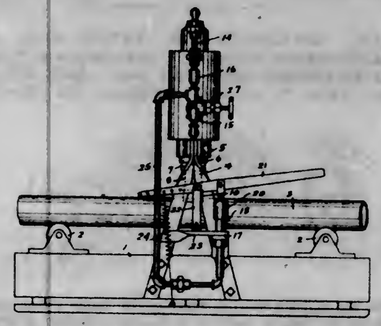
1. A device of the class described, comprising a casing, a plurality of inductance coils mounted in axial relation therein, a variable condenser mounted in one end of the casing, in line with said coils and electrically connected in parallel with the adjacent coil, binding posts on the casing, a pair of connections extending from opposite terminals of the condenser and connected coil to a pair

of binding posts, and a circuit connection between the first mentioned coil, and the coil at the opposite end, and a metallic sleeve mounted on the coil at the opposite

end of said casing, whereby said coils may be arranged in inductive relation with a radio receiving set for having circuit connections wherewith to increase the signal receiving qualities of said set.

1,578,736. BLANKET FOR PRINTING PRESSES, PROCESS FOR FORMING THE SAME, AND PROCESS OF PRINTING EMPLOYING SAME. ROBERT JOHN, New York, N. Y. Filed Jan. 26, 1925. Serial No. 4,646. 49 Claims. (Cl. 101—426.)

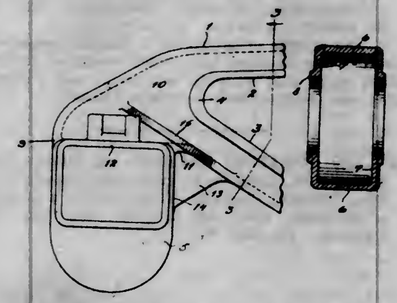
1. A printer's blanket comprising a substantially unstretched compressible face, and a substantially unperforated non-stretchable back.



13. A printer's blanket comprising a nitro-cellulose back, and a rubber face.

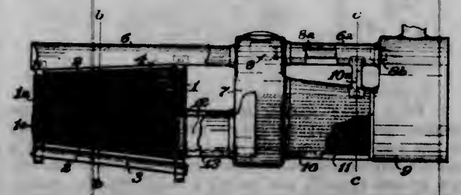
21. The combination with a rotary cylinder of a metallic base so secured thereto as to permit movement in the direction of travel of the said cylinder, and a ruber face secured to said base.

28. The process of printing comprising supporting a rubber faced blanket on a suitable member, bringing said blanket into contact with an inked surface, and permitting said blanket to move relative to said member during the printing operation.



1,578,737. BENDING AND STRAIGHTENING MACHINE. CHARLES J. JOHNSON, Wichita Falls, Tex. Filed July 15, 1924. Serial No. 726,094. 8 Claims. (Cl. 153—48.)

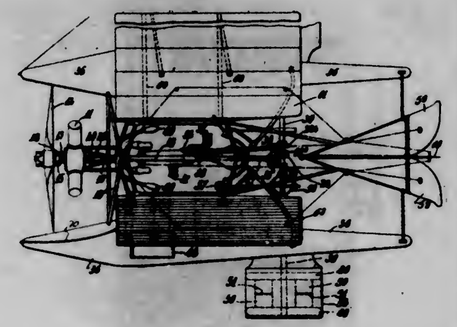
1. In a machine of the character described, the combination with a base and a pair of adjustable pipe supports spaced apart thereon, of a cylinder associated with the support, a plunger therein, a plunger rod connected at one end to the plunger and whose other end is formed into a pipe-engaging head, a coil spring surrounding said plunger for normally elevating same, a fluid chamber, a valve-controlled pressure line leading from said chamber and entering the cylinder on one side of said piston, a pump connected into said line through which fluid may be forced from said chamber into said cylinder,



whereby said head is forced against the pipe on said supports, means for operating said pump, and a valve-controlled relief line connecting said cylinder with said chamber.

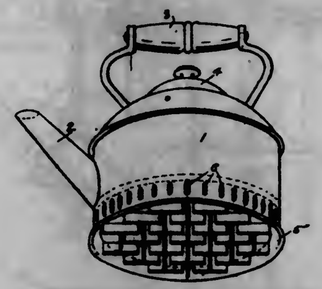
1,578,738. SIDE FRAME. BYRON W. KADEL, Baltimore, Md., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed May 5, 1925. Serial No. 28,071. 10 Claims. (Cl. 105—205.)

1. A car truck side frame comprising a compression member and a tension member, said members converging at their ends and united together and to journal boxes, the joints between said members and journal boxes being reinforced by flanges from the sides of the tension member extending from below to above the tops of said journal boxes.



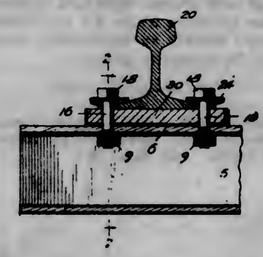
1,578,739. STEAM BOILER. JULIUS KINDERVATER, New York, N. Y. Filed June 14, 1923. Serial No. 645,294. 3 Claims. (Cl. 122—94.)

1. In a steam boiler of the locomotive type, the combination of a front and a back firebox header or water leg; a plurality of inclined water tubes, connecting said headers, and constituting the side walls of the firebox;



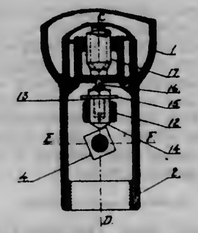
a plurality of reversely inclined water tubes, interposed between the side wall tubes and connecting said headers; arch tubes leading from the front header into members of the intermediate set of water tubes; a steam drum, communicating with the headers, above the water tubes; and a combustion chamber, communicating with the firebox.

1,578,740. MOTOR-CYCLE HYDROPLANE. JOSEF KUBELIC, New York, N. Y. Filed Mar. 12, 1925. Serial No. 14,867. 4 Claims. (Cl. 244—14.)



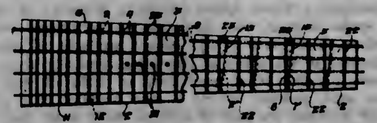
1. In a motorcycle an engine, an engine shaft, a plurality of drive wheels, a detachable means for transmitting motion from the engine to said wheels and a detachable foot pedal drive for said wheels, said transmitting means containing a pair of gears slidably mounted on said shaft, a shift gear to be moved into and out of mesh with said shaft gears and a means for controlling the position of said shift gear for connecting the engine shaft to said drive wheels when said foot pedal drive is disconnected therefrom and vice versa.

1,578,741. VESSEL FOR HEATING LIQUIDS. SYDNEY WALTER LACK and ARTHUR JAMES SHEPHERD, Woollahra, near Sydney, New South Wales, Australia. Filed Oct. 3, 1924. Serial No. 741,477. 3 Claims. (Cl. 53—9.)



1. A vessel wherein liquid is to be heated, having on the exterior face of the bottom thereof, a plurality of metal heat conduction vanes arranged in two intersecting series of parallel rows, each row of one series being intersected between its vanes by the adjacent vanes of alternate rows of the other series; passages being formed between adjacent vanes.

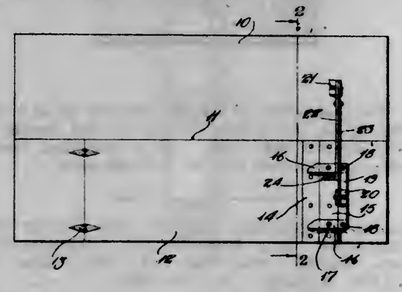
1,578,742. RAIL TIE. AUGUSTUS A. LOOMIS, Mundelein, Ill. Filed Jan. 8, 1926. Serial No. 80,052. 5 Claims. (Cl. 238—285.)



1. The combination of a hollow metallic tie, of a chair positioned on the hollow metallic tie and having upwardly directed side walls, and a cushioning element mounted on said chair between said side walls.

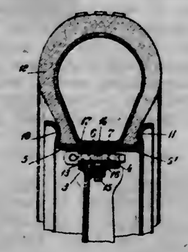
1,578,743. ACTUATING DEVICE FOR FLUID CONTROLLERS. ELOF KARL HJALMAR LUNDBERG, Stockholm, Sweden. Filed Mar. 18, 1924. Serial No. 700,148. 4 Claims. (Cl. 137—139.)

1. In a starting device for valves or the like adapted to deliver predetermined quantities of liquid the combination with a rotatable starting effecting member, provided with projections for the shifting of the valve, of a holding member connected with the said starting member and corresponding in shape thereto, and yieldable means acting upon the said holding member, the position of the holding member with relation to the starting member being such, that, after the starting member has been rotated through such a distance that is about to open the valve, the holding member causes the starting member to automatically move through such a further distance, that it opens the valve and permits the same to be closed.



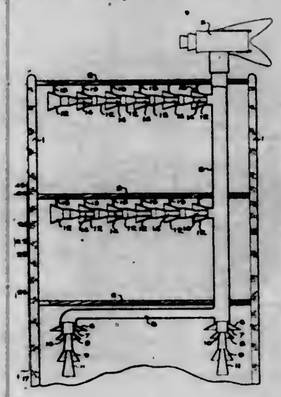
1,578,744. FINGER BOARD OF VIOLINS AND LIKE STRINGED INSTRUMENTS. CHARLES EVELYN CREASY JENSEN MANBY, Hawksburn, Melbourne, Victoria, Australia. Filed Aug. 10, 1925. Serial No. 49,406. 8 Claims. (Cl. 84—314.)

6. A finger-board for violins and like stringed instruments having in combination transverse guide grooves formed in its upper face, the edges of said grooves tapering inwardly or converging from the thicker or bass string side towards the opposite side of the finger-board, and liners of substantially L shape in cross section accom-



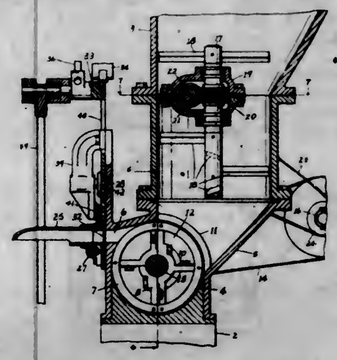
modated in said grooves so that an upstanding lip of each liner extends along the upper edge of the respective transverse groove, and a base portion of the liner engages the bottom of said groove; said base portion being provided with an extension which fits into a slot formed in the finger-board beneath an overhanging shoulder at the lower side of the respective groove.

1,578,745. END-GATE LATCH. ABE BARRETT MELLIN, Turtle Lake, N. Dak. Filed Nov. 17, 1925. Serial No. 69,671. 1 Claim. (Cl. 296—50.)



A latch device for the end gate of a vehicle having an end gate opening and provided with an end gate hinged at one side of said opening, said latch device comprising a plurality of pivoted members overlapping the edge of the gate, a link connecting said members, an angle bracket pivoted to said link, a second angle bracket pivoted to the body above said link, an operating lever pivoted to said second angle bracket at right angles to the pivot thereof, and a second link pivoted to the first angle bracket and the operating lever.

1,578,746. WHEEL FOR AUTOMOBILES AND THE LIKE. JACOB WILLEM MIJNSSEN and KARL KÜNZI, Schaffhausen, Switzerland, assignors to Aktiengesellschaft der Eisen- und Stahlwerke vorm. Georg Fischer, Schaffhausen, Switzerland. Filed Oct. 26, 1921. Serial No. 510,618. 8 Claims. (Cl. 301—12.)

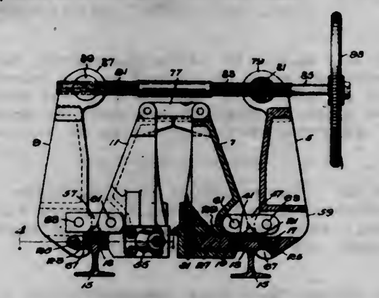


1. A wheel for automobiles and the like comprising in combination, a wheel spider having a plurality of spokes each spoke having two faces on its peripheral surface shaped to form parts of the convex surfaces of cones, a rim divided in the plane of the wheel, radially projecting members on the inner periphery of both of said rim halves, each member having a face forming part of the interior concave surface of a cone, each such face contacting with a corresponding face of the spoke ends, a pneumatic tire mounted on said rim, the distance in the axial direction between said faces on the rim halves being alterable and said contacting faces being pressed against each other by the air pressure in the inflated tire, whereby a frictional engagement between wheel spider and rim is caused and a connection between the latter is effected that can readily be severed, a locking bolt passing through the contacting faces of the wheel spider and rim for preventing the wheel spider from creeping on the rim when the air pressure in the tire fails, said locking bolt having a circular groove, and a spring-loaded pin engaging in said circular groove for keeping said bolt in position.

1,578,747. VENTILATION SYSTEM. WILLIAM HEYWOOD MOTTERSHALL, Thornhill, Ontario, Canada. Filed Aug. 16, 1923. Serial No. 657,821. 2 Claims. (Cl. 98—27.)

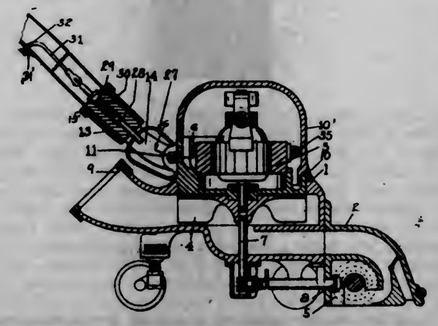
1. In ventilation systems, a plurality of spaced apart funnel shaped members, each comprising a neck portion and a coacting skirt portion, such portions longitudinally adjustable with respect to each other, each neck portion inserted into the skirt portion of the next member, such neck being of substantially less diameter than the diameter of such skirt portion, and means for holding the necks in their centred position in the skirt portions.

1,578,748. FILLING MACHINE. LEWIS D. NELSON, Coldwater, Mich., assignor of two-thirds to Robert M. Neale and William M. Hatch, both of Union City, Mich. Filed Mar. 20, 1924. Serial No. 700,567. 7 Claims. (Cl. 226—48.)



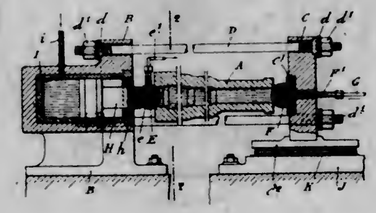
1. In a structure of the class described, the combination of a hopper, an ejector cylinder disposed so that a segmental portion of said cylinder projects into said hopper, the sides of said segmental portion being open providing side inlet openings, said cylinder having a tangentially disposed discharge opening, a rotor comprising a spider having radial blades mounted thereon and annular side members at the outer ends of said blades whereby the material to be ejected may pass laterally

to said blades from said side openings of said cylinder, and an agitator disposed in said hopper above said cylinder and provided with forwardly inclined radial arms so that they tend to lift the material upwardly, the arms being spaced to permit the material to fall between them by gravity.



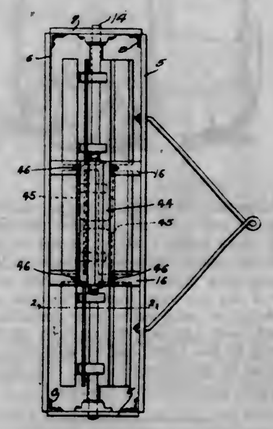
7. In a structure of the class described, the combination of a hopper, an ejector disposed below the hopper so that the material to be ejected passes thereto by gravity, and an agitator disposed in said hopper above said cylinder and acting to lift the material engaged thereby upwardly while permitting it to fall by gravity to said cylinder.

1,578,749. RAIL-CLAMPING MECHANISM. ALMON E. NORRIS, Brookline, Mass. Filed Aug. 2, 1923. Serial No. 655,301. 4 Claims. (Cl. 183—43.)



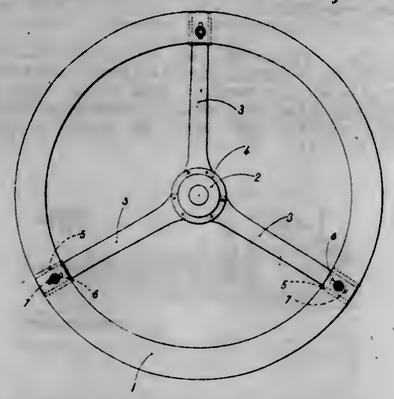
1. A device for securing a structure to a rail, comprising opposed pivotally mounted jaws operatively related to opposite sides of the rail, self-tightening clamping devices carried by one of the jaws and including a movable cam member adapted, when said jaws are moved to apply the clamping devices, to be moved through the frictional engagement of a jaw carried part with the rail to increase the grip of the jaws therein as the structure tends to move in either direction along the rail, connected mechanism comprising a screw which may be turned to close or open said jaws, said screw being movable at the will of the operator to move the jaws toward the rails to variable positions of positive setting with relation to the rail to meet varying rail dimensions, and a hand operated device for turning said screw.

1,578,750. PORTABLE ELECTRIC SUCTION CARPET SWEEPER AND CLEANER. IRA J. OWEN, Grand Rapids, Mich., assignor, by mesne assignments, to Bissell Carpet Sweeper Co., Grand Rapids, Mich., a Corporation of Michigan. Filed Apr. 17, 1922. Serial No. 553,966. 3 Claims. (Cl. 172—36.)



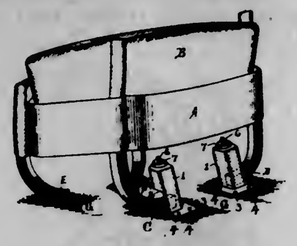
2. In an electric suction cleaner, the combination of a suitable motor and casing, a hollow handle, electric connections disposed within the hollow handle, a suitable ear on the motor casing, insulator blocks interposed between the said ear and the said handle, annular contact devices thereon, and connections therefor from the conductor within the handle to the motor within the casing, coacting as specified.

1,578,751. APPARATUS FOR PRODUCING HOOPING EFFECTS IN METAL TUBES OF GREAT STRENGTH. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Joint Stock Company. Filed July 16, 1925. Serial No. 44,072. 9 Claims. (Cl. 29—1.11.)



6. Apparatus for subjecting a tube to hydraulic pressure comprising a fixedly mounted crosshead having an opening therein, a piston in said opening, a rod for said piston, means for introducing liquid under pressure into said opening to move said piston and rod, a second crosshead, means permitting movement of said second crosshead relative to said first named crosshead, tie rods extending through said crossheads, spherical bearing members interposed between said tie rods and crossheads, and spherical members for gripping and closing the ends of said tube, one of said members having engagement with said rod and another of said members having engagement with the second named crosshead.

1,578,752. LAND ROLLER. ARTURO F. MOELLER, San Pedro, Mexico. Filed Jan. 24, 1924. Serial No. 688,261. 2 Claims. (Cl. 55—21.)

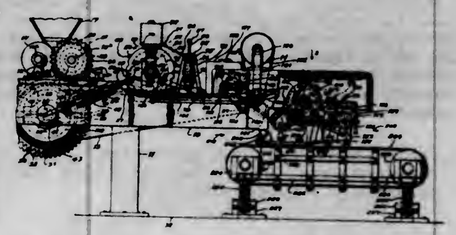


1. In an agricultural implement of the class described, a rectangular frame of the open type, a pair of arch members disposed between the longitudinal sides of the frame, a plurality of slats lying alongside of each other on the intermediate portions of the arch members, and a pair of pins projecting through each arch member for holding the slats in place thereon and projecting above the slats for maintaining weight material on the slats.

1,578,753. ELASTIC STEERING WHEEL FOR MOTOR VEHICLES. FRED R. OSTREIMER, Paris, France. Filed Sept. 28, 1925. Serial No. 59,199. 1 Claim. (Cl. 74—33.)

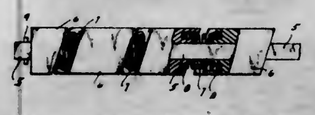
In an elastic steering wheel, a plurality of spring arms having the outer ends thereof slotted, a wheel rim, guide sleeves slidably receiving the outer ends of the arms mounted in and extending throughout the entire thickness of the rim, flanges at the two opposite faces of the sleeve bearing against the outer portions of the wheel rim and pins extending through the slots and the outer ends of the arms.

1,578,754. JERK ABSORBER. SYDNEY PAUL, Lima, Ohio, assignor to The Superior Motor Coach Body Company, Lima, Ohio, a Corporation of Ohio. Filed Feb. 26, 1925. Serial No. 11,749. 1 Claim. (Cl. 267—1.)



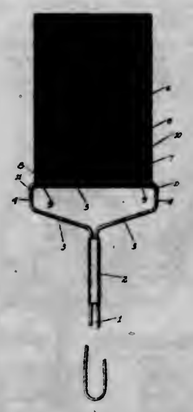
A jerk absorber comprising a casing having a top and an open lower end with an aperture through the center of the top, there being a notch formed in the lower end portion of the casing, means for securing the lower end of the casing to a floor, a tubular guide extending from the center of the top down into the interior of the casing, a rod slidable in said guide and extending therebelow and through said aperture in the top of the casing, a head secured to the lower end of said rod and operative up and down in the casing, and a coil spring surrounding said guide and engaging the head.

1,578,755. MACHINE FOR MAKING A FOOD PRODUCT. SCOTT H. PERRY, Keeseville, N. Y. Filed Mar. 19, 1921. Serial No. 453,584. 41 Claims. (Cl. 107—4.)



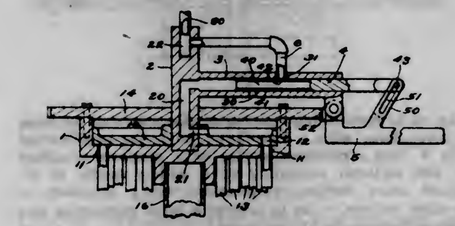
1. In a machine for making food products, the combination with means for receiving the raw material and means for forming said material into a ribbon, of means for compacting an end of said ribbon.

20. In a machine for making food products, the combination with means for receiving the raw material and means for forming said material into ribbons, of means for rolling said ribbons into cylinders, compressors for compressing said cylinders, and partitions between said compressors.



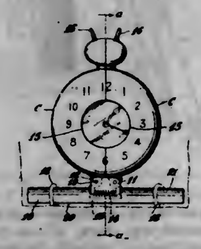
35. In a machine for making food products, the combination with means for receiving the raw material, of means for forming the same into a cylinder formed of rolled ribbon, an oven belt, and means for depositing said cylinder on said belt to rest on one base thereof.

1,578,756. COMPENSATING HOLDING DOWN AND SUPPORTING BAR. EDWARD V. PRENTICE, Portland, Oreg. Filed May 16, 1925. Serial No. 30,839. 5 Claims. (Cl. 34—26.)



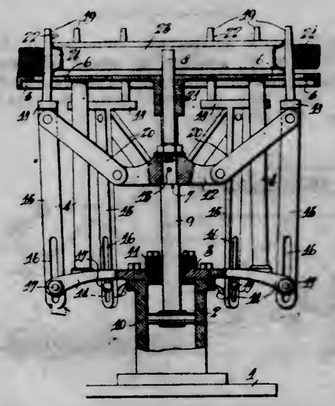
4. A compensating holding down and supporting bar, comprising a core bar, individual compensating units, mounted upon the bar, and normally spaced apart by a compressible spring seated in adjacent ends of the individual compensating units and roller supporting means journaled within the base of the individual compensating units composing the bar.

1,578,757. FLY SWATTER. JAMES S. RAIRDEN, Waterford, Calif. Filed July 2, 1925. Serial No. 40,984. 4 Claims. (Cl. 43—137.)



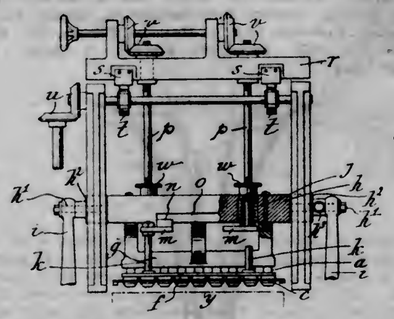
4. A fly swatter including a handle, a rod connected to and extending transversely of the plane of the handle at one end thereof, a swatting element turnably mounted on the rod, oppositely acting helical springs wound in spaced relation about said rod, a loop member connecting the adjacent ends of the springs and having constant engagement with the swatting element beyond the plane of the rod, to maintain the element in normal predetermined alinement relative to the handle, vertical members fixed with the rod at the ends thereof, and projections formed with the adjacent ends of the springs and engaging the vertical members in opposite and laterally movable manner, and arranged to bear against said members when the corresponding springs are in tension but to move away from said members when the springs are turned beyond their normal slack condition in a direction tending to cause them to unwind.

1,578,758. FLUID DISTRIBUTOR. CHARLES A. REED, Onalaska, Wash. Filed Aug. 18, 1925. Serial No. 51,033. 2 Claims. (Cl. 277—31.)



1. A rotatively-mounted disk-like distributing valve having a single port passing therethrough, a casing for said valve having a series of distributing ports in one face adapted to register with the port in the valve, an operating journal for said valve extending without the casing and having a fluid port therein, an operating arm connected with said journal, and a control valve mounted to control said fluid port to connect it with the source of supply and with an exhaust at will.

1,578,759. WATCH-PROTECTING CASE. RICHARD REMMLER, New York, N. Y. Filed Apr. 3, 1925. Serial No. 20,841. 2 Claims. (Cl. 2—250.)

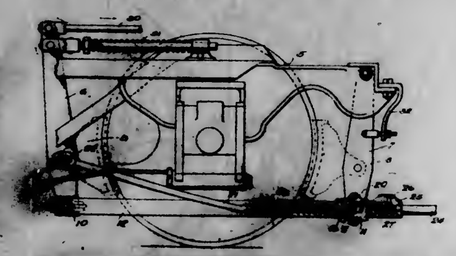


1. The combination with a pocket having loops or straps formed therein, of a bar over the ends of which said loops are engaged, projections on said bar, a pair of pins secured in said projections, a pair of half-circular supplementary case-parts pivoted on said pins, hooks formed with said case-parts, a coiled spring secured between said hooks for keeping said case-parts closed, said case-parts adapted to encircle a watch and provided with supplementary half-circular openings for allowing an inspection of the watch hands therethrough, and having their front faces graduated corresponding to the watch dial, and means on the upper end of each of said case-parts to effect a rotation of said parts about their lower pivot points for permitting the removal of the watch.

1,578,760. TIRE-BAND EXPANDER. MARK A. REPLOGLE, Akron, Ohio, assignor to Lambert Tire & Rubber Co., Barberton, Ohio, a Corporation of Arizona. Filed May 20, 1925. Serial No. 31,643. 5 Claims. (Cl. 157—6.)

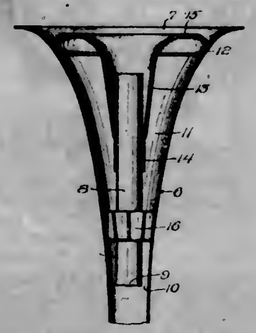
1. A tire band expander comprising a table having slots, fingers projecting through said slots and movable from and toward the axis of the table to expand and release a band, and movable up and down in a direction approximately parallel to the axis of the table to project and withdraw the pins, and means for effecting the aforesaid movements of the pins, substantially as shown and described.

1,578,761. MANUFACTURE OF BISCUITS AND LIKE EDIBLE ARTICLES AND MEANS THEREFOR. LAURENT RONDOLIN, Bermondsey, London, England, assignor to Peek Frean & Company, Limited, London, England. Filed Sept. 20, 1924. Serial No. 738,871. 4 Claims. (Cl. 107—26.)



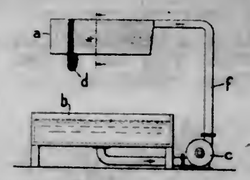
3. Means for manufacturing articles such as biscuits from a plastic mass in sheet form, comprising a shell cutter and an impression die housed completely therein, means for advancing the die, resilient means through which the cutter is advanced by the die, and means for temporarily retarding movement of the cutter after it has partially advanced into the sheet mass, substantially as described.

4. Means for manufacturing articles such as biscuits from a plastic mass in sheet form, comprising a shell cutter and a companion die housed completely therein, means for advancing the die, resilient means through which the cutter is advanced by the die, and means for temporarily retarding movement of the cutter after it



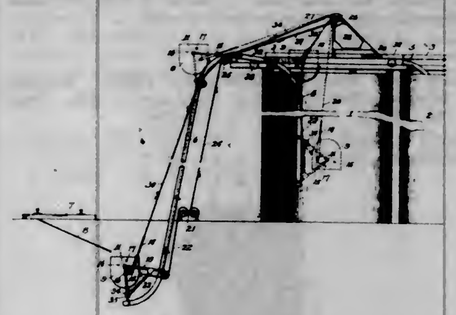
has partially advanced into the sheet mass, the resilient connection between the cutter and die being adapted to ensure retraction of the impression die from the sheet mass before the cutter is withdrawn from such mass, substantially as described.

1,578,762. SLACK ADJUSTER. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to The Gould Coupler Company, a Corporation of Maryland. Filed May 17, 1924. Serial No. 714,168. 4 Claims. (Cl. 188—199.)



1. In an automatic slack adjuster of the clasp brake type for combination with live and dead levers, the upper ends of which are movable towards each other during the application of the brakes, a tie rod connecting the lower ends of said levers, and fulcrums intermediate the ends of said levers carrying brake shoes adapted to be brought into engagement with the periphery of the wheel, said tie rod being relatively movable with respect to its point of connection with the dead lever, a temporary take-up mechanism associated with said point of connection, an adjusting rod connecting said point with the live lever near the pivot point of the live lever, a take-up rod, and permanent take-up and holding means associated with the lower end of the dead lever and said rod.

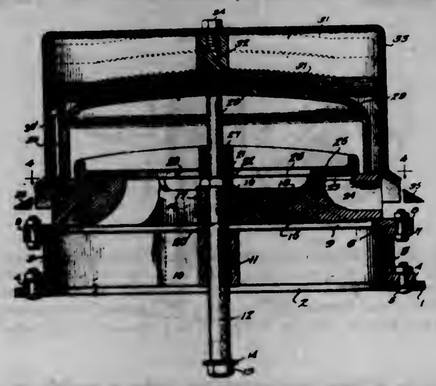
1,578,763. MUTE FOR WIND INSTRUMENTS AND THE LIKE. GEORGE SCHLUESSELBURG, Chicago, Ill., assignor of one-half to P. T. Harmon, Chicago, Ill. Filed Feb. 28, 1923. Serial No. 620,338. 1 Claim. (Cl. 84—460.)



As a new article of manufacture, a mute for a wind instrument having an outwardly flared bell, said mute comprising in combination a circular body member having at its inner end a tubular extension of uniform cross section and of relatively small cross-sectional area and of smaller size than the small end of the bell, a tube of uniform diameter and smooth bore slidably mounted in said extension, means for supporting said slidably mounted tube within the small end of the bell while permitting passage of air blast between the said parts, the circular body member increasing in size towards its outer end and having its outer end curved outwardly towards the outer end of the bell of the wind instrument, and into contact therewith and curled inwardly towards the axis of the instrument on an easy curve, substantially as described.

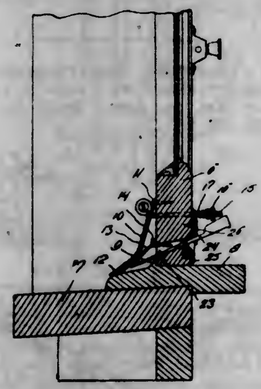
1,578,764. TREATING TEXTILE MATERIALS WITH CIRCULATING LIQUOR. ALBERT WILLIAM SCHMID, Basel, Switzerland. Filed Apr. 7, 1925. Serial No. 21,426. 1 Claim. (Cl. 8—17.)

In an apparatus for treating textile materials in hank or piece form with a circulating fluid, the combination with a fluid circulating device of a stationary carrier for the material consisting of a hollow saddle of U-shaped cross section, perforations being provided in its outer surface, so as to present a large supporting and spraying surface to the material.



1,578,765. HANDLING APPARATUS FOR COAL AND THE LIKE. CLARENCE A. SCHUBERT, Findlay, Ohio. Filed Apr. 5, 1922. Serial No. 549,834. 16 Claims. (Cl. 214—120.)

1. In a structure of the character described, an elevating track, a transferring track, a lowering track, said tracks being connected, a transfer bucket, movable on said tracks, and mechanism for moving said bucket back and forth upon said tracks.



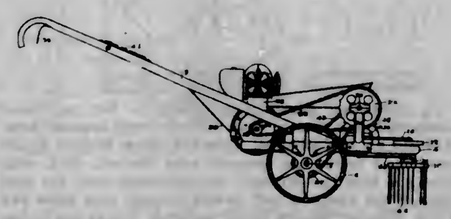
1,578,766. VALVE. WILLIAM SCHWEMLEIN, Parkersburg, W. Va., assignor to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed Jan. 19, 1925. Serial No. 3,475. 4 Claims. (Cl. 277—20.)

1. A combined pressure and relief valve comprising a valve seat, a substantially flat, annular plate of substantially uniform thickness mounted on said seat and forming a pressure valve member, a cover carried by said member, and a second plate arranged over said pressure valve member within said cover and forming a vacuum valve, said pressure valve member being provided with a central opening, said vacuum valve member being provided with a central opening, and said

pressure valve member being further provided with opening extending from the top to its outer periphery and normally closed by said vacuum valve member.

1,578,767. WEATHER STRIPPING FOR WINDOW AND DOOR CASEMENTS. GEORGE E. SCOTT, Kankakee, Ill. Filed Mar. 23, 1925. Serial No. 17,631. 1 Claim. (Cl. 20—67.)

In combination, a frame, a swingable member in the frame, a weather strip of resilient material fixed at its upper edge to the member, bolts passing through intermediate portions of the strip and through the member, means for tensioning the bolt so as to hold the strip toward the frame, a wear plate hinged to the member and having its free end terminating under the strip, and means engageable with the wear plate whereby the wear plate and strip may be lifted to an out-of-the-way position.

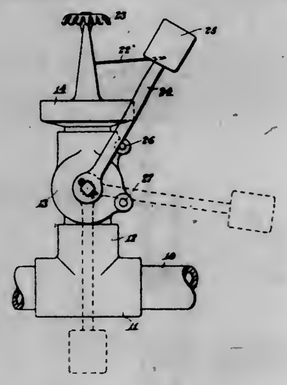


1,578,768. CAR-FLANGE-WHEEL OILER. JOHN L. SCOTT, Vicksburg, Miss. Filed Jan. 14, 1925. Serial No. 2,411. 3 Claims. (Cl. 184—3.)

1. In a locomotive flange oiler, a supply tank, a depending supply pipe, a laterally and downwardly inclined nozzle carried by the lower end of the supply pipe, means for controlling the flow of oil from the tank to the pipe including a valve plug, a tilting platform tank rockably off the center, means supporting the end of the tank to the greatest distance from its pivot point, an operating lever rockably mounted at a point intermediate its ends, means pivotally connecting the valve plug to the lever at one side of its pivot point, an operating rod

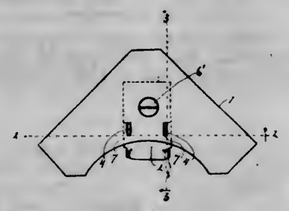
pivotally secured to the lever on the other side of its pivot point engaging the end of the tilting platform tank nearest the pivot point thereof, spring means normally urging the valve plug to a closed position, and a movable weight in said tilting platform.

1,578,769. POWER CULTIVATOR. NEWTON D. SERGEANT, Springbrook, Wis. Filed June 28, 1921, Serial No. 481,002. Renewed June 8, 1925. 2 Claims. (Cl. 97—43.)



1. In a power cultivator in combination, a frame, a vertical drive shaft rotatable in bearings on said frame, a drive crank fixed to said drive shaft, a vertical driven shaft rotatable in bearings on said frame, a driven crank longer than said drive crank fixed on said driven shaft, a connecting rod between said drive and driven cranks, a spur gear fixed on said driven shaft, two arms loosely mounted on said driven shaft, a vertical shaft mounted in each arm, each of said shafts carrying a gear meshing with said spur gear, cultivator teeth at the lower end of each of said driven shafts, means for adjusting said arms about their pivots, and means for rotating said drive shaft.

1,578,770. SPRINKLER-HEAD-CONTROLLING MECHANISM. MICHAEL F. SILVA, Boston, Mass. Filed July 17, 1924. Serial No. 726,448. 10 Claims. (Cl. 169—19.)

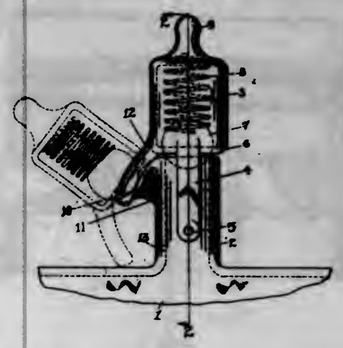


1. The combination of a supply pipe; a sprinkler head therefor having a fusible connection adapted to be re-

leased at a predetermined heat to open said head; a valve interposed between said pipe and head and normally open; and automatic means for closing said valve

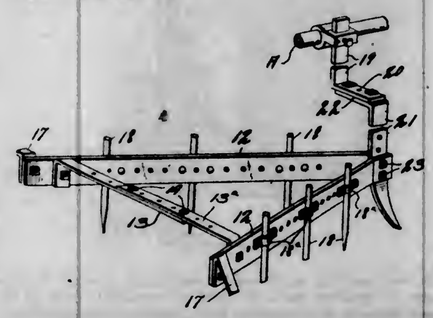
after the sprinkler head has been opened, said means including a weighted arm secured to said valve normally off center and adapted to move downwardly.

1,578,771. CULTIVATOR. PHILIP SIMONS, Pewamo, Mich. Filed Apr. 10, 1925. Serial No. 22,067. 1 Claim. (Cl. 97—204.)



In cultivator sweep construction, a flat cultivator sweep having a counter sunk hole centrally located therethrough, an arm mounted upon the upper surface of the sweep and having an integral wing thereon, said wing having a hole therethrough corresponding with the hole through the sweep, a bolt passed through said holes and a nut screwed thereon firmly securing the sweep to the wing of the arm, the sweep having slots therethrough, and lugs cut and formed integral with the wing to pass through said slots and hold the sweep from sidewise or revoluble movement.

1,578,772. SIDE LAMP FOR AUTOMOBILES. CHARLES A. SIMS, Odon, Ind. Filed June 30, 1924. Serial No. 723,189. 2 Claims. (Cl. 240—8.2.)

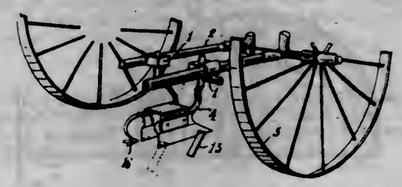


1. A side lamp for an automobile comprising two projecting reflectors, with their axes at an angle to each other, the reflectors intersecting each other in a central curved line, independent sources of light substantially at the foci of the reflectors.

1,578,773. CLOSURE FOR FUEL TANKS. HARRY WORCESTER SMITH, North Grafton, Mass. Filed Sept. 27, 1923. Serial No. 665,120. 2 Claims. (Cl. 220—86.)

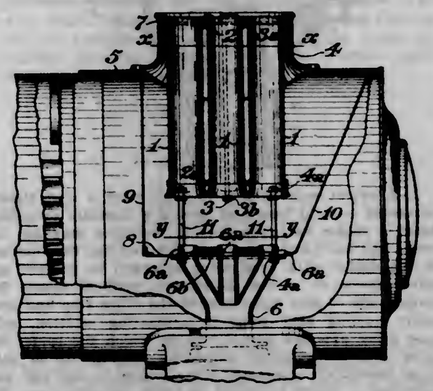
1. In a closure mechanism for tanks, a member provided with an orifice, a hollow member pivotally attached to said first member, a spherical member in said hollow member, means retaining said spherical member at least partially in said hollow member, resilient means tending to press said spherical member out of said hollow member, a flange on said first named member to receive said spherical member when the closure mechanism is in the open position, a concave seat on said flange, and a second flange on the hollow member adapted to cover said first named flange when the closure mechanism is in the closed position.

1,578,774. HARROWING AND PLOWING ATTACHMENT FOR CULTIVATORS. JOHN T. SMITH, Carey, Tex. Filed Mar. 14, 1925. Serial No. 15,570. 1 Claim. (Cl. 97—5.)



A cultivator attachment comprising a member adapted to be connected to a cultivator beam and extend downward therefrom, the member being laterally angled at its lower end and perforated, a second member having a laterally angled upper end adapted to be adjustably engaged with the angled lower end of the first named member, and a cultivating frame connected to the lower end of said second named member and having cultivating tools thereon and projecting downward therefrom.

1,578,775. CULTIVATOR ATTACHMENT. WILLIAM C. SPECK, Lamesa, Tex. Filed Feb. 24, 1925. Serial No. 11,019. 1 Claim. (Cl. 97—179.)

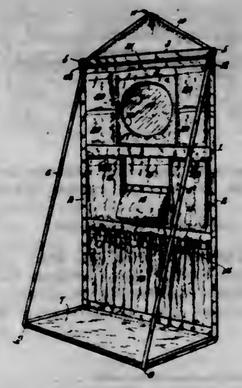


A cultivator attachment of the character described comprising a frame consisting of a pair of angular plates, means for adjustably connecting said plates together,

means for connecting said plates to a cultivator curved portions formed with the outer sides of said plates, runner guards, curved portions formed with the upper ends of said runner guards and adapted to receive said

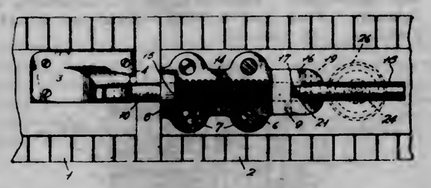
curved portions of said plates, a bar seated within the curved portion of each plate said bars and curved portions having openings therein, and bolts extending through the openings in said bars and curved portions for adjustably connecting said runner guards to said frame.

1,578,776. LOCOMOTIVE STACK. CLEMENT F. STREET, Greenwich, Conn. Filed Apr. 4, 1925. Serial No. 20,623. 10 Claims. (Cl. 162—8.)



9. In a multiple locomotive stack, the combination of a plurality of vertical discharge channels; upper and lower head plates, fitted to the ends of said channels; a casing, enclosing said upper head plate and the adjacent portions of the discharge passages, and connected to a locomotive smoke box; and means for preventing the ingress of air between the upper head plate and the casing.

1,578,777. FIREARM. CARL G. SWEBILIUS, New Haven, Conn., assignor to The Marlin Firearms Corporation, New Haven, Conn., a Corporation of Delaware. Filed July 18, 1923, Serial No. 652,886. Renewed Nov. 17, 1925. 6 Claims. (Cl. 42—25.)

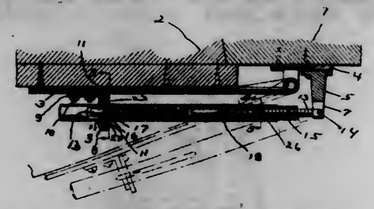


1. In a fire-arm, a pivoted ejector, resilient means for projecting one end of said ejector into position to engage a cartridge, and a member adapted to maintain the cartridge engaging end of said ejector in inoperative position.

1,578,778. COMBINATION TRAVELING CASE AND TOILET TABLE. ROBERTA ROHR THORNHILL, Lynchburg, Va., assignor to Virginia Art Goods League, Incorporated, a Corporation of Virginia. Filed Apr. 11, 1925. Serial No. 22,475. 11 Claims. Cl. 150—34.)

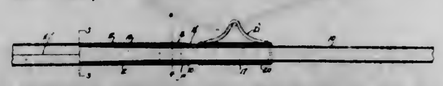
10. An article of the class described comprising a foldable fabric section, means at one end of said section for holding the same in a suspended position, means for holding the opposite end of said section at an angle to the body of said section when the same is suspended to enable said end to act as a supporting shelf, and means for stiffening said shelf portion.

1,578,779. REFRIGERATOR-DOOR LOCK. ALFRED E. TITUS, Trenton, N. J. Filed Aug. 21, 1924. Serial No. 733,401. 2 Claims. (Cl. 292—164.)



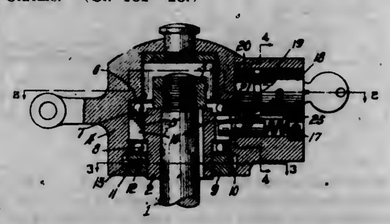
1. In a door lock, the combination with a base plate, lugs extending at right angles from the face of said plate, a bolt slidably mounted in said lugs, a coil spring around said bolt and confined between said lugs, one end of the spring being anchored to the bolt, a roller on one end of said bolt adapted to engage a keeper, the other end of the bolt being forked, a roller mounted in said forked end, an operating lever pivotally mounted intermediate its ends on one of said lugs, said lever comprising arms at substantially right angles to each other, one of said arms projecting into said forked end and having a cam face adapted to cooperate with the roller in the forked end.

1,578,780. DOOR HINGE. ALFRED E. TITUS, Trenton, N. J. Filed Oct. 6, 1924. Serial No. 741,985. 5 Claims. (Cl. 16—72.)



1. In a hinge, the combination with a bracket secured to each leaf of the hinge, a rod pivotally secured at one end to one of said brackets and slidably mounted at its other end in the other of said brackets, a stop slidably mounted on said rod and adapted to engage one of said brackets, a spring on said rod, one end of which abuts

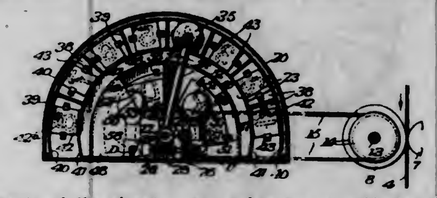
said stop, a tension slide on the other end of said rod against which the other end of the spring abuts. A slot in one of said brackets, and means to move said



stop to register with said slot whereby the stop may move beyond its bracket and release the compression on the spring.

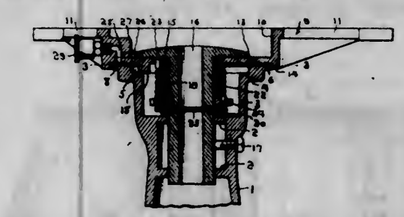
1,578,781. TELESCOPIC FISHING ROD. CHARLES A. TREDWELL, New Haven, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn. Filed Oct. 14, 1924. Serial No. 743,527. 3 Claims. (Cl. 287—124.)

2. In a telescopic fishing-rod, the combination with a longitudinally-seamed, cylindrical joint-section having its lower end conically expanded along its seam and slightly flattened on each side thereof, of a guide-collar mounted upon the said joint-section at the upper end of its said expanded and flattened portion; and a complementary joint-section having its upper end reduced in diameter to form a guide-sleeve and a cone.



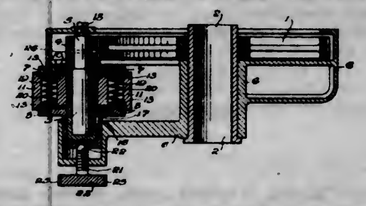
1,578,782. STEERING-WHEEL LOCK. ERNEST TRUMAN, Toledo, Ohio, assignor to Fox Automotive Products Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 8, 1923. Serial No. 673,417. 2 Claims. (Cl. 151—25.)

1. A steering wheel hub member and a retaining ring member threaded for axial adjustment in the hub member, one of said hub and ring members having an annular groove opening to the other, and means carried by the other of said members and releasably projecting into the groove to coact with a wall thereof to prevent a removal of the ring member from the hub member and at the same time permitting predetermined axial adjustment of one member relative to the other.



1,578,783. ELEVATOR SIGNAL SYSTEM. PAUL SCHUYLER VAN BLOEM, Hempstead, N. Y., assignor to Viking Products Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 663,461. 5 Claims. (Cl. 177—336.)

1. In an elevator signal system the combination of a plurality of dial plates for the different floors of a building served by an elevator car each dial plate having a series of floor designating characters thereon adapted to admit light through them, a movable lamp support located at the rear of each dial plate, an electric lamp carried by each support, an electrical circuit connected to all of said lamps and adapted to maintain them constantly illuminated during the up-and-down move-



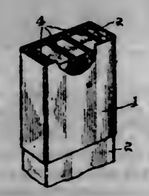
ments of the elevator car, and means operable by the movement of an elevator car from floor to floor for simultaneously shifting said lamp supports to move each lamp past the rear faces of the floor designating characters and thereby render the corresponding characters of each series luminous successively.

1,578,784. SWIVEL CONNECTION. JOSEPH S. WALTON, Los Angeles, Calif. Filed Feb. 28, 1924. Serial No. 694,777. 5 Claims. (Cl. 155—95.)

1. A swivel connection including a base, a stem rigidly connected to said base and having a laterally extending head, a spider having a portion rotatably mounted between the head and base, stops for limiting the rotation of the spider, said head being arranged to prevent upward movement of the spider, and resilient means for forcing one of said stops toward the other stop and normally holding said stops in contacting relation, said base being provided with a cup on which the spider rotates, and the resilient means for forcing one of said stops toward the other stop being located in said cup and including a sleeve rotatably mounted on said stem, detachable means for holding the sleeve in a fixed position relatively to the stem, and a coiled spring arranged in the cup and having one of its ends connected to the sleeve and its other end connected to the spider.

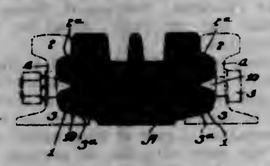
1,578,785. POWER-TRANSMISSION MECHANISM FOR CREAM SEPARATORS AND OTHER MACHINES. JAMES STUART WEARN, Christchurch, New Zealand, assignor to Wearns Automatic Drive Company, Limited, Christchurch, New Zealand, an Incorporated Company of New Zealand. Filed May 9, 1924. Serial No. 711,958. 4 Claims. (Cl. 74—29.)

1. A power transmitting clutch, comprising, in combination, a driven member, a pair of rotatable clutch members spaced apart and slidable toward and from each other, means between said clutch members and said



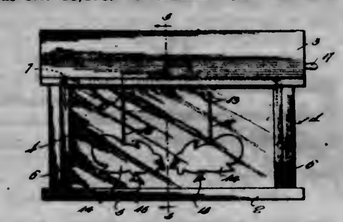
driven member for rotating the latter with the clutch members only in one direction, a driving pulley mounted for rotation between said clutch members, a plurality of flexible members carried by said pulley in frictional engagement with the clutch members thereby to cause the latter to rotate with the pulley, and means for regulating the distance between said clutch members thereby to adjust the tension of said flexible members.

1,578,786. SPIRIT LEVEL. SAMUEL WESTON, London, England, assignor to H. R. Watts & Son, Limited, London, England. Filed Aug. 20, 1923. Serial No. 658,322. 9 Claims. (Cl. 33—211.)



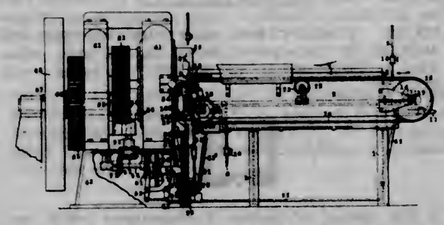
1. A spirit level with the usual bubble tube having the air and liquid therein in relative proportions adapted to maintain the length of the bubble substantially constant under temperature variations.

1,578,787. PROCESS OF FORMING BATTERY JARS AND THE LIKE. JOHN WESTREN, Toronto, Ontario, Canada, assignor to Dunlop Tire & Rubber Goods Co. Limited, Toronto, Canada. Filed Feb. 9, 1925. Serial No. 7,840. 2 Claims. (Cl. 18—56.)



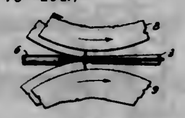
2. A process of forming a rubber jar which consists in extruding a seamless tube of rubber compound; forming the tube over a core; positioning strips of rubber on the core to form ribs inside the bottom of the jar; placing a bottom in position on the strips and core; turning down the edges of the tube over the bottom; and vulcanizing the finished jar.

1,578,788. METAL WEAR MEMBER. GEORGE W. WHITEMAN and RUSSELL C. PAXSON, Philadelphia, Pa. Filed Mar. 8, 1924. Serial No. 697,912. 12 Claims. (Cl. 246—463.)



1. As a new article of manufacture, a wear-metal member of material length having a portion fitting in tight engagement between the head and flange of a rail and deeply grooved longitudinally of the same to permit expansion or compression of such rail-engaging portion.

1,578,789. MECHANICALLY-OPERATED FIGURE TOY. JOHN G. WILSON, Chicago, Ill. Filed May 28, 1925. Serial No. 33,498. 6 Claims. (Cl. 46—40.)



6. A toy comprising a support, a plurality of figures adjacent said support, a plurality of cords slidably arranged upon the support and having one end attached to the figures, a spring mounted adjacent and having a portion movable toward and from the support, said cords having their other ends connected to said spring portion, and means for alternately forcing said spring portion toward said support and releasing it, thereby causing the spring to jerk upon the cords and effect movement of the figures.

1,578,790. MACHINE FOR MAKING KNIFE BLADES. EDWARD E. WOOD, Northampton, Mass., assignor to Wm. A. Rogers, Limited, Toronto, Canada, a Corporation of Ontario. Filed July 25, 1921. Serial No. 487,363. 66 Claims. (Cl. 80—26.)

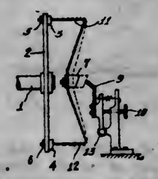
1. In an apparatus of the character described, in combination, a pair of swaging dies, a gripper adapted to advance blanks into operative relation with said dies, a blank carrier adapted to advance blanks in the sphere of operation of said gripper, and a furnace adapted to heat the blanks on said carrier.

1,578,791. METHOD FOR MAKING KNIFE BLADES. EDWARD E. WOOD, Northampton, Mass., assignor to Wm. A. Rogers, Limited, Toronto, Canada, a Corporation of Ontario, Canada. Original application filed July 25, 1921, Serial No. 487,363. Divided and this application filed Apr. 3, 1924. Serial No. 704,011. 2 Claims. (Cl. 76—104.)

1. The method of making a blade and a supporting part such as a tang or handle integral with the blade which includes, forging a portion of the length of a heated blank into the substantial shape and dimensions of the supporting part, thereafter heating that portion of the blank to be fashioned into a blade while the supporting part remains comparatively cool, thereafter, by a rolling operation, swaging while hot the portion of the blank last heated into the substantial shape and dimensions of the blade and subsequently shaping and finishing the article so formed by a trimming operation.

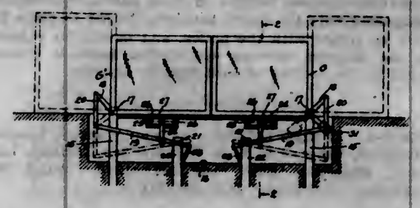
1,578,792. LEER FOR GLASSWARE AND OTHER ARTICLES. WALTER O. AMSLER, Toledo, Ohio. Filed Apr. 1, 1925. Serial No. 19,858. 5 Claims. (Cl. 49—47.)

2. In annealing apparatus an elongate horizontally extending chamber, the floor of said chamber being formed in a plurality of sections arranged at different levels, conveying means entering the chamber between the said floor sections and then advancing above the upper floor section, and means for causing a stream of hot gases to flow externally of said floor structure, first beneath the lower floor section and then beneath the upper floor section.



5. In annealing apparatus an elongate, horizontally extending chamber, means for heating the floor of the chamber, a horizontally extending conveyor movable longitudinally within the chamber and at an interval above the floor and at an interval from the side walls of the chamber, and a shield extending parallel with and at an interval from the side walls of the chamber and extending from above to a level lower than the level of the conveyor.

1,578,793. COMMUTATOR AND THE METHOD OF MAKING IT. VINCENT G. APPLE, Dayton, Ohio. Filed July 3, 1920. Serial No. 393,826. 4 Claims. (Cl. 171—321.)

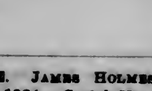


1. The method of making a commutator which consists in providing a cylinder having separated tongues at each end, one for each commutator bar; turning the tongues inwardly from the body part of the cylinder towards the axis thereof to provide a holding means; placing a moldable, adhesive, insulating material inside of the cylinder, about the tongues, and dividing the body of the cylinder into a plurality of commutator bars.

1,578,794. SPEED-REGULATING DEVICE. FRITZ BANNWITZ, Berlin-Charlottenburg, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed May 22, 1924. Serial No. 715,257. 12 Claims. (Cl. 200—31.)

1. In a speed regulating device of the character set forth, a rotatable resilient member provided with a surface inclined with respect to a plane at right angles to the axis of rotation of said member, and an element cooperating with said surface to coact therewith in accordance with the position of said surface, the axial movement of which is effected by the deformation of said resilient member by the action of centrifugal force.

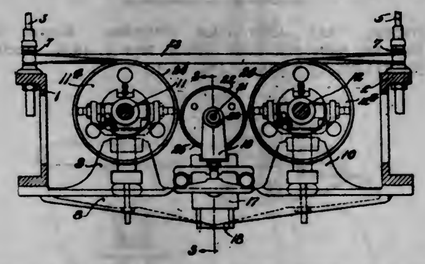
1,578,796. GATE. JAMES HOLMES BARD, Bell, Calif. Filed July 16, 1924. Serial No. 726,376. 2 Claims. (Cl. 39—18.)



1. In combination, a trough adapted to span a well disposed transversely of a roadway, platforms in the trough movable to be depressed by a vehicle passing thereover, a gate extending transversely of the trough and pivoted to swing about a horizontal axis, a lever fixed to the gate at the axis of the gate, a counterweight having an arm fixed to the gate, a link pivotally connected to the lever, a standard fixed in the well, a second lever pivoted on the standard and connected to the link, a spring connected to said second lever and standard for urging said levers to a position in which the gate is closed, and an actuating bar pivoted on the second lever and extending upwardly into the trough so as to be depressed by said platforms, whereby said levers will be actuated to open said gate against the action of said spring.

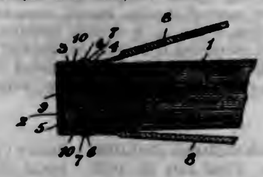
1,578,796. FRAME CONSTRUCTION. ISAAC ALBERT BAUM, Memphis, Tenn. Filed Apr. 16, 1925. Serial No. 23,626. 2 Claims. (Cl. 72—98.)

2. A plaster terminal comprising a metallic channel having a web, and a corrugation running along the web defining a depression to provide a weather drip.



1,578,797. SHUTTLE AND BOBBIN FOR SEWING MACHINES. THOMAS A. BEANEY, Poughkeepsie, N. Y., assignor to Beaney Rubber Company, Inc., New York, N. Y., a Corporation of New York. Filed June 24, 1924. Serial No. 722,051. 1 Claim. (Cl. 112—233.)

The combination with an oscillating sewing machine shuttle having a center post to enter the bore of a bobbin, said post having a transverse bore therein, of a spring pressed ball in said bore adapted to project into contact with the wall of the bobbin bore on said post.

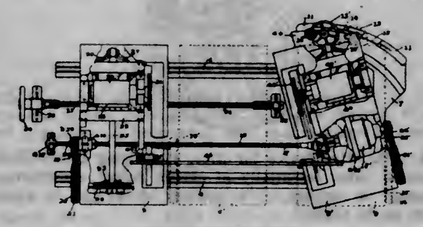


1,578,798. DRIVE MECHANISM FOR TWISTING AND SPINNING FRAMES. HERBERT G. BEEDE, Pawtucket, R. I. Filed Mar. 29, 1923. Serial No. 628,582. 1 Claim. (Cl. 118—48.)

In a machine of the class described having a pair of spaced parallel side rails, transverse members rigidly connecting said rails, a row of spindles carried by each rail, a pair of spaced brackets carried by each of said transverse members, a pair of longitudinal drive shafts turning in the same direction in bearings carried by the brackets, and a drive pulley mounted upon each shaft, said pulleys being disposed in the same plane, in combination, an auxiliary bracket mounted upon one of said transverse members intermediate the bearing brackets supported by said transverse member, said auxiliary bracket having a portion offset from the transverse member and provided with an elongate vertical guideway disposed midway between the drive shafts, a slide plate freely slidable vertically in said guideway, a bearing supported by the plate, a shaft in the bearing, a tension pulley mounted on the shaft, said pulley being disposed in the plane of the pulleys upon the drive shaft, and an endless integrally continuous band partially

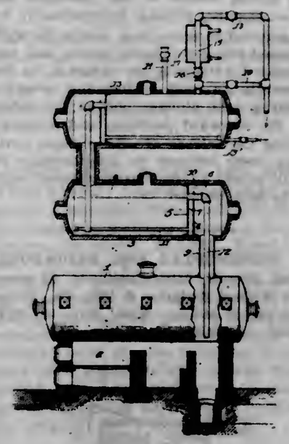
encircling a spindle of each row of spindles, both runs of said band being disposed above said drive shafts, one run of the band engaging the upper portions of both drive pulleys, said run also passing below the tension pulley and supporting the weight of said pulley and the vertically sliding plate.

1,578,799. BOOKBINDING. JOSEPH BERG, New York, N. Y. Filed Jan. 13, 1926. Serial No. 80,873. 4 Claims. (Cl. 281—21.)



3. A binding for books consisting of a plurality of pages, a strip of binding fabric secured along the rear edges of said pages and uniting the same, perforations in said pages, separate elastic members extending through said perforations, and a cover embracing the rear ends of the pages and adhesively secured to their edges and over the ends of the elastic members.

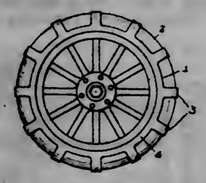
1,578,800. GRABBING TOOL. CARL F. BRANDENBERGER, Fort Madison, Iowa. Filed Jan. 19, 1926. Serial No. 82,329. 2 Claims. (Cl. 294—100.)



1. In a device of the class described, a plunger provided at its lower end with a compressible grip, a sleeve slidable on the plunger to compress and release the grip, a body rotatable on the plunger, and slidable on the plunger to depress the sleeve and compress the grip, first interengaging elements on the body and the plunger and cooperating to secure a withdrawal of the plunger along with the body, and second interengaging elements on the body and the sleeve and cooperating to connect the sleeve with the body, for withdrawal, when the body is rotated.

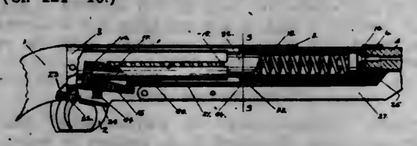
1,578,801. AUTOMATIC DADO, EQUALIZER, AND VARIETY WOODWORKING MACHINE. WILLIAM I. CARR, Bellingham, Wash. Filed Apr. 20, 1925. Serial No. 24,467. 6 Claims. (Cl. 144—133.)

1. In machinery of the kind described in combination, a vertically pivoted machine, a transversally movable machine adjacent said pivoted machine adapted to approach and recede from said pivoted machine, a power shaft common to both of said machines, and a universal coupling in said power shaft oscillatable about the vertical axis of said pivoted machine.



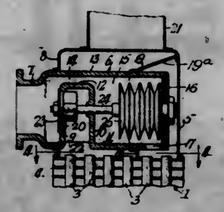
1,578,802. PYROGENESIS OF PETROLEUM. EDGAR MILTON CLARK, New York, N. Y., assignor to Standard Development Company, a Corporation of Delaware. Filed July 3, 1919. Serial No. 308,644. 4 Claims. (Cl. 196—51.)

1. The process of digesting petroleum oils for the pyrogenesis thereof which consists in confining under pressure two separated bodies of relatively heavy oil within a digester, applying heat to one of said oil bodies, taking vapors from the latter over into the second body, abstracting heat from said last named body to cause condensation of the vapors of the desired products of pyrogenesis therein, and feeding to the first named body the oil displaced by vapor condensation in the second body, continuing the said operation until said second



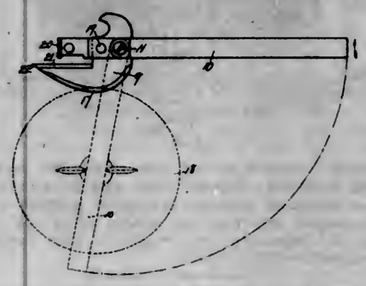
named body becomes of substantially lower boiling point than said first named body, whereby a substantial conversion may be effected without distillation and at a relatively low pressure.

1,578,803. TRACTIVE COVER FOR TIRES. FREDERICK H. COMBY, Akron, Ohio, assignor to The Falls Rubber Company, Cuyahoga Falls, Ohio, a Corporation of Ohio. Filed June 17, 1920. Serial No. 389,549. 10 Claims. (Cl. 152—14.)



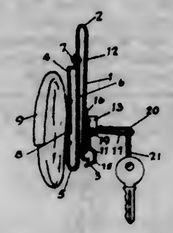
1. A tractive device for tires, comprising a detachable skeleton cover essentially of elastic rubber construction adapted to conform to the contour of the tire to which it is to be applied.

1,578,804. AIR GUN. EDGAR P. COOK, Granville, Ohio. Filed Apr. 23, 1924. Serial No. 708,329. 4 Claims. (Cl. 124—10.)



2. In an article of the character described, the combination of a casing, a barrel connected with the forward end of said casing, an opening in the forward end of said casing giving access to the rearward end of said barrel, an air chamber slidable longitudinally within said casing and adapted to serve as a closure for said opening, a spring pressed plunger engaged within said air chamber, means associated with said air chamber for moving the same rearwardly in said casing and compressing the spring abutting said plunger, means for retaining said plunger in its rearward position, and automatic means for preventing the release of said plunger until said air chamber has been restored to substantially its normal position with access to the barrel through said opening obstructed by said plunger.

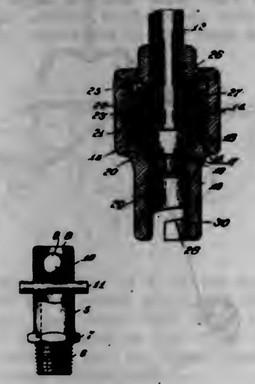
1,578,805. THERMOSTAT FOR RADIATORS. JAMES H. COOPER, Detroit, Mich., assignor, by mesne assignments, to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed Nov. 10, 1922. Serial No. 600,010. 5 Claims. (Cl. 236—34.)



1. The combination with a radiator for internal combustion engines, of means dividing the radiator core into front and rear circulating sections, and a thermostatic valve device carried by the radiator and leaving the front section of the core in the circulation when the cooling medium is cold, said valve device being operated by the temperature of the cooling medium in the front section for cutting the rear section into and out of the circulation.

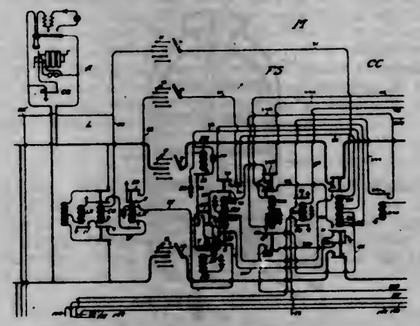
1,578,806. JAR AND CAN OPENER. SIDNEY O. COWLES, Salisbury, Conn. Filed May 7, 1924. Serial No. 711,727. 7 Claims. (Cl. 7—1.)

1. A jar and can opener comprising a handle with a can-opener blade secured thereto, means cooperating with said blade to open a can by a cutting operation, and a penetrator blade extending from said handle and having a penetrating edge spaced from the can-opener blade for the purpose of receiving the end of a jar between said blades.



1,578,807. POCKETBOOK HOLDER. HENRY CROSSMAN, Toledo, Ohio. Filed July 23, 1925. Serial No. 45,475. 2 Claims. (Cl. 24—3.)

1. In an elastic clip, a bent strip having leg portions, an elastic strip secured to one leg portion of the said bent strip for elastically and removably connecting an object to the clip, a spring operated member, a latch member pivotally supported on one leg of the said bent strip and having an end portion turned at right angles to the body portion of the latch and in position to engage the said spring operated member and so as to press the end of the said spring operated member towards the other leg of the strip against the yielding resistance of the spring.



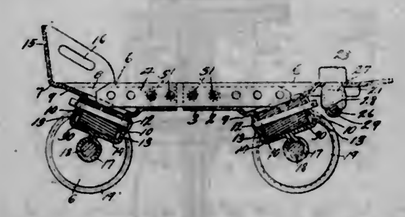
1,578,808. COUPLING. NORMAN W. CUMMINS, Bridgeport, Conn., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed June 1, 1920. Serial No. 385,529. 6 Claims. (Cl. 285—175.)

1. The combination with a coupling member comprising a hollow cylindrical member one end of which is provided with a conical inwardly tapering seat and a closure for sealing against the inner side of said seat, of a second coupling member comprising a conduit for conducting lubricant, a hollow expansible conical-shaped sealing member for co-acting with said conical seat to seal the joint

between said coupling members, and co-acting means on said coupling members for connecting said coupling members in detachable relation.

1,578,809. TELEPHONE SYSTEM. HIRAM D. CURRIER, Chicago, and GEORGE R. EATON, Oak Park, Ill., assignors to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1922. Serial No. 590,785. 15 Claims. (Cl. 179—26.)

1. In a telephone system including telephone lines terminating at an auxiliary exchange, a group of non-numerical rotary finder switches multiply associated with said lines, any one of them adapted to seize said lines as calling lines, a main exchange, supervisory means under the control of the operator at the main exchange for supervising connections between calling and called lines at said auxiliary exchange and operator's answering equipment located at a centralized operator's position at said main exchange, an answering switch common to said finder switches for seizing a finder switch of the group that selected one of said lines as a calling line to connect said line with said answering equipment at said main exchange and connector switches at said first exchange paired with said finder switches to form connecting circuits between calling and called lines.



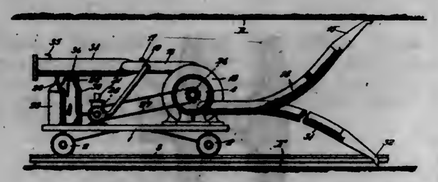
1,578,810. TOBACCO PIPE. BENJAMIN L. DALL, River Forest, Ill. Filed June 5, 1922. Serial No. 565,838. 8 Claims. (Cl. 131—12.)

2. A pipe having a body with two oppositely facing bowls therein, a passage connecting said bowls, a lateral opening communicating with said passage, and a stem having a reduced tubular extension terminating in a beveled end and rotatable in said lateral opening to close communication with one bowl and open communication

with the other, said extension being substantially of the same size as said passage so that it may be removed from said opening and introduced into said passage to clean the same.

1,578,811. ROLLER SKATE. LAWRENCE V. DAVIS, South Bend, Ind. Filed June 15, 1925. Serial No. 37,216. 7 Claims. (Cl. 208—173.)

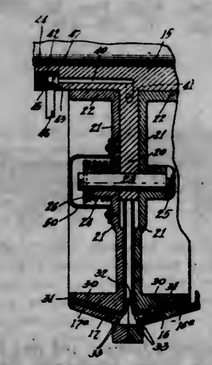
1. A skate comprising forward and rear frame sections, downwardly struck alined reinforcing channels carried by said frame sections, truck attaching means in the bottom of said channels, and an adjusting bar disposed in said channels and connecting said frame sections.



1,578,812. INSULATING BODIES AND METHOD OF PRODUCING THEM. CHESTER L. DAWES and WILLIS A. BOUGHTON, Cambridge, Mass., assignors to New England Mica Company, Waltham, Mass., a Corporation of Massachusetts. Filed Oct. 26, 1922. Serial No. 597,153. 33 Claims. (Cl. 154—2.)

1. The method of producing insulating bodies, characterised by association of mica fragments with an inorganic binding material which, at ordinary atmospheric pressure requires a temperature substantially as high as the disintegration point of mica to render it fluid, raising the associated mica fragments and binding material to a temperature below that at which mica disintegrates, and applying pressure adequate to make the binding material flow at that temperature.

1,578,813. COMPOSITE INSULATING BODIES AND METHOD OF PRODUCING THEM. CHESTER L. DAWES and WILLIS A. BOUGHTON, Cambridge, Mass., assignors to New England Mica Company, Waltham, Mass., a Corporation of Massachusetts. Filed Oct. 26, 1922. Serial No. 597,154. 4 Claims. (Cl. 106—24.)



1. An insulating body, mainly consisting of mica fragments and a silicate of an alkali metal containing substantially no water, compressively integrated.

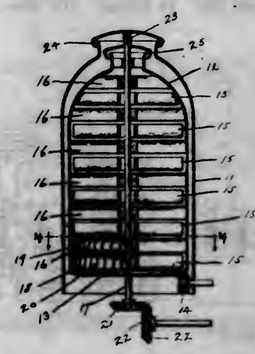
1,578,814. METHOD FOR REMOVING GAS AND DUST FROM MINES. ANGELO D'ASCENZO, Denver, Colo. Filed Apr. 8, 1925. Serial No. 20,504. 3 Claims. (Cl. 262—84.)

1. A method for removing gas and dust from a mine without the use of fixed pipes or passages, comprising separately and simultaneously collecting the gas and dust, storing the collected dust in a container, compressing the gas into a storage container, and periodically shipping the dust and gas containers out of the mine.

1,578,815. FLUID-PRESSURE CLUTCH. JAMES T. DICKSON, Los Angeles, Calif. Filed Feb. 1, 1922. Serial No. 533,470. 1 Claim. (Cl. 192—88.)

A clutch mechanism embodying a driving and a driven member, one of said members having oppositely arranged friction faces and the other having a hub carrying a central driving plate, two oppositely and longitudinally movable disks mounted at their centers to slide with a fluid tight fit on the hub on opposite sides of the central plate, said disks having friction faces adapted to be pressed outwardly against the friction faces of the first mentioned member, means to introduce fluid pressure between the disks, an extensible fluid tight connection between the two disks at their peripheries, a bolt passing through the central driving plate and both disks and rotatively connecting the driving plate and disks while allowing the disks to move longitudinally, a spring around the bolt outside a disk and pressing on the disk, and a fluid-tight cover cap mounted on the outer face of the disk and covering both bolt and spring.

1,578,816. COMBINED POT AND LID LIFTER. PETAR EIFRIED, Passaic, N. J. Filed July 17, 1925. Serial No. 44,176. 4 Claims. (Cl. 294—3.)



2. A combined pot and lid lifter including pivoted handles, and jaws carried thereby and each having tapered bifurcations therein capable of receiving, respectively, the shank and head of the knob of a lid.

1,578,817. TAKE-UP SPRING. CHARLES FISCHER, New York, N. Y. Filed Sept. 17, 1924. Serial No. 738,321. 7 Claims. (Cl. 24—73.)

1. An electric cord take-up consisting of a helical wire spring having wire ends, the said wire ends being shaped to provide a plurality of gripping loops for gripping the ends to the cord, which passes thru them.

1,578,818. AIR TURBINE. JAMES J. FITZGERALD, New York, N. Y. Filed Oct. 8, 1924. Serial No. 742,281. 3 Claims. (Cl. 170—165.)

1. In an air turbine the combination of the following elements; a housing; a rotatable cylinder mounted therein; a shaft mounted in the said cylinder; a series of blades secured to the wall of the said cylinder and adapted to rotate around said shaft; a second series of blades mounted on the said shaft and adapted to rotate within the said cylinder and in the opposite direction to that in which the first series of blades is rotated; means adapted to rotate the said cylinder and first series of blades; means adapted to rotate the said shaft and the said second series of blades; and means adapted to permit the longitudinal movement of said shaft by compressed air.

1,578,819. DISPLAY CONTAINER. ANSEL FREELAND, Nevada, Iowa. Filed Jan. 30, 1922. Serial No. 532,631. 1 Claim. (Cl. 220—22.)

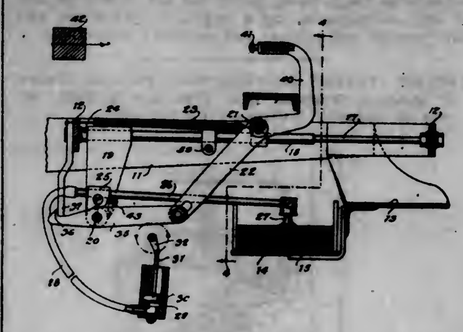
A display container including a bottom, side walls and end walls, the end walls of said container being inclined upwardly and outwardly from the bottom, a partition member extended between the side walls and secured thereto, said partition member being spaced above the bottom of the container and dividing the container into

compartments so that commodities from one compartment can pass into the other below said partition, the top of said partition being substantially higher than the tops of said end walls, said side walls being of the same height as said partition at the points where said partition is secured thereto and slanting down in both direc-

tions from said points so as to be the same height as the end walls at the points where said end walls are secured thereto, one compartment being comparatively small relative to the other so that it can be used as a display compartment and the large compartment can be used as storage compartment.

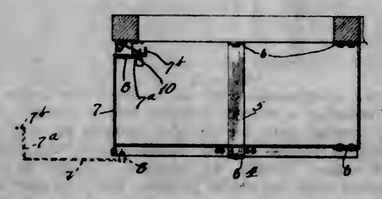
1,578,820. SKIM-CHEESE MANUFACTURE. CLARENCE M. GERE, Brodhead, Wis., assignor to Kraft Cheese Company, Chicago, Ill., a Corporation of Illinois. Filed May 18, 1925. Serial No. 31,213. 7 Claims. (Cl. 99—11.)

7. The improvement in the art of making cheese of skim milk which consists in coagulating skim milk at a temperature of substantially 88° F. to produce and form a curd, drawing off the whey, working the curd after the whey has been drawn, while maintaining substantially said temperature, then soaking the curd in whey which after drawing has been cooled to a temperature of 70° F. thereby causing the curd to absorb a substantial percentage of such cool whey, then draining off the surplus whey, warming the curd to substantially its original temperature, pressing and curing.



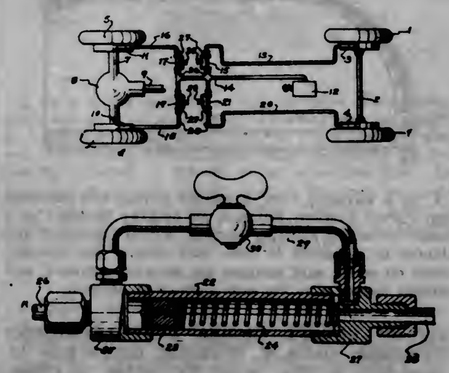
1,578,821. HANDWHEEL AND METHOD OF MAKING THE SAME. HARVEY D. GEYER, Dayton, Ohio, assignor, by mesne assignments, to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 30, 1922. Serial No. 585,189. 3 Claims. (Cl. 74—33.)

1. A handwheel having a rim, dished wooden spokes having greater width than thickness, and a metallic center having stub arms having recesses for receiving the inner ends of the wooden spokes, said metallic center being divided into two parts the plane of division extending through said recesses to permit the lateral insertion of the spokes therein, and means interconnecting the upper and lower portions of the stub arms and passing through the inner ends of the spokes for clamping the spokes and the divided hub portions rigidly together.



1,578,822. LABEL-HANDLING MECHANISM. TRUMAN J. GLOVER, Millburn, N. J., assignor to Federated Engineers Development Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Feb. 9, 1924. Serial No. 691,691. 11 Claims. (Cl. 271—11.)

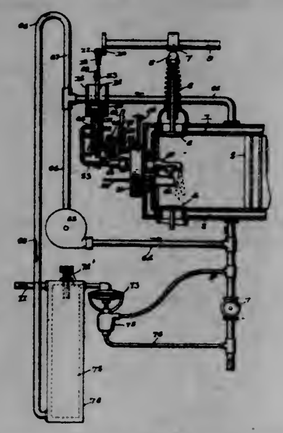
1. In a pneumatic sheet handling mechanism a traveling carriage, a pneumatic pick-up device carried thereby, driving means for moving said carriage, and means on



the carriage controlled by said driving means for lifting the pick-up device prior to the movement of the carriage.

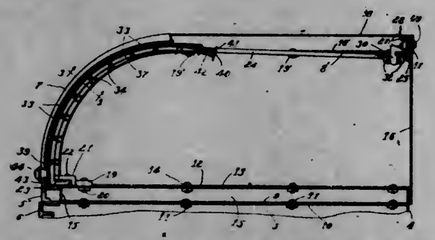
1,578,823. TIRE CARRIER. WALTER R. GREEN, Chicago, Ill. Filed June 21, 1923. Serial No. 646,812. 2 Claims. (Cl. 224—29.)

1. In an underslung tire carrier, a pair of crossed members, an attaching bracket secured to each of the ends of one member, and to one end of the other member, a gate hinged to the other end of such other member, said gate having an upper inwardly bent end with an upstanding flange, and a latch adapted for locking engagement with such flange.



1,578,824. FLUID-OPERATED BRAKE. WILLIAM E. HERBST, Hillside, and R. HARRY STONE, Irvington, N. J. Filed Apr. 18, 1924. Serial No. 707,389. 12 Claims. (Cl. 188—152.)

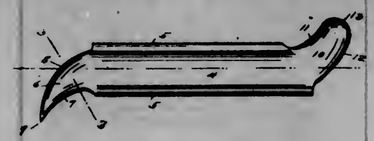
1. The combination with a fluid-pressure-operated brake, of a source of fluid under pressure, primary connections communicating with said source, secondary connections



communicating with said brake and means permitting transfer of pressure between said primary and secondary connections but normally preventing any substantial flow of fluid therebetween, and a by-pass for permitting fluid flow between said primary and secondary connections.

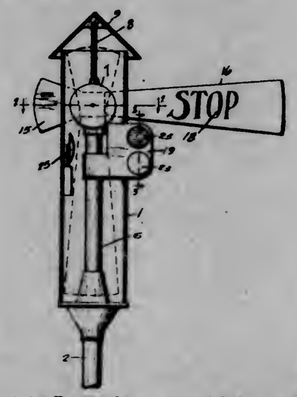
1,578,825. INTERNAL-COMBUSTION ENGINE. FRANK L. HOAGLIN, Waupaca, Wis. Filed Mar. 8, 1920. Serial No. 364,066. 5 Claims. (Cl. 123—33.)

2. The combination with an internal combustion engine including a valved cylinder, and a piston; of a fitting inserted into the cylinder through its wall and including a nozzle, a main passage therefrom leading to the engine cylinder, an auxiliary cylinder in communication with the engine cylinder, and a by-pass leading from said nozzle to the interior of the auxiliary cylinder; and means operative during the suction stroke of the piston for supplying a rich mixture of air and fuel through said nozzle and said by-pass.



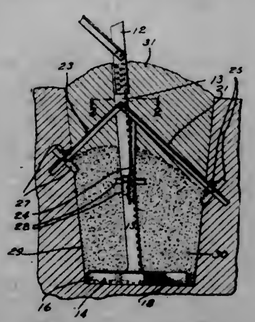
1,578,826. WARMING OVEN. STANLEY H. HOBSON, Rockford, Ill., assignor to Geo. D. Roper Corporation, Rockford, Ill., a Corporation of Illinois. Filed Apr. 16, 1925. Serial No. 23,481. 9 Claims. (Cl. 126—190.)

1. In a warming oven, a closure having side members with curved portions adjacent an opening therein; of a closure including abutting sections flexibly connected and adapted to be moved to cover and uncover the opening, guides on which said sections are movably mounted, and resilient means to retain said sections in contact.



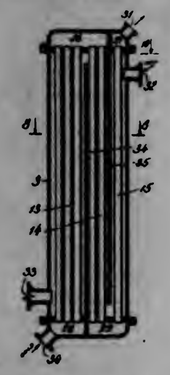
1,578,827. CHERRY SEEDER AND STRAWBERRY STEMMER. JACOB W. HOLSINGER, Granite City, Ill. Filed Sept. 2, 1924. Serial No. 735,386. 2 Claims. (Cl. 146—21.)

1. In a device of the character described, a thin semi-cylindrical body having reinforced sides and a sharp pointed concave projection at one end curved to one side and lying substantially in the plane of the body and having sharp side edges of convex and concave outline



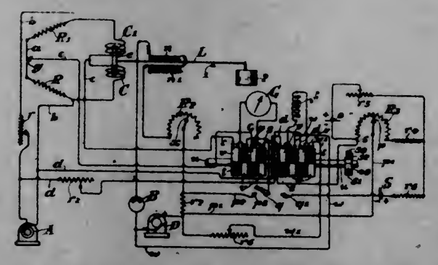
meeting in said point,—the cross section of said projections being parabolic with the focus nearer the convex side edge, substantially as and for the purpose described.

1,578,828. TRAFFIC REGULATOR. FRANK J. HUSBANDS, Los Angeles, Calif., assignor, by mesne assignments, to Acme Traffic Signal Company, a Corporation of California. Filed Mar. 15, 1921. Serial No. 452,580. 5 Claims. (Cl. 177—329.)



1. A street traffic regulator comprising a support, two counter-balanced signal arms, mounted on said support, means for independently moving said arms to signaling and non-signaling positions, including an armature for each arm, a field common to both armatures, and means for energizing said field with current of one polarity and for selectively energizing said armatures independently with currents of different polarities.

1,578,829. MAST FOR HIGH-TENSION ELECTRIC TRANSMISSION. JOHN E. JENNINGS, New York, N. Y. Filed May 3, 1924. Serial No. 710,849. 5 Claims. (Cl. 189—21.)



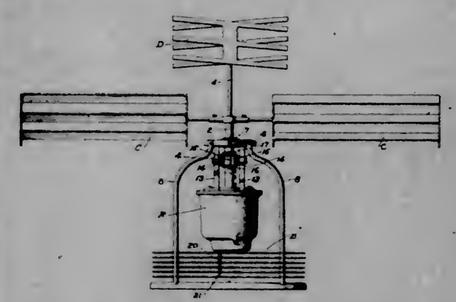
4. Mast supporting means comprising a grill work formed of channeled metal bars adapted to be disposed at the bottom of an excavation, a channeled beam extending upwardly therefrom and secured at its lower end to said grill work, channeled metal bars secured to said beam adjacent its upper end and projecting laterally therefrom at opposite sides thereof for engagement with the walls of the excavation, cross braces riveted to said bars adjacent the outer ends thereof, and means for securing a mast leg to the upper end of said beam.

1,578,830. HEAT EXCHANGER. RUSSELL C. JONES, Bronxville, and JOSEPH PRICE, New York, N. Y., assignors to The Griscom-Russell Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 12, 1921. Serial No. 491,886. 7 Claims. (Cl. 257—224.)

1. Apparatus for heating a viscous liquid, comprising a shell, a plurality of metal tubes arranged longitudinally within said shell and constituting a passage for the liquid, said shell having an inlet for steam and a drain for removing the residual water, means at the ends of the shell for effecting the division of the tubes into successive groups connected in series, each of said successive groups containing a fewer number of tubes than the preceding group, thereby decreasing the cross sectional area of the passage in the direction of decreasing viscosity of the liquid.

1,578,831. BALANCING APPARATUS. EARL A. KEELER, Norristown, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 7, 1920. Serial No. 379,464. 65 Claims. (Cl. 73—167.)

1. The combination with a member movable from its normal position in response to a quantity to be measured, of an inductive winding and a magnetizable member movable relatively to each other, one of them movable with said movable member, a deflecting member, means causing deflection thereof in response to change of inductance of said winding, and means for returning said movable member toward normal position controlled by said deflecting member.

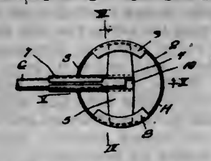


23. The combination with a member movable in response to changes in magnitude of a quantity, of a circuit, a galvanometer controlled by said circuit and having a deflecting member, means controlled by said first named member for varying the current in said circuit, a movable structure, a source of power, a disengageable mechanical connection between said source of power and said movable structure, means whereby said mechanical connection is controlled by said deflecting member, and means controlled by said movable structure and controlling exertion on said first named movable member of a force opposing that causing its movement.

1,578,832. CONDENSER. JOSEPH A. KLAUSS, Philadelphia, Pa. Filed Mar. 15, 1923. Serial No. 625,200. 7 Claims. (Cl. 250—41.)

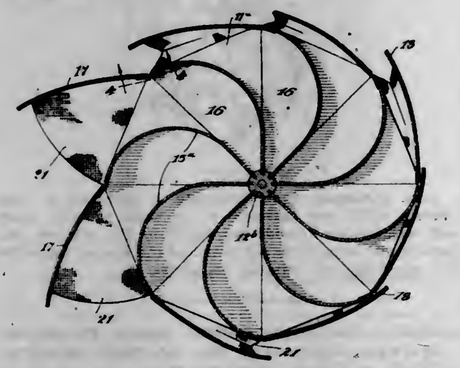
1. A condenser bank including a plurality of condensers which are arranged at an angle to each other, and each having its ends overlapped by the adjacent condensers and being arranged to utilize the mutual capacities for equalizing the varying capacities.

1,578,833. FLYING MACHINE. ALBERT KÖGLER, San Francisco, Calif. Filed June 10, 1925. Serial No. 36,075. 4 Claims. (Cl. 144—19.)



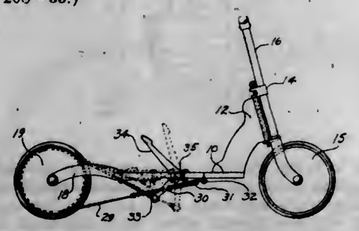
1. In a flying machine of the character described, an inner and an outer gimbal ring, a bearing member pivotally supported in the inner ring, an inner driving shaft and an exterior driving sleeve shaft journaled in said bearing member, a driving motor suspended from the bearing and secured against rotation with relation thereto, means for transmitting power from the motor to rotate the inner shaft and the sleeve shaft in opposite directions, and a propeller on each shaft.

1,578,834. DOLL'S EYES. ALEXANDER KONOFF, New York, N. Y., assignor to Overland Metal Novelty Co. Inc., New York, N. Y., a Corporation of New York. Filed Apr. 21, 1925. Serial No. 24,731. 10 Claims. (Cl. 46—40.)



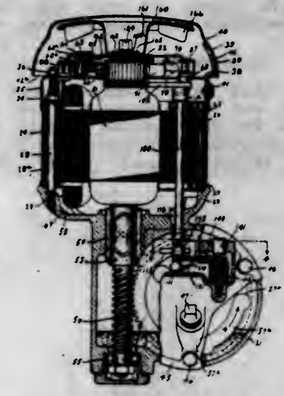
8. An eye structure comprising a shell, and an attaching member by which to connect said shell with the

usual supporting rod, means by which the shell is pivotally connected with said attaching member, and said last mentioned means comprising a spring finger extension of



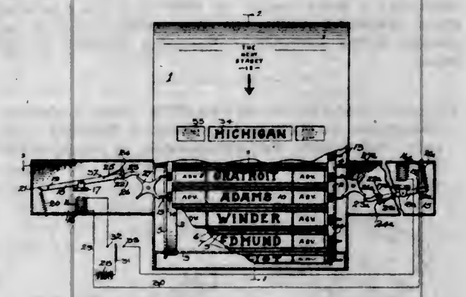
the attaching member arranged to engage the shell to frictionally resist rotary movement of the shell with respect to the attaching member.

1,578,835. FLUID MOTOR. LOUIS E. KOTHE, Englewood, N. J. Filed Feb. 28, 1925. Serial No. 12,200. 15 Claims. (Cl. 170—13.)



1. A wind motor including a drum formed with a plurality of partitions defining pockets extending from near the center thereof to substantially the periphery thereof and wings freely hinged at the outer ends of the partitions, those of said wings moving in direction opposed to the wind being closed by the pressure of the wind.

1,578,836. SCOOTER. ALLIE L. LANE, Sparland, Ill. Filed Aug. 3, 1925. Serial No. 47,828. 1 Claim. (Cl. 208—35.)



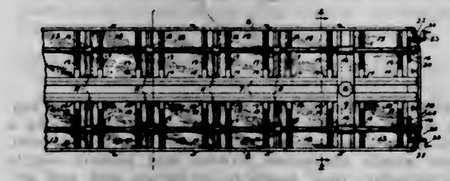
In a device of the class described, a frame, a steering wheel at the front and a driving wheel at the rear, comprising two opposed disk members and an axle support therefor, a pedal pivoted to the frame portion and a driving means between the pedal and rear wheel comprising a plate member rotatably attached to the axle at a point between the disk members, a friction cable member engaging throughout a considerable portion thereof the outer edge of the plate member, said cable being attached at one end to the frame portion and at the other end to the pedal member, a coil spring for tensioning said cable member and a clutching mechanism between the plate member and the axle permitting forward movement of the device by depression of the pedal member.

1,578,837. REVERSIBLE MOTOR. RALPH L. LEE, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 13, 1924. Serial No. 698,834. 8 Claims. (Cl. 172—240.)

1. In a motor and control therefor, in combination, a stator; a rotor; a motor reversing mechanism; a housing for the stator, rotor and reversing mechanism; an oil reservoir; and control apparatus for the reversing mechanism located within the oil reservoir, said apparatus including means actuated by said rotor and means connected with the reversing mechanism for actuating the same and adapted to be set in motion by said first means and operative independently of said first means after a predetermined movement thereof.

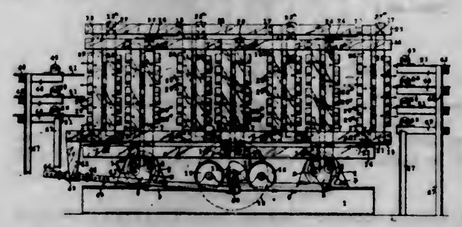
1,578,838. INDICATOR. SAMUEL MAGED, Detroit, Mich. Filed Aug. 29, 1925. Serial No. 53,250. 5 Claims. (Cl. 40—55.)

1. In an indicator, the combination of a casing, endless runways mounted in said casing, an endless carrier having projecting members on each side, rollers mounted on said members, said rollers being adapted to move along said runways, a lateral projection on each side of said casing, a sprocket mounted in each projection, said sprockets being adapted to engage said members and move the carrier round the runway, and means for turning the sprockets.



1,578,839. MANIFOLD FOR INTERNAL-COMBUSTION ENGINES. ORVAL DOUGLAS MAPLE, Pekin, Ill. Filed Mar. 27, 1925. Serial No. 18,746. 4 Claims. (Cl. 123—52.)

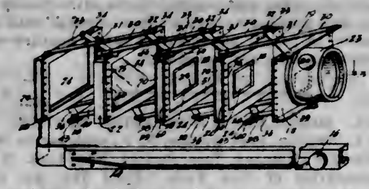
4. In an exhaust manifold for an internal combustion engine, a conduit having a passage increasing in cross sectional area from one end of said conduit toward the discharge end thereof, spaced baffle plates stationed in said passage, there being a port leading into each space between said baffle plates, said passage between the position of the said baffle plates and the discharge end



of the conduit being reduced in cross sectional area from the zone having the ports, and a series of baffle plates stationed therein having opening alternating in position whereby to provide a tortuous path for the discharge of gases.

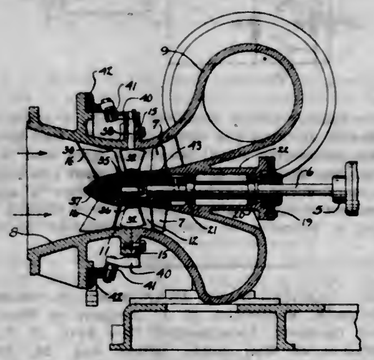
1,578,840. DROP-BOTTOM STOCK CAR. ALONZO C. MATHER, Chicago, Ill. Filed Sept. 19, 1923. Serial No. 663,632. 6 Claims. (Cl. 105—296.)

1. In a device of the class described, floor doors hinged to the car frame, a compound shaft arranged below the free ends of the doors comprising a plurality of sleeves locked together to turn in unison and a center rod, arms mounted on said shaft to turn therewith and to have their free ends engage the lower sides of the doors and means for rotating said shaft to raise and lower the doors.



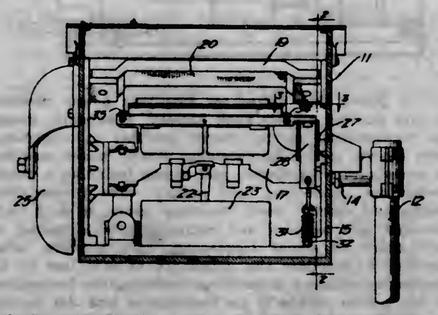
1,578,841. PROGRESSIVE PLATE DRIER. LOUIS G. MERRITT, Lockport, N. Y. Filed July 15, 1921. Serial No. 484,903. 63 Claims. (Cl. 34—16.)

26. In a drier, in combination, a plurality of juxtaposed batteries each having superposed platens, means for mounting one of said batteries in stationary position, means for mounting a battery for lateral travel at either side of said one battery, means for supporting the material to be treated adjacent said laterally traveling batteries, and means whereby the platens of said traveling batteries grip the material to feed the same into the drier.



1,578,842. CAMERA ATTACHMENT. GEORGE A. MITCHELL, Hollywood, Calif., assignor to Mitchell Camera Corporation, a Corporation of California. Filed Aug. 17, 1921. Serial No. 493,170. 4 Claims. (Cl. 88—1.)

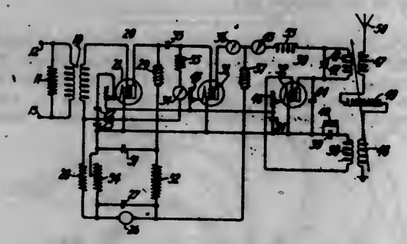
4. A camera shade, comprising an extensible frame composed of a plurality of frame sections constructed and arranged to extend equally with each other when the frame is extended, and proportionately at all times with the extension of the whole frame, a plurality of apertured plates mounted one on each section of the frame, whereby in the expansion of the frame the plates main-



tain equi-spaced relation, and the apertures in the several plates increasing regularly in size from one end of the frame to the opposite end.

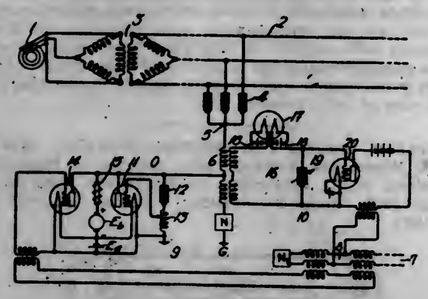
1,578,843. PUMP AND METHOD OF REGULATING THE SAME. LEWIS FERRY MOODY, Philadelphia, Pa. Original application filed July 3, 1919, Serial No. 308,607, Patent No. 1,460,428, dated July 3, 1923. Divided and this application filed Jan. 2, 1923. Serial No. 610,096. 26 Claims. (Cl. 103—89.)

1. In a pump the combination with a rotary impeller, of an inlet directing the inflow to said impeller with the meridian components of the velocity substantially parallel to the axis, and movable guide vanes regulating the flow through said inlet, all of said guide vanes being linked to a single operating ring to be similarly adjusted thereby, said movable guide vanes turning on axes intersecting at the axis of said operating ring.



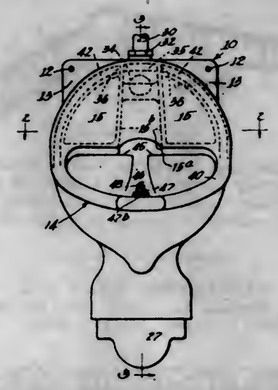
1,578,844. BRAKE FOR WIGWAG SIGNALS. MARK S. MORSE, Los Angeles, Calif., assignor to Magnetic Signal Co., a Corporation of California. Filed Jan. 25, 1923. Serial No. 615,421. 4 Claims. (Cl. 172—126.)

1. In a traffic signal, the combination of: an armature; electro-magnets for reciprocating said armature; a brake member; a connector for transferring the recip-



rocation of said armature to said brake member, whereby said brake member will normally inhibit movement of said armature; and auxiliary armature means associated with said connector and adapted to be attracted by the magnetic flux induced by current flow through said electro-magnets, to permit movement of said armature when said electro-magnets are energized.

1,578,845. MODULATION-INDICATING SYSTEM. EDWARD L. NELSON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1924. Serial No. 686,473. 8 Claims. (Cl. 250—17.)



1. In a radiant energy signaling system, a space discharge device, an input and output circuit for said device, means for impressing signal potentials upon said input circuit, a space discharge device having input and output circuits, said devices cooperating to produce a signal modulated wave, and means included in said circuits for indicating a plurality of different conditions in said system.

1,578,846. CARRIER-WAVE TRANSMISSION. HAROLD W. NICHOLS, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1921. Serial No. 495,100. 2 Claims. (Cl. 179—2.)

1. A power line, means for supplying power currents to said line for transmission thereby, a network, means for transmitting carrier waves modified in accordance with speech, means for receiving carrier waves modified in accordance with speech, and means including a transformer for connecting said carrier wave transmitting means and carrier wave receiving means to both said line and said network and conjugately with respect to each other at signal frequencies, said network being designed to simulate the impedance of said line at all frequencies within a given range including the frequencies of the carrier waves to be transmitted and not including the frequencies of said power currents, whereby high voltages are prevented from being established at the winding of said transformer.

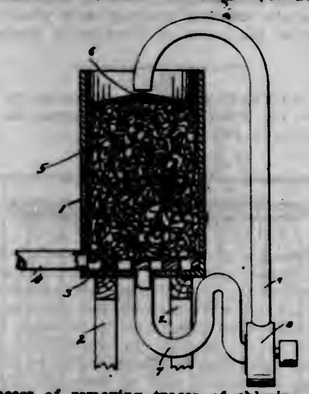
1,578,847. URINAL. JOHN K. PENNINGTON, Los Angeles, Calif. Filed Jan. 10, 1922. Serial No. 528,192. 6 Claims. (Cl. 4—102.)

1. The combination with a primary flushing water supply means, a urinal having a bowl, said bowl having a back wall, a secondary flushing tank above said bowl, water supply connection between said primary supply and secondary tank, means in connection with said primary supply and secondary tank and bowl to effect a primary flushing of the bowl, means in connection with said secondary tank to effect a protracted flushing of the bowl continuing after said primary flushing, and means in connection with the back wall of the bowl to distribute said secondary flushing over its surface.

1,578,848. ORIFICE CAP. FRANK E. RICE, Detroit, Mich., assignor to American Tap Bush Co., a Corporation of Michigan. Filed May 20, 1922, Serial No. 562,299. Renewed Aug. 29, 1925. 6 Claims. (Cl. 220—40.)

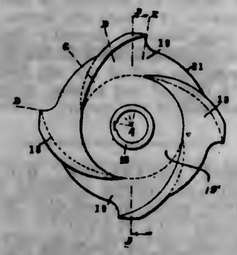
1. A closure cap for an orifice comprising a pair of relatively rotational sections, one of said sections having a pair of grooves with entrance notches, one wall of each groove being beveled at its inner end, the other section having lugs beveled upon one surface for cooperating with the beveled walls of said grooves and adapted for insertion through said notches, and means for frictionally clamping said sections together against relative rotation.

1,578,849. WASHBASIN. ALFRED ROGERS, Milton, Mass. Filed Oct. 22, 1919. Serial No. 332,538. 2 Claims. (Cl. 4—170.)



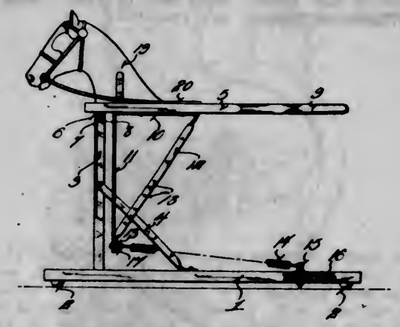
1. The combination with a pair of supporting brackets, each having a flat tapering upright of sufficient thinness to lie against the front face of the wall studs and be concealed by the finish of the wall, and a single integral

arm extending from the lower portion thereof, of a hollow slab, said arms and the lower wall of said slab having registering apertures, and fastening means passed



through said apertures and securing said slab and said arms together, said means lying between the horizontal planes of the top and the bottom faces of said slab.

1,578,850. PROCESS OF REMOVING TRACES OF CHLORINE FROM AIR. LUDWIG ROSENSTEIN, San Francisco, Calif. Filed Apr. 19, 1923, Serial No. 63,254. Renewed Aug. 31, 1925. 1 Claim. (Cl. 23—4.)

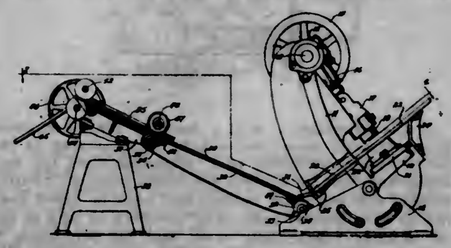


A process of removing traces of chlorine from gases which comprises passing the gas to be treated over a body of scrap iron and keeping said body of iron wet with a ferrous chloride solution during the passage of the gas.

1,578,851. CENTRIFUGAL PUMP. BERNARD SAMELSON, Seneca Falls, N. Y., assignor to Goulds Manufacturing Company, Seneca Falls, N. Y., a Corporation of New York. Filed Apr. 11, 1924. Serial No. 705,768. 14 Claims. (Cl. 103—115.)

1. In a double suction centrifugal pump, an impeller including a hub and web extending radially from the hub to provide a pair of intake chambers in opposite side faces of said impeller, said web being distorted at a distance from the hub to form a plurality of blades and to provide a plurality of similar channels defined by said blades and communicating alternately with one and with the other of said chambers, said channels being disposed in staggered relationship.

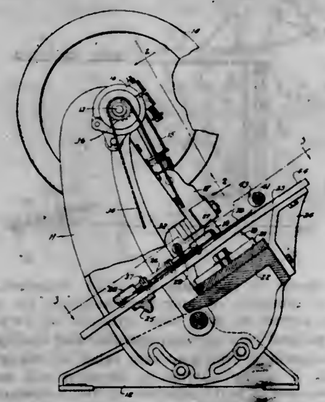
1,578,852. JUMPER. ANTON W. SCHMUTZER, Crandon, Wis. Filed Oct. 17, 1925. Serial No. 63,072. 2 Claims. (Cl. 272—55.)



1. A device of the class described comprising a base having a plurality of apertures adjacent its rear end, uprights carried by said base adjacent its forward end, a beam pivoted between said uprights and having a downwardly extending arm, said arm being of triangular construction, a spring having its forward end secured to said arm, and a bolt attached to the rearward end of said spring and adapted for insertion into any one of the apertures in said base.

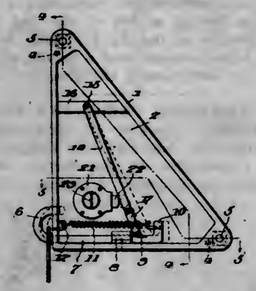
1,578,853. RING CONSTRUCTION. ISIDORE SCHNEIDERMAN, Brooklyn, N. Y. Filed Oct. 6, 1925. Serial No. 60,728. 1 Claim. (Cl. 63—15.)

A finger ring construction comprising a shank, a hollow top piece having a slot at one end thereof, a reduced loop portion on the shank adapted to pass through the slot to form a hinge, and a spring latch at the opposite end for maintaining the ring in closed position.



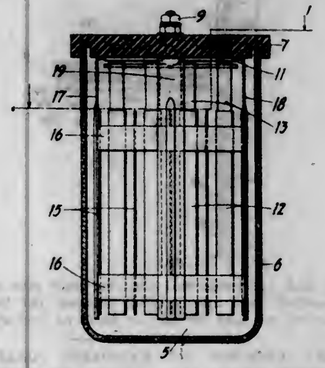
1,578,854. COMBINED PRESS AND WASTE-REMOVING SLITTER. JOSEPH W. SCHOENDELEN, Ogden, Utah, assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 19, 1923. Serial No. 675,458. 4 Claims. (Cl. 164—10.6.)

1. The combination of a press adapted to cut circular articles from metal sheets, and sheet metal cutting means



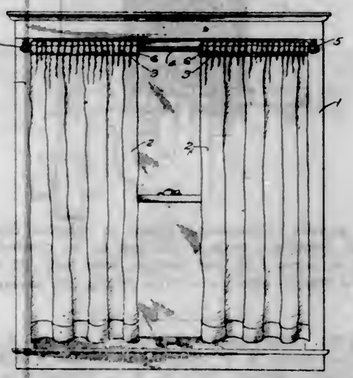
for cutting out scrap portions from the intermediate part of said sheets to make the separated parts of the sheets practicable for handling, and mechanism operating said press and said cutting means in timed relation.

1,578,855. SHEET-GAUGING DEVICE FOR PRESSES. JOSEPH W. SCHOENDELEN, Ogden, Utah, assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 19, 1923. Serial No. 675,459. 4 Claims. (Cl. 164—117.)



1. A sheet gauging device for presses and the like, comprising a rotatable element arranged longitudinally of the path of travel of the sheets and having a plurality of projections thereon adpated to be successively disposed in sheet obstructing position during the rotation of said element, a transverse shaft having a cam to bear intermittently on the tops of the sheets, and means connecting said transverse shaft and rotatable element for operation in timed relation to each other.

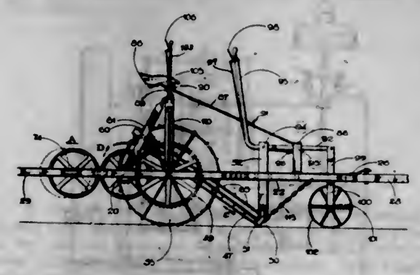
1,578,856. CHECK LOCK. ULYSSES SIDNEY SHOEMAKER, Princewick, W. Va., assignor to Geo. W. Williams, Beckley, W. Va. Filed Nov. 28, 1924. Serial No. 752,828. 7 Claims. (Cl. 40—15.)



7. The combination with a dumping car, of a check holder therefor comprising a lock casing secured to the car, a check supporting hook projecting from the lock casing and movable to open and closed positions relative thereto, and means for holding said hook in closed position so as to prevent removal of the check so long as the car remains substantially level, and for permitting it to be moved to open position when the car is tilted.

1,578,857. ELECTRODE FOR ELECTROLYTIC CELLS. HUMPHREYS O. SIEGMUND, West Orange, N. J., and BEN ELI BROWN, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 21, 1923. Serial No. 658,522. 4 Claims. (Cl. 175—315.)

1. An electrode for electrolytic cells composed of aluminum and other material in such proportions as to be substantially non-film forming, said other material being inert to the action of film-forming electrolytes.



1,578,858. CURTAIN FIXTURE. MARGARET H. SMYTHE, Evanston, Ill. Filed Oct. 20, 1920. Serial No. 418,252. 5 Claims. (Cl. 156—20.)

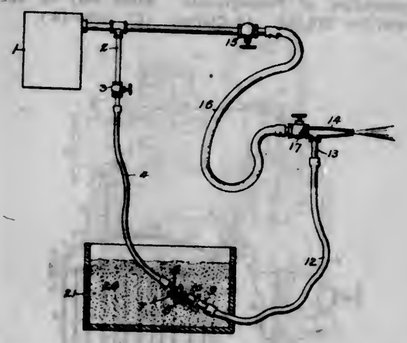
2. The combination with a curtain having a loop at its top and a curtain rod disposed in said loop and supporting the curtain, of a wire clip having portions intermediate its ends disposed partially around and frictionally engaging opposite sides of the curtain rod, said curtain engaging one end of the clip holding the latter at an angle to the rod and holding the greater part of the clip in the loop of the curtain.

1,578,859. SOIL PULVERIZER. WILLIAM STEPHEN SNIDER, Chilliwack, British Columbia, Canada. Filed Sept. 27, 1922, Serial No. 590,815. Renewed Nov. 5, 1925. 2 Claims. (Cl. 97—10.)

1. An implement of the character described, comprising a wheeled frame, a conveyor carried thereby, means for actuating the conveyor, a conveyor platform disposed beneath the conveyor, means for elevating the forward extremities of the conveyor and platform independently of each other, the lower end of said platform being

bent to form a scoop, a yielding means bearing on the shaft at the lower end of the conveyor, and a conveyor-regulator member depending from the said frame.

1,578,860. STARTING MECHANISM FOR ALTERNATING-CURRENT MACHINES. JOSEF SOUSEDIK, Vsetin, Czechoslovakia, assignor of one-third to Robert Suczek, Philadelphia, Pa. Filed Sept. 16, 1922. Serial No. 588,740. 3 Claims. (Cl. 172—279.)

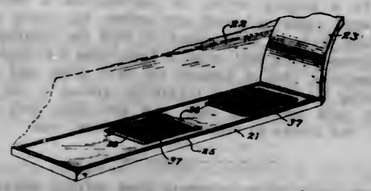


2. The combination with a rotor, of controlling mechanism rotatable therewith comprising switching mechanism controlling the rotor circuit, a plurality of magnetizable members movable away from the axis of rotation under the influence of centrifugal force controlling said switching mechanism, an element of said switching mechanism controlled by each of said magnetizable members, means traversed by rotor current for producing a field acting on said magnetizable members in opposition to centrifugal force, the air gaps of said magnetizable members being so related to each other that said members move outwardly from the axis of rotation in succession.

1,578,861. COMPOSITE WALL AND METHOD OF CONSTRUCTING SAME. HARRY E. SQUIRE, Oakland, Calif. Filed June 12, 1924. Serial No. 719,463. 12 Claims. (Cl. 61—49.)

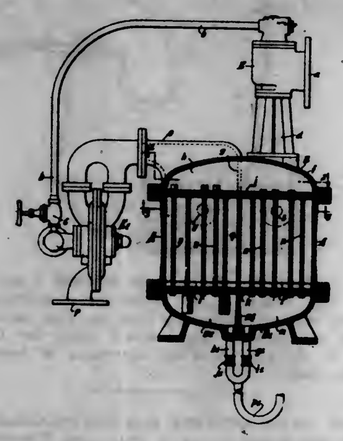
1. The method of constructing a wall which consists in securing an abutment support in position, placing an abutment member in adjustable relation with said abutment support, adjusting the position of said abutment member relative to said abutment support to a position where one face of said abutment will engage an end portion of a wall member, and then securing said abutment member in the latter position.

1,578,862. SAND-BLAST APPARATUS. JOSEPH H. STALEY, Columbus, Ind. Filed Apr. 9, 1924. Serial No. 705,174. 2 Claims. (Cl. 51—8.)



1. In a device for the purposes specified, a pipe open at one end, a nozzle, and means for maintaining the nozzle in aligned relationship with the pipe such as to leave a substantially unobstructed space for the entrance to the pipe from all directions of loose surrounding material.

1,578,863. FOOT SCRAPER FOR AUTOMOBILE RUNNING BOARDS. FRANK H. STANWOOD, Wilmette, Ill., assignor to Stanwood Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 6, 1924. Serial No. 697,176. 2 Claims. (Cl. 280—164.)



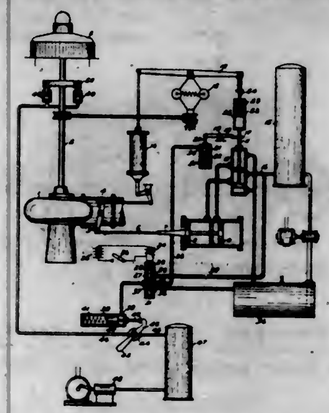
1. A foot scraper for automobile running boards and the like, comprising a two-piece hollow metal member positioned in an opening in the body of the running board and having an upstanding scraper part thereon, the pieces of said member having outwardly extending flanges adapted to engage respectively the upper and lower sides of the running board.

1,578,864. FOOT SCRAPER FOR AUTOMOBILE RUNNING-BOARD TREADS. FRANK H. STANWOOD, Wilmette, Ill., assignor to Stanwood Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 6, 1924. Serial No. 697,177. 3 Claims. (Cl. 280—164.)

1. A foot scraper insert for automobile running board step treads, comprising a two-part hollow member adapted to be positioned in an opening in the tread and running board and providing flanges for engaging respectively the top of the tread and the bottom of the running board, said member being formed with an upstanding scraper edge.

1,578,865. FLUID-COMPRESSING APPARATUS. ROBERT SUCHER, Philadelphia, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 8, 1920. Serial No. 379,717. 43 Claims. (Cl. 230—13.)

1. The combination with an ejector, of condenser structure into which said ejector discharges comprising a plurality of groups of tubes serially related conducting the ejector discharge, and a plurality of independent cooling water passes for cooling different tube groups.

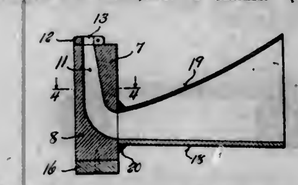


1,578,866. LOCKING DEVICE AND TOOL. DONALD B. SWAIN, Millers Falls, Mass., assignor to Millers Falls Company, Millers Falls, Mass., a Corporation of Massachusetts. Filed July 11, 1923. Serial No. 650,830. 9 Claims. (Cl. 145—53.)

9. In a locking device, in combination, a pair of ring-shaped cams arranged one within the other with their cam faces in engagement so that the rotation of the outermost cam will cause a transverse movement of the innermost cam, a support for said cams, said support being formed with a transverse groove, a pin carried by said innermost cam and extending into said groove, and means to rotate said outermost cam.

1,578,867. CONTROL SYSTEM FOR PRIME MOVERS. CHARLES B. TAYLOR, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed June 18, 1924. Serial No. 720,744. 7 Claims. (Cl. 192—3.)

1. In a control system for a prime mover, a gate for controlling the admission of operating fluid to said prime mover, a governor responsive to the speed of said prime mover for controlling said gate, means for robbing said governor of control of said gate and for causing said gate to close, a brake for said prime mover, means for



applying said brake, and common means for controlling said means for robbing said governor of control and said brake-applying means.
